INTRODUCTORY CHAPTER;
ON
THE USES OF HISTORY,
As a Study:
AND
ON THE SEPARATION OF THE EARLY FACTS
OF
HISTORY FROM FABLE.

INTRODUCTORY CHAPTER.

PART I.

OF HISTORY AS A STUDY.

THE word History (*ἱστορία*) has, in its Greek original, two significations, namely, the acquisition of knowledge by research or enquiry, and the narration of events, real or supposed. The English word History, bears only the latter of these meanings, except in the combined expression, *Natural History*, which signifies a knowledge of the various species of natural productions, animal, vegetable, and mineral, with their respective properties and uses. History.
Meanings
of the word.

Events can only be contemplated by the human mind, as occurring in time and space; but a species, being a creation of the intellect, is confined to no certain duration or position. Natural History, therefore, falls within the domain of science; and will be treated of in that part of the present work which includes the Applied Sciences.

HISTORY, in its proper acceptation, must necessarily occupy a large and conspicuous portion of every work, which aspires to trace the great outlines of human knowledge; for much of that knowledge is historical, either in form or in origin: many powers and faculties of the mind are adapted to acquire, digest, and communicate historical information: the historical records, which exist in the world are numerous, and interesting, and valuable; and in fine it is History, which uniting nations and epochs, gradually augments the common stock of wisdom, and elevates man in the scale of intellectual being. This great subject therefore requires to be developed both theoretically and practically; it must be treated as matter of general speculation, and its progress must be followed throughout the successive ages which it has hitherto embraced; but its philosophical consideration will properly precede its historical application. Extent of
the subject.

In the division of the human faculties, that by which we contemplate events as occurring or having occurred, in time and space, with a sense of their reality, forms a peculiar and important feature. It is essentially different on the one side from *Imagination*, which wants the sense of reality, and on the Foundation
of the study.

History. other from *Science*, which contemplates not events but ideas. Hence arises Lord Bacon's well-known division of human knowledge into *History*, *Poetry*, and *Philosophy*. In fact, all that we know, if not poetical or philosophical, must be historical; but in each of these large acquisitions of the mind, we may observe that some portion is cultivated and some uncultivated. Of the former alone it is possible to treat theoretically. The wide deserts and unknown tracts which lie out of the pale of a sovereign's law, and are even untrodden by any who obey his precepts, are not to be reckoned as any part of his political power. It is with distinguishable elements that we work; and not with a dark and confused chaos. Thus, all events, which we consider as having actually occurred, however trivial they are in themselves, or however slightly we may have noticed them, are in truth viewed historically; but History, considered as a study, imports some selection from these notices, some discrimination of these events. It is not enough, that a man should recite to us with fidelity, things which in themselves are entirely puerile and inconsequential. We do not call such a blubber an historian. But History must be instructive; it must tend to make us wiser, or better; it must teach us the road to power, to happiness, to duty; and it must therefore select, among numberless occurrences, those which are of sufficient interest to claim our attention, of sufficient importance to enlarge our judgment. Hence it is necessary, before we proceed in the consideration of our subject, to lay down the definition which we consider properly to belong to History as a study. Without a previous understanding of the terms to be employed in any discussion, it is impossible to bring it to any useful and profitable close: and the accuracy of all reasoning through the medium of language absolutely depends, in its very outset, on the definition of the subject under consideration.

Definition. We define History, then, to be "The narration of real events, intended for the instruction and amusement of mankind." This definition, it will be observed, consists of two parts, the one relating to the *substance* of History, the other to its *end*. In point of substance, nothing is truly and properly historical, which does not communicate a narrative of events, that have actually occurred. Narratives of imaginary events, professedly delivered as such, are called *fable*; and when these are intentionally or unintentionally mixed with actual occurrences, the combination is properly called *Fabulous History*; the distinguishing of which spurious sort from the genuine, is no mean object of the philosophical study of History. The end of History is double—utility and pleasure: the former is doubtless the more important, but the latter is the more captivating. They cannot, however, be properly separated. The mere gratification of an idle curiosity, or the cold enforcement of an oninteresting moral, is alike beneath the dignity of an historian: neither can great moral good come unattended with delight; nor can pure and refined pleasures be communicated without elevating and improving the mind.

Distinctions. A just definition of any subject will, of itself, indicate the great leading *distinctions* of that subject; and since we define History to be a narration, it will follow that all our distinctions must refer either to the narrator, to the events narrated, or to the manner of narration.

Sacred and Profane. The first, most obvious, and most important distinction, is into History *Sacred* and *Profane*. This is a distinction depending on the character of the narrator. Sacred History, properly so called, differs from mere Ecclesiastical History, inasmuch as it does not simply record what has happened, in the dispensations of Divine Providence, to the church; but it delivers these and other important truths, from an authority not to be questioned. If the grounds of this distinction be disputed, it belongs to the domain of science, or of faith, or of both, to settle that dispute. We enter not here into such a contest. We assume the existence of the Deity, and the revelation of his will; and these positions being admitted, it must follow that the events delivered by inspired writers, in order to unfold to us more or less plainly the mysteries of the divine dispensations, must stand on a very different and a far higher footing, than any facts resting on mere human authority. What rules and canons there are for the exposition of Sacred History; what are its peculiar characteristics; how far its belief is matter of reason, and how far matter of faith; whether there be any degrees of credibility in it,

and what they are; and in short, all the peculiar questions relative to this, as a distinct branch of History, we leave to a future essay: the remainder of our present observations will be understood to refer to History, merely as derived from human authority. In profano, as well as in Sacred History, it is clear, that the character of the narrator is a most material consideration; but it affords no line of distinction sufficiently broad to serve as the ground-work of any plain intelligible classification.

From the difference of narrators, then, we come to the difference of the events narrated: and here there is a large and extensive field for distinctions. In the first place, History may be universal; or at least, the name of *Universal History* may be and is commonly applied to works which profess to deliver a comprehensive view of all the affairs which have been transacted in the world. Of histories of this sort, it is to be observed, that they can be universal only in name. They are in reality epitomes, or abridgements, of more particular works. It would be as impossible to record all events, as it would be to travel through all space, or to exist in all time. Omniscience alone could comprehend, Omnipotence alone could record such a History. Those general views and slight outlines of what has occurred to the successive races of man are nevertheless useful, in aiding us to arrange and classify our historical knowledge: they are serviceable too as works of reference: but the subject is so vast that it cannot well be brought at once within the grasp of the human intellect; and is not fitted for the finest displays of historical talent. Accordingly few men of great genius have embarked in so vast and hopeless an undertaking: and of those who have done so, the works have in general broken off abruptly, and left a great part of the task untouched, as is the case with the History of the World by the celebrated SIR WALTER RALEIGH.

History, then, to be well written, must of necessity be less comprehensive in its object. Hence particular histories are opposed to universal: and that particularity is again distinguishable into different classes, according as it refers to the limits of *time* or *place* within which the events occurred; to the nature of the *actions* recorded; or to the *persons* by whom those actions were performed.

Time, simply considered, would seem to afford no very eligible distinction for History. One Thousand years, one year, or one day, has no claim in itself to notice, more than any other like portion of time; nor do the events of History demand our attention at all in the proportion of their duration. Nevertheless there are certain portions of time, which have generally been regarded as fit to form the basis of a classification in History. Thus, we have the great distinction of *Ancient* and *Modern* History, which commonly dates from A. D. 467, when the Roman Empire in the West was terminated by the deposition of Augustulus. This distinction, however, is rather literary, than moral, or philosophical; it has nothing to do with the great events from which the Christian and Mahometan world respectively reckon: and it is unknown to those whose historical information is derived only from Arabic, Persian, Indian, or Chinese sources. There are certain ages, which the civilized part of mankind has, with justice, considered to be more, and others less deserving of attention. Thus we speak currently of the dark ages; of the Augustan age; the age of Chivalry, &c.; but these distinctions do not so properly belong to the consideration of time, as of the nature of the events which then occurred. Histories were originally distinguished by the time to which they referred, rather from the ignorance of their compilers, than for any other reason: hence the title of *Chronicles* and *Annals*; which subsequent writers have since adopted, in some measure from modesty, as indicating that either from want of leisure or ability, they had not ventured to attempt a more artificial arrangement. It is in this view, that Tacitus seems to have distinguished his *Annals* from his *History*: the former being written in strict chronological order; the latter having more regard to the connection of the events with each other as cause and effect. It is sometimes convenient to record and give publicity to events soon after their occurrence, either for the speedy gratification of curiosity, or for the perpetuation of testimony which might otherwise perish. Hence our *Annual Registers*, private *Diaries*, and public *Journals*; and all these

History are to be regarded rather as affording materials to the future historian, than as the work on which a great genius should found his claims to celebrity.

Place.

Place presents such a circumscription of narrative, as easily falls in with the natural feelings of mankind. Thus the History of England, or of France, or even the History of Cumberland, or of Dauphiny, carries on the face of it some importance and some interest. The reason of this difference between time and place is, that the individuals of the human race are grouped and collected together in masses, more with reference to the latter than to the former. Time flows on with an equal and undistinguishing current, to all the inhabitants of the earth; and the mere circumstance of their being contemporaries does not necessarily unite them, nor give them any common principles of action: whereas, those who are of the same vicinage, are ordinarily governed by the same laws, descended from the same ancestors, speaking the same language; they are as a household together, they feel as brethren; and the love of their natal soil is like the love of a common parent, identifying their desires, their affections, their prejudices, and their interests. There is, however, a medium in the choice of historical subjects, according to the limitation of space; and that medium is determined by the circumstances of the age to which the History refers. The History of Modern Europe has much less unity of view than the History of England; but it has much more than the History of Ancient Europe: because in modern times the nations of Europe, not only have a more intimate knowledge of each other, and more constant intercourse; but they have adopted so many common principles, and habits and customs, and even laws; they proceed so much in the same track, and toward the same end; that they form, in some sort, one community. The time may come, when a History of Europe shall present quite as much unity of plan as the History of England does now; and in that case it must as much excel the English History in interest and importance, as the English History now does a History of Cumberland or of Cornwall.

Time and place, however, are in themselves but secondary links in the association of events: the quality of the *actions* recorded, the characters of the *persons* commemorated:—these are the true and primary sources of interest to the mind of man. *Polybius* congratulated himself on the subject of his work, which was a certain portion of the Roman History, not because it related to such an extent of territory, or spread over such a number of years; but because it traced the growth and spread of a memorable nation, and illustrated the consequences of a wise and persevering policy, of great courage, and of great virtue. Long after him, *Livy* declared it to be his wish to show with what life and morals, by what men and arts, at home and abroad, Rome had gained and extended her vast dominion; and then to trace discipline relaxing and morals decaying, till from a gradual deterioration, they seemed to rush precipitately to ruin; until Rome had at length reached a period when she could neither bear her vices nor their remedies. Actions, then, and persons, as they are at all times the principal sources of interest; so they often become, without particular reference to their duration, or the local scene of the events, the avowed subjects of the writer's narration.

Actions.

Human *Actions* of the same nature and quality may be taken more or less strictly as descriptive of particular *Historiës*. In the most general sense, we speak of Civil History, Ecclesiastical History, Military History, Literary History, Financial History, and the like; when civil, ecclesiastical, military, literary, financial, or other affairs, form the exclusive or principal topics treated of. This is sometimes the more judgment of the reader on the author's work; sometimes the writer avows his exclusive object in his very title, as in Brucker's *Institutions of the History of Philosophy*, Mosheim's *Ecclesiastical History*, &c. We often find more limited, but still extensive views of what has been done by particular nations or bodies of men in any one pursuit; as Tiraboschi's *History of Italian Literature*, Warton's *History of English Poetry*, Sprat's *History of the Royal Society*. Again, we may take some longer or shorter course of events leading to one common end; such as the Decline and Fall of the Roman Empire, the Reformation of Religion, &c. Lastly, certain particular occurrences,

such as the Peloponnesian War, the Expedition of Alexander, the League of Cambray, the Council of Trent, Sacheverel's Trial, or Captain Cooke's Voyage round the World, may be treated separately and distinctly from all other occurrences. History.

If the attention of mankind is strongly drawn to the contemplation of great actions, it is *Persons*, perhaps still more forcibly attracted to that of remarkable *persons*. There is no object so interesting to man as man. There is no glass in which we can so well dress our maral nature. There is nothing that so fully enables us to obey the famous oracle, *γρῦσι ἑαυτοῖς*. There are no such effectual means to stir up our latent powers; to kindle passions unknown even to ourselves; and to impel us to act by showing us that we possess the means of action. If Cæsar wept before the statue of ALEXANDER; if Burns felt the enthusiasm of a patriot possess his whole soul in perusing the valiant deeds of WILLIAM WALLACE; if the benevolence of the catholic has been kindled by the example of St. VINCENT DE PAULE; if the British sailor will for ages to come feel his heart beat at the name of NELSON;—all this, and a thousand times more, is owing to that most fascinating species of History which is called Biography. Of Biography there is again a sub-division, called *Auto-Biography*; which is, when a man takes himself for his hero, or wishes to make all the world the confidants of his secrets. Works of this kind are often very amusing. They are bought, and read: but few people believe them. We are all sensible how partial we are to ourselves. We all know, that our personal enemies, who pass for very good sort of men in the world, appear in our eyes to be monsters; and that, according to the trivial proverb, all our own geese are swans. We know, that even our humility is too often a piece of gross self-deception, and that we accuse ourselves of all the virtues, under the pretence of showing how much worse we think of ourselves than we really deserve. Of the most celebrated work of this kind, the Confessions of *Jean Jacques Rousseau*, has been justly observed, that "there is more vanity concentrated in its ten first lines than in the whole contents of any other book in the world." The defence of a man's character, from unjust aspersions, has been urged as a reasonable motive for auto-biography: and this may indeed account for a man's explaining some particular transactions of his life, in which he is the sole depository of the principal proofs; but it can rarely justify his delineating himself from the cradle, and entertaining the world with a long series of narratives, one half of which they will probably care nothing about, and the other half they will totally disbelieve. Generally speaking, if a man is so unfortunate as to find no historian but himself, to do justice to his character, it is because his character is a matter of very little consequence. The world has certainly lost a great deal, in not possessing a good biography of Shakspeare; but if the great poet had himself attempted to fill up the chasm, he would have dissolved the spell which now makes us doubly admire his genius, in consequence of his magnanimous disregard of future fame. It is not that great men do not wish to be known to after ages: Milton has well said—

"Fame is the spur that the clear spirit doth raise;
That last infirmity of noble minds."

But it is an infirmity which we should be as little proud of displaying as we are of exhibiting the traces of any hereditary disease. Biography of this kind, too, has another defect. It can rarely be made the centre of a general History of the times in which the individual lived, or even of the great events in which he was engaged. His knowledge of the one must have been too limited, and his views of the other too partial. We shall have the portrait of the general instead of the plan of the battle: and understand as little of the course of affairs, as a courtier who accompanies his sovereign in a state coach knows of the domestic economy of the cottages a mile distant from the road.

History admits of a still different classification, according to the manner of narrating events; and Mode of narration. thus, whether we regard the plan of the work, or the spirit of its execution.

The plan of the work may have more or less of comprehension, more or less of unity. By com- Compre- hension. prehension, we mean the extent of its compass, either as to time, place, action, or person: thus we

History. call the Life of Philip of Macedon, or of Scipio, a more comprehensive work than that of Castruccio Castracani: and indeed Machiavelli, the author of the latter work, himself confesses as much; for he says of his hero, that he would have equalled or perhaps excelled either of those great men, if instead of Lucca, he had had for his birth-place Macedonia or Rome. In like manner, we say that the History of the Negotiations of Utrecht is more comprehensive than that of the festivities of the Field of Gold; the Account of the European Settlements in America, than the History and Antiquities of Cambridge; and Millot's General History, than Dodsley's Annual Register. Some of the narrower subjects of the historical pencil are executed with all the delicacy of cabinet pictures; but still the greater efforts of genius are those which unite breadth of colouring with grandeur of outline. There is however a due medium to be observed in this respect: we must fill the mind without overpowering it. Biography has here a great advantage. The subject can never be too vast; for wide as are the actual diversities of intellect and disposition among men, all who can reason at all are capable of embracing the whole of a human character, as well as any part of it; and the interest which they feel is the stronger the more accurately a character is developed, with all its beauties and deformities.

Unity. *Unity of conception* is a mark either of original genius, or of cultivated taste. The ignorant and inexperienced in all arts proceed without system or design, and heap together parts, without any reference to a whole: so it is in rude and imperfect Histories. The author sets out without any definite object in view, and travels through a wilderness of facts, without judgment to direct him in their selection. When we come to the end of his work, we find neither the amusement nor the instruction at all in proportion to the labour: the memory is burdened with much dull and much useless matter; and the task of selection and arrangement, which is among the first duties of an author, is thrown wholly upon the reader, who has seldom leisure or ability for its performance: that may be called a *perfect History*, which has one clear and distinct object, and places that object clearly and distinctly before the view of the reader. Some authors, undertaking to write the History of a given period or country, have arranged its different portions according to the different subjects, which they thought it convenient to treat separately; thus, Dr. Henry's History of Great Britain is divided into sections, each of which relates to one great branch of public affairs, civil, military, literary, &c.; but this method is rather a combination of two discordant modes of classification, than a desirable plan in itself: it is a collection of separate Histories, awkwardly and inconveniently intermingled, for no reason but because they happen to be written by the same author. When the unity of object is thus destroyed, there is no leading idea, no key-note, as it were, to the whole composition; and the length of the work not only excuses an occasional doze, but of necessity deadens and puts to sleep all power of attention.

Spirit of the execution. Next to the plan of the work, we have to regard the *spirit of the execution*: and it is here principally that we find the personal disposition and character of the writer conspicuous. The spirit in which the work is executed may, for the purposes of the present essay, be considered as of three kinds; the *poetical*, the *philosophical*, and the purely *historical*. The excess of the poetical spirit would lead to mere fable; but it is an error to suppose that an historian should be destitute of many of those powers which characterize the poet. In point of fact it is only by means of the imagination that we can comprehend any scene or action whatever, of which we are not eye witnesses. Nay, of that which we see passing before us, it is the power of imagination, which renders the impression vivid, distinct, and permanent. Let us only call to mind the passages which have struck us most forcibly in History, and we shall commonly find, that if they do not contain long and studied descriptions, yet even a single expression serves to paint the scene, and to show that the author contemplated it, in his mind's eye, as passing before him. Tacitus is not commonly considered to be a poetical writer; and indeed his genius is rather philosophical; but yet the remark which we have just made, may be illustrated by numerous passages in his writings. Thus, after describing at some length the affected modesty of Tiberius, in

Poetical.

pretending to decline the empire when offered to him by the senate, the historian proceeds thus: "Whilst the senators were descending to the lowest entreaties, Tiberius happened to say, that though he was unequal to the government of the whole state, he would undertake the direction of any part that might be committed to his charge. 'I ask you, then, Cæsar,' said Asinius Gallus, 'what part of the state you wish to have entrusted to you?' Struck with the sudden question, he was for a moment silent; but presently recollecting himself, he answered, 'That it would not agree with his sense of decorum, to choose or reject any particular part, when he wished to be excused from the whole.' Thereupon Gallus, *who saw, by the looks of Tiberius, how much he was offended*, immediately replied, 'That he did not ask this question, with any view of separating what it was impossible to divide; but in order to prove, by the confession of Tiberius himself, that as the body of the state was one, so by one mind alone it should be governed.'" History. In this short narrative, the expression "*cultu offensionem conjectaverat*" is sufficient to give a life and movement to the scene; it produces in the reading an effect quite dramatic; it opens to us at once all the hypocrisy passing in the mind of Tiberius, and all the servility in that of Gallus; and thus incontestably proves that the author possessed that strong power of "bodying forth the forms of things unknown," which is the distinctive faculty of the poet. It is by appealing to the imagination, that History becomes amusing; but that amusement ought to be, and by virtuous writers is, always made the means of elevating or purifying the mind. To great moral truths in action belong great force and beauty of description. This is a want felt by the most common reader; for who could bear to see the death of Nelson recorded as an every-day event; or to be simply told that on the 18th of June, 1815, a great battle was fought, near a place called Waterloo, in which the united English and Prussians gained the day? Hence a superiority, or defect, in the imagination forms one of the most obvious and popular distinctions between historians. No man hesitates any more to prefer Froissart to Monstrelet, than he does Chaucer to Gower and Lidgate.

Opposed in some sort to the poetical spirit, is the *philosophical*. The one looks first upon the visible forms, the other upon the abstract laws of existence: the one is apt to be warmed and transported into the regions of mere imagination; the other, to fall down into the cold and blank speculations of a cheerless metaphysic. In old times the former was the more prevalent fault: in our age it is the latter. The great abuse which has resulted from it, has been the invention of what is called the *spirit of History*, a species of writing which we owe principally to VOLTAIRE. In general, it ought rather to be called History deprived of its spirit, as well as of its truth; for as the principal aim of authors who have written in this line, has been to recommend some philosophical opinions, and as those opinions have for the most part been drawn from a false philosophy, facts have generally been strained, often invented, to suit the preconceived theory; and even these distorted facts have occupied a smaller part of the work than the reasonings, commonly futile and superficial, which they have been cited to illustrate. But, in the composition of History, we ought no more to reject the philosophical spirit, because it has been misemployed by such shallow writers as Voltaire, than we should reprobate the poetical spirit, because it seems to have disposed Milton and Buchanan to accept as truth the legends of the early English and Scottish History. Philosophy is nothing more than an attempt to trace the relation of cause and effect; to discern in particular actions the operation of general principles: to perceive the one in the many, and thence to foresee the many from the one. Philosophy is the root, as Poetry is the flower: one works in darkness and difficulty, the other expands in beauty, and splendour, and light. We conceive, that a philosophical spirit should above all things prevail in the choice of a subject for History. A writer should not record circumstances that have happened, merely because they have happened, but because they are of some magnitude and importance; because some inference is to be drawn from them, which may increase the happiness, or enlarge the power of man. Vice should be portrayed to be shunned: virtue to be loved, and courted and cultivated. Throughout the conduct of the narrative, the philosophical writer will never

History. forget his moral. If his mind be turned too much to reflection, he will, in the common phrase, become a sermoniser. He will interrupt the current of his reader's thoughts, to make remarks which the facts themselves sufficiently suggest. If he be too deeply imbued with his opinions, they will render him even involuntarily a falsifier of facts, which, viewing them with a jaundiced eye, he must of necessity exaggerate and misrepresent. Again, there is a class of philosophical writers who are so, not from the impulse of natural disposition, but to exhibit their talents in common-place remark, in a declamatory style, or a superfluity of antithesis and epigrammatic point. Of this class is Sallust. Quintilian, a man of no great genius himself, supposes that Livy was jealous of Sallust, whom he accused of disfiguring and weakening the thoughts of the Greek writers. Quintilian thinks it sufficient to reply that Sallust expressed those thoughts in fewer words;—which is the answer of a pedant. Sallust was a man of notorious vices, and yet affected to write like Cato the censor; he was a parasite of Cesar's, and yet assumed the tone of a stern republican; no wonder that the philosophical spirit of his *History* is strained and formal, when the man himself was a hypocrite. Very different was the case of Tacitus. He was a virtuous man who, almost from his infancy, was brought up in the contemplation and abhorrence of every thing base and odious under the imperial despotism; and who, in his more advanced age, considered those as times of a rare felicity, when he could think as he pleased, and speak as he thought. Under the reigns of Nerva and Trajan he gave a loose, in his historical writings, to that indignation, with which his mind had been so deeply filled by the horrors of the court of Nero, the ignominy of Galba, the sensuality of Vitellius, and the rapine of Otho. He no doubt paints human nature in too gloomy colours; and seems, as an historian, to dwell with pleasure on the dark side of the picture: and it is worthy of remark, that though in his *Essay on the Manners of the Germans*, he describes a whole nation in a more favourable point of view, this picture is evidently in a great degree imaginary, and intended to confirm his own theory of the corruptions of Rome.

Purely historical.

The *purely historical spirit* ought doubtless to predominate in the writing of *History*; but it is not sufficient to form an historian. Many an old chronicler has recorded with the most scrupulous fidelity the occurrences of his age; and has even displayed a zeal in collecting information, and a pride in communicating it, which are in themselves highly laudable: but these works have not merited the title of *History*, because they have neither been calculated for entertainment, nor for instruction. The love of truth, as truth, is the first duty of the historian; but it is not his whole duty. In laying before us the occurrences of past times, he must animate and excite our feelings by powerful description; he must exercise our habits of reflection by appropriate remarks on the causes and consequences of the events related. The only rule that can be laid down, on this point, is that the historian should rather be guided by his subject, than force it to the display of his own peculiar talents, whether of imagination or of judgment. THUCYDIDES appears to have been framed by nature to a careful and laborious investigation of facts. He complains, with justice, in the outset of his work, "that the search after truth was considered by many people as an intolerable labour; and that they therefore too often took up with such accounts as were at hand, merely to save themselves trouble." His *History* is therefore remarkable for the plainness, clearness, and apparent fidelity of his statements. Nevertheless he is by no means disinclined to make such remarks as the events which he is relating naturally suggest; of which a striking example is afforded by the celebrated description of the plague at Athens; and of the moral evils which were the result of that dreadful malady. In like manner, LIVY is universally acknowledged to be an unaffected narrator of occurrences, without any other apparent view than that of placing them fairly before his reader: yet the natural liveliness of his genius induces him often to give such reins to his imagination, that his narratives are perfect pictures; of which the celebrated account of the Roman army passing under the yoke, at the Caudine forks, is a memorable example.

Other class
succinct.

We have thought it advisable thus to present to our readers a classification of our own, in

which we make a threefold distinction of History, according to the narrator, to the events narrated, and to the narration. It is right, however, to observe, that other writers adopt other plans of classification: and in particular, Lord Bacon, the great classifier of knowledge in modern times, has given the following:—he first distinguishes History into Natural and Civil. Natural History he considers, first, *ex statu*, and, secondly, *ex usu*. Under the head of *status* he arranges Generations, Prætergenerations, and Arts; and Generations he divides into those of, 1st, the heavens; 2d, the airy regions; 3d, the land and sea; 4th, the elements; and 5th the species of animals and plants. No part of this falls within the modern or proper use of the word History.

Civil History, according to him, includes the *Literary*, *Civil* (properly so called), and *Sacred History*. Of literary History he says, that some particular parts had been touched in a jejune manner by lawyers, mathematicians, philosophers, and others; but that a general literary History was in his time a desideratum. He therefore proceeds to state its substance, the mode of forming it, and its use when formed. He considers that it should include an account of the origin, progress, migration, oblivion, and revival of learning and the arts; the mode of teaching and practising them; their sects and controversies; their encouragements and persecutions; the principal books, authors, schools, and colleges. On the mode and use, he makes some judicious observations; and then proceeds to civil History, properly so called, in which, after touching generally on its dignity, difficulty, and principal defects, he proceeds to classify its productions; first, according to their degree of perfection; the imperfect being memoirs and epitomes; the decayed being antiquities, and fragments of old writers; and the perfect histories being those of times, persons, or actions. Those of times he distinguishes: first, into universal and particular; and, secondly, into annals and diaries. A second classification of civil History, according to him, is into mere History and mixt; of mixtures he notices especially two,—the mixture of History with civil philosophy, and with natural philosophy. Sacred or ecclesiastical History, he says, agrees with civil, in being distinguished into that of times, persons, and actions: and it is besides divided, according as it relates to the affairs of the church, in its advance, establishment, or persecutions; or to prophecies; or to divine judgments. Lastly, this author enumerates, as appendages to History, orations, epistles, and memorable sayings of individuals.

It is for our readers to determine, whether these distinctions of Lord Bacon's are, upon the whole, of sufficient practical utility, to be adopted with profit by the writer, or student, of History. To us, we frankly confess, they appear involved in that confusion, which pervades some other attempts of this celebrated man, to introduce a new order into the prevalent modes of education and study. He sets out from no clear definition, connecting his two great branches, natural and civil History. He acknowledges that the one relates entirely to species, the other to individuals; but of species there can be no narration; because a species being an idea of the mind, its contemplation belongs to philosophy, and not to History, at least in the modern and strict sense of the latter word. We say nothing of the distinction of generations, prætergenerations, and arts; or of the classes of generations; which in the present state of physical science are perfectly untenable. It is more immediately relevant to our present subject to observe, that the term *civil* seems strangely applied to include sacred History; and that the great distinction of *sacred* and *profane*, together with the reason on which it is founded, is in consequence entirely taken away.

Other writers have called historical books, rather than historical studies. Of that very useful branch of the subject, we shall find occasion to speak hereafter; for the present, we shall merely add, that we have purposely exemplified what was necessary to be said on the distinctions of History, by occasional references to particular authors, for two reasons: first, to avoid the dryness of mere technical enumeration: and, secondly, to afford at once a test of the accuracy of our classification, by an appeal to the common feelings of mankind.

The essential qualities of History next demand our attention; and these also are to be deduced

Historia.
qualities.

History. from our definition. Since History is a narrative of real events, its first essential quality is *truth* ; and since it is intended to instruct and to amuse, its other essentials are, *utility* and *pleasure*. From a happy combination of all these will arise that dignity, which belongs to History in the rank of human studies.

Truth. "History," says Cicero, "is the light of *truth* ;" a noble expression, and one which reflects honour on the pure and upright mind of its author. On the clearness and steadiness of this light depends its whole value, in guiding us through the obscure and difficult passages of life. We can reason but from what we know : and without truth, our fancied knowledge is worse than that ignorance of which we are aware, and which at least does not inspire us with a fatal confidence. It is manifest then, that an untrue History is no History at all, but a fable, so much the more pernicious because it assumes the garb of truth. The historian who misleads his readers violates this first duty towards them. If he does it through carelessness and negligence, he is censurable in no light degree ; but if he does it wilfully, he is a base and infamous impostor. Yet in human works we must not expect perfection. The truth of History derived from mere human authority must be imperfect. It is an impression difficult to shake off, in the reading of History, that we are perusing an exact account of events as they really happened, without exaggeration or diminution, without suppression or addition. A little reflection, however, will teach us that this can never be the case in a narrative of any length. Where is the impartial mind, untinctured by prejudice, which can see every fact in its true light ? Where is the powerful grasp of knowledge which can embrace all the long and complicated details that go to the making up every action of importance ? To every human mind, some infirmity of passion or prejudice must cling : from all human knowledge some large deductions are to be made for the absolute impossibility of correcting error. Hence some writers have foolishly inferred that there is no truth in History ; or at least that its truth is greatly outweighed by its falsehood ; that it is rather a source of error than of knowledge ; and that there is no resource to the student but in a general scepticism. This practical absurdity is the necessary result of a philosophy aiming at more than it can accomplish. The abstract nature of truth is first delineated in just and pleasing colours, and then the abstraction is substituted for the reality : we are taught to expect what we can never obtain ; and in our disappointment, like children deprived of the toys which they eagerly covet, we foolishly reject or undervalue the advantages in our power. This fault pervades the lectures on History, delivered by M. VOLNEY, some years ago, in Paris. He sets out with an error in ranking History and natural philosophy alike among the sciences ; and then, because the evidence of History is clearly different from that of natural philosophy, he infers that History is of far less importance, and of far less social and practical utility, than it had ever before been considered. Ancient writers would not have fallen into this error : they all term History an *art*, and not a *science* : and they would as little have thought of confounding the operations of the mind in matters of science, with those which relate to historical testimony, as of treating politics like a question of abstract reasoning, according to the method of Jean Jacques Rousseau. The truth of History is like the truth established on legal trials. It may not be positive, but, with due care, it is sufficient to enlighten the conscience, and to guide the conduct. How weakly would he argue, who should contend, that because judges and juries sometimes err, witnesses sometimes deceive, the innocent sometimes suffer, and the guilty sometimes escape ; therefore the administration of the law is altogether an evil, and society would do better without it ! Just as weak are the arguments directed against the utility of History, because its evidence is sometimes fallible. This is nothing more than the old sophistical form of argument, from the abuse of a thing, against its use. It is the general common-place of all those declamations against governments, and society in general, with which the disaffected and factious, in modern times, have sought to bring about revolutions, and to subvert all established order.

Utility. The next essential quality of History is *utility*. Vain is the difference between truth and fable, if no advantage be derivable from either ; and a fable, an apologue, a parable, professedly the work of

imagination, is far more valuable, if it inculcate sound doctrine and virtuous sentiment, than a whole volume of History, unmeaning in itself, or written with views pernicious to mankind. The foundation of the utility of History is to be found in the common adage—"Example is better than precept;" an adage which has been somewhat varied in expression by the best classical writers, but which, in the common proverbial form, possesses as much force as truth. "*Pauci prudentiâ*," says TACITUS, "*honestâ ab deterioribus, utilitâ ab noxiis discernunt; plures aliorum eventis docentur*." SENECA says, "*longum iter per præcepta, brevè et efficax per exempla*." It is true, that fable agrees with History in presenting instruction in the form of example; but the latter possesses the great and invaluable superiority which arises from the belief of reality. Hence it is more philosophical. "History," says DIONYSIUS of Halicarnassus, "is philosophy teaching by example." But the question immediately presents itself, what is the philosophy that History should teach? what is the utility which ought to be its main and principal object? The answer is as ready as the question:—virtue, the moral improvement of man, his duties here, and the means which fit him for happiness hereafter: these form not indeed the sole, but certainly the first and highest aims which both the writer and reader of History should have in view. In this sense, CICERO calls History "The mistress of life;" and TACITUS says, "It is the peculiar office of the annalist to take care that virtue be not passed over in silence: and that men may fear to do or speak evil, from the infamy which may await them in the opinion of posterity." One instance from History of amiable virtue, or of despicable vice, has often done more than a whole course of ethics, to recommend the former, and discountenance the latter. Has not the continence of *Scipio* become proverbial? And is not a *Nero* the very synonyme of a tyrant? To improve us in virtue, though the first and highest, is not the only use of History: it also serves to form and strengthen the intellect; it opens to our view the nature of the great scene in which we are called to act a part. It wonderfully multiplies the objects of our thoughts; and, as it were, forces us to the task of comparing them together, and reducing them to order and arrangement. Hence the penetration is sharpened, the attention is fixed, the judgment is strengthened; the mind habituates itself to the divine faculty of "looking before and after;" it acquires the habit of turning itself about more quickly, discovering expedients and solving difficulties; it is not taken unawares by the shafts of fortune, does not cry out upon chance, or come (as Cicero says) to that foolish exclamation, "Who would have thought it!" but meets, unabashed, the storm which has fallen on nobler heads, and submits, at once with dignity and humility, to the will of Providence. Hence, "the study of History," says Polybius, "is the best school in which a man can learn how to conduct himself in all the situations of life." It is certainly most useful to those who are destined to act a part on the widest theatre: and it forms an indispensable branch of education to the legislator and the statesman; but above all, must it be useful to nations and communities of men, which would cease to exist, if we were ephemeral creatures like the "flies of a summer," or only gregarious for common purposes of spoil and rapine, like the wolves which are driven down from the Alps in winter by the pinchings of hunger, and flee back in the spring, each to his solitude among the mountains. But nations cannot be perpetuated, otherwise than by maintaining certain institutions, and following certain principles and examples; for though there is nothing ever at a stand still in human affairs, and every new age brings new discoveries and opinions, and wants and desires; yet if there be not preserved a constant memory of what has gone before, and a sort of deference and veneration for antiquity, the chain of national identity will soon be broken: and with the body and form of what we once were, will perish the national spirit. Hence it is, that in the words of our great philosophic dramatist,

"Mighty states, characterless, are grates
To dusty nothing."

History tends to prevent these perpetual dissolutions of human society, not only by tracing the salutary principles of our own conservation, but by showing us the fatal accidents which have undermined or

History. broken up the social edifice, in other ages and parts of the world: for it is History, which, as Sir Walter Raleigh says, "has carried our knowledge over the vast and devouring space of so many thousands of years." By it we behold the world, as it was first created, inhabited, governed, deluged, re-peopled: we see how kings and kingdoms have flourished and have fallen; we see virtues and vices producing their natural fruits; we live with our ancestors, and connect age with age, in one unbroken succession; and, in fine, we are enabled to frame a wise and permanent policy, by calculating the consequences of past actions, if we will not be dazzled by a single light, but compare the various passages of History with each other.

It has sometimes been questioned whether Histories of recent events, or those of the transactions of distant ages, are of the greater importance; but this, like many other questions of the like nature, is the mere amusement of an idle mind. If it were asked whether it be more useful to read Livy's History of Rome, or some obscure annalist of the reign of George the Third, nobody would hesitate to prefer the more ancient; and, on the contrary, Southey's life of Nelson must indisputably rank higher in point of utility to an English reader, and especially to an English seaman, than any life in Cornelius Nepos, though the latter was a writer of no mean ability. "Every difference in manners, in civilization, and in government," it is said, "increases the difficulty of making any application of the facts." This is not so, because the application to be made may not at all depend on the difference in question. What has the difference of government between Rome and England to do with the beautiful anecdote of the Roman matron presenting her children to her female friend, and saying, "These are my jewels?" Does any general of modern times despise the example of Fabius Cunctator, because the state of manners and civilization is now vastly different from what it was when that great man saved his country by well-timed delay? The error of the observation above noticed is the common error of all modern philosophy, which regards facts as mere insulated things, aliquot parts of human existence, all equal in weight and dignity; whereas they should be tried, not *numero*, but *pondere*: the piece should be essayed and valued, not by its magnitude, but by the richness of its metal. If we merely apply facts to facts, there can be no use in History whatever; for in no two portions of History can we find facts alike in all their extrinsic circumstances; and again, if we take a fact nakedly, without inquiry into its causes, it is altogether insignificant. Curtius devoting himself to death for the preservation of his country, is merely a young gentleman leaping into a ditch: and the Gaul casting iron into the scale, with the insolent exclamation, *ea victus*, is only the gross cheat of a tricking luckster. Viewed in this light, the reader has no direct personal concern with the facts of which he reads; "What's Hecuba to him, or he to Hecuba?"—but he *is* interested in the feelings, the sentiments, the principles, on which alone the application of historical facts depends. He feels himself exalted to a manly contempt of pain and torture, when he reads the story of Regulus: and if he passes from that to the death of Nero, he derives from the contrast an increased power of estimating the vast distance between infamy and honour. The differences in manners, in civilization, and in government, are doubtless to be taken into the account in estimating the action; they are part of it; but when we have made the estimate, when we have ascertained what was extrinsic to the agent, and what was to be attributed to his intellectual and moral energy, then the result is a matter of permanent and practical utility, whether it happened yesterday, or two thousand years ago. It was a fine expression of AURELIUS PISCUS, who, in describing the lamentable execution of Cicero through the wicked machinations of Mark Antony, thus apostrophized the former, "*uno proscriptus seculo, proscriptus Antonium omnibus.*" In short, the utility of History depends, not on loading the memory with facts, but on filling the mind with principles. The art is to discriminate the general principle in the particular fact. All men can do this roughly and in the gross; but he alone who has well studied a multiplicity of cases, can determine on the various shades of principle which distinguish practical virtues and vices; which enable us to make our way through temptations, and to rise proudly above opposing obstacles.

It is an idle dispute, whether a knowledge of History, or an experience in the ways of the world, be the most effectual means of teaching us how to act with our fellow-men. Both are necessary; but study naturally precedes practice, and fits us for it. It serves to form the judgment and the heart. It accustoms the mind to expansion, and prepares it for temptation and struggle. In the study of History too we see the picture at full length, the whole succession of cause and effect is traced, the false colouring is washed off; the impostor of the day becomes the convict of posterity, and he who was blamed and calumniated while living, is embalmed after death in the regrets, the admiration, the love of mankind.

It may be said, that History does not always work these wonders. True: Neither have the sweet enticements of poetry, nor the unanswerable arguments of philosophy, nor even the splendid promises and terrible denunciations of religion, yet brought mankind to that happy state, for which, contemplating human nature in the abstract, we should say it is ultimately calculated. This then is no more an objection to the utility of History than of any other species of knowledge. It is a proof of human imperfection, and it is nothing else. But are there not some evident advantages which have resulted from the study of History in modern times? Has it not advanced civilization? Has it not perpetuated public virtue; as the images of their ancestors for so many ages kept alive the spirit of the Roman nobility? Has it not broken down many of the barriers which vanity and ignorance raised between nations? Has it not moderated ferocity in war; and barbarous customs, laws, and punishments in peace? Has it not enlightened superstition, allayed bigotry, and annihilated the most odious forms of religious intolerance; and may we not hope that, by recording the dreadful effects of pretended philosophy in modern times, it will totally eradicate the fatal madness of atheism? "To converse with historians," says a celebrated writer, "is to keep good company." Surely those who associate with Tacitus and Livy, with Thucydides and Xenophon, with Guicciardini and Davila, must be dull indeed if they do not derive from their companions something more than the entertainment of an idle hour.

But is it nothing, that History adds largely to the stock of our innocent pleasures? This it does, *Pleasure*. however mildly executed: this it has done in all stages of the progress of mankind. "*Historia*," says Cicero, "*quoquo modo scripta, delectat*." This was an early amusement. Achilles, in Homer, is introduced singing, to his harp, the glorious deeds of former heroes; and few nations are so uncultivated as not to possess some means of recording their deeds; none are so dull as to listen to those records without curiosity, without interest, without delight. The love of History is as inseparable from human nature as the love of fame. Hence the cairn, the Runie song, the knotted threads of the South American savage, and all those various means by which man has sought to connect himself with those of his own race who preceded, and with those who were to follow him. The chief interest of History has been said to arise from the vices and follies of mankind. This is by no means true. The source of the mistake probably originates in this; that curiosity, or the vague desire of knowledge, is one of the deepest rooted, as well as most useful and necessary, inclinations of the human mind. Hence we are led to devour, too often with an indiscriminating appetite, whatever is related to us in historical connection. We want to see the end of the story: and this, indifferently, whether it be a tale of woe or joy, of triumphant vice, or of virtue persecuted and depressed. But it cannot be said that mankind does not sympathize much more strongly with the virtuous than with the wicked: it is not true that we do not feel greater pleasure in reading those histories which present illustrious examples of patriotism, of generosity, and whatever else ennobles and exalts the human mind, than those which only abound in petty intrigues, and the various artifices of a low-minded selfishness and corruption. The decline and fall of a great empire is no less instructive, than its rise and growth; but it is surely not by any means so interesting: and though the mode of execution may do the writer credit; yet the choice of his subject rather testifies against his heart. Machiavel himself laments, that his subject necessarily abounded in examples of weakness and wickedness.

History. "Of these slothful principles," says he, in his introduction to the Florentine History, "and of these most vile arms, my History will be full." But in choosing for a subject the life of Castruccio, he rejoices "that he has found in it many things which, both as to virtue and as to fortune, are highly exemplary." Milot considers in History only two subjects, truth and utility; but why should we suppose that this is the only branch of literature to which the rule of the poet does not apply:

"Omne luli punctum, qul miscuit utile dulci."

Nature, or to speak more properly, the Author of nature, has not so ordered it, that all our duties should be separated from all our pleasures, nor that we should necessarily acquire knowledge only by dry and repulsive studies. On the contrary, Cicero has observed, that "in those very things which we learn and know, there are certain inviting qualities by which we are moved to learning and knowledge." Children and childish nations, indeed, are delighted with tales of fairies and giants: and Mandeville's fabulous relation of the marvellous things which he pretended to have met with in his travels, may have suited the gross ignorance of the times in which he lived: but his ridiculous fabrications would certainly not afford a hundredth part so much gratification in the perusal now, as the journal of the simplest circumnavigator of the globe. The solid and permanent pleasure of History, therefore, does not consist in strange events, in amplifications and exaggerations, but in the truth and beauty and grandeur of the sentiments and descriptions; in the simple and unaffected ease of the narrative, in the endless variety of particulars, all pressing as it were to one goal, all throwing light on each other, and all illustrating the subtle movements of the human heart, the influence of social principles and institutions, or the great designs and laws of Providence in the government of the world. The pleasures of History are indeed less sweet and fascinating than those of poetry; less ostentatious and striking than those of oratory; but they require as much the cultivation of the author, and deserve as much the approbation of the reader: more especially as the rule *artis est celare artem*, applies to them with peculiar aptitude. They ought to appear to result, as it were, necessarily from the events, never from the author, except in the sole, and as we think generally unfortunate case of autobiography. The orator is engaged in an attempt to subdue and carry away the mind of his hearer; and it is therefore allowable that the composition should bear traces of effort and exertion: the poet has chosen pleasure, as the first and principal object of his work: and is supposed to write under an inspiration made up of exalted feelings and lively impressions: but the only ostensible business of the historian is to convey to us a faithful record of that which has come to pass in the world, without bias or exaggeration, with lucid order, in a perspicuous style. The lower are his pretensions, in this respect, the more praiseworthy is his success, if he contrive to keep alive our interest, without flattering our passions, or perverting the truth.

Combina-
tions of
qualities.

This leads to the consideration, how truth, utility, and pleasure, are to be combined in History; and on this head there are but two rules: first, that as far as possible these qualities should all enter into the composition; and, secondly, that they should only enter into it in the rank and subordination here designated. The truth should be sacrificed to nothing: it should be sought most earnestly, and detailed most faithfully; it should be diligently sifted from error, and from mere opinion; it should be made out clearly and plainly, without favour or affection, like a testimony delivered under the solemnity of an oath before the tribunal of justice. Utility should not be taken as a test of truth; men should not think that the laws of truth can safely be dispensed with on any vain and foolish notion of contributing to the advantage of themselves or others. Pious frauds are insults to the Divinity: and frauds of an opposite kind, which some modern historians have committed to depreciate religion, are, if possible, greater offences against God and man. If the hope or pretence of doing good is not to be accepted as an apology for falsehood, it is needless to say, that History is not to be corrupted on lighter grounds;—for the sake of saying a witty thing, or telling a wonderful story; to amuse the thoughtless, and to astound the credulous. But as all truths are not worthy of record, there is abundant scope for judgment in the selection; and the choice can only be made with a view to profit or

to delight. Both are legitimate motives, and neither should be pursued alone. In this respect, however, the natural temper and disposition of the writers will unavoidably betray themselves: while the frivolous fill their narratives with amusing trifles, the dull and plodding will labour to enforce a doctrine which nobody will read: greater geniuses will certainly not fall into such gross errors; but one, like Tacitus, will see all events under a moral aspect; another, like Herodotus, will be attracted by every thing novel and interesting. Livy is perhaps, of all historians, the one who has most happily united instruction with entertainment; the former predominating, as it always should, in the choice of the subject, and in the general scope of the work; the latter enlivening its details, and not suffering the attention to flag.

Such a combination is a work of no less difficulty than dignity. It is difficult; for in the words of BACON, "To carry backward the mind in writing, and as it were, to make it old; diligently to investigate and faithfully to record, and by the light of language to place before our very eyes the movements of the times, the characters of persons, the hesitations of councils, the course and flow of actions, as of waters, the hollowness of pretences, the secrets of empire, is truly a work of great labour and judgment; especially when we consider the uncertainty of all ancient events, and the danger of meddling with those which are recent." Rare is the conjunction of assiduity and animation, of judgment with integrity, of taste with genius, which is necessary to subdue all these difficulties, and when the task is at all successfully executed, it raises History to a high rank among human studies. In vain has it been urged, that the many falsifications of History deprive it of all real dignity, and render it unworthy of the rank which it has generally held in the scale of education. This is one of the pretended discoveries of modern days; the result of that philosophy, which, in hunting after an abstract and imaginary perfection, overlooks all practical good. The great men of antiquity thought otherwise. Demosthenes is said to have copied the history of Thucydides eight times through with his own hand: and Plutarch tells us, that Cato the censor, who took upon himself a peculiar care in the education of his son, drew up a collection of historical facts for the boy's use, and wrote them over himself, in large characters; wishing, as he said, that his son, before going from home, might become acquainted with the great men of his own country, and form himself upon those ancient models of probity and virtue. Doubtless, the study of History will not supply the want of all other learning; nor is the student exempted from the necessity of exercising his own reason, in judging of the truth or utility of what he reads: and this reflection brings us to the next point to be considered, namely, the means of deriving from History those benefits which its essential qualities are calculated to produce.

The means of cultivating History to advantage, naturally divide themselves into two heads, ^{Means of} according as they relate to the art of composing History, or to the prosecution of its study; in other words, ^{cultivating} as they respect the writer, or the reader.

The art of writing History has been treated professedly, or incidentally, by a great number of ^{t. By the} authors. Of those who have made it their special object, no one has written with more liveliness ^{historians.} or felicity than LUCIAN, in his celebrated treatise, "How History ought to be written:" and among the incidental notices of History, in this point of view, few are more close and striking, than those which we find in MONTAIGNE. Our purpose, however, requires a more detailed consideration of this part of the subject: and we shall therefore consider, first, the character of the historian, and then, its aptitude to particular kinds of History.

The character of the historian, as such, refers either to the substance, or form of his work: in regard to the former, we may class our observations under the heads of personal qualification, means of knowledge, and motives to write; and, in regard to the latter, under those of arrangement and style.

Among the personal qualifications of the historian, the first place is undoubtedly due to his moral ^{Personal} ^{qualifica-}
VOL. IX. ^{tions,} d

History. sentiments. This rule, so important in the practical habits of life, cannot but be equally important in our studies.

"Sincerum est nisi vae, quodcumque infandis accedit."

We take a guide; but he is blind: we seek counsel; but it is of an enemy:—what must be the result? Unawares we are led into a pitfall: and we become parties to the sacrifice of our dearest interests. If we did not know the deceitfulness of the human heart, we should be surprised, that a man from bad and vicious motives should ever undertake to write History; since "facts," as it is said, "are stubborn things:" and distort and disfigure them as we will to-day, to-morrow, or it may be next year, or even in the following century, they will rise up in judgment against us: and if we think to escape this danger by infusing all our poison into the work, only in the form of reflection and general discussion, we shall but expose our motives to be more immediately anatomized and laid open by the pen of a just but severe criticism.

Sincerity. The first moral quality which the historian should possess, is a great *sincerity*. He should be of a plain and downright honesty,—of a "winnow'd purity" of truth; so that in reading his work one might be sure, that whatever were his mistakes and errors in point of fact, however credulous, however weak in judgment, or limited in his sphere of observation, still there was no obliquity of purpose, no taint in the sweetness of the water, at its very source. The irreproachable integrity of Thucydides was one of the qualifications which early attracted the respect of all readers. We do not question his assertions, because we know the sincerity of his heart. So it is with Tacitus, "Who," says Montaigne, "was a great man, upright and bold." It was otherwise with Sallust; whose History of the Catilinarian War, with all its beauties of style, is rendered contemptible, by the mean and selfish envy which induced him almost to suppress the mention of Cicero, the proper hero of the piece. In modern times we have, unfortunately, historians of great name, in whom we can scarcely read a page without discovering a lurking and insidious purpose of insincerity. VOLTAIRE, GIBBON, and HUME, are all obnoxious to this charge: and in our eyes, the talents which they possess, but poorly compensate this their radical and most pernicious defect. The remarks of Lucian, on the studious insincerity of some historians, are no less amusing than they are just. "You are partial," says he; (we quote only the substance of his observations;) "you omit the facts which make against your own party; you extol your own chiefs and leaders to the skies. Do you think that your business is that of a hired panegyrist? It is very allowable in the poet, when he would paint to us his hero, to describe him with

Hyperion's curls, the front of Jove himself,
An eye like Mars to threaten and command,
A station like the herald Mercury
New lighted on a heaven-kissing hill:

but only try how all this figurative eulogy would read in History; and you will be convinced, that your pen should be guided by plain and simple truth. Excessive praise disgusts the very individual to whom you mean to pay your court by it. The historian Aristobulus, whilst sailing down the Hydaspes, in the same vessel with Alexander, read to that prince a narrative, in which he had described him as fighting alone, on foot, against king Porus on his elephant; but Alexander, indignant at the absurd fabrication, snatched the volume from the hands of the historian, and threw it into the middle of the stream, with a sharp reprimand for its falsehood." "Write," continues Lucian, "the truth, and nothing else. It is not you, who are responsible for events. If your countrymen fled in battle, it was not you that made them run away. Remember that you are not writing for the present age alone; for the unlucky, or the ignorant, or the criminal of the times which you describe: but you write for posterity; you stand on high like a Pharos; and woe be to you, if you guide the mariners who trust your light toward rocks and quicksands!"

It is not enough, that the historian is irreproachable in his conduct, and unbiassed in his inclinations; he ought to have a warm love of virtue and an abhorrence of vice. It is an idle supposition that man can abstract himself from these the fundamental qualities of his moral nature. He who affects indifference to good or bad, to right or wrong, is already more than half enlisted in the cause of iniquity. He is a judge, who has no veneration for the laws; a soldier, who fights not for patriotism, or honour, but for pay. A very little will turn the scale of his judgment; and besides, as he does not admire the beauty of virtue, it is plain that he never contemplated, and therefore cannot describe, her ravishing brightness. It is one of the best founded accusations against Machiavel, that he recites crimes and virtuous actions with almost equal want of feeling: and the reason is, that he lived in a vicious age, and could not raise himself above the moral level of his contemporaries. Let no one, therefore, presume to become the historian of heroic events, or of virtuous and excellent persons, who is not, in some sort, transported with admiration of their excellencies. The battle of Thermopylæ demands the pen of a patriot: and the lives of the Christian martyrs could not well be written by one, who knew not the nature of sanctity and religious zeal. On the other hand, if we are to paint a people worn out and totally corrupted by the odious vices of despotism; or to portray the madness, the follies, the fury, the blasphemies of a nation, which has cast off all moral restraint; it is scarcely possible that the expressions which annex detestation to wickedness, and hold up a NERO, a SEJANUS, or a ROBESPIERRE, to the everlasting hatred of posterity, can be too forcible or too indignant.

History.
Love of vic-
tims.

The historian should be religious. This is, in great measure, to be considered as a corollary of the rule which requires him to be sincere. It may be objected, that there are some individuals, who with perfect sincerity reject the truths of religion, as insufficiently proved, or as contrary to the best exercise which they can make of their reason. We enter not here into the judgment of such men, their motives, or their understanding; but since they are confessedly few in number, and since their sentiments, feelings, and opinions, must necessarily be so much in opposition to those of mankind in general, they should abstain from the task of the historian; a task, indeed, for which they are obviously unfit; since they cannot fairly appreciate motives which they have never felt, or estimate the force of events which they are unable to comprehend. Some writers have imagined, that they could dexterously conceal the contempt which they felt for the religious opinions of their readers: and, indeed, it is not difficult for any impostor to delude the unthinking mass of mankind; but a slight degree of attention suffices to detect the cheat, and then he who has attempted to practise it, is exposed to the contempt he so richly merits. Mr. Gibbon felt, in the latter part of his life, the odium which he had incurred by his disingenuous attacks on Christianity. It will occur to every one, that religion is too often mixed with superstition; and that superstition must tend to corrupt the purity of History, not only by the ignorance of the writer, but by his bad faith. When, therefore, we say, that an historian should be religious, we certainly do not mean to become the apologists of superstition. To draw the line between these two great influences of our moral nature, is, indeed, no easy task; and belongs not to our present undertaking. All that we are concerned to show is, that in the work of the historian a sense of religion should be distinctly visible; that it should be fairly and candidly set forth; that it should form a known and certain element in the character of his narrative. There are some subjects into which it must enter more directly, than into others. The History of the Reformation must necessarily be more occupied with the discussion of religious topics, than the Florentine History: and the life of William Penn, than that of Washington. It would be idle to ask, what religious sentiments should predominate in the labours of the historian; since the answer must be, his own. It would have been neither necessary, nor decorous, that Prideaux, in writing the life of Mahomet, should have feigned to believe the doctrines of that impostor; but in Taylor's life of Christ, we recognise with pleasure the zeal and animation of a devout Christian. It will hence follow, that the truth of History must be in some sort warped and vitiated by the errors of

Religion

History. different religious sects. Many events cannot be treated by a Protestant historian in a manner perfectly satisfactory to a Roman Catholic reader: and the manner in which Tacitus has spoken of the primitive Christians (if the passage be not interpolated), must necessarily offend all the followers of the Christian faith. Doubtless, this is an evil; but it is a less evil, than that the historian should strike out of his work every thing referring to the Ruler of the Universe, which would be as absurd, as to attempt to paint the beauties of the morning, without even a reflection from the beams of the rising sun. It is for the reader to determine, how much he must deduct from the credit of the narrative, on account of the religious opinions of the author; but the latter should avow those opinions with perfect candour, and give them their full weight in the composition of his work. It is a common objection against Livy and Tacitus, that they record false miracles and omens. We may regret that such great men were heathens; but we cannot reasonably blame them for reciting facts, as true or probable, which appeared so to them, and which in those days were generally believed. "Historians," says Montaigne, "record all events of importance: and amongst public occurrences are the common rumours and opinions: it is their part to recite common beliefs, not to regulate and decree them."

Judgment. This leads us to consider the intellectual attainments which properly belong to the historian; and of these the most essential, without doubt, is a sound and clear *judgment*. His great object is to paint man as he is, and this equally whether the subject of his work be an individual or a community. "To be an historian," says MARY, "a man should be born such;" an idle and unmeaning remark, if it be understood of the whole turn of mind and attainments; but very just and true, if it regard the kind and degree of judgment which are absolutely essential to the writing of History. To the same effect speaks Lucian. It is vain to lay down rules for the acquisition of this gift of genius. *Poeta nascitur, non fit*: and the historian is so far a poet. It is not enough, that he sit in the council, or take part in the fight; he must comprehend the one and the other, deeply and intimately, in their very first principles; so that the event may appear to him to be merely the development of an idea known and familiar to his mind. Some men indefatigably treasure up all the anecdotes that they hear, and pour them forth in vast profusion, without being able to form, still less to convey, any distinct notion of the result of the whole. They are like ignorant portrait painters, who mechanically trace the outlines of the features, and yet cannot make up a countenance from them all; or who, in putting them together, omit that particular trait on which the similarity chiefly depends. Oftentimes, a single phrase will paint a character; but these compendious portraits of the mind are rarely treasured up, as they should be: "They are generally thrown to the servants," says Montaigne, "and lost in by-places." The same may be said of actions. It is in this respect, that the last-mentioned author so highly commends PLUTARCH. "Only to see this author," says he, "pick out a slight action in a man's life; or a word, that does not seem of much importance, is often in itself a whole discourse." Nothing has so much fixed Henry IV. in the love of all good Frenchmen, as that homely saying of the *poulet au pot*: and that James II., with all his faults, was a real lover of his country, is testified by his exclamation, "Spare my Englishmen!" Who can mistake the character expressed in the two words, *Cassarem rebus*? or the self-command of him who said, "Strike, but hear?"—Judgment, clear, active, penetrating judgment, seizes at once these key-notes, and is thence led to unfold all the hidden harmony of the mind. The author who can thus penetrate into the abstruse parts of human nature, and contemplate the real man, in his proper shape and dimensions, not as he is seen under the disguises of outward fortune, will not descend to the duller task of stringing together a contexture of gazette accounts, and reports picked up in the streets, which is all that forms the substance of common-place histories. What we say of individual description, is no less true of the delineation of national character. Some historians speak only in the abstract, of large bodies of men, in different stages of civilization. They apply the terms *Prince, People, Noble, Plebeian*, and the like, without any regard to the very different situations in which they are respectively placed, by the influence of

climate, laws, manners, science, and whatever else contributes to mould and diversify the human character. They do not, therefore, so much narrate, as speculate. They attribute the same, or nearly the same, powers and faculties to a prince of the Merovingian race in France, as to one of the house of Hanover in England; and they describe "the people" in the time of Alfred, as under the reign of George the Third. A recent French writer, M. Levesque, ingenuously confesses his surprise, on finding that the early Franks were in great part *serfs*, or in the language of the old English law *villains*, in that state of slavery which attached them to the soil. To speak of a barbarous race, thus enthralled, thus destitute of the very rudiments of letters, and thus sunk in almost heathen superstition, as one would of the free and enlightened Scottish peasantry of the present day, is an error, in moral description, quite as gross as the geographical blunders which Lucian ridicules in an historian of his day. "This author," says he, "was stout enough to lift up a whole city, with all its inhabitants, and transport them from Greece into the heart of Mesopotamia." Historians who thus confound eras and circumstances, seldom content themselves with delivering their statements in an hypothetical shape. They actually invent narratives of such conduct, as is suited to their imaginary personages, and gravely tell us what the clergy or people did in parliaments, long before the very name of a parliament was known. All this is as unworthy the name of History, as the narrative of that other author, mentioned by Lucian, who invented a false death for Severianus, and a false oration at his funeral. The historian may perhaps excuse himself for some of these errors by attributing them to the authorities which he has followed; but this is only confessing a different error in his own judgment. It is no less essential that he should know how to choose his authorities, than that his own testimony should be unimpeachable, and his own conceptions distinct. What shall we say to Dr. Henry's History of Britain, of which the first volume mainly rests on the authority of Ossian: when the very existence of this poet is questionable; when his era, and the place of his residence, are alike uncertain; and when all that the historian could know of him was derived from a translation indisputably falsified and interpolated? The historian is in all cases necessarily removed from the greater part of the events which he records, either by an interval of time, or of space. It may be supposed, that the general, who commands in a battle, must be able to give a faithful account of it; yet Asinius Pollio detected a mis-statement in the Commentaries of Cæsar himself, either because the general could not have his eye on all parts of his army at once, and had given credit to some particular individual, who had not delivered him a true account; or else because the officers, who commanded under him, had inaccurately reported what had occurred in his absence. "Thus may we see," says Montaigne, "that the inquiry after truth is a matter of great delicacy, when the report of the same battle is differently given by the different persons engaged in it, without any intention to deceive; and when we cannot decide between the contradictory statements, otherwise than as one would do on a solemn trial at law,—by strict examination and comparison of all the particulars deposed to by the witnesses." This examination must be directed either by natural penetration, or by acquired knowledge of the subjects under consideration. To the first, a sharpness of intellect is necessary, which no less distinguishes one historian from another, than it does man from man, in the more active scenes of life. The only danger is, that this shrewdness may degenerate into an excessive self-confidence, and that a writer may reject credible and important testimony, because it is not consistent with his own preconceived notions, or because he has taken a prejudice against the witness. The other circumstance is still more important. No man, however wise and skilful, can be equally skilful and wise on all subjects. The general historian must embrace a very large diversity of matter: he must speak now as a soldier or as a sailor, anon as a financier, presently as a physician, a painter, or a husbandman: and in any of these characters, the use of inappropriate terms, much more the statement of erroneous or improbable facts, may subject him to deserved censure. Thus Lucian speaks of an author, who affected to deal much in military details, but who confounded a parallel line with an oblique one, and marching in front with marching on the flank. In all such

History. cases, the old legal rule is the best to be followed: *cuique in arte sui perito credendum est*. We are not to trust to a cloistered monk for the military part of the History of the Crusades: and it would be equally injudicious to rest satisfied with what a distinguished general might happen incidentally to say of civil politics, or of the fine arts. In the present age, every art and every science has been separately and successfully cultivated: nor is it very difficult for the historian to select the best guides, even on the ground of their popular reputation. Thus, the antiquarian will easily mark out for us the period in the History of our own country, beyond which we possess few lights but those of tradition, and will enable us satisfactorily to discriminate between true and fabricated records. BUCHANAN, the Scottish historian, was undoubtedly a man of great learning and singular attainments. He professed to write for the purpose of rescuing the exploits of his countrymen "from the vanity of fables and the injury of oblivion:" and yet he begins with the History of King Fergus, 330 years before the birth of Christ! Sir DAVID DALRYMPLE, who proceeded on very different grounds, commences his "Annals of Scotland" with the accession of Malcolm Canmore to the throne, A. D. 1057; "Because," says he, "the History of Scotland, previous to that period, is involved in obscurity and fable." Thus he passes over in silent contempt a period of 1387 years, filled by Buchanan with a regular series of Scottish kings! There can be no doubt but that, in the judgment suitable to an historian, Sir David Dalrymple was infinitely superior to Buchanan. Judgment is not only shown in rejecting the marvellous: but in choosing among things probable, that which has the greater probability; not merely in itself, but from the character of its narrator. The historian, therefore, in comparing his authorities, must look well to the bias of their minds, to the opinions which they held, to the party which they meant to serve. The expression, "Punic faith," has become proverbial, perhaps, for no other reason, than that the historians of Carthage now extant are all Romans. He must consider the state of science at the time in which his authorities flourished. The belief in witchcraft was very general in England until after the Revolution of 1688: the notion of sympathetic action on bodies at a distance prevailed, even among learned men, about the same period; it would, therefore, be wrong, on the one hand, to tax an author of that time with excessive credulity for maintaining either of these errors; and on the other, to eredit readily the facts which he asserts in their support. The judgment of an historian may be safely estimated from the authorities which he cites, and the reliance which he places on them. He who should allow the same weight to Archbishop Turpin's supposed History of Charlemagne, which he does to Thucydides, would certainly be little competent to draw from either an accurate representation of facts. With such a writer, every historical statement is a fact; but in return, he carefully avoids supplying any thing from the stores of his own imagination. He will not venture to assert that Cromwell was ambitious; but he narrates with scrupulous fidelity the prodigies that were observed to take place about the time of the usurper's death.

Taste. It is not enough that the historian be a man of judgment: he must also have some taste. He must know how to distinguish the sublime from the insipid or the absurd; how to maintain an unity of feeling and character throughout his work; how to suit the parts to each other, so that no one should have the preponderance. A man of very sound practical judgment may be extremely defective in this respect. He will resemble the artist, who is exquisite in the detail, but inadequate to the combinations.

"Infelix operis summa, quia ponere totum
Nescit."

The taste of an historian is commonly supposed to be discernible chiefly in his style; but there is a more refined species of taste, which regards the general arrangement of the work, the balancing of its parts, the relief, the light and shade, and the tone of colouring, which pervades the piece. The

author shows his taste in the choice of his subject, as well as in the handling of it. He suits it to his strength: he chooses an argument in which he is at home, and on which he can expatiate. He adapts his expressions to the scene which he has to describe: he is grave and sententious in the council, animated and vehement in the field. He passes hastily over trivial events, and dwells with force and energy on those which are of importance. "It must not be supposed," says Lucian, "that facts present themselves spontaneously, or at hazard, to the pen of the historian: the selection and disposition of them require great consideration and care." In this respect, as in many others, the task of the historian resembles that of the poet. We must beware, however, not to estimate the value of an historical work merely by the taste and refinement of the author. This is an error, perhaps, too prevalent in the present day. Disgusted by the asperities and unpolished roughness of our older writers, among whose works we wander as in a forest of noble trees interspersed with tangled brakes and thickets, the smooth and garden-like surface of a more polished work fascinates the eye, and prevents us from observing that it is really productive of little fruit, and scarcely worth the labour bestowed on its cultivation.

The judgment and taste of the historian, though they do not wholly depend on his *previous studies*, must be greatly affected by them: it is right, therefore, to advert in this place to such studies as seem to be most indispensably preliminary to the writing of History. We must not suppose that every man is competent to this task, who can turn a sentence neatly, and has sufficient patience to consult all the gazettes and state papers of the day, or to make a digest and abstract of the narratives of preceding writers. Far different must be the attainments of one who, like Thucydides, is ambitious of giving to mankind a work, which may prove to them "an everlasting possession." He must have studied man, in the abstract; and men,

———"in the daily walk
Of the world's business."

He must have contemplated society in its constituent elements, and societies in their mutual relations. He must possess a competent knowledge of the arts of war and peace; and he so far versed in literature, as is necessary to the clear arrangement of his thoughts, and to the vigour and polish of his language. We have already said, that in all the various topics which may fall within the scope of History, especially in modern times, the historian cannot be equally versed: but in studies which are fundamental to his subject, and without which his errors must be gross and revolting, there is no excuse for total ignorance.

The *philosophy of the human mind* stands in the head and front of the indispensable studies. Man's common nature must be known, or the actions of this or that man will be an enigma and a mystery. The historian, therefore, should be a proficient in the science commonly, though somewhat improperly, called metaphysics. We mean not the metaphysics of the French Encyclopédie, which have been aptly described as "the metaphysics of an under-graduate," and parodied with "the mathematics of an exciseman." We mean not new metaphysics, or new philosophy of any sort. "The common run of fashionable authors, on matters of History and antiquity, and general philosophical research," says a profound and eloquent writer, "have now, for about a hundred years, been telling the world, in at least a hundred publications every year, that till they themselves appeared among us, there was no knowledge on this earth at all:—just as if we should suppose the falling of stones from the sky, in our own days, to be the very first instances of gravitation. But in our view of the metaphysics necessary to an historian, they are the most ancient of sciences, and to be found in the most ancient and venerable of books. The Holy Scriptures present us with a notion of human nature, to the truth of which every heart bears witness. We there see man described as a weak fallible, offending, and responsible creature; whose depravity produces want and fear, and whose

Philosophy
of the human
mind.

History. wants and fears are the natural foundation of society. We see this offspring of natural inebecity called to act a part a little lower than the angels, but to act it only under a guidance and an inspiration which, if he abandon or reject, he is lost and irretrievably ruined. This most ancient system of philosophy places the moral being of man at the head of all his faculties; and teaches us that all his powers, mental and corporeal, are only means to enable him to let his *light* shine before others, and that that light "is light from heaven." By this scale, and by this alone, is human greatness to be measured; and the historian who does not possess this clue, can never conduct us through the labyrinth of human affairs.

Knowledge of the world. It is true, that History now presents us with the abstract man: her business is with *men*, engaged in their various occupations and pursuits, instigated by their prejudices and follies, and hopes and fears; seeking wealth, and fame, and honours, and distinctions; stimulated by the necessity of action, or carried away by the love of ease and enjoyment. To conceive the endless variety of this moving scene, we must have mixed with the crowd, and been driven this way and that by its alternate flux and reflux. The knowledge thus acquired is commonly called a knowledge of the world: some writers seem to possess it mechanically, as it were, by a natural tact, and an unconscious experience. Machiavel, with very little reflection on the intrinsic merit of virtue, or the natural deformity of vice, was a shrewd and attentive observer of both, as they presented themselves to him in the course of a very busy life, and amidst political changes of great frequency and variety. He abounds, perhaps more than any other writer, in practical rules, fitted for the conduct of men with a view to their own interest, or that of their faction or country, as separate and distinct from the great interests of mankind. Undoubtedly much is to be learnt from such a writer; but if to his practical knowledge of man, on the mere surface, he had joined a penetrating view into the nature of human motives, and thoughts, and propensities, the value of his work would have been incalculably augmented.

Political science. Nor is it merely with single individuals that the historian is concerned. Unless he be a biographer in the very narrowest sense of the word, he must speak of numbers acting together; of tribes, and races, and nations. Mably, therefore, requires that the historian should have studied *political science*, of which he distinguishes two kinds: one founded on the laws which nature has laid down for the happiness of mankind; the other, on variable and conventional rights, established by men; the fruit, as he says, of passion, violence, and injustice; and capable of affording only false benefits and great evils. The acrimonious feeling and declamatory style of Mably, render him an inconvenient guide in this or any other study: but it is certainly indispensable, that the historian, who undertakes to develop political movements, should be a well-grounded politician. He ought not, however, to proceed on any abstract theory, inconsistent with the previous History of mankind: but he should look to the origin of civil society as a matter of fact; and particularly should observe, that as the rise of different forms of government cannot all be referred to one common principle, so neither can the practical rules of policy be the same in all countries. Hence those particular researches, and that information, which render a man adequate to undertake the History of France, may be worse than useless to him in attempting that of England: and in like manner, we may observe, that the foundations of ancient and modern republics being vastly different, their historians should be furnished with very different data; and the works themselves should be composed in as different a spirit and feeling. It is generally acknowledged that *ROME* is an unsafe guide in English politics, because his political principles were as little those of the English constitution, as his belief was that of the English church: and with all the labour which ROBERTSON bestowed on his justly celebrated History of Charles V., we cannot but consider that his talents were much more fitly employed on his History of Scotland. Foreign politics are often no less necessary to be known by the historian than domestic. The relation of states to each other, both in law and in fact; their clashing interests; their alliances, feuds, and mutual influence on a common balance of power;

are things which, as they may fall more or less within the scope of the author's work, so they require more or less of his previous attention. History.

Particular subjects require, in the historian, information of a particular kind. Thus he who, like POLYBIUS, has principally to treat of military operations, should, like that author, possess a thorough knowledge of the military art: and he who, like DÆ TUOU, has to speak of disputed points of legal and constitutional right, should, like that eminent judge, be profoundly skilled in the laws and institutions of his country. On the other hand, a writer of Ecclesiastical History may be excused for some deficiency in finance, or general statistics: and he who professes to delineate the progress of literature, is not expected to be minutely accurate in his incidental notices of law. The only rule that can be laid down on this point is, that the historian should be a perfect master of those studies which are connected with the characteristic and leading topics of his work; and that, with respect to inferior and secondary matters, he should be guided by authorities of known weight and reputation. Other studies.

It may seem hardly within the scope of such an essay as the present, to speak of the physical Physical qualities qualities of the historian; but yet more depends on them than may at first sight appear probable. The earliest historians, such as Herodotus and Diodorus Siculus, encountered great bodily fatigue and peril, in the prosecution of their efforts to collect materials for History: and so Froissart in his plain and simple manner says, "I have searched in my time the greater part of Christendom (in truth, who seeks will find), and wherever I came, I made inquiry after such ancient knights and squires, as had been present at these deeds of arms, and such as were well enabled to speak of them. I sought also for heralds of good repute, to verify and confirm what I might have heard elsewhere of these matters. In this manner have I collected the materials for this noble History: and as long as through God's grace I live, I shall continue it; for the more I work at it, the greater pleasure I receive: like the gallant knight or squire enamoured with arms, who, by perseverance and attention, perfects and accomplishes himself; thus by labouring and working on this subject, I acquire greater ability and delight." The biographer of Froissart, relating a journey which the historian took in company with a knight of high distinction and of great experience, says: "If they arrived at a town before sunset, they availed themselves of the remnant of the day to examine the outworks of the place, or to observe the parts of it which had suffered from assaults. On their return to the inn, they continued the same conversations, either between themselves or with other knights and esquires who might be lodged there; and Froissart never went to bed, until he had put down in writing every particular that he had heard." Nor were his excursions confined to countries in a state of peace, tranquillity, and cultivation. We find him attending armies, and journeying alone in the Pyrenees, and in the Highlands of Scotland—places where, at that time of day, the law could afford no very sure protection to strangers. He who fears to encounter peril, or is incapable of surmounting fatigue, is certainly to be so far considered as deficient in the requisites of an historian. Modern times, indeed, by facilitating the means of obtaining information, have rendered these qualifications less essential than they were formerly; but certainly they are even yet of no slight importance. To be able to see and handle for one's self—to have experienced the storm and the battle—to have conversed and associated with the classes of men whose actions we describe; cannot but impress the truth more deeply on our own minds, and of course render us more competent to its true and striking description. It has been said, not without justice, that writers are sometimes censured as acrimonious and intolerant, who are in reality only oppressed by bodily disease; and that what we consider in them as defects of moral character, may have originally needed no other corrective than a good regulation of body. This remark applies as much to the historian as to any other writer: and hence we may justly reckon among the physical qualities to be desired in him, that suavity of bodily temperament which is generally accompanied by mildness of temper and freedom from prejudice; and which has no distant connection even with sweetness of style, and purity of language.

History. One may easily believe, that Tacitus was a man of hiliouſ temperamēt; but it is not ſo conceivable that Livy ſhould have compoſed his long and eaſy-flowing work amidſt the tortures of the gout, or under the depression of a conſtitutional lowneſs of ſpirits.

Means of knowledge. Personal qualifications are not all that is wanting to the hiſtorian; he ſhould have ſuperior *means of knowledge*: and theſe means are to be conſidered, either with reference to the *time* in which he lives; or to his *rank, ſtation, and country*.

Time. The hiſtorian is either contemporary with, or ſubſequent to, the events which he relates; and if ſubſequent, he is more or leſs diſtant from them in point of time. It does not neceſſarily follow that becauſe he lives at the ſame epoch with the perſons and things which he deſcribes, he either can or even ought to publiſh at the time an exact account of them. Some indulgence is not only due, in charity and kindneſs, to the failings and errors of thoſe with whom we aſſociate; but ſuch is the nature of human affairs, that it would not always be ſafe or poſſible to divulge them at the moment when they occur. Yet at that moment, or ſhortly afterward, it may be neceſſary that ſome account of them ſhould be given; and, as far as it is given, it ſhould no doubt be ſtrictly true. He who attempts it, however, muſt be aware, that the very circumſtance of his being near to the events, often confounds and dazzles his idea of them. He muſt feel all the force and beauty of the celebrated addreſs of Horace to Aſinius Pollio:

“Periculum plenum opus aleo,
Tractus; et incœdula per ignes
Suppositos cineri doloso.”

What is eſſential to the truth and livelineſs of Hiſtory is, that the narrator ſhould have it clearly before his own mind. But Hiſtory is in this reſpect like ſome pictures; to which, if we approach too cloſely, we loſe all the effect of the light, and ſhade, and colouring; and are often unable to trace the very outline of the forms, much leſs to comprehend their arrangement and compoſition. Notwithſtanding theſe, and many ſimilar remarks, which might be made on contemporary Hiſtory in general, it is certain that ſome of the beſt hiſtorians have not only lived during the periods which they record, but have taken a conſiderable ſhare in the tranſactions of their time. Such were Thucydides and Cæſar. Men of their ſtamp, indeed, could not write otherwiſe than inſtructively; and their productions muſt neceſſarily rank high in the claſs to which they belong. But it is not ſo much becauſe they lived at the time, as becauſe the ſituations in which they were placed, afforded them eſpecial opportunities of obſervation, that their teſtimony becomes precious; and after all, precious as it is, it muſt be received with the deductions neceſſary to be made on account of their partialities and intereſts. We muſt never forget, that Thucydides was an exile from Athens, and that Cæſar made his military exploits the ſteps to political power. A contemporary author, who determines that the publiſhment of his work ſhall be poſtponed for many years, may give himſelf a greater latitude in its compoſition, than would otherwiſe be prudent. Lord CLARENDON ſays of his great Hiſtory of the Rebellion, that as it was a work in which the infirmities of ſome, and the malice of others, muſt be boldly looked upon and mentioned; ſo it ſhould not be publiſhed in the age in which it was written. Yet, even this conſideration ought not to make us place an entire confidence in a contemporary writer. Few men appear to have been more conſcientiouſly impartial than the noble author juſt named; but we ſhould look in vain through his work for the ſame lively impreſſion of the views, entertained by the moſt honeſt of the republican party, which we find in the ſingular and intereſting work of Mrs. HUTCHINSON. The great maſs of contemporary information is chiefly uſeful as affording materials to ſucceeding hiſtorians; materials ſo much the more valuable, as they often ſerve to produce the very contrary effect from that which the author himſelf contemplated. Thus it is probable, that BURN DODDINGTON, in writing his diary, thought as little that he was painting, in his own perſon, the character of a mean intriguing courtier, as another writer may have intended to diſplay to the world,

the portrait of a malignant and unprincipled demagogue. What length of time, subsequent to great events, is most favourable to their just and useful relation, cannot be precisely determined *à priori*; nor, indeed, is it to be limited with mathematical exactness. It should be after the passions, which agitated the period described, have in a great measure subsided; when the billows of the storm no longer heave, and the sky has again become serene. Before that period, the voice of the charmer will not be heard, charm he never so wisely. He will be accused of wishing to sharpen the sword anew, and of provoking his countrymen or his party to resume the

——— "arma
Nondum expiatis uncta crucibus."

Before that period, too, he will not easily obtain access to those private documents which often cast an entirely new light on public transactions: for, as Sir WILLIAM TEMPLE observes, in his "Memoirs of what passed in Christendom from 1672 to 1679," the true springs and motions of affairs, both foreign and domestic, are often mistaken, not only by the public in general, but even "in court and parliament;" and thereby, "many suspicions, confidences, applauses, and reproaches, are fastened upon persons; and, at times, where they are very undeserved." On the other hand, he should not live at a period too remote. Every age has its habits and feelings, which pass away, evaporate, and are wholly lost, if not consigned to remembrance by a faithful pen: and as those habits and feelings enter largely into all the motives of individual action, we shall mistake the latter, if we are ignorant of the former. We shall possess only, as it were, the lifeless form of great events, without their animating spirit; and walk among the kings and great men of antiquity, as we do among the stony effigies on their tombs. The great name of LIVY will perhaps be cited as sanctioning the attempt to relate the History of periods long antecedent to the author's age. Livy probably wrote his History about 750 years after the building of Rome, and near 1200 years from the siege of Troy; yet he begins "*Jam primum omnium SATIS CONSTAT, Trojâ captâ,*" &c. What he means by *Satis Constat*, it is not easy to comprehend; since he himself states, that most of the public and private records of the Romans were destroyed in the conflagration of the city, 365 years after its first building, and near 800 years after the fall of Troy. The truth is, that the early books of Livy are little more than compilations from other authors, none of whom were of very high antiquity: for, in speaking of a transaction, which occurred in the 432d year of the city, he says "there is no writer extant who was contemporary with the event." Fabius Pictor, the earliest of those whom he expressly quotes, was only about 250 years his predecessor: and as to the annals of the pontiffs, and such other records as those early writers could have consulted, we have the testimony of Cicero that nothing could be more meagre and jejune than the information which they afforded. The first five books of Livy's work, then, scarcely deserve the name of legitimate History: they reach to the 365th year of the city, and embrace only what the author himself admits to be *res vetustate nimia obsecuras*. The remainder that is extant comes down to the 585th year, and leaves us infinite cause to regret the loss of the succeeding 97 books, which included the author's own times. It would be curious to see whether an author, who with such admirable skill has woven together the materials supplied by other hands, could maintain the same apparent candour, and excite a similar interest in the minds of his readers, when he united the characters of a witness and a judge. Different duties belong to historians, contemporary and subsequent; and the advantages which they possess are in like manner different. To the former is chiefly addressed that energetic admonition of Lucian: "Let the historian be fearless, incorrupt, free, the friend of boldness and truth, calling a fig a fig, and a spade a spade; giving nothing to hatred, nothing to love; touched neither by pity, nor shame, nor diffidence; a judge equally just and kind to all parties; a foreigner in his books, a citizen of no state, bound by no laws, subjected to no king, utterly

History. careless what this or that man will think or say of his work." To the latter, other rules are necessary. He is not apt to be misled by his interests, but by his studies: not the warmth of his feelings, but the narrowness of his views, is likely to mislead him. Let him, therefore, when he first sits down to write, espouse no theory; let him erect no bed of Procrustes, on which to stretch and distort his facts; let him reject no evidence, till he has patiently heard what the witness has to say, and candidly weighed the credit due to his deposition. The partial accounts of a BURNER, a NORTH, or a LUDLOW, are useful to those who wish to form an estimate of the times. The historian will weigh them against each other: he will do more; he will compare the opinions which an individual may have maintained in the ardour and enthusiasm of youth, with those which he may have corrected by the experience and reflection of age. For it is to be observed that the writers of whom we now speak, not only possess the advantage of living after the passions, which heated men on both sides, have become cool, but often of hearing exaggerated sentiments retracted, and erroneous statements disavowed. They possess the advantage of trying men by their conduct, and principles by their results: they see great events ushered in with hope, and brightness, and beauty; but the radiant clouds of morning are charged with the dark and desolating tempests of noon, and "steal unseen to west," in the cheerless gloom of the night. Such contemplations are fitted to produce a mild and meditative temper, which, while it inclines the writer to view with extreme indulgence the common errors and failings of humanity, must give a moral energy to his works, and render them powerfully subsidiary to the great cause of virtue. Much of the advantage here shown to belong to historians, who write at a period subsequent to the event, is lost, if that period be too far extended. Time sweeps away the materials of History and History itself. We have lost the collections of MUCIANUS, as well as the Decads of LIVY: and both losses are irreparable.

—— "data sunt ipais quoque fata sepulchris."

"The monuments of the dead," says WREYER, "within these His Majesty's dominions, are, to the shame of our time, broken down, and utterly almost ruined; their brazen inscriptions erased, torn away, and pilfered; by which inhuman, deformidable act, the honourable memory of many virtuous and noble persons deceased, is extinguished; and the true understanding of divers families in these realms is darkened." Even of those monuments and records of "the olden time," which are not wholly obliterated, some serve only to excite our wonder, but not to gratify our curiosity. The Pyramids, and Stonehenge, and the temple-caves of India, neither tell us how, nor when, nor by whom they were built: and from the days of Herodotus to the present time, the hieroglyphic inscriptions of Egypt have afforded matter for doubt and disputation to the learned. We have been thus diffuse on the epoch of the historian as compared with that of his subject, because there is, perhaps, no question relative to the topic of History, on which a greater diversity of opinions exists, than whether the great ends of History are best to be obtained from the perusal of contemporary or subsequent writers.

Station

It is not merely the time in which a man lives, but the sphere in which he moves, that enables him to dive into the real motives of action; to trace causes from their very source, and throughout all their meanderings, to disclose the *graves principum amicitias*, and what it is that incites the *civium arder prava jumentum*. Sleidan observes of PHILIP DE COMINES, that "he had all the advantages for writing the History of LOUIS XI., and his son CHARLES VIII., that could be desired; since he served both those princes in the quality of ambassador to several courts, and managed most part of the affairs which he mentions in his Memoirs." This is the more important in political History, because, as Lord HERBERT observes, in his life of HENRY VIII., "the actions of princes are not always drawn from reason of state, but sometimes even from inclination and humour." Nor is this peculiar to those who hold the highest authority: party-leaders, and even persons who contribute in a very secondary degree to the conduct of public transactions, are

apt to consult their passions or interests in preference to their duties: and one cannot well determine whether they have done so or not, in a given instance, without a knowledge of their characters; which is seldom to be obtained but by living amongst them, or learning, from the most authentic sources, private anecdotes of their lives. Hence one of the greatest excellencies of Lord Clarendon's History, has always been considered to consist in the characters which he has drawn of the various persons who took part in the disturbances of his time—characters which his various situations in public life gave him abundant means of studying. He himself very forcibly points out the utility of this species of information.—“By viewing the temper, disposition, and habit, at that time, of the court and of the country, we may discern the minds of men prepared, of some to act, and of others to suffer, all that hath since happened. The pride of this man, and the popularity of that; the levity of one, and the morosity of another; the excess of the court in the greatest want, and the parsimony and retrenchment of the country in the greatest plenty; the greatest craft and subtlety in some, and the unpolished integrity of others, too much despising all craft or art; all contributing jointly to this mass of confusion now before us.” It would be desirable, indeed, that the historian could mix with all ranks, and enter into the feelings of all classes; but this can seldom happen, except in times of confusion and civil disorder. The customs of society, stronger than any written ordinances, usually raise barriers, which it is not easy to overleap: and in such cases, it is better for the historian fairly to avow his ignorance, than to affect an intimate acquaintance with those modes of life and particular scenes, to which his station renders him an entire stranger. It is scarcely necessary to add, that the History of England should be written by an Englishman, and that of France by a Frenchman. There are certain mistakes which all foreigners are apt to commit, but which nevertheless savour of great absurdity. We may easily conceive how inaccurate are most English accounts of the disputes between the noblesse and tiers état of France, by observing how ridiculously French writers talk of what they are pleased to call the *wicks* and *foris* of England.

The motives which prompt an historian to write, are often sufficiently obvious, to show at once what degree of credit is due to his statements and inferences. These motives are either directly or indirectly connected with the events detailed. It has been said that the contemporary writer is a witness, and the subsequent a judge: but there is a character which belongs much more frequently than either of these to the historian, and that is the character of an advocate. We cannot but consider in this light all *auto-biography*. It is in vain that a man, about to speak of himself, professes an entire indifference and impartiality: he must necessarily, though perhaps unconsciously, court our admiration; either for his good actions, or for the candour with which he avows his faults. In like manner, where a general relates his own campaigns, or a statesman his own negotiations; where a great man's secretary, or humble dependent, relates the events in which his patron bore a principal part; or where the conduct of a sect or party is related by one of its most zealous members, we should be on our guard against the partiality of the writer, throughout the whole of the performance. There are other influences which are less obvious and direct. Mr. Fox, in his History of James II. has strenuously argued against the Tory writers, who represent that monarch to have been less intent on the establishment of absolute power, than on the restoration of the catholic religion; yet the Stewart papers, since published, seem to turn the balance decidedly the other way. May we not attribute this inclination of Mr. Fox's judgment to the Whig principles which he through life professed? Mr. Gibbon, in his History of the Decline and Fall of the Roman Empire, has taken constant occasion to insinuate objections against the divine origin and efficacy of the Christian religion. Is it to be doubted, that his own disbelief of Christianity gave a colour not only to his arguments on this subject, but to the facts on which they were founded? It has often happened that those who were concerned in the religious or political controversies of one age, have published the History of another only as a covert mode of recommending their own opinions, or of casting odium upon their adversaries. Others, without going so far as this, are evidently anxious to recommend their

History. own principles by examples drawn from former times; in recording which, they are occasionally led into some exaggeration. Thus the very justifiable aversion of Mr. MITFORD to the excesses of modern democracy may perhaps have disposed him to view with somewhat too favourable an eye the measures of Philip for the subjugation of the Grecian states, and to have allowed too little merit to the great Atheian orators,

" whose restless eloquence
Wielded at will that fierce democratic,
Shook th' arsenal, and fulminated over Greece
To Macedon, and Artaxerxes' throne."

It is scarcely necessary to observe, that works in which we can detect any such bias, are to be read with a degree of caution proportionate to the obliquity of the author's motives.

Hitherto, we have spoken of the historian, with reference only to the substance of History: we must now direct our attention to its form. History is an important branch of literature; and historians are perhaps more universally known by their literary attainments, and classed according to their literary excellence, than with reference to any other standard. It is not the object of this essay to go at length into a critical examination of the philological principles applicable to historical composition. These will be considered in detail, in another branch of the present work. It will, however, be proper that we should notice the principal circumstances which distinguish historical productions, either as to their arrangement, or as to their style.

Arrangement.

By the *arrangement* of an historical composition, we mean the manner in which all its parts are disposed, both those which constitute the body of the work, and those which form its appendages; and as to the body of the work, we speak not here of the mere mechanical division into books, chapters, sections, and the like; but of the apt coherence of the *narrative* and *philosophic* parts, so as to give an unity to the whole. The narrative may be distinguished into *principal* and *episodical*; and in each, but more especially in the former, the writer must touch on some matters *introductory* to the main events; he must clearly develop the *events* themselves, and he will often find occasion to advert to their *results*. The *selection* of events, and the *order* in which they are related, require particular notice: and the order to be observed must be either that of *succession* or that of *causation*.

Narrative

We proceed, first, to speak of the narrative part, which in the early and rude attempts constituted the whole of History. Cicero tells us that from the foundation of Rome to the consulship of P. Mucius (that is for a space of 620 years), the chief pontiff wrote down the principal occurrences of every year, and these records being preserved were called the great annals, *annales maximi*. Early History, he observes, both in Greece and Rome, was nothing better than the compilation of annals: and Pherecydes, Hellanicus, and Acusilaus, the first Grecian historians, like Cato, and Pictor, and Piso, among the Romans, merely left behind them remembrances of times, and men, and places, and exploits, without any attempt at ornament, and without aiming at any other praise than that of brevity. In the works of Aulus Gellius, however (l. 5, c. 18), we find it laid down by Sempronius Asellio, that annals differ from History inasmuch as the former only inform us what happened, and when; but the latter explains the causes and consequences of the events. This distinction, so familiar to the best ages of Greek and Roman literature, is also well known in modern times; and though we can by no means admit that it is but of late years that the true uses of History have begun to be understood, yet we must allow that the proper mixture of recital and reflection manifestly distinguishes the historical productions of the present age from those of the periods preceding the revival of learning.

Introductory matter

In all narratives there must be some information which it is necessary to premise for the proper understanding of that which is to follow. This is commonly requisite in an especial degree at the opening of an historical work: but it is also useful in many subsequent parts of the composition.

The general introduction should be suited to the general nature of the work. Lueian justly ridicules those who introduce a miserable performance with a laboured opening. The commencement of the History of Thucydides has been much admired. Considering the age in which he lived, and the state of literature in his time, it was certainly more allowable for him than for Livy to ascend to the Trojan war. It is, perhaps, in imitation of Thucydides, that Machiavel introduces his Florentine History with an account of the origin of all the states of modern Europe; but the imitation is not very happy, nor is the statement itself very instructive. A much more absurd introduction, however, is that to the Memoirs of Marshal Saxe, whose biographer sets out with an account of the origin of the Saxon nation! In some cases a formal introduction to the whole work is not necessary, as in XENOPHON'S Hellenics, which are confessedly a continuation of the History of Thucydides; but Lucian justly censures some authors of his time, who, without the same reason, adopted this mode of beginning a History, imagining that they were treading in the path of Xenophon. Introductory matter is not only necessary at the beginning of the whole History, but at almost every stage in its progress. When a great battle is to be described, some previous description of the ground is requisite; and when an important personage is brought on the scene, it is desirable that his character should be at once comprehended. In this latter particular Lord Clarendon may serve as a model to all historians; but it must be remembered that he generally delineates from the life, having himself had many occasions of knowing personally the individuals whom he describes. Neither does he unnecessarily occupy the attention of the reader with superfluous matter of this kind, having laid down to himself the rule "not to speak of persons otherwise than as the mention of their virtues and vices is essential to the work in hand."

History.

When the historian has thus cleared his path before him, his next care is to select, from the Selection of occurrences which present themselves, those only which are necessary to the force and clearness of his narrative. He must be particular, without being minute and trifling. Here again Lord Clarendon lays down the judicious rule, "to mention small and light occurrences no otherwise than as they have been introductions to matters of the greatest moment." There is nothing which more distinctly marks the man of genius, than the skill with which he seizes on the leading traits of any action, passing over all that is trifling and secondary. The predominant fault of the earlier historians is a wearisome minuteness; that of most modern writers, is a want of particularity, and consequently of truth and effect, in the pictures which they unfold to our contemplation. According to the relative importance of the incident, should be the space it occupies, and the distinctness with which it is related. Lucian wittily ridicules an historian who dispatched the great battle of Europus in seven lines, but occupied ten times as many pages in relating the trivial adventures of one of the fugitives. This, says he, is to gather the thorn and neglect the rose: it is as if you had been to view the admirable statue of the Olympian Jove, the masterpiece of Phidias, and had only remarked in what manner its footstool was decorated. The art of marshalling events, and characters, and all the accidents of time and place, in their due subordination, depends on the strength and energy of the author's first conception of his object. He who has to describe a battle must first weigh well the mind and intention of the leaders, and he who has to relate a long course of political intrigue must first comprehend the views and interests of the conflicting parties. Where the leading idea is wanting, all is confusion and disproportion: and though the separate facts may be truly stated, yet they produce a false impression, like a picture which is out of keeping, and out of perspective. Thus FULLER, in his History of the Holy Warre, dispatches the five months' siege of Malta, in 1565, with the single fact that Soliman discharged against it 78,000 bullets; but to make amends for this meagerness of information, he assures us that some of the bullets were big enough to overturn mountains! On the other hand, CAMDEN, in his annals of Queen Elizabeth, is so particular as to give us the exact formalities of the trial of the Duke of Norfolk, and even the very words in which he was found guilty of treason by his peers, and sentenced to be executed, although these words and formalities differ in no respect whatever from

History. the ordinary legal proceeding in such cases; and the reason which he assigns for his minuteness is that in great affairs the least circumstances are interesting to posterity. It is, indeed, difficult for an author easily to foresee the ideas of future ages on any given subject: and some allowance must always be made for his dwelling on those facts which are thought important by his own contemporaries. Thus even the great Bacon concludes his History of Henry VII. with a grave account of a dream which that king's mother had before her marriage, "that one in the likeness of a bishop, in pontifical habit, did tender her Edmund, Earl of Richmond, the king's father, for a husband." As the earl was probably at that time a handsome young man, the dream was certainly not very miraculous; but yet Lord Bacon enumerates it among the occurrences which, he says, "may put upon the king somewhat that may seem divine!"—nor is it unlikely that at the time when he wrote, such an impression may have been very general from such an event. Bacon, perhaps, in like manner, followed the common opinion of his time, when he spoke of the court of star chamber, confirmed by parliament in the reign of Henry VII., as "one of the sagest and noblest institutions of the kingdom:" so little are even acute minds capable of anticipating the judgment of that posterity to which they all appeal. We may add, that though Bacon was contemporary with Shakspeare, he does not seem from any passage, either in his private correspondence or his published works, to have been even aware of the existence of a poet universally esteemed at present as the greatest ornament of his age.

Order of events.

The events thought worthy of commemoration by the historian must be related in a certain order; and that order, however diversified, does in fact reduce itself to two species,—the order of succession, and the order of causation. The order of *succession* consists in collecting and classing events simply according to their dates, and it is only varied by more or less frequent transition from place to place. As there are numberless events passing at the same time in different parts of the world, and as they all pass with different degrees of celerity, the historian who should endeavour to follow, day by day, and hour by hour, the course of time, embracing, at the same time, a wide range of subject, would soon involve himself and his readers in inextricable confusion. The usual mode, therefore, of writers, who follow the order of time, is to pursue one course of events in that order, making occasional digressions to the occurrences which lie out of their principal sphere. The sphere of the common annalist is narrow; and, indeed, we have before said that he is not to be called an historian; but where a larger scope is taken, time alone will be found to form an insufficient link of connexion between events. "If writers," says VOLNEY, "admitting facts without scrutiny, heap them together without taste; if they reduce their labours to a sterile summary, to a list of the reigns and deaths of princes, to a record of wars, convulsions, pestilences, and famines, like most of the Asiatics ancient and modern, and like all those of the dark ages in Europe; their compositions, void of all instruction and animation, will be found to have all the tediousness, and to deserve all the contempt which are usually attached to the name of chronicles." Such works are but a rude canvass, wholly unornamented; and, indeed, even when the facts are well chosen and complete, they form but the first step, they supply but the mere catalogue and storehouse, for the other kinds of History. It is, therefore, necessary to resort, at least occasionally, to that higher and more philosophic order which traces the connexion of causes with effects; but as, on the one hand, *causation* is not to be wholly overlooked, so, on the other, to throw time entirely out of consideration would be to convert History into philosophy. The only question, therefore, which the historian has really to consider is, which shall be the *predominant* principle in the order which he has to follow, *succession* or *causation*: and though the former may give his work a greater appearance of simplicity, the latter will undoubtedly afford occasion for the display of superior talent. In the one case, indeed, he may begin his labour while the events themselves are going on; but, then, as the future is hidden from his view, he cannot possibly determine the relative weight and importance of different facts. When Columbus sent his brother to Henry VII. of England to negotiate for embarking on a voyage

of discovery, the Historians of that day would have scarcely thought it worth while to notice the failure of the negotiation: and yet on this accident has turned much of the subsequent difference between the policy of England and that of Spain. Indeed History is full of those occurrences which, appearing at first like the cloud which was no bigger than a man's hand, at length involve the whole horizon in tempests, or pour down waters of fruitfulness on the earth. It is only after a course of events has been brought to a distinct and definite close, that we can adequately determine the relative importance of its separate parts: and without such judgment the history cannot be composed in an orderly and due proportion. This is perhaps the only just complaint to be urged against Thucydides. Had he waited to the end of the Peloponnesian War before he wrote its history, he would probably have found that some circumstances on which he dwells at length were comparatively inconsequential, whilst others, which he passes over slightly, were of serious import to the final result of the contest. Doubtless in History, as well as in Philosophy, causes are to be traced with great care and accuracy. The writer is not to take mere coincidence for causation: he is not to rush hastily to a conclusion from weak and insufficient premises. By clear and satisfactory reasoning he will obviate all paradoxes in History; for historical paradoxes are such only to the unreflecting or the uninformed. The same nation expelled the Tarquins, and submitted to Nero; the same individuals fought under Brutus, and became parasites of Augustus. It appears strange, that any people should court despotism, or should endure anarchy: but the skilful Historian will show us the same cause operating to produce effects at first sight so dissimilar. An over-refinement in tracing causes is however to be avoided. "I am not so sharp-sighted," says Clarendon, "as those who have discerned this rebellion contriving from, if not before, the death of Queen Elizabeth, and fomented by several Princes and great Ministers of State in Christendom, to the time that it broke out." By such fine-spun modes of reasoning, the expulsion of James II. is traced to the disgust of his grandfather, James I., at the republican austerity of his tutor, Buchanan: but this is rather following the guidance of imagination than of reason. If, avoiding these extremes, the Historian apply himself to treat of events in that order which most clearly displays the connection of cause and effect, he will be most likely to attain the true objects of History,—utility, and pleasure. This method is most useful, because it best enables us to profit by the examples which it presents; and it is most pleasant, for whilst it equally satisfies curiosity, it less fatigues either the memory or the judgment.

Historians are again distinguished by the different degrees of skill and ability which they display in explaining and rendering clear and intelligible to their readers, the *consequences* of the events which they relate. The same judgment which is able to discriminate the cause, will also be competent to point out the consequence; but in this, there is a necessary caution to be observed: the Historian must remember that he has nothing to do with futurity. Lucian satirizes a writer of his time, who, in narrating the wars then carrying on against the Parthians, predicted that Vologeses would be taken, and Oroos thrown to the lions; that a great victory would be gained (a very desirable event, no doubt, says Lucian, sarcastically;) and that these great successes would be commemorated by the building of a magnificent city, to be called either Victory or Concord; but which name it is to bear, says Lucian, the author has not yet determined. It is scarcely necessary to say, that Historians, who thus overstep the line of their proper occupation, are to be taken neither as models nor as guides. Sir W. Temple, in his *Memoirs of the War of 1672*, has afforded an example of wisdom highly commendable in this respect. His work was written in 1683, and he mentions in it a prediction that William of Orange would come to the throne of England; but he adds, "though the present state of the Royal family leave not this without appearance of arriving at one time or other; yet it is at too great distance for my eyes, which, by the course of nature, must be closed long before such an event is likely to succeed." It did succeed however in 1688, and Sir William lived till 1700.

He who well manages his introduction; the main course of the events; and the general results, *Consequences of events.* *Subsidiary matter.*

History.

will give to History the same unity and completeness which is conferred on an epic poem, by a regular beginning, a middle, and an end. Nevertheless there will always be much subsidiary matter in the nature of episode; the skilful interweaving of which with the main subject, adds greatly to the reputation of the author, and to the value of the work. How difficult a part of the Historian's duty this is, may be inferred from the following passage in Lord HULLAND's preface to *Mr. Fox's History of James II.* "In speaking of the writers of that period," says his lordship, "be (Mr. Fox) lamented that he had not devised a method of interweaving any account of them or their works, much less any criticism on their style, into his history. On my suggesting the example of Hume and Vultaire, who had discussed such topics at some length, either at the end of each reign or in a separate chapter, he observed, with much commendation of their execution of it, that such a contrivance might be a good mode of writing critical essays; but that it was, in his opinion, incompatible with the nature of his undertaking, which, if it ceased to be a narrative, ceased to be a history." Mr. Fox was manifestly right. Separate chapters of this kind are mere excrescences, and not parts of a well-ordered work. The author is to consider well how far the subsidiary matter is really essential to the completeness of his plan: he is to throw aside without mercy, all that does not necessarily conduce to the great object that he has in view; and he is to frame and adapt his episodes with the same care, and nearly by the same rules, in History, as he would in epic poetry.

Reflections.

The subsidiary matter of which we have just spoken, may consist of facts, or of reflections: the latter is what we call the philosophic episode. In ancient times this was often thrown into the mouths of fictitious personages; and seems to have been the principal reason for those speeches which form so singular a feature in the ancient Historians. M. LAHARPE, in his *Course of Literature*, undertakes to justify the Ancients in respect to those harangues, which are commonly considered as belonging rather to the art of the Orator than of the Historian. He suggests, "that though Fabius or Scipio may not have uttered in the Senate precisely those very words which Livy puts into their mouths, yet they may have spoken to nearly the same effect." He observes, "that the Ancients were much more devoted to public speaking than the moderns," (an observation, however, which is less applicable to the English than to the French.) He remarks, "that Athens was wholly governed by its Orators; that nothing of importance was decided but by them; and that, throughout all Greece, with the single exception of Lacedæmonia, the art of speaking was one of the most essential accomplishments for a citizen; that it was most carefully cultivated from their very youth, and formed the most important part of their studies." "At Rome," he adds, "whoever aspired to any public office, felt it necessary to be able to express himself with readiness and elegance before three or four hundred senators; to argue in support of propositions which might be attacked with republican freedom; and sometimes to harangue to the assembly of the Roman people composed of an innumerable and tumultuous multitude." Admitting all this, it is hardly credible, that the speeches, introduced into the histories which we now read, were actually delivered by the persons to whom they are attributed. They are evidently adopted by the Historian, as occasions to throw in his own reflections; or to comprise a summary of the reasonings employed for or against particular measures. This seems to have been considered as a license belonging to the Historian, just as the ancient chorus was a mode used by the Dramatists to deliver their own moral reflections on the scene. In modern time, we wisely allow no such fictions. Even if a speech of any length should be preserved, it would hardly be introduced into an historical work, but would be considered as one of the documents to be referred to in the Appendix. Modern authors do not introduce their reflections on the events of History, as delivered by fictitious personages; but they reason and argue, sometimes at great length, on the incidents which they record. It would be absurd to say that the Historian should never interrupt the thread of his narrative with a general remark: for it would be unnatural that he should not feel, or that he should not express his feelings. The power of drawing general rules from particular incidents, of seeing the universal truth in the insulated fact, is a power

of genius and intelligence. Nobody can doubt the superior mind of Tacitus. "His thoughts," says an amiable writer, "are of such extent, that every one penetrates them more or less readily. He pierces to a vast depth, but he does it without effort." "Every page, every line of Tacitus," says Lipsius, "is a flash of wisdom, a profound thought, a solid axiom; but he is so rapid and so concise, that much sagacity is needed to follow and to understand him." And to the same effect speaks Montaigne: "there are in his works more precepts than facts: it is not a book to read merely, but to study and get by heart: it is a nursery of ethics and politic discourses for the use and ornament of those who have any place in the government of the world." Tacitus, then, must be allowed to be a model in this branch of the Historian's art: but has he not pushed it to an extreme? has he not in some measure merged the character of the Historian in that of the Philosopher? In short, is he not too meditative and sententious? These are questions which we would rather propose than resolve, fearing to be considered deficient in respect and admiration for so great a man. Certain it is, that the remarks of Tacitus are at once brief and striking, energetic and refined. The expressions, *odisse quem Casaris; intus quæ indecora; omnia proma victoribus; libentius obscura credi*, and a thousand others which might be cited, carry the force of a proverb; and have, in many instances, become proverbial. After Tacitus, the writer most distinguished by the maxims which he intersperses throughout his work, is Machiavel. Some of these are sufficiently remarkable, especially when the discredit commonly attached to his name is considered. For instance, he lays it down as a rule, that "where there is religion, every presumption should be favourable; where it is wanting, every presumption should be unfavourable:" that "it is impossible for a man, who despises his God, to respect his prince:" that "to break a plighted faith can never be glorious, even in war:" that "it is never wise to drive an enemy to desperation:" that "good laws make good men:" that "there should be no change but where there is a manifest defect," &c. The principal question is, how these general reasonings and reflections should be introduced? Is it sufficient to deliver them as digressions; and if so, is it allowable to fill whole chapters with them; or should they not rather be condensed as much as possible, and even melted down, as it were, into the narrative? Certainly the latter mode, wherever it is practicable, is much to be preferred. It is the true historical philosophy which teaches by example; and the moral truth sinks deeper into the mind because it is communicated insensibly. The imagination is made to minister to the understanding and to the heart. Thus Livy tells us, that Lucius Junius Brutus feigned madness, "in order that he might be safe in a state of contempt, since there was no safety in the protection of the laws." Is not this far more striking than if he had first drily stated the fact, and then reasoned at length, on the general inconvenience which must result to every one, when the laws are incompetent to preserve innocence and integrity from persecution? The transition from a narrative to a sententious style, stops the flow and easy course of thought. Such changes, indeed, are natural in certain cases. Sometimes when the mind is struck with extraordinary events, it recoils, as it were, on itself, and a general reflection is involuntarily suggested by a particular incident; but in order that these remarks should produce their full effect on the reader, they should be rare, unstudied, and spontaneous; they should be rather breaks in the composition, than regular portions in the general plan of the work.

It is the style of the Historian, as of every other writer, which principally contributes to the style. popularity or unpopularity of his works. The first traditional histories appear to have been generally in verse: and it is curious to trace the continuance of this custom to very late periods, in different parts of the world. We possess a translation by Mr. Champion of the *Shah Nameh*, an historical poem of FERDOSI the Persian, who wrote about A. D. 1000. The Scottish historical poem of BARBOUR, who wrote in 1375, is well known; as is the English Chronicle of FARVAN, compiled about 1505. As civilisation advanced, History gradually emancipated itself from the shackles of metre, or at least retained them only in those ballads and trivial poems which serve to keep alive the memory of great events among the populace. But when prose History began to be cultivated by men

History. of taste and genius, it was soon discovered to be susceptible of great embellishment in point of style : it was discovered that it ought to hold a due medium between the low and the turgid, the brief and the redundant, the didactic and the forensic. Lucian has justly and beautifully observed, that the Historian should work like the exquisite sculptor Phidias, in marble and ivory and gold combined ; that is to say, that his style, never low or mean, should yet possess various degrees and shades of excellence, suitable to the different parts of his subject. He should march with the same pace as the events. In peace, and joy, and prosperity, his style should resemble that of Xenophon, when, as Quintilian says, "spoke with the sweetness of the Muses : " in war he should "sound the trumpet of Thucydides." The "Sallustian brevity" will best snit those parts in which the writer indulges philosophical reflection : whilst the full flow of the narrative will demand "the milky richness of Livy." "Let him not write," says Lucian, "in an involved and elaborate style, but plainly ; for as truth is the one great object of his mind, so clearness should be the one great character of his style ; neither vulgar nor pedantic, but such as the unlearned may comprehend, and the scholar admire. When he deals, as he must sometimes do, in figurative and metaphorical language, let the figures be just and obvious : when he is animated with the warmth, or elevated with the loftiness of his subject, let him beware that he be not transported into a bombastic extravagance : "—a precept which strongly reminds us of Hamlet's advice to the actors, "that in the very torrent, tempest, and one may say, whirlwind of their passion, they should beget a temperance, which might give it smoothness." "Some there are," says Lucian, "who, at one moment, will soar into the pompous phraseology of the epic poet, and describe the commander—'with cares unnumber'd struggling in his breast ;' but who will presently afterwards sink down into a vulgarity of expression fit only for the lowest camp-follower." This motley style is ridiculous enough : but it is not more wearisome than that of a pedant whose language is formed on one dull, unvaried plan ; beginning perhaps with an interrogatory, then introducing a syllogism, then an exclamation, then an interrogatory again, and so on ; or forming in every sentence a regular balance of phrase against phrase, in triads or quaternions, as contrary to true harmony as they are inadequate to the expression of real feeling. In order to narrate faithfully and well, it is by no means necessary that the style should be cold and inanimate. Delicate circumstances should be delivered with a delicacy of language ; and the pathetic, the noble, the spirited, the tender, should each have their appropriate modes of expression. It is true, that every author may be allowed the indulgence of his own peculiar and characteristic style of writing ; but no one should be a mere mannerist : and yet even affectation is more tolerable than dullness ; and the prevalence of one marked defect, counterbalanced by some beauties, is better than an uniform insipidity. In fine, History has an eloquence of its own, "flowing and continuous," as Cicero says, "with a certain equability in its course, distinct from the brevity of the judge, or the sharpness of the advocate ; and equally remote from the authoritative and sententious manner of the moralist or the preacher."

Characters
of Histori-
ans

It remains to notice the degree and manner in which certain distinguished Historians have displayed those qualities of which we have hitherto spoken. HERODOTUS, the father of Grecian History, has formed his plan with great art and judgment. Taking as its basis the wars of the Greeks and Persians, he has united with it a great variety of incidents by retracing the power of the two belligerents from its origin, and through all the gradation of its progress : thus successively introducing the History of the Lydians, the Medes, the Babylonians subjected by Cyrus, the Egyptians conquered by Cambyzes, the Scythians attacked by Darius, and, in fine, the Indians : after which he returns to his predominant object, and concludes with the glorious victories obtained by his countrymen at Salamis and Thermopylae, over the immense multitudes led on by the Persian monarch. This plan is executed with great clearness, with elegance, with facility. He has been taxed with credulity, but all things considered, the accusation appears unjust. It has been said, that in the details of his plan, he is somewhat immethodical, not sufficiently minute, or full of information ; but those who make this charge, have not adverted to the extreme difficulty of

obtaining and verifying intelligence in ancient times. Upon the whole, it is extraordinary that this very early writer should have at once attained a reputation, from which the lapse of so many centuries has done little to detract, and which still leaves him in the very first class of Historians. He was immediately followed by THUCYDIDES, a writer totally different in style, and yet so nearly equal in talent that critics have doubted which to prefer. "Many (of the Greeks) have written History most admirably," says Quintilian; "but no one doubts that there are two who are to be greatly preferred to all the rest, and whose respective excellencies have obtained nearly equal praise. Thucydides is close, and brief, and forcible; Herodotus sweet, and candid, and flowing: the one is better fitted for the lofty passions, the other for the gentle; the one for oratory, the other for meditation; the one for force, the other for pleasure." Cicero also describes Thucydides, as "a writer who excelled all others in the artful construction of his style; who was so rich and abundant in matter, that the number of his thoughts almost seemed to equal that of his words; and, again, so close and compact in expression that it was difficult to say whether his subject was more adorned by his language, or his language exalted by his subject." Laharpe observes that Thucydides has been reproached with two faults of rather a contradictory nature—the being too concise in his narrative, and too diffuse in his speeches. He abounds, adds this critic, with thoughts, but they are sometimes obscure; and if his style is marked with the gravity of a philosopher, it sometimes betrays the dryness of that character also. Longinus, however, speaks almost in raptures of this great Historian, and warmly defends the inversions which give that length and obscurity to his speeches, complained of by Laharpe. Upon the whole, it is not perhaps safe to dissent from the decision of so many admirable judges among the ancients, who agree in placing Thucydides, if not above all other Historians, yet certainly on a level with the very highest.

The literary characters of Herodotus and Thucydides form, it will have been observed, a striking contrast. These writers were followed by one who differed from them both, but was scarcely inferior to either. If XENOPHON does not exhibit the endless variety of Herodotus, or the austere grandeur of Thucydides, he possesses a sweetness quite unequalled, and his own. Hence he has been called "the Attic Bee," and it has been said, that "the Graces reposed on his lips." He was the pupil of Socrates, the associate of Plato, the commander of the Greeks in that ever memorable Retreat of the Ten Thousand. When such a man took up the historic pen, we might have expected to see a work characterised by a severe philosophy, or by a fierce and unbridled energy of thought; but, on the contrary, nothing can be more mild and equable than all the movements of his mind, unless it be the happy flow of his language, which seems almost to have been composed.

——— "to the Dorian stood
Of tales and soft recordings; such as rain'd
To brighten of noblest temper heroes old
Arming to battle; and instead of rage
Deliberate valour breath'd, firm and unshak'd."

This idea corresponds well with the moral dignity and strength of mind which this mild and elegant writer displayed in real life. He was sacrificing to the Gods, crowned with flowers, when news was suddenly brought to him that his son had been killed at the battle of Mantinea. At the terrible recital he tore off his garland, and burst into tears; but when the messenger went on to relate, that the young hero, fighting to the last gasp, had mortally wounded the enemy's general, Xenophon resumed his garland, and said, "Let us thank the Gods—my son's glory consoles me for his death." If the Greeks have left us such models in general History, they have left us one no less celebrated in Biography. PLUTARCH has, in fact, been called "the Prince of Biographers," though we are far from being satisfied with his claims to that title. It is well known that he has written the parallel lives of celebrated Greeks and Romans; and M. Laharpe looks upon the idea of such a

History.

comparison between the great men of one country and those of another, as a mark of genius. On the contrary, it appears to us to be an injudicious mode of writing History. Parallels of this kind can never be exact, and the effort to produce an apparent exactness will always produce an unconscious disposition in the writer to distort the facts. In other respects, too, the work of Plutarch is inferior to those of the authors already mentioned. There is little grace or harmony in his style, and the idiom of his language is by no means pure. His narratives afford us little information on the general History of the times, but are confined almost wholly to the individuals intended to be delineated. Considered, indeed, as separate pictures of human character, they have great merit. Plutarch describes man, not by an undigested accumulation of anecdotes, as Suetonius does, but by an admirable selection of characteristic incidents. It is on this account that he is so highly praised by Montaigne, and indeed that he has obtained very general and deserved popularity as a Biographer.

Roman Historians.

The Romans have left us models in History, scarcely, if at all, inferior to those of the Greeks. At the head of these is LIVY, whom Quintilian merely reckons equal to Herodotus; but La Harpe thinks him superior. The former critic says, "that Livy's narrative style is singularly agreeable, and of the purest clearness; that his harangues are eloquent beyond all conception; that all he says is perfectly adapted to the persons and things described; that he, above all, excels in expressing the mild and gentle passions; and that no Historian is more affecting."—"This eulogy," observes La Harpe, "is just in all its points: and we may add, that the genius of Livy, without ever showing marks of labour or effort, seems naturally to rise with the Roman greatness, and is never either above or below the elevation of his subject." Quintilian, who compares Sallust with Thucydides, had probably at that time seen none of the writings of TACITUS, who is far more worthy of being brought into such a competition. "I know no author," says Montaigne, "who, in relating public affairs, mixes so much consideration of manners and particular characters, as Tacitus does: his work is rather a judgment, than a deduction of history." Hence he has been called, "the Father of Philosophical History;" and his philosophy is of the highest kind—the philosophy of the human mind. "Every line," says La Harpe, "imprints a sentiment in the mind of the reader. Tyrants seem to be punished while he paints them. He represents posterity and vengeance: and I know no reading so terrible for the conscience of the wicked."

If it were necessary to produce a parallel to Xenophon among the Roman Historians, we could not, perhaps, fix on a better choice than CÆSAR, whose *Commentaries* might, without impropriety, be compared with the celebrated Retreat of the Ten Thousand. What Quintilian says of CÆSAR's oratory, may be applied also to his historical composition: "it is adorned with a wonderful elegance of language, of which he was singularly studious." Like Xenophon, he possesses "that unaffected ease, which no affectation can ever attain;" but it may be questioned, whether he is equally faithful and candid in his narration.

Biographers

Rome produced no Plutarch. Its most celebrated Biographer was CORNELIUS NEPOS; whose lives of illustrious men are merely summaries of their principal actions, interspersed with judicious reflections. If this mode of composition exhibit far less genius than the seizing those characteristic traits which develop at once the minds of the person described, it is at least superior to the dull and plodding method of SUETONIUS, who heaps together every anecdote that he can collect, without selection, and with little remark, leaving it to his readers to form their judgment, as well as they can, out of a rude and undigested mass of materials.

It would extend this essay too far to draw the characters of modern political Historians; but we must just notice, that in recent times they have been enabled to extend, in some degree, the sphere of their inquiries, by means of that antiquarian learning which has so largely illustrated the diplomatic remains, the laws, and other records, public and private, of the more obscure ages. Among the most distinguished works of this kind, is ROBERTSON'S *History of the Reign of Charles V.*; and what this author has done for political History, has been imitated in respect to the History of Literature, by Mr. ROSCOE, in his *Life of Lorenzo de Medici*.

We have said that the means of cultivating History to advantage, relate either to the writer or reader of History: and having spoken at some length on the former branch, we shall have less to observe on the latter.

History.
II. Readers of History.

The plans of study proposed by different learned men are so very contradictory, that they cannot possibly be reconciled; and among a variety of conflicting opinions, the only reasonable rules to guide our discretion, must be drawn from a consideration of the proper objects of study, which are to improve either the morals, the understanding, or the taste. The first rule, then, in the study of History, is to discard those writers whose works breathe a spirit of decided immorality. Like some stigmatised or suspicious kinds of testimony, they may indeed be received in cases of extreme necessity, from the *penuria testium*: their pages may be cautiously opened, and closed again when the necessity ceases; but above all things they should be rarely intrusted to the juvenile reader,

Plans of study.
Objects of study.

"For in the morn and liquid dew of youth,
Contagious blishments are most imminent."

From this rule, no fascination of style, no liveliness of wit, no acuteness of argument, should suffice to plead an exception. On the other hand, a plain and homely writer will sometimes tell a tale pregnant with honourable and virtuous feelings. These incidents are to be met with in the accounts of ancient and modern nations, of barbarous and civilized ages; and wherever they occur, they should be treasured up and committed to memory; for the judgment can only be enriched by the multitude of examples and the clearness with which they are placed before us. It is therefore necessary, that the study of History should be comprehensive; that we should read many and different Historians, of many and different ages and countries; but yet this reading must be with selection and care. "Let not the tutor," says Montaigne, "so much imprint on his pupil's memory the date of the ruin of Carthage, as the manners of Hannibal and Scipio; nor so much where Marcellus died, as why it was unworthy of his duty, that he died there: for to some, History is a mere grammar study; to others, the very anatomy of philosophy, by which the most secret and abstruse parts of our human nature are laid open." Dates, however, and local accidental causes often constitute the principal criterion of the merit or demerit of an action. When we find an Historian careless of these things, we may be sure he is a bad guide: and it is of no small importance to determine how far a writer is to be trusted, especially where contradictory accounts of the same event are given by different authors. In such cases we should carefully observe the character of the Historian himself, which is not difficult to be discerned by an attentive perusal of his work. Is he bigoted or irreligious; credulous, or prejudiced, or insincere?—In all these cases a proportionate deduction is to be made from the weight of his testimony.

When we have well satisfied ourselves of the facts of History, they become light to our paths; but it is of infinite importance that we do not suffer ourselves to be dazzled by them. Nothing is so dangerous as a precedent falsely applied. We must see that the cases fit in all their circumstances, or we must not adopt them as an absolute rule of conduct. Guicciardini observes, on the conduct of Peter de Medici, in imitating his father, that it is very dangerous to govern one's self by particular examples. Oftentimes the distinctive trait in the original is lost in the copy; for the poet is abundantly just in his expression—*Imitatores, servum pecus*! It is therefore necessary to meditate deeply on what we read in History, and to connect causes and consequences well in our own minds. By so doing we shall store them at once in the memory and in the judgment for every great event; and every brilliant character will become, as it were, a centre around which numerous minor personages and occurrences will be grouped.

After determining the objects which we should have in view in the study of History, it will be less difficult to agree on the order of study, whether we regard the peculiar situation of the student, or the choice of books to be read. First, as to the situation of the student:

Order of study.

History.

it is manifest, that as the statesman requires a knowledge of politics, so the scholar does of literature ; the soldier of war ; the ecclesiastic of the church ; and the like : yet we may say that all alike should be versed in the study of human nature. In early age we read or sympathize with feelings, and passions, and sentiments, of which the seeds are sown in our own bosoms. It would seem, therefore, that the youth should be first tutored to the study of History by single pictures of eminent virtue or ability, which being insulated and detached from all preceding and subsequent matter, might easily fasten on his young mind, warm his heart, and be comprehended by his understanding. The moral nature of man develops itself first, and therefore first demands to be fed with high example, and animated by the sympathies, which, in our youthful imaginations, render us continent as Scipio, or persevering as Hannibal ; makes us act over the part of Lennidas, or of Wallace ; and persuade us that we could die like Bayard or Sidney, like Epaminondas or Wolfe. As we advance in life, we become more capable of comprehending the connection of causes and effects ; but still we can best understand the occurrences which happened in our own age and country : these therefore we should next be taught ; then what has happened to other eminent nations ; until, by extending the sphere of our knowledge, the whole map and chart of History lies open before us : after which we may, as circumstances direct, choose some particular portions for more minute and accurate investigation. Abstracts and epitomes of History are, generally speaking, brought into use in too early a stage of education. It matters little, that a lad of ten years old should be able to enumerate all the dynasties that have reigned since Nimrod, or to tell us in what Olympiad the first tragedy of Euripides was acted. These are mere exercises of the memory, like the multiplication table, but not so useful ; until, in a subsequent state of our studies, they enable us to class and arrange facts : but if they prevent us from acquiring more substantial knowledge, they are to be regarded less as helps, than as hinderances to learning.

Chronology
Geography,
&c.

The two studies, which have been called the eyes of History, are those which tend to ascertain times and places, namely, CHRONOLOGY and GEOGRAPHY. These have been so scientifically pursued that they may be said to have themselves attained the rank of sciences, and will therefore require consideration in separate Essays. But it is to be observed, that many studies may occasionally be called in aid of the Historian : such as *Astronomy*, on which both Chronology and Geography mainly depend. And again, *Natural Philosophy*, the discoveries in which enable us positively to decide on the truth or falsehood of many events recorded in History. So the *Natural History* of the human species may throw light on the migrations and unions of different races of men ; and these latter circumstances may be still further elucidated by *Grammar* in its largest extent ; including both the first principles of speech, and the minute comparison of languages. These incidental assistances, however, are too partial and indirect, to be much considered in the arrangement of the Historical library : but it is otherwise with what may be called the *Criticism of History*, namely Lectures and Essays on its general spirit and tendency ; on the modes of studying it ; and the like : to which we may add, finally, the works of *Reference* ; such as the Dictionaries of History, Biographical and Historical Charts, Chronological Tables, Atlases, Maps, and other valuable accessions to this important branch of human knowledge.

INTRODUCTORY CHAPTER.

PART II.

ON THE SEPARATION OF THE EARLY FACTS

OF

HISTORY FROM FABLE.

WE have now to speak of the rise and progress of History. This picture of man has shared the fate of its original. It has had its infancy of Fable; its youth of Poetry; its manhood of Thought and Intelligence, and Reflection; and it has sometimes declined into an old age of dulness, decrepitude, bigotry, and barbarism. The mind of the savage, like that of the infant, is a chaos of wonder, confusion, and uncertainty; and as soon as it passes from the impressions of animal want and gratification to any meditation on the past, or anticipation of the future, it touches at once on the borders of an ideal world, where shadow and substance are so strangely mingled, that the effort to distinguish them is beyond its power, and soon ceases to be beyond its inclination. Hence the few individuals who have energy enough to feel or to feign the inspiration of a loftier spirit, are soon listened to as oracles. Their obscure thoughts, expressed in language still more obscure, are imperfectly caught by their wondering hearers. Dreams and reveries, and insanity itself, become the substance of tradition. These wild recitals are crowded with the phantoms of a disordered imagination;—

History.

All th' unaccomplish'd works of nature's hand,
Abortive, monstrous, or unkindly mix'd;
Gorgons and hydens, and chimeras dire!

Above all, the mind labours with the too weighty thought of an UNKNOWN God, which, wanting the holy guidance of the Spirit of Truth, presents itself in a thousand distorted conceptions, and at length forms the substance of a more or less complex, a more or less extravagant MYTHOLOGY.

Of all profane History, without exception, the first beginnings are in great part, if not wholly, Mythological. The fabulous beings that are introduced as gods, demi-gods, heroes, &c. appear to be, in some instances, personifications of the great agencies of nature, the storm, and the whirlwind, the flood, and the flame; in some the sun and moon, the planets and fixed lights of the firmament; and in others men of extraordinary strength or skill, kings and warriors, conquerors and teachers, false prophets and the workers of false miracles. The imaginary acts of these supernatural

History. beings are commonly mixed up with shreds and patches of true History, with vague traditions of the creation, and the deluge, of an early state of innocence and a fall. In proportion as the mythologists acquire arts and letters, they multiply and diversify their fables. They envelope the truth in a new veil of fiction: they speak in parables, and are understood literally: they write in hieroglyphics, and the symbol is taken to be an exact picture. Finally, the poet comes in aid of the priest, and enriches the tale of wonder with all the charms of verse, and all the luxuriance of a fertile imagination. This had happened in most nations before History began to be cultivated; the first profane histories then must necessarily have been fabulous, and the periods at which it becomes possible to distinguish truth amidst the clouds of fable are very different in different countries.

History.

We begin with the History of Egypt, because we have in the sacred Scriptures the earliest and plainest account of its ancient state. Moses, the great Historian, to whom we owe those statements, was himself a native of that country; he was versed in all its learning, and he delivered his narrative to a people who had sojourned there (they and their ancestors) for many generations. The books of Moses are, moreover, the earliest specimens of alphabetic writing now extant, having been completed in the year before Christ, 1451, or nearly a thousand years previous to the birth of Herodotus, the father of Grecian History. From these most ancient historical records, we learn that the early name of Egypt was *Misraim*, which some suppose to have been derived from the second son of Noah: others, considering that *Misraim* is a word of dual termination, which they derive from *Masor*, a fortress, hold, that *Misraim* meant the two Egypts, upper and lower, and that the son of Ham was meant to be designated as the common ancestor of the inhabitants of both countries. It is not the province of the historian to discriminate between these conjectural explanations of the sacred text, any more than it is to endeavour to ascertain the limits of Egypt at the time it is first noticed by Moses. It is however necessary that we should adopt some rule for fixing the date of that and other events, not absolutely, but with reference to the present state of chronological information; and therefore we shall follow, on this and all other occasions, the Hebrew text as the more generally received. According to this text, Abraham went down into Egypt with a large retinue, in the year before Christ 1920, on account of a famine prevailing in the land of Canaan. It would seem, therefore, that the former country was at this period in a state of high cultivation, whereas the life of the Hebrew Patriarch was pastoral. In the time of Abraham, Egypt was a monarchy, governed by a king, who bore the name or title of Pharaoh; but no other circumstances, relative either to its religious or political state, appear with any clearness after a lapse of nearly 200 years, (viz. a. c. 1728.) We find merchants from Gilead trading with camels loaded with spices and drugs, who carry down Joseph and sell him as a slave to an officer of the king of Egypt, which king, like his predecessor, also bore the name of Pharaoh. Potiphar, the officer in question, was chief of the executioners of justice, or grand marshal of the kingdom; and it appears that Pharaoh had, among other principal officers, a chief butler, and a chief baker: these circumstances mark a considerable advance in the political institutions of the Egyptian monarchy; but it is to be remembered, that the period here spoken of was 620 years after the general deluge, a period of time within which it is easy to conceive that men may have been led, in situations as favourable as that of Egypt, to unite in society, to dispose themselves into ranks and orders, to pass laws, to build cities, to coin money, and to exhibit all those political phenomena which occur in the history of Joseph. This History shews that there was then a class of men in Egypt who professed supernatural arts, such as the interpretation of dreams, and it would seem that they were the priests; but what were their religious ceremonies or doctrines we do not learn. It is clear, however, that they possessed a portion of the lands, and that the rest were held in absolute property by the private occupiers, until by the procurement of Joseph, the paramount, or as we should say, the allodial property of the whole was transferred to the king, who, however, made no other use of that right than to place the former occupiers in the state of tenants *in capite*, (to speak the language of the feudal law,) bound, not indeed to military service, but to the payment of a

rent, or land-tax, of one-fifth of the produce, which Moses distinctly says, continued to be the law of Egypt down to his time. Among the arts in use in Egypt at that time, we find particular notice of embalment, and that it was practised by a class of men called, in our translation, "Physicians." The word, however, in the Septuagint is *εὐσεβιστῆς*, which implies solely a person employed in preserving or anointing bodies. For the learned Beza observes, that the verbs, or *ἐτάφη*, to bury, and *ἐνέθαλει*, to anoint for the funeral, are entirely distinct in signification. We find notice too of the use of chariots and waggons, vestures of fine linen, rings, gold chains, silver cups, and other traces of great civilization and opulence. And among their customs, we observe, that though they themselves possessed herds of cattle, yet the attendance on them was thought so servile as to be held an abomination; and probably for this reason the Egyptians also held it an abomination to eat with Joseph's brethren, who were by profession shepherds, and who, on that account, were planted as a colony apart from the natives, in the land of Goshen. In this situation the Hebrews, the descendants of Joseph's family, remained for 215 years, during which time they had multiplied exceedingly; but being considered by the Egyptians as an inferior caste, they had been grievously oppressed, employed in many laborious and servile works, and at length treated with the most horrid and revolting cruelty: nor will this circumstance appear surprising to those who are aware of the unnatural and brutal manner in which the despised caste of *Pariahs* are treated in India; nay, we wish we could not say that there are some civilised Europeans, who, to this day, think and speak of their fellow beings with the same unchristian arrogance; because they have had the misfortune to be born in slavery, and to inherit from their ancestors a sable complexion.

Man, proud man,
Drest in a little brief authority,
Plays such fantastic tricks before high Heaven
As make the angels weep.

Among other labours of the Israelites were the building of certain strong places, or "Treasure cities," as our translation has it, two of which are named in our Bible, viz. Pitham, or Heroopolis, and Raamses, or Goshen; but the Septuagint adds a third, viz. "On, which is Heliopolis." It is remarkable that there is no hint whatever in the Scriptures of the construction of the pyramids, which could therefore hardly have been effected by the labour of the Israelites, as has been supposed by some persons; but, on the contrary, would seem more probably to have been built subsequently to their quitting Egypt. For a similar reason we should be inclined to refer hieroglyphic writing, which we consider to be only a sort of mysterious cypher invented by the priests, to an origin later than the alphabetic writing of Moses. It is no part of our present object to pursue the History of the Israelites, further than as it is connected with that of Egypt. The name of Pharaoh was given to the kings of Egypt at the time of the return of the Jews from that country: and there were still among the Egyptians men who professed to exercise supernatural arts, and whose impostures appear to have been of greater variety than those mentioned at an early period. Five hundred and twenty years elapsed before the Jewish historians had again occasion to speak of Egypt; but in the year before Christ 971, Shishak, king of Egypt, invaded Judea, took Jerusalem, and carried off the riches of the temple and the palace. Again, 360 years afterwards, (viz. a. c. 610,) Pharaoh Necho, king of Egypt, being engaged in war against the Assyrian monarch, with whom Josiah, king of Judah, was allied, overcame, and killed the latter, and afterwards exacted a tribute from the Jews, which was not of long continuance, because "The king of Babylon took from the river of Egypt unto the river Euphrates, all that pertained to the king of Egypt." From these slight and incidental notices of the affairs of Egypt, we obtain little particular information, except that the forces of Shishak were numerous, and that he was assisted by auxiliary or dependent powers. "He came up against Jerusalem with 1200 chariots and 60,000 horsemen; and the people were without number that came with him out of Egypt; the Lubims, the Sukkims, and the Ethiopians."

History.

But we now come to authorities of a very different kind; and we must not be surprised to find a relation of very different events. These are chiefly to be found in the works of HERODOTUS and DIONORUS SICULUS, both foreigners, both deriving their information from the very class of men most likely to deceive, and most interested to deceive; both living at a time very far remote indeed from the events of which they speak; and what is most observable, differing to such a degree, that it is utterly impossible to reconcile their statements. HERODOTUS was born in the year B. C. 484, that is, as we have before observed, nearly 1000 years after the death of Moses. DIONORUS SICULUS was in all probability alive at, or a very few years prior to, the commencement of the Christian era. Both these historians visited Egypt. Diodorus fixes the time that he was there, in the 180th Olympiad, viz. between the years 54 and 58 before Christ. They relate the Egyptian History, not as a narrative to which they attach credit, but as information communicated to them by the priests of that country from tradition, and from the annals written in the sacred and hieroglyphical characters. From similar materials Manetho, who lived between the time of Herodotus and that of Diodorus, composed a History of Egypt, now lost; but from which we possess the lists of the sovereigns, who, as he pretends, reigned over Egypt. Manetho was high priest of Heliopolis in the time of Ptolemy Philadelphus, about 280 years before Christ: and that enlightened sovereign, who caused the sacred Scriptures of the Jews to be translated into Greek, engaged Manetho to write, in the same language, an account of the affairs of Egypt. The work was divided into three volumes, the first, containing eleven dynasties, besides the gods and heroes; the second, eight dynasties; the third, twelve; and the whole extending over a space not less than 53,535 years! These dynasties are preserved by different authors; but with considerable varieties of transcription. They are referred to by Josephus; they are epitomised by Julius Africanus; and from him, by Eusebius and Georgius Syncellus; the two latter of whom refer also to an ancient Egyptian chronicle which, probably, was only another mutilated abstract from Manetho. Until very lately, these extravagant calculations set all explanation at defiance; but the recent discoveries which have been made in the fabulous History of India, seem to throw considerable light on the construction of the narrative, as well as the doctrinal part, of the Egyptian traditions. We are assured by all those who have profoundly examined the Hindù Mythology, that the fundamental doctrine of its most recondite mysteries, is the belief in ONE GOD the creator and preserver of all things: such Jamblichus asserts to be the belief of the Egyptians, and such appears to be the case from the inscription mentioned by Plutarch, as existing in an Egyptian temple, "I AM ALL THAT HAS BEEN, IS, AND EVER SHALL BE:" expressions which forcibly bring to mind the 14th verse of the 3d chapter of Exodus, "Aod God said unto Moses, I AM THAT I AM: and he said, thus shalt thou say unto the children of Israel, I AM hath sent me unto you." But when those who had to preach this high mysterious truth, either perceived it grossly themselves, or wished to familiarise it to the gross conceptions of their hearers, when they personified the sun, and the moon, and the stars, as emanations of the divinity, as gods and sons of gods; they began narrowly to observe the movements of those great bodies, and discovered various periods of time during which each, as it were, reigned in some part of the heavens. It was an easy transition to place these celestial sovereigns on earthly thrones: it was a simple operation to compute their courses backwards, and to accumulate reign on reign, and dynasty on dynasty, until the fabulous history of the globe far outstripped its real existence. As astronomy first introduced this corruption into History, so astronomy will, probably, hereafter afford a solution of all the difficulties which it presents. Every nation which adopted the system of these fabulous sovereignties, placed their seat within its own territory; and as Idriss is said, by the Braminos, to have reigned in India, so Osiris (who is probably the same personage) is placed by Manetho among the divine sovereigns of Egypt. Before we enter upon the fancied exploits of the seven gods and nine demi-gods who form this list, or indeed before we take any notice of the early mortal dynasties, we shall at once come down to a point where we think it possible to reconcile all

the profane historians with the sacred; and to reason on their concurrent testimony with tolerable confidence. This point is the dynasty of Phœnician shepherd-kings, which, according to Africanus, is the 15th; and according to Eusebius, the 17th in Manetho's list. We conceive that there is strong reason to consider the Phœnician shepherds to be no other than the Jews, who were in fact a pastoral nation, from the neighbourhood of Phœnicia; and of whom the first chief was Joseph, probably, the *Saïtes* of Manetho, and certainly governor, under Pharaoh, of all Egypt. His family and descendants possessed the land of Goshen; they were an abomination to the Egyptians; the priests in particular must have had cause to hate them, and to misrepresent their conduct. The shepherd-kings, or king-shepherds, are accordingly described in the Egyptian accounts, as having been the oppressors instead of the oppressed. Their establishment in Egypt is said to have lasted 259 years, which is only 22 years more than the time calculated to have elapsed, from the time that Joseph was sold into Egypt to the Exodus of the Israelites out of that country. The chief sent of the shepherd-kings is said to be Avaris, which is considered to be the same as Raamses, one of the cities built or fortified for the Egyptian monarch by the Israelites. The shepherds are said to have retired in a body from Egypt, to the number of 240,000, by the way of the desert; to have entered Syria, and there to have built Jerusalem. We must always remember that this is the earliest account which we have of this event, except the narrative of Moses; that it was written about twelve hundred years after it happened; and that during all that time the traditions and records relating to it had been in the hands of men, who, as they had certainly corrupted religion in a very great degree, may well be conceived to have taken similar liberty with History. Though Diodorus Siculus was no stranger to the work of Manetho, he says nothing of a dynasty of shepherd-kings, but states the departure of the Israelites from Egypt as follows: "A plague having broken out in Egypt, many persons attributed the cause of the evil to the anger of the Divinity; for there were many strangers there from all parts, who used foreign rites in the sacred ministries and sacrifices, whence it came to pass that the ancient honours of the gods fell into neglect: and the original inhabitants began to fear, that unless they removed from among them the foreigners, they should never be relieved from their afflictions. The men of other nations therefore were expelled: and of these the noblest and bravest, under the guidance of Danaus, Cadmus, and other celebrated leaders, came into Greece and the parts adjacent; but the more numerous body were driven out into Judæa, a country adjoining to Egypt, but at that time wholly deserted. The leader of this colony was named Moses, a man of excellent wisdom and fortitude; who occupying that region built there many cities, and particularly the most celebrated of all, Jerusalem, with its temple." He goes on to say, that Moses instituted laws and religious ceremonies; taught the Unity of God; forbade images of the Divinity; and divided the people into twelve tribes; set apart a class of men for the priesthood; and established customs and modes of life different from those of all other nations, in order to keep his people separate and distinct: and in another passage he says that Moses pretended to be inspired by the God *Jaoh*. Justin, the abreviator of Troguus, in the age of Antoninus Pius, speaks still more particularly of Joseph's being sold into Egypt, and of Moses leading out the Israelites; mixing some fables with the truth, but plainly shewing that he, as well as Diodorus, had obtained some knowledge of the Jewish records.

We may then assume, that the expulsion of the Jews from Egypt is a fact sufficiently clear; and that, at the period when it happened, the Egyptian monarchy must have been considerably powerful, and considerably advanced in arts and civil policy. If we are right, in considering the shepherd-kings to be no other than the Israelites, we shall be much inclined to hold that all that is recorded by Herodotus and Diodorus Siculus, prior to the reign of Amasis, is to be treated as little better than mere fable. Amasis is found in the tables of Manetho, as succeeding the Phœnician and Grecian shepherds: and we have seen, that Diodorus assigns the same date to the emigrations of the Jewish and Grecian colonists, and attributes them to the same cause. It is easily to be believed, that the jealousy which operated against the increased numbers of the Jews, may have

History.

Shepherd-kings.

Expulsion of the Jews.

History.

led the Egyptians to expel other tribes; and it is remarkable, that the best chronologists place the arrival of Cecrops, Cadmus, and Danaus, with their respective followers, in different parts of Greece, much about this time; the earliest being only sixty-five years before, and the latest only six years after the departure of the Israelites. The foundation of Troy is also placed within nine years of the latter event; and it is quite certain, that the mythology, arts, and letters, both of the Trojans and Grecians, were of Egyptian origin. Justin mentions, as the reason for expelling the Jews, that they were infected with the plague; thus agreeing both with Scripture, and with Diodorus, in the fact of a plague having existed at this time in Egypt. He adds, that Moses, by stealth, carried away the sacred things of the Egyptians, and that the latter, seeking to recover them by force of arms, were driven back homeward by tempests; a mode of relating the scriptural story, which approaches as near to the truth as national pride would permit an Egyptian to record it. Tatian, Justin the Martyr, Clemens of Alexandria, and other ancient writers, as well as some moderns, have considered the expulsion of the shepherd-kings, and that of the Israelites, to be the same event: and, if we reject this supposition, in what way shall we be better able to reconcile truth with fable, or obscure and partial tradition with real history? It is either the voluntary falsehood of men, or their ignorance, which corrupts the truth: and the account of the shepherd-kings has been affected by both causes. The priests, who were the sole depositories of learning among the Egyptians, were interested to falsify the history of this great event. To the pride, which in all ages renders nations unwilling to acknowledge inferiority, were added the superstitious horror with which they must have viewed the contempt shewn to their idolatrous rites and ceremonies by the Jewish nation, and the strong interest which they had to maintain in the minds of the people at large, an antipathy toward the opponents of idolatry. The grounds of error and misconception must have accumulated to a great height by the time of Herodotus, and still more in subsequent ages. In another part of this work, some reasons will be adduced to prove, that alphabetic writing was early known to the Egyptians; that the first letters were called *acred*; and a subsequent set were denominated *common*; that the mythological fables were recorded in the former, which were only intelligible to the priests; and that these persons, for still greater concealment, afterwards adopted the Ethiopian symbols called *hieroglyphics*. Thus did those, who were for many ages the only historians of Egypt, adopt methods which tended more and more to involve their narratives in obscurity. Add to this, that though the sacerdotal caste was one and the same all over Egypt, every city, and almost every temple came, in process of time, to have its peculiar superstitions, which were carried to such a length, that every animal, and even some vegetables, had their worshippers; many of whom took up the quarrels of their respective divinities, so that the votaries of the ibis actually waged war against those of the crocodile. It is easily to be conceived, that this produced a similar conflict of traditions, each priest contending as strenuously for the authenticity of his legend as his senseless hearers did for the sanctity of their oaths and their omens. Finally, it is to be observed, that the nation itself was manifestly made up of many different tribes; the sovereigns of which were, at different periods, established at *This*, at *Memphis*, at *Elephantis*, at *Heracleopolis*, at *Diospolis*, at *Tanis*, at *Bubastis*, &c.; whence arose wars and revolutions, and that confusion of names and dates which was their necessary consequence. Amidst so many causes of obscurity and contradiction, Manetho appears to have given an account of the origin of the Jewish nation more nearly approaching the truth than might have been expected, when we consider that he lived 1200 years after the time of which he speaks. We have next to enquire in what part of the Egyptian History, as delivered by Herodotus, this great event is to be placed, since neither he nor Diodorus makes any mention of shepherd-kings; nor do these writers pretend to name all the sovereigns who reigned in Egypt. It must clearly have happened prior to the reign of *Proteus*, whom both Herodotus and Diodorus state to have lived during the Trojan war; that is to say, from the year a. c. 1193 to 1184. Now it is somewhat remarkable, that th-

table of Egyptian kings immediately succeeding the shepherds as cited by Josephus, from Manetho, makes up three hundred and nine years and five months, to the beginning of the reign of *Amenophis*, the last prince in this series. If, therefore, the shepherds were identical with the Israelites who left Egypt in 1491, *Amenophis* must have begun to reign in the year B. C. 1183, and consequently, if the dates be accurate, his predecessor, *Harmesses Miamun*, must have been the Proteus in question. The series cited by Josephus, agrees very nearly with the 18th dynasty of Manetho, as cited, with some slight variations, by Africanus and Eusebius. We shall therefore exhibit a comparative table of the three lists together, affixing to them the dates to which they belong on the above hypothesis:—

B. C.	Josephus.	Africanus.	Eusebius.
—	<i>Haliaphragnuthosis</i>		
1491.	<i>Tethmosis</i>	<i>Tethmosis</i>	<i>Amosis</i> .
1465.	<i>Chebron</i>	<i>Chebron</i>	<i>Chebron</i> .
1452.	<i>Amenophis</i>	<i>Amenophthis</i>	<i>Aumenophis</i> .
1432.	<i>Amesses</i> (a woman)	<i>Amesis</i>	
1412.	<i>Mephres</i>	<i>Misaphris</i>	<i>Miphris</i> .
1399.	<i>Mephramuthosis</i> ..	<i>Misphragmuthosis</i> ..	<i>Misphragmuthosis</i> .
1377.	<i>Thumosis</i>	<i>Tuthmosis</i>	<i>Tuthmosis</i> .
1368.	<i>Amenophis</i>	<i>Amenophis</i>	<i>Amenophis</i> .
1337.	<i>Orus</i>	<i>Horus</i>	<i>Horus</i> .
1300.	<i>Acenchres</i>	<i>Acherres</i>	<i>Achenceres</i> .
1288.	<i>Rathosis</i>	<i>Rathos</i>	<i>Athoris</i> .
1279.	<i>Acencheres</i>	<i>Chehres</i>	<i>Cencheres</i> .
1267.	<i>Acencheres</i>	<i>Acherres</i>	<i>Acherres</i> .
1255.	<i>Armais</i>	<i>Arneses</i>	<i>Arnes</i> .
1251.	<i>Ramesses</i>	<i>Rammesses</i>	
1249.	<i>Harmesses Miamun</i>		<i>Ammesses</i> .
1183.	<i>Amenophis</i>	<i>Amenoph</i>	<i>Memophis</i> .

In the table given by Syncellus, the kings from 33 to 48, both inclusive, nearly agree with the above lists; and we should therefore conclude, that all these statements were of common origin, and related to a dynasty which reigned at Diospolis between the periods of the expulsion of the Israelites and the siege of Troy.

It remains to be seen what light Herodotus and Diodorus throw on the ages before Proteus. Now, with the exception of Amasis, (probably the same as Amosis or Tethmosis,) neither of them mentions any one of the names in the above list. Herodotus mentions only Menes, Nitocris, Meris, Sesostris, and Pheron. Diodorus names Menes, Busiris the First, Busiris the Second, Osymandyas, Uchoreus, Myris, Sesosis the First, Sesosis the Second, Amasis, Actisanes, and Mendes; but they both agree that there were many intervening generations, and they both assign to the era of Menes or Menas, a very remote and incredible antiquity. This personage, they say, was the first mortal who reigned in Egypt. In like manner Menu is said to be the first lawgiver of India. Eratosthenes, who, in the time of Ptolemy Evergetes, gave a series of Egyptian kings, also begins with Menes, and such too is the beginning of the first dynasty, according to Manetho. Menes, in all the Egyptian genealogies, immediately succeeded the gods and demi-gods who reigned in that country. A very slight notice of these celestial sovereigns will suffice. Authors are agreed neither on their imaginary dates, nor on their descents, nor even on their exploits. Herodotus says, that there were eight great gods, from whom were produced twelve minor gods; that from Hercules there elapsed 17,000 years to the time of Amasis; and from Bacchus 15,000. In another place he

Ages before Proteus.

History. says, that from the first mortal king to Sethon, (who was contemporary with Sennacherib,) there had been 341 generations of kings, which he calculates to amount in all to 11,340 years: but he observes that the Grecian deities of the same name were believed to have lived much later, viz. Bacchus 1600 years, Hercules 900, and Pan 800, before his own time; a remark which alone would suffice to shew the utter confusion in which all the mythological fables were involved. Herodotus says, that *Menas* first confined the Nile by banks to the middle of the valley, and on the ground thus rescued from the water, built the city of Memphis. He was succeeded by 330 sovereigns, of whom 18 were Ethiopians, and one, *Nitocris*, was a woman. None of these monarchs, says he, were distinguished by any act of magnificence or renown, except *Mæris*, who erected some pyramids. Surely a more meagre account of the lapse of a thousand years cannot well be imagined! Diodorus says, that the gods and demi-gods reigned in Egypt near 18,000 years, and the mortals near 15,000; and that of the latter there were 470 native kings and five queens, besides the Persians, Macedonians, and other foreigners in latter times. *Menas*, he says, introduced luxury; he was succeeded by 52 descendants who did nothing memorable. Then came the first *Busiris*, whose eighth successor, of the same name, built Thebes, otherwise called the greater Diospolis. What time elapsed between this king and *Osymandyas*, the historian does not say; but he asserts that *Osymandyas* led an army of 400,000 foot, and 20,000 horse against the Bactrians, who, it seems, had some time before become tributary to Egypt, but had thought fit to revolt. How this march of near 2000 miles, to a country lying beyond the north of India, was effected, it would be vain to ask. Seven descendants of *Osymandyas* are passed over in silence to come to *Uchoreus*, the founder of Memphis, to which place succeeding kings repaired, abandoning Thebes, the former capital of the kingdom. The twelfth king, from *Uchoreus*, was *Myris*, who dug the lake of *Mæris* to carry off the superfluous waters of the Nile, and built two pyramids. Reckoning the generations, as Herodotus does, at the rate of three to every hundred years, we shall find the period between *Menas* and the last *Busiris* to be 2066 years; and that between *Osymandyas* and *Myris*, 699. It is needless to say that these dates are perfectly imaginary. If Egypt had possessed a high degree of civilisation, and had spread her conquests so far at so early a period, she must have civilised the whole world several thousand years ago; her own histories would have shewn the steps she took to acquire power and to diffuse knowledge; and those histories would have been corroborated by the records of all those numerous countries which must have been subject to her sway. Not one of these circumstances took place; and the Egyptians, with their vast pretensions to extensive conquest, remained to the last in ignorance even of the sources of the river whose banks they inhabited. The warlike exploits of *Osymandyas*, however, and the peaceful arts of *Mæris* were alike eclipsed by the celebrated *Sesostris*, or, as Diodorus calls him, *Sesoosis*. Herodotus simply says he lived after the monarchs, whom he had before mentioned; but Diodorus states, that seven generations intervened between him and *Myris*. In a future essay the exploits of *Sesostris* will be set forth more at large. Suffice it here to say, that he appears to have been the chosen hero of Egyptian fable, as Arthur was of the Armorican legends; Fingal, of the Gaelic songs; and Charlemagne, of the old French and Italian Romances. It is probable that some such person once lived, but when, it would be difficult to say. It is equally probable that he, in some manner or other, distinguished himself, particularly by liberality to the priests, a virtue which in their eyes would include all the others. If we were to indulge in any one hypothesis rather than another, we should say he was the Pharaoh, who, by the counsel of Joseph, first divided the lands among his subjects, reserving to himself an annual rent. "The priests," says Herodotus, "informed me that *Sesostris* made a regular distribution of the lands of Egypt. He assigned to each Egyptian a square piece of ground: and his revenues were drawn from the rent which each individual annually paid him." It will be remembered that the Pharaoh in question spared the lands of the priests, and fed them during the famine. Whether this monarch possessed any of the military talents so liberally bestowed on *Sesostris* we know not; but if not he

Osyman-
dyas

would not be a solitary instance of a Sovereign praised for qualities to which he was an entire stranger. As to some of the exploits related of this wonderful Sovereign, nothing can be more extravagant. Herodotus makes him conquer the Scythians and Thracians, to whom Diodorus, five hundred years afterwards, gratuitously adds India on both sides of the Ganges! The latter writer, however, ingenuously confesses, that the Egyptian Priests themselves did not agree in the tales which they related of this their hero. Only nine years are allowed for his distant expeditions, and decisive victories, and all the conquered nations are represented as bringing tribute to Egypt; but yet we, somewhat incoherently, find the great conqueror afterwards busied in building a wall to defend Egypt itself from the incursions of its nearest neighbours, the Syrians, and Arabians. It needs no serious argument to show, that much of the History of Sesostris is romance. The Egyptians, at various periods of their history, certainly spread their conquests as far as Jerusalem one way, and perhaps into Lybia and Ethiopia in other directions; but that they ever went much further, still less that they penetrated to Bactria and India there is not the slightest reason to believe: and though Herodotus speaks of pillars and statues erected in various parts of the world by Sesostris to commemorate his victories, the only one which he says he saw was in Palestine, and even of that he very probably may have misunderstood the inscription, which, he says, was in the sacred characters of Egypt.

Sesostris is said to have been succeeded by a son, whom Herodotus calls *Pheron*, but who, Diodorus says, took the name of his father. However, of him there is recorded nothing but an idle tale of the mode in which he was cured of blindness. Herodotus makes this Prince the immediate predecessor of *Proteus*; but Diodorus says he had a great number of successors who performed nothing worthy of note; and that it was not until many generations afterwards, that he was succeeded by *Anaxis*, who, for his tyranny, was dethroned by *Actisanes*, the Ethiopian; after whose death the Egyptians chose as King one of their countrymen named *Mendes*, who built the celebrated Labyrinth. After *Mendes*, he adds, there was no Sovereign in Egypt for five generations of men, (166 years,) and then the *Proteus* above mentioned, was elected King.

Such are, in brief, the inconsistent accounts of the two great Grecian historians. They only prove that the affairs of Egypt, prior to the Trojan war, were involved in impenetrable obscurity; and that of the few incidents related concerning those ages, those only which have some relation, more or less direct, to the narrative in the Bible, deserve the slightest attention. It is obvious that the Egyptian accounts set out in fable and falsehood. Manetho's enumeration of the divine Sovereigns, differs from the statement of Herodotus, inasmuch as the former inserts only seven Gods and nine Demi-gods in his list; but in neither historian can we suppose a sudden transition from truth to falsehood. What should all at once convert the fabling narrator of the reign of *Bacchus*, into the veracious annalist of the life of *Menes*? Besides the mere circumstance, that such vast and unaccountable chasms exist in the history is conclusive against it. It has never yet been found, at least since the human race was renewed after the Deluge, that many centuries have passed away without producing some events worthy of commemoration: and they who could record the trivial story of *Pheron*, would surely have found something worthy of notice in the thousand years which are said to have elapsed from *Menes* to *Nitocris*. The most extraordinary monuments of Egyptian power and industry, were the Pyramids; and those who carried back into a distant antiquity the actions of their Sovereigns, were likely to give a similar origin to these extraordinary structures. Accordingly we find some of them attributed to *Mæris*; but as Diodorus expressly assigns to many of them a date subsequent to the time of *Proteus*, we have little reason to doubt but that they were all built long after the Israelites quitted Egypt. The denomination given to them has received various explanations; but the most plausible is that which derives them from *Piramis*, a word applied, as Herodotus asserts, to the mortal Sovereigns of Egypt. This word, he says, signifies good, or virtuous; which may probably have been the original meaning of *Pharaoh*. The supposed antiquity of the pyramids, and of the

History. inscriptions on the obeliaks, have given occasion to a belief that the Egyptians had made great progress in the arts several thousand years ago; but the grounds of this reasoning being taken away, by the preceding observations, we remain exactly where the scriptural accounts left us on this subject; that is to say, we find that Egypt was a Monarchy, in the time of Abraham; and that it had made still further advances in civilisation, in the course of the three following generations. But what was the extent of the first Egyptian Monarchy; and where was its seat? These are questions which it is absolutely impossible to answer, in the present state of historical knowledge. It seems probable that Upper Egypt was inhabited before the low country, and consequently that Thebes was a Royal seat before Memphis; which, as Herodotus observes, was only secured by artificial banks from the ravages of the Nile. It is reasonable to suppose that men first stationed themselves in the part of the country least liable to inundation; and afterwards descended the stream to cultivate the richer alluvial soil. The whole country was probably divided into petty Sovereignities, until either the King of Thebes, or of Memphis, was sufficiently powerful to extend his dominion from the cataracts to the sea. Among other actions of Sesostris, is an uncertain account of his having founded a colony at Colchis, which seems to have arisen out of a mere conjecture on the part of Herodotus. So little, in general, were the Egyptians disposed either to colonize or to make conquests in distant parts of the world, that all their most important institutions appear to have been framed with a view to attach the inhabitants to the soil. Before the time of Joseph it was not probable, we might almost say it was impossible, that they should ever have sent out large armies. In his time, they were an agricultural people; the Priests were proprietors of a considerable portion of the lands: and we find the King possessing himself of a fixed revenue in the form of a land-rent. According to Herodotus, the soldiery were, at a subsequent period, paid in land. In short, agriculture was the chief object and support of all their institutions: nor did they merely cultivate corn, but other esculent vegetables, in great abundance. Commerce does not appear to have engaged their attention, except as receiving what was brought to them from abroad; nor do we find them engaging in maritime concerns, although lying upon two seas. The cultivation and improvement of their own country, however, required a knowledge of various studies; and they were skilled in land-measurement, in the arts of forming dykes and embankments, in those of making bricks, of building houses, of weaving linen, of working in gold and silver, and of coining money: and where all these arts are known to be practised, the existence of many others may be with certainty inferred. In particular we may reasonably believe that some mode of communicating thought, by written language, existed in Egypt at the period of which we now speak: yet even this inference is not quite irresistible: since the Mexicans and Peruvians had attained nearly as great a degree of civilisation, without the use of letters. It is remarkable that we find several customs in Egypt, the origin of which is not given by their own writers; but which appear to refer to events commemorated in Sacred History. The instance of circumcision is a remarkable one. Palladius asserts, on the authority of some Grecian authors, that the Egyptians used annually to make experiments on the different kinds of seeds, placing them, for a certain number of days, in a moist situation, until the rising of the dog-star, when they judged from their dryness or humidity, what species were likely to be plentiful and what scarce in the course of the next season. This custom may not improbably have originated in the predictions of Joseph. The prohibition of feeding on unclean animals, common to them with the Jews, whether a matter of divine or human origin, was evidently conducive, as all divine laws must be, and as all human laws are intended to be, to the welfare of the people on whom it was imposed: different kinds of animal food were more or less apt to generate the leprosy, a disorder to which Egypt has always been peculiarly liable, and with which many of the Israelites might have been tainted when they left that country. The Egyptian leprosy has been observed to be hereditary, at least to the third or fourth generation: and it is possible that this circumstance may have been what was particularly alluded to in the menace, held out in the second Commandment, against that idolatry, to which Egypt was peculiarly addicted. What

we find respecting the early customs of the Egyptians, in the Greek writers, is not at all to be relied on. Diodorus Siculus presents us with a sort of romance evidently meant to picture out the ideal perfectibility of a government in which the Priests were to direct every thing by their counsels; but it would be as reasonable to consider Sir Thomas More's *Utopia*, or Fenelon's *Telemachus*, a true history, as this account a just description. The most accurate notions on this subject may be formed by considering the laws, delivered by Moses to the Jews, which in numberless instances must have been directed to wean them from the influence of that evil example which they had received in Egypt, their house of bondage as a nation, but the scene of sensuality, and consequent object of regret, to many of them as individuals.

From Egypt we turn our views at once to India, a country similar to Egypt in its pretensions to an incredible antiquity, in the principal features of its early fables, in the prevalence of an idolatry shocking to reason, and in the division of castes which contributed to perpetuate all its abuses, moral and political. Of India we obtain from Herodotus little, if any, information: he had in fact never even heard of the Ganges. The first Grecian writer, who professedly treated of that country at any length, was Megasthenes, who wrote about the year B. C. 300, but whose work is lost. The earliest classical writers extant on the affairs of India are *Diodorus Siculus* and *Strabo*, about the commencement of the Christian era; *Curtius* and *Pliny* in the first century, and *Arrian* in the second. In Sacred History we find India mentioned rather as a boundary of the dominion of Ahasuerus, than as a country at that time much known; and this occurs in the Book of Esther, which is supposed to have been written about, or somewhat before the time of Herodotus. Modern times have opened to us a vast fund of historical knowledge in the books of the Indians themselves, as well as of their neighbours the Persians; but what degree of antiquity should be attributed to these records is a question of very considerable obscurity. Those which are considered to be the most ancient are written in a dialect and character called the *Sanscrit*, which has no doubt ceased to be a living language in India for many centuries; but there is great reason to believe that many of them are fabrications of much later date than they purport to bear: and the very anxiety of Europeans to procure a sight of these curious volumes has probably encouraged the Indians to practise frauds of this nature to a great extent. Fabrications of Sanscrit works are the more easy, inasmuch as the originals are in the exclusive keeping of the *Brahmins* or Priests, who were alone capable of decyphering them, until lately, when a very few Europeans succeeded in obtaining a knowledge of the Sanscrit language. The most ancient of these books are the four Vedas, which do not appear to have been yet perused by any Europeans; and which are said to be written in a style which had already become obsolete when the *Puranas* were composed, of which latter there are many, explanatory of the sacred doctrines and traditions of the Indians. There are also some historical and mythological Poems, particularly the *Mahabharat* and the *Ramayana*, which have been in part translated into English. Some of the Mohammedan Sovereigns of India also procured translations to be made of the early Indian Histories. When the celebrated Akbar led his troops into Cashmere, about A. D. 1555, the natives presented him with a Sanscrit book, entitled *Raj-Turungee*, containing the History of their Princes for more than 4000 years. It set out with the account of an foundation of the whole country, except the mountains. When the waters had subsided, says this history, *Kushup* brought the Brahmins to inhabit Cashmeer. After a time they elected a King, whose successors continued to reign uninterruptedly until the time of Owgnund, who was killed in battle. This, however, is a very moderate specimen of the length of time over which most of their annals extend. They commonly begin with mythological fables of the successive revolutions of the globe, which are reckoned by millions of years, and thence gradually descend to something like the common and natural estimate of human generations; still with such uncertainty in the early stages, that it is extremely difficult to find any on which the least reliance can be placed.

We shall therefore not commence with any of these records, of which the date and the contents

History.

are so extremely obscure, but shall proceed in the first place to consider what may be collected of the ancient state of India, from Diodorus Siculus, Strabo, &c.; and shall then endeavour to correct and enlarge this view by a reference to what has been learnt in more modern times. That there never was any great expedition from the western parts of the world into India before the time of Alexander, still less any extension of the Indian dominion over any part of Europe or Africa, is reasonably to be inferred from this, that Alexander's incursion, short as it was, formed an era in Geography, and opened to the Europeans a knowledge of India, which has ever since been increasing. Megasthenes, whose History of India is cited by Strabo, obtained all his information from that source.

Diodorus Siculus.

Diodorus Siculus from this and subsequent authorities, had collected a very accurate knowledge of India; and it is remarkable how similar the portrait which he draws of Indian manners and habits, is to those which prevail at the present moment. He says, that according to the accounts of the Indians themselves, the *aborigines* of that country were a half barbarous people, living dispersed in villages, when Bacchus invaded it from the West, and introduced arts and civilisation. That Bacchus then established a Sovereignty; which, at his death, he left to his sons, who reigned there in like manner, and were succeeded by their descendants for several generations, until at length Monarchy was abolished, and a popular government adopted in most parts of India, though some districts retained Royalty down to the time of Alexander. In mythological story, the conquest of a country by one of the Gods, almost always signifies the introduction of his worship into that country. Now Bacchus had been previously stated by Diodorus to be the same as the Egyptian Osiris, and the Egyptians represented Osiris to have made an expedition first into Ethiopia, and afterwards into India; from all which fables we may gather that the worship of Osiris, or Bacchus, was communicated from Egypt to India, as we have before seen that it was to Greece. It would be extremely difficult to assign, with any probability, an exact date to this event; but it seems most likely to have been after the invention of alphabetic writing, and before the introduction of hieroglyphics from Ethiopia into Egypt; because we do not find in India the latter to have ever existed; whereas there is an alphabet which may not improbably have been formed from the sacred letters of the Egyptians. Again, this event must have taken place before the Egyptians had so much multiplied the worship of animals, as they did in the later ages of their idolatry. We find the worship of the cow in India, agreeing with that of the sacred bull of Memphis; but there is no trace of any divine honours having ever been paid in India to cats or dogs, much less to onions or other vegetables. The idolatry of the Indians appears to have taken a different direction. They multiplied their Deities, not in the figures of breasts and fishes, but of men and women, sometimes of monstrous shapes, as when they placed the head of an elephant on the body of Ganesa to imply wisdom, or gave Carticeya a number of hands as significant of strength; but more frequently these divinities were distinguished merely by some peculiar mark or attribute. The *Lotus*, or water lily, is among these, and has been supposed by some writers to allude to the ark; but it must be remembered that the Egyptians in very early times made of the lotus a sweetish bread, so that this flower was as natural a type of plenty amongst them as ears of wheat became afterwards in Greece. Osiris is said by Diodorus to be the sun; and in India the sun is worshipped under the name of Iswara, which seems to be a word of the same origin. The expedition of Osiris too, having in his train a number of Ethiopian Satyrs, seems to bear a great resemblance to the story of Rama, who was assisted in his expedition against the Isle of Lanka, or Ceylon, by a body of monkeys. Diodorus observes that there is much confusion among the Egyptian Deities, and the same may be said of those of India. This conformity, or rather identity, between the mythological systems of India and Egypt does not indeed determine which received its system from the other; and as Sir W. Jones observes, "It may be a material question whether the Egyptians communicated their mythology and philosophy to the Hindûs, or conversely;" but we have seen that the former is certainly traced to the time of Moses; whereas we have hitherto no

Idols.

accurate knowledge of the latter before the age of Alexander. Prior to that time, indeed, there was a vague notion among the Greeks of some communication between Ethiopia and India; but this probably arose, in part, from the circumstance that the people in both countries were literally Ethiopian, that is *black-faced*. In fact, many of the ancients believed, that the continent of India reached to Africa; as in the later ages it was thought to reach to America, whence our common expression, the West Indies, was first applied to the American Islands. What appears upon the whole most probable is, that some fugitives from Egypt, at an early period, carried arts and a mythological system from Egypt to India, where, as in Egypt, they established hereditary classes in society; the most sacred being the Priests, the next the military class, and these two having under them two others to perform the more mechanical and more laborious offices of society. We know that the sacerdotal class, among the Egyptians, was a separate one, in the time of Joseph; but there is no positive ground to believe that the military class was so, till afterwards; and as to the subordinate classes we do not find that they were ever distinguished in that country, as they have been in India into endless subdivisions; every one hereditary, and every one dedicated to the exclusive pursuit of some occupation in society. On the subject of these castes great diversity exists among the Indian books, and in the practices of different parts of India: and we may believe that at various periods they have undergone great revolutions. According to Diodorus, there were, in his time, *seven* tribes, viz. the philosophers, the husbandmen, the shepherds, the artificers, the soldiers, the overseers, and senators; but the general doctrine of the modern *Brahmins* is, that there were but *four* original castes, the *Brahmin*, or sacerdotal; *Chetteree*, or military; *Bire*, or agriculturist and traders; and *Sooder*, or labourers; but that, by a criminal deviation from the purity of the ancient law, there arose another vast multitude called *Burran Sunker*, which was produced by the illegal conjunction of persons of different castes, and which is distinguished according to the varieties of that conjunction into various tribes, or sub-castes as they may be called, differing in rank and occupation; besides all which there is an unfortunate body of men who are held in abhorrence by all, as an unclean and polluted race, called *Chandalas*, or *Pariars*. It may be observed that a fourfold distinction of society, not very dissimilar to the rude outline of the Indian system, existed at one time in Europe. The *Clergy* asserted an independence of the Laity, and a sacredness of character not unlike that of the Brahmins; they were the sole depositaries of learning, they were the Lawyers and Counsellors of the State; and by their spiritual authority they were enabled to direct all earthly power, public and domestic. The *Nobles*, were the most eminent warriors. The *Franklins* and *Burgesses* by degrees grew into consequence, as a third estate: and lastly, the *Labourers* were uniformly held in a state of villenage, or domestic slavery. To complete this picture, even the *Pariars* found a counterpart in those unhappy persons, who often for slight causes were *excommunicated* and cast out into a state of exclusion from all society. The fundamental principles of the Christian religion were not susceptible of so gross a perversion as was the Indian idolatry; and therefore the distinctions just noticed either faded away entirely, or accommodated themselves to the successive changes in the wants and habits of society. Upon the whole, therefore, we may not unreasonably infer, that the distinctions of caste took their rise in India from similar sources, as the distinction of orders in Europe, and were founded in an age of similar barbarism. We may well doubt that they ever existed in the theoretical simplicity asserted by the Brahmins, as the ancient law: and we may rather conclude that the higher castes were originally foreign Priests and conquerors, and the lower castes, the barbarous aboriginal tribes, asserted by Diodorus, to have inhabited India before the time of Bacchus. There are two great religions, or rather idolatrous systems which appear to have anciently divided India, that of Buddha and that of Brahma. It would seem that Buddha was a real personage; and as far as can now be collected, his doctrines were the less gross, and his ceremonies the less barbarous. Brahma appears to have been a mere name of the Deity from whom the Brahmins boasted their descent. Which of these two were the primary religion of India it is now difficult to ascertain. We should incline to think that the

Castes.

Two great
sects.

History. Brahminical system was the elder; and that Buddha, revolting at the cruelty of some of its practices, formed a sect which was eventually driven out of India, and carried its doctrines to Ceylon, to China, to Tâtary, and perhaps to Scandinavia. It is not easy to say when the separation of the Buddhists from the Brahmins took place. As far as we can judge from the picture drawn by Diodorus, they were indiscriminately mixed together in his time; for he mentions some customs which belong to the one sect, and some which are peculiar to the other; but does not hint at any distinction between them.

Doctrines. The Brahmins teach a mysterious doctrine to the initiated; but to the vulgar, a system of most gross and extravagant superstition. The Deity they say is one. His mysterious unity is indicated by the word *Aum*, which they never presume to utter, but which perhaps is nothing more than the old Egyptian word *Om*, the *Snn*. The three letters A, U, and M, are said to indicate a triple nature in the Divinity, as the Creator, Preserver, and Destroyer; called *Brahma*, *Vishnu*, and *Siven*; each of whom has had various incarnations, and numerous descendants. The incarnations called *Avatars*, are all of a wild and fanciful nature: and the confusion which exists in the genealogies of these divinities, is utterly inextricable; the offspring being confounded with the parent, and the marriages, contests and other incidents being involved in endless allegory and fable. Add to this, that as various great men have at times assumed the name of the Gods, (a custom which is even now in use,) their real actions have been mixed with the fabulous exploits of the divinities, and tended greatly to increase the general confusion. We have seen that Diodorus believed the whole of India to have been anciently ruled by one Sovereign; but there is no certainty that such a state of things ever existed. Sir William Jones expresses an opinion "that in some early age the Hindûs were splendid in arts and arms, happy in government, wise in legislation, and eminent in various knowledge;" but unfortunately for this hypothesis, he adds, that "their civil history beyond the middle of the XIXth century from the present period, is involved in a cloud of fables." This being the case, we know not how it will be possible to trace amidst the obscurity the proofs of their imaginary splendour. We find here the same sources of confusion as in Egypt. Each petty Sovereignty furnishes a dynasty: and the genealogies of the different dynasties, some of which are derived from the sun and the moon, are altogether irreconcilable. The Buddhists are anathematised by the Brahmins; and among the latter the followers of Vishnu are as much at war with each other, as the Egyptians who worshipped the Ichneumon were with those who venerated the Crocodile. Sir W. Jones observes that we have four media to satisfy our curiosity respecting the ancient state of India, viz. languages, religion, antiquities, and works of science. We know not what languages the Greeks found in use when they invaded India; but the names of men and places which they mention seem to be Sanscrit; and Sir William is of opinion that the Sanscrit was introduced into India in some remote age and mixed with the pure Indian language, which he seems to think of Tâtarian origin. He attributes the introduction of the Sanscrit to conquest; but it is still more likely to have been effected by the exertions of those who were artful enough to procure the adoption of their superstitions. If so, the origin of the Sanscrit language is perhaps to be found in the old Egyptian. The learned author above cited asserts that the language and literature of Abyssinia bear a manifest affinity with those of Asia, and that some of the Indian inscriptions are composed in part of Ethiopic letters. Of the Hindû religion we have already spoken. The antiquities, including architecture and sculpture, are certainly curious, more especially from the similarity which appears to exist between some of the ancient statues, and the African form, tending strongly to corroborate the idea of some early connection with that part of the world; yet this goes but a little way toward fixing the period of such an intercourse. Of their works on science and art, any more than of their religious tracts, it is manifestly impossible to ascertain the date: and the circumstance that their oldest law books contain rules for the interest of money, proves nothing; since we cannot be sure that this way not have been an interpolation. After all we are thrown back to the Grecian authors, with little more light than they can afford as to the times much anterior to their era.

It is well known that the Indian writers in general divide the duration of the world into

four Yugs or Ages, like the golden, silver, brazen, and iron ages, of Grecian and Roman fable. They by no means agree in the periods which they assign to each Yug. One estimate however is as follows :

	Years.
Satya Yug	3,200,000.
Treta Yug	2,400,000.
Dwapar Yug	1,600,000.
Cali Yug	400,000.

It seems quite idle to attempt to reconcile either of the three first Yugs with any actual chronology ; more especially as they are filled, like the early periods of Egyptian fable, with reigns and exploits of Gods and Demi-gods. The only question is, whether any probable commencement can be assigned the Cali Yug at present subsisting. Some persons who reason on the astronomical works of the Indians, assign the year *s. c.* 3102 to the epoch in question, and contend that astronomy was well known in India at that time : but this fact is positively denied by others, who say that *Parasara* is the most ancient Indian writer on astronomy, whose works are now extant ; that he lived about the year *s. c.* 1153 ; and that he was ignorant of the precession of the equinoxes, the signs of the zodiac, or even the days of the week. Others again state the Cali Yug to begin *s. c.* 1078 : and others adopt other periods. Little stress can be laid on the astronomical argument, but we should rather prefer the historical records, meagre and uncertain as they confessedly are, when by comparison and adaptation any reasonable narrative can be drawn from them. Yet these soon fail us when we ascend beyond the time of Alexander, contemporary with whom was *Chandragupta*, the *Sandracottus* of the Grecian historians. In the 9th volume of the *Asiatic Researches*, we find a table of the Kings of Magad'ha, Emperors of India, which ascends from this Sovereign to *Sahadeva*, *s. c.* 1370 : and though much confidence cannot be placed in those tables, yet it is possible, that up to that period, or even earlier, the Brahmins may have flourished in India : of which country they uniformly state, that they are not the aboriginal inhabitants : and this supposition would harmonize well with the idea, that they, and perhaps some of the *Chetteree* class, or warriors, formed one of those offshoots of Egyptian population, which the jealous policy of the ancient Pharaohs induced to quit their country, about the time of Moses. The similarity of language before alluded to, and the vague memory of ancient traditions, both in Egypt and India, seem to indicate that they were rather persuaded than compelled to this expedition : that they first penetrated into Ethiopia, and there perhaps obtained an auxiliary force of barbarous and ape-faced men, described as Satyrs and monkeys, with whose aid they established themselves on some part of the Indian coast ;—a long and perilous navigation in those days, and one which they, perhaps, possessed neither the means nor the inclination to retrace, when once they had come, like the Israelites, into a land flowing with milk and honey ; where they were recognised by the savage natives as a superior race of men, sons of the sun and of the moon ; and where their King at once entered, like the Kings of Egypt, into the *allodial* possession of the whole territory. Upon this last point Diodorus is an express authority. He says, “the whole land is the King’s : and it is not lawful for any private man to possess any portion of it.” Here too, as in Egypt, the only land, not Royal, was that of the Priests. The earth in general was described as the wife of the Sovereign, and the sacerdotal lands as his sister. Hence the passage in an old Sanscrit inscription, (*Asiatic Researches*, p. 423,) “In this world is only one *sister* of all Kings, namely land, which has been conferred on Priests ; she must not be enjoyed nor espoused.” From the other lands too, in India, as in Egypt, the King drew his revenues in the shape of a rent, being a proportion of the produce ; an additional circumstance to show that the emigration was probably posterior to the time of Joseph : to which we may add, that the Indians do not use circumcision, a rite introduced, it would seem, into Egypt,

History

Arta.

Revolts
against
caste.

in imitation of the Israelites. On the other hand, they practice the Phallus worship, which DioJorus expressly says, the Greeks received from Egypt. In their creed, as in that of the Egyptians, the metempsychosis forms a prominent feature. They have the art of making sun-dried bricks like those on which the Israelites were employed. They probably brought with them the art of weaving fine linen, practised in the time of Joseph, and applied by them to the manufacture of cotton, a plant anciently unknown to Egypt. Herodotus says, the Priests and the soldiery were the only ranks honourably distinguished in Egypt; and Plutarch observes, that the Kings must be of the one or the other of these classes. Such was certainly the case with the Indians from the beginning; and they appear to have kept the two other classes, for a time strictly separate. In Egypt too, as in India, the Priests assumed a right, not only to counsel, but to ensue the King, and even to direct the most common actions of his life. In both countries the Sovereign often attempted to shake off this slavery, and to weaken the power of the Priests by setting their institutions at defiance. An attempt of this kind seems obscurely hinted at in the Preface to Halhed's *Code of Gentoo Laws*. The Pundits, or learned Brahmins who drew up that Preface, after stating the origin of the four original castes from the different parts of their great Deity *Brahma*, viz. the Brahmin from his mouth, the Chetteree from his arms, the Blee from his thighs, and the Sooder from his feet; go on to say, that for some period after the creation of the world, there was neither magistrate nor punishment, and no man committed crimes: wickedness, however, at length arising, *Brahma*, the Creator, issued his order to a Chetteree named *Beiroja* to assume the magistracy; but he and his descendants, for three generations, all declined so weighty a charge. *Anung*, the fourth in descent, assumed it awhile, but resigned it to his son *Neit-man*, who, in like manner, after a time, withdrew to devote himself to religion; when, the kingdom being left without a magistrate, the Brahmins raised *Bein*, the son of *Neit-man*, to the throne. This personage they represent to have acted, as Cheops the Egyptian Sovereign did, who, according to Herodotus, "harred the avenues to every temple, and forbade the Egyptians to offer sacrifices." In like manner the Pundits say, that *Bein* issued a proclamation throughout his kingdom, that no man should perform the *jugg*, nor the *poojah*, nor any such works of piety; and that he tolerated the mixture of castes, which produced the *Burrin Sunker*. For these impieties the Brahmins put him to death, but in a mysterious manner produced from his dead body a son named *Pert-hoo*, who was more obedient to the Brahmins; and who, consulting with them, established regulations for the different tribes of the *Burrin Sunker*, which they were never to overpass. It is easy to see, under the veil of this allegory, the ineffectual attempt of some enlightened Sovereign of the military caste to emancipate himself and his people from the power of the Priests; an attempt which only ended in giving new weight to their tyranny, and more degrading forms to their superstition. The general feelings of human nature, however, have often revolted against the oppressive distinction of caste. Thus the military nation of the *Mahrattas* has been formed out of three inferior castes, who were anciently restrained to the occupations of farming, and keeping sheep and cows. Thus too, the *Sikhs* have more entirely thrown off the Brahminical system. Nor has this happened only in latter ages. At very early periods individuals started up in various parts of India, who founded numerous sects on the principle of abolition of castes. The most remarkable of these was *Buddha*, the great conflict between whose followers and those of the Brahminical system appears to have taken place in Ceylon, about the year B. C. 542, from which the Ceylonese, who are Buddhists, date their present era. We find no trace of his name in any European writer before *Clemens Alexandrinus*, (about A. D. 200), who says, "there are likewise among the Indians, persons obeying the precepts of *Butta* (*Birra*), whom they honour as a God for the excellence of his venerableness." Long before, indeed, it was known that there were two classes of the philosophic tribe, one of whom called by the Grecian writers in general, *Brachmanes*; the other is called by Megasthenes and Strabo, *Germanes*, and by Porphyry, *Samanari*, possibly from *Samana*, a name given to *Buddha* by the Ceylonese. It is remarkable, that *Buddha* is venerated, though in

an inferior degree by the Brahmins themselves; although in later times his followers have been persecuted by them. There is no trace, however, of open warfare between the two sects on the continent of India; but the former were always considered as the orthodox sect throughout India proper; and the latter appear to have dispersed themselves, at various periods and in all directions, from that central point; carrying with them images of Buddha, as an incarnation of the Supreme God, and mixing up with their worship of him more or less of the old Brahminical, or (as we should say) Egyptian mythology. Hence he has been traced not only in Ceylon, but in Siam, Pegu, Ava, China, Tartary, and even in Scandinavia, under the names of Bud, Pot, Fo, Woden, Odin, &c. The Brahmins, on the contrary, never migrated; and the attempt to subdue Ceylon was not considered by them as passing the sacred limits of their empire. As this event took place *a. c.* 542, we may be satisfied that the Buddhists had been established long before in Ceylon, where they formed the predominant sect; and hence it is also likely that their migrations to different parts of the continent were antecedent to this period.

If we are right in these conjectures, the annals of Egypt and India united furnish us with two great facts in the history of mankind, namely, that a complete system of idolatry was carried from Egypt to India subsequently to the age of Joseph, that is to say, after the year *a. c.* 1635; and a modification of that system was carried from India to the north-western extremity of Europe, and to the north-eastern extremity of Asia, before the year *a. c.* 542. Hence the incredible exploits of Sesostris, Odin, &c., &c., not only become to a certain degree intelligible, but assume, within moderate limits, a place in chronology: and hence, too, we may account for that very remarkable fact, that time is found to be distinguished into weeks, and the days of the week to be dedicated to the same or analogous deities; among nations apparently so unconnected and so unacquainted with each other, as the Indians, the Scandinavians, and the Romans: viz.,

Andity War.....	Dies Solis, the Sun's day.
Soma War.....	Dies Lunæ, the Moon's day.
Mungela War.....	Martis Dies, Tuisco's day.
Boodha War.....	Mercurii Dies, Woden's day.
Vrihaspat War.....	Jovis Dies, Thor's day.
Shukra War.....	Veneris Dies, Frea's day.
Shenisker War.....	Saturai Dies, Seater's day.

Now, on looking to the Divine commandments given by Moses to the Israelites, nothing is more evident than that their first and principal object was to detach that chosen people from the idolatry which they had witnessed in the land of Egypt. The Egyptians had already begun to have "other gods" beside the Creator; they had made idols, "the likenesses of things in heaven above, and in the earth beneath, and in the waters under the earth;" they had "taken the name of the Lord God in vain," by applying it to the Sun and the Moon, and the visible planets, Mars, and Mercury, Jupiter, and Venus, and Saturn; and, lastly, they had dedicated every day, in rotation, to these false and fabulous gods; whereas, to the great Creator alone was any day to be devoted, and that day was not to be a day of obscene rejoicing, but of pious rest, "the Sabbath" of the week; remembered in order "to be kept holy." Thus was the true religion rendered the means of exempting mankind from a yoke as perpetual as it was debasing, alike to the intellect and to the morals.

We have dwelt thus long on the early history of Egypt and of India, not only because they both pretend to so high and extravagant an antiquity, but because, amidst their monstrous fictions, we think we perceive something like a light breaking in upon the obscurity, both of their own and other records. We think, too, that this examination strongly illustrates the childish credulity of modern philosophers, who, in their zeal to discredit the Scripture history, have set up in opposition to it, records, of high antiquity and perfect credibility, which are one entire chaos

History. of monstrous fiction, and in which it is scarcely possible to ascertain the real date or origin. Thus, the poem called the *Raymayuna*, though founded on an event which took place less than sixty years before the birth of Herodotus, is related with an infinitely greater mixture of fable, than either the *Iliad* or the *Odyssey*. The attacking sovereign is represented as an incarnation of Vishnu, and the king of Ceylon as a demon called *Ravana*: and together with the real events of this war, whatever they may have been, are mixed up all the old traditionary fables, invented by the Egyptian priests, a thousand years before, respecting *Osiris*. It is manifest that this incoherent medley could not have been put together until some centuries after the event which it pretends to record: most probably it is subsequent to the Christian era; and yet this is the most ancient historical poem in the Sanscrit language.

China. Another country, the unfathomable antiquity of whose annals was, for a long time, vaunted by writers who affected to doubt whether Christ ever preached in Judea, is the strange and anomalous empire of China. We were expected to believe that this people, not sufficiently cultivated to adopt alphabetic writing, was in possession of a complete body of literature thousands of years before letters were known in western Europe. We were told, in the words of an Italian writer, that "the history of this nation, the most ancient and most polished on earth, would compensate the sterility of that of most other nations." In fine, what says the luminary of modern French literature, the celebrated *Voltaire*? "Shall we dare," exclaims he with indignation, "to speak of the Chinese without referring to their own annals?—It is evident, that the empire of China was formed above four thousand years ago.—If any annals bear the stamp of certainty, it is those of the Chinese—the Chinese empire was subsisting in splendour when the Chaldeans began those nineteen hundred years of astronomical observations which *Calisthenes* sent into Greece." Such was the opinion of a man who dared to assume the direction of historical belief in the age in which he lived. The lowest student in History, who reads for solid information, would be ashamed to utter such a rhapsody. Let us see what authorities we can find for Chinese history devoid of fable. The Greek and Roman authors here afford us little light or assistance. All that they seem to have known was, that there were people far to the east, who were called *Seres*, and who manufactured silk, a commodity extremely rare at that time in Europe; the silk worm's eggs being first brought to this part of the world about the middle of the fifth century. It is stated, that the *Seres* twice sent embassies to Rome, viz., in the year a. c. 24, and in a. d. 273; but it is by no means probable that these were Chinese; indeed, *Pausanias* mentions a nation of that name upon the *Ganges*. The *Serica* which *Ptolemy* describes was a Scythian or Tartarian country to the north-west of the country of the *Sina*, from which latter our modern name of China is derived; and both *Serica* and the country of the *Sina* are included in *Shen-si*, one of the northern provinces of the present Chinese empire.

In the commencement of our inquiries into the information of the Chinese themselves, we meet with a startling fact. It is asserted, that so late as a. c. 246, or 213, or as others say, 187, the reigning emperor ordered all the books then extant to be burnt, except those of law and physic. Such an edict might not have been of very difficult execution in a country like China, where, from the very nature of the writing, it is the labour of a life to learn to read with accuracy, and where the individuals possessing any but common books of accounts, belong to the learned class; and are therefore individually known to the government. However, it is probable, that the edict itself is a fable, invented to account for the want of earlier records. The earliest historical work extant is that of *She-Ma-Tsien*, who wrote a. c. 37, and who professes to have framed his work partly from tradition, and partly from some imperfect fragments of works which had escaped the general conflagration. He has moreover the candour to own, that he had not found it possible to ascend with certainty 800 years beyond the times in which he wrote. Consistently with this, we find, that though books of law are said to have been spared, yet *Sir George Staunton*, the celebrated translator of the Chinese Penal Code, could obtain authentic intelligence of no compilation earlier than that of *Lee Quee*, who is supposed to have lived a. c. 250. A collection of

laws, however, made at that time, presupposes, that the people had been united under regular government for some considerable time previously; and we may, in the present instance, safely conclude, that such was the case with China for 600 or 800 years before the Christian era. This computation, however, stops exceedingly short of what some of the Chinese are said to maintain. They hold, it seems, that the world had existed from the beginning of its creation, six ages, or 64,800 years, when their first Emperor Ya was born. It is probable, that these extravagances are the mere echo of Indian traditions, introduced at different times by the Buddhist missionaries. It is commonly said, that Buddha is worshipped in China under the name of Fo; but, as far as we can discover, it would appear that there are two kinds of idolatry in China, both derived from the same source. That of the sovereign and magistrates seems to be the purer kind. *Kien Lung*, the late emperor, in a valedictory address to his subjects on resigning the throne to his son *Ping-Shin*, speaks only of THE SUPREME BEING, as the object to which his prayers were addressed; but still there are certain ceremonies, which are performed at stated periods by all persons in authority, and which seem to be derived from the religion of Buddha. The common idol *Fo*, however, is worshipped with a great variety of superstitious usages by the lower classes of people: and the priests of this idolatry are tolerated by law, though under certain restrictions, as if their faith were considered to be different from the established religion of the state.

History.

Extrava-
gant Chro-
nology.

It was probably from the Buddhists that all those opinions and practices of the Chinese were derived, which made some persons consider them to be a colony of Egyptians; an hypothesis attacked and completely overturned by M. De Pauw. It is needless to add, that the Chinese themselves knew as little of their imaginary migration from Egypt, as the Egyptian priests in the time of Herodotus and Diodorus did of the existence of China, which they otherwise would have doubtless included among the pretended conquests of Sesostris. Some writers have supposed that Noah in his old age retired to China, and that he was identical with Fohi; but this is just as little consistent with the Chinese accounts, which say nothing of any flood in the time of Fohi, whom they consider not as the head of a family of eight persons, but as the sovereign of an established monarchy. At what time Fohi lived, if he ever lived at all, is very doubtful. One of his successors, Yao, is placed by some writers in the year B. C. 2357, by others in 1357: a difference of a thousand years in such a matter sufficiently evinces its total obscurity. From Yao to *Ping Yang*, who began to reign B. C. 770, M. de Guignes has given an abstract of the Chinese history, taken principally from the *Shu-king*, a work held in some measure sacred. The inferences which he draws from the whole are striking. "This part of their history," says he, "is entirely destitute of facts, extremely uncertain, and one might say completely null, if it were not for a few moral discourses inserted in it here and there. It plainly demonstrates, that whilst there subsisted in other parts of the world several large empires, and even after several kingdoms had disappeared from the face of the globe, the empire of China, according to the statements of its own historians, was of very trifling importance indeed. It was only composed of a few hordes, by no means numerous, living amidst barbarous nations, and moving to one place or another, according as circumstances, or the advantages presented by those migrations might dictate: in a word, that this empire, far from having existed, as has been pretended, 3000 years before Jesus Christ, has not been united together, in a durable manner, above 529 years." M. de Guignes observes, that this inference is to be drawn from the statements, mossier as they for the most part are, of the Chinese writers themselves. In proof of this, we may read what they say of *Yen-Yang*, the first sovereign of the Teheou dynasty, whose reign began B. C. 1122. "This prince and his son *You-Yang* reigned over the country round about *Sy-gan-fou*, in the province of *Chen-ry*. They did not occupy a very extensive district; for the greater part of what now forms that province, was possessed by barbarians. In general there were no cities, and of small towns and villages there were very few: there were also large tracts of land which have not been brought into culture till of late. China, properly speaking, was not furnished with cities till long after

Early state.

History. that time: and it was the *Tsui* and the *Han* who subsequently built them, to keep in subjection the barbarians whom they had conquered." The successor of Vou Vang was named *Ching Fang*: he consulted the *oracles* to know where he should fix his residence: and the oracle having very wisely determined that a place called *Fong* was the middle of the world, the king went thither, and built a city in *five days*. This was *n. c.* 1109, and of course the pretended city was little better than a Tartar camp. In fact, the Chinese of that time were a number of roving tribes, about as polished as the Saxons during the heptarchy. Of the present fifteen provinces, ten were wholly occupied by savages who had never been subjected to any yoke, and the other five were occupied, partly by pastoral tribes, and partly by the inhabitants of a few cities, which, with their neighbouring lands, were dignified with the name of kingdoms. It is not easy to say at what periods, and by what degrees, these petty kingdoms were united so as to form the present extensive empire of China; but it is most certain, that that empire is not now, and never has been, in any other than a very low state of civilization. Much has been said of the Chinese astronomy, and Father Du Halde builds confidently upon an eclipse of the sun, said to have been observed by them *n. c.* 2155; but it is tolerably certain that this eclipse was the invention of a very recent writer; and that the astronomical knowledge of the Chinese was extremely limited; for when the Jesuits first came amongst them, they were utterly unable to calculate eclipses, or indeed to make any celestial observations whatever. We may apply to the Chinese what we have said of the Egyptians; if their civilization and power had been so early, it would have been known to other ancient nations. But the bulk of the Chinese nation appears to be of Scythian or Tartar origin, and the Scythians themselves were unknown till about the year *n. c.* 637, when, under the command of their king Madyes, they broke into Media, killed Cyaxares, and advanced with their victorious hordes to the confines of Egypt. This Madyes is by some called Indotyus, and seems to be the same person who in the Tartar histories is called Ogus Khan, and is said to have conquered Cathay, or part of China. The Chinese themselves place their first great Emperor *Fohi*, in the province of Shen-si, which, as above mentioned, forms the north-western part of the present empire, and includes the ancient Serica and the country of the Sinae. Previously to him indeed they mention some few other sovereigns, who lived before men were united into regular society, or knew how to build so much as a hut or cottage, or even to strike fire from flints. Nevertheless, these wondrous monarchs were great astronomers and geometricians; and by the advice of their wise counsellors, established fairs and markets for the promotion of commerce. *Fohi*, however, who was a divinely begotten personage, carried political science a great deal further, for he taught his subjects to live in towns, invented a symbolical mode of writing, and composed, or rather copied in it a code of laws which he had the good fortune to see inscribed on the back of a dragon-horse, as it arose from the bottom of a lake by the side of which he was walking. He also invented music, and dress-making, the custom of sacrificing six different kinds of animals at the solstices, and of distinguishing persons by different names. Moreover he was the first sovereign who discovered the utility of naming a prime minister, and of establishing mandarins to govern his provinces. All this, it must be owned, was a great deal for one king to accomplish; but then he reigned a hundred and fifteen years, according to some of his biographers: while others more sensibly admit, that the exact length of his reign is unknown. The only fact that we can discern with any real sort of distinctness in this monarch's history is, that the Chinese empire, in its first origo, was formed by an union of four tribes, since it is said that this was the number of mandarins, each of whom had a province allotted to him to govern. The succeeding emperors for some time were great inventors in art and science. *Shin Nung*, the successor of *Fohi*, reigned 140 years, during which time he occupied himself in discovering the practice of physic, the art of making salt from sea-water, and various other useful matters, particularly the construction of ploughs, an art however in which he did not show much genius, and to which unfortunately no succeeding monarch has sufficiently attended; for modern travellers observe that the present Chinese plough is the most rude and inefficient instrument that can well be imagined; that

Chinese
astronomy.

Fohi.

the Chinese never plough above four or five inches deep, and seldom so much; and that two-thirds of the land under tillage is cultivated with the spade or the hoe. *Whang Ti*, the third of these early emperors, was no less accomplished than his predecessors. He spoke, say the historians, as soon as he was weaned from the breast. He was elected to the throne at twelve years of age, and soon afterwards discovered the compass. It is unnecessary to pursue the detail of his inventions, and those of his ministers, of whom he had six, little inferior to himself in originality. We must not, however, forget to notice that one of these ministers invented the gamut, and another the art of ringing little bells, a favourite entertainment of the Chinese. Though *Wang Ti* reigned only a hundred years, yet his discoveries were much more numerous, and evinced a much greater facility of talent, than those of both his predecessors united. His descendants, eighty-five in number, reigned over China for 2457 years, in the earlier periods of which time their principal inconvenience arose from the bad practices of certain magicians, who disturbed the order of sacrifices, and frightened the people with spectres and goblins. On the other hand, we find the successive emperors by no means inattentive to the good example of their ancestor, but inventing over again many of the things which he had invented before. Some grave writers bestow great pains in controverting these puerilities. For our own part, we think it quite sufficient to produce a short sample of them, and to let them speak for themselves. Yao, of whom we have before spoken, was the fourth in succession from *Whang Ti*; and the Chinese historians themselves agree that before his time their chronology is not to be depended on; but *Père Fouquet* with much greater reason asserts, that genuine Chinese history does not ascend above four centuries beyond the Christian era. Doubtless, the preceding portion contains some glimmerings of truth: we may perceive in it some vague notion of the first origin of society, we may see wandering tribes like those of North America, induced to settle on the banks of some great river, growing formidable by union; gradually enlarging their dominion; becoming an agricultural people; receiving the first rudiments of civilization, imperfect arts, and awkward, inconvenient letters; but dwarfed in intellect, and arrested in the natural progress toward improvement, by the very institutions which they consider as the acme of human wisdom.

From China our view naturally carries us over the continent to the north and west of that empire. Above a thousand years after civilization had begun to spread itself along the coasts of the Mediterranean, and while the great empires of Assyria and Persia were growing up and falling to pieces, the immense region, which reaches from the sea of Okotok to the British ocean, and from the north of India to the Polar regions, by far the largest compact portion of the habitable world, was either desert, or only occupied by wandering tribes; of whom, some subsisted by fishing and hunting, and others gradually adopted a rude sort of pastoral life. The most general name of these tribes, in ancient times, was *Scythæ* or Scythians, whom we are now in the habit of considering as the origin of the Tartars; but there were many others, as the *Getæ* and *Massageta*, ancestors of the Goths, the *Sauromata*, or Sarmatians, of the Slavonian nations, the *Ugri*, or *Unni*, of the Huns, &c. The population of some of these tribes becoming at length redundant, casual famine driving them abroad, or the hope of plunder and conquest inciting them, they at different periods, and in various directions, burst forth from their homes, often repelled, but more frequently overrunning and subduing countries richer and more polished than their own. It has pleased some fanciful speculators, in modern times, to discover among these barbarous savages, the origin and cradle of all the arts and sciences; and they have in these wild plains erected an Utopian empire of light and splendour, while all the countries known to history, sacred or profane, were lost in gloom. This extravagant notion still less deserves examination, than the pretended antiquity of the empires of China, India, and Egypt. We shall begin, as before, with the earliest accounts, on which the least reliance is to be placed. It is generally supposed, that the Gog and Magog, mentioned by the prophet Ezeckiel, were the *Getæ* and *Massageta*. However that may be, it is certain that the Scythians first became known

History.

Scythia, or
Tartary.

History. to the Grecian writers in consequence of their invading the territory of Media, and from thence overrunning Upper Asia and Syria, as far as the very confines of Egypt. From hence, however, they were afterwards obliged to return, and were finally conquered by Cyaxares, king of the Medes, who at first had opposed their progress without success. The whole duration of this their expedition, occupied several years, some say not less than twenty-eight; and their final overthrow took place a short time before the celebrated eclipse of the sun, which prevented a battle between the Medes and the Lydians, and which Sir Isaac Newton places a. c. 585. About two years prior to that period, the prophet Ezekiel had described "Gog, the land of Magog, the chief prince of Meshech and Tubal," sometimes using the word Gog as a noun of multitude, and sometimes Magog, as if he meant to express by either term indifferently the same nation, or by both terms two tribes of an united race. In prophesying their defeat and repulse, he says, they are "a great company and a mighty army,"—"all of them riding upon horses,"—"all of them clothed with all sorts of armour, even a great company, with bucklers and shields, all of them handling swords,"—"with "horns in the left hand and arrows in the right hand,"—"with "hand-staves," and with "spears." This description agrees remarkably with that which Herodotus gives of the Massagetas, who, he says, "resemble the Scythians both in their food and clothing;"—"they fight on horseback and on foot, and are both ways formidable; they have spears and arrows, and battle-axes (probably the hand-staves of the Bible): their spears, the points of their arrows, and their battle-axes, are made of brass; their helmets, their belts, and their breast-plates are decorated with gold." These nations, therefore, must have had some skill in metallurgy and other arts; but still they were not a settled people: they lived in waggons (from whence one tribe was called *Hamaxobii*), and Herodotus expressly asserts, that the Massagetas "sowed no grain, but subsisted entirely upon cattle, and upon the fish which the river Araxes abundantly supplied;" and that "milk also constituted a part of their diet." The accounts given by the Scythians themselves of their origin, plainly showed that in the time of the Grecians they had neither records nor traditions of any antiquity to refer to. Madyes, who led them into Upper Asia, was said to be the grandson of Sagillus, the fourth in succession from Scythes, the ancestor of the whole Scythian nation: and Scythes they represented as the son of Jupiter or Hercules, by a woman with the body of a serpent. He had two sons, Palos and Napos, who divided his empire. By the former we are perhaps to understand the ancestors of the Polish nation. Among the Scythian tribes, as in most distant extremities of the earth, the ancients had placed singular beings, partly human and partly monstrous. Thus we find in that country the Oigurs, who afterwards became the Ogres or giants of our fairy tales. There also were the Pygmies, who fought with the cranes; which fable has been supposed to relate to a war between the Moguls and some other Tartars. The *Pygmaei* are described as a small but remarkably strong race of men; and it is singular that the same tradition exists to this day in Scotland concerning the *Peeltis*, or Picts, whose name may be of the same origin. The cranes was a name given to the Massagetas, who subsisted, as has been seen, partly on fish and partly on hunting; and were, consequently, to be found, like cranes, in the marshes during the summer, and in the woods during the winter. Other Pygmies, who were probably nothing but monkeys, were placed by the ancients in Ethiopia, because that also was a country little known, and therefore, to a proverb, fertile in monsters. In the farther Scythia, too, we find the one-eyed *Arimaspi*, and the *Griphi*, alluded to by Milton, in his description of Satan "half on foot, half flying:"

"As when a Griffin, through the wilderness,
With winged course, o'er hill and moory dale,
Pursues the Arimaspiæ, who by stealth
Had from his woful custody purloin'd
The guarded gold."

Religion

The religious opinions of the Scythians have not been clearly explained. According to Herodotus

and other authors, they worshipped many of the same gods and goddesses as the Greeks, but under other names, as follows : History.

Vesta.....	Tabiti.
Jupiter.....	Papeus.
The Earth.....	Apia.
Apollo.....	Octosyrus.
Venus.....	Strippasa.
Neptune.....	Thamimasades.

They also worshipped Vulcan, Mars, and Diana: and they had a peculiar deity called *Zamolxis*. Some pretend that this last-mentioned personage was a mortal. He was, say they, a Geta, or Goth, by nation, the slave of Pythagoras, whom he accompanied into Egypt; and afterwards returning to his native land, he civilized his countrymen. Herodotus, however, makes him to live before Pythagoras; so that he was possibly no more than a Buddhist from India, or perhaps the name of Zamolxis was given to Buddha himself. It is most probable that various tribes received their idols from different sources: some therefore might have been of Phœnician origin, derived through the colonists at Colchis; but there is certainly good ground to believe that many came from India. We have seen that the Buddhists had communicated their doctrines to the neighbouring nations, at least as early as the seventh century before Christ. Hence not only is the Sanscrit mythology to be found under various modifications from the Ganges eastward to China, and northward to Tibet; but among the Mongol Tartars, subject to the Russian empire, are traditions of the cosmogony abounding with terms evidently Sanscrit. It is not unlikely that the celebrated *Odin*, or *Woden*, was identical with Zamolxis; for the people who came from the neighbourhood of the Euxine sea to the shores of the Baltic, brought with them the worship of Woden, and were therefore said by their descendants to have been led by that deity. It is recorded, that the ancient Getæ consigned the souls of the deceased to Zamolxis, and so did the Scandinavians to Odin, in words to this effect, "Odin receive thee! mayest thou be with Odin." That Odin was considered the same as Mercury by the Roman authors is well known; and the coincidence of *Bodha* *War* with *Mercurii dies*, and with *Woden's day*, cannot be accidental; more especially as it is only part of a systematic division of time (namely, the division into weeks), which in the whole, and in all its parts, is perfectly accordant. The barbarous Scythians and Scandinavians, indeed, corrupted the mild doctrines of Buddha, which forbade all sanguinary sacrifices; for these nations even practised human sacrifices: and yet if we rightly consider this point, we shall perceive, that, shocking as it is, it is yet a step toward the humanizing of savages; for the mere brute man listens only to his ferocious passions, and horrid appetites, and slays and *devours* all the enemies he can conquer; but the priest persuading him to select only the best and bravest as sacrifices to his protecting deity, and promising him that after death he shall be rewarded, by quaffing ale with Odin, in Valhalla, from the skulls of the victims, thereby in fact preserves numberless lives, and puts an end to the cannibalism which has justly been looked on as the last degradation of human nature. The existence of human sacrifices, therefore, among these savage tribes, is no proof that their first notions of religion were not derived from the Buddhists, although one of the marked distinctions of these latter from the Brahmins was an abhorrence of the sacrifice of animals. We see that Christianity itself, when planted among savages, is too apt to be mixed up with their old idolatrous rites; and before the doctrines of Buddha had reached the savages of Denmark and Sweden, they may have gone through numerous degradations, passing from one race to another, over wild and extensive regions, and during whole ages of barbarism.

As to the stories which are related of Woden, it cannot be expected that we should enter into a minute detail of them. He was, say the Gothic writers, a king of the *Asæ*, who dwelt at *Argard*, His origin.

History.

between the Euxine and the Caspian seas, where in fact there was anciently a city called by Strabo *Aspuria*, the metropolis of a province denominated *Asia*. Woden foreseeing, by the art of magic, in which he particularly excelled, that he and his posterity should reign for many ages in the northern parts of the world, he set off on his expedition, and fortunately conquered all the kingdoms that lay in his way until he reached Sweden, where, probably, captivated with the genial warmth of the climate, he fixed his abode, and dying there, was worshipped by his followers as a god. His course does not appear to have been very direct; for he first subdued all the country from the north of the Euxine to the Baltic, then embarking, he went by sea to the north of Germany, and there made himself master of Saxony, Westphalia, and Franconia; and afterwards returning, took possession of Jutland, from whence he crossed over to Sweden. All that can be collected from this incredible tale is, that the same Scythian tribes, or at least the same priests and teachers, spread their rites and customs, at successive periods, through all the countries here named, and that they originally came from the above country. The date of Woden's expedition is fixed by the Danish writers near 1100 years before the Christian era: most modern writers, however, bring it down to a. c. 66, when Pompey defeated Mithridates in Upper Armenia; but as we do not believe in the existence of Woden as an individual, neither do we think that the time or circumstances of that event at all correspond with the notion of any such expedition. Mithridates was the most learned, the most polished, and the most magnificent sovereign of his day; and those who had been accustomed to the splendour and elegance of his court, who had viewed his statues of Minerva, Mars, and Apollo, of pure gold and exquisite workmanship; his own statue eight cubits high, of the same metal; his two thousand cups of onyx, set in gold; and all the other marks of wealth and power, of taste and voluptuousness, which he constantly displayed, could have had little appetite for the bleak and miserable life of shivering savages in Sweden. Therefore, let us confidently conclude that no such expedition was ever undertaken, but merely, that at a time, probably some centuries before Pompey, the superstition which had previously found its way from Egypt to India, was thence transmitted to the Scythians, and spread amongst them from tribe to tribe, until it reached the very northern parts of Europe.

Expedition of Woden incredible.

It may easily be inferred, that there is really very little credible history of the Scythian or Gothic nations before they embraced Christianity, except in so far as they may have come into contact with the Greeks and Romans. Hence the Danish history, which begins with one *Dan*, a. c. 1050, and the Swedish, which sets out from a. c. 2000, might, from this circumstance alone, be accounted fabulous; even if they were not loaded, as they are, with giants, dragons, and the other concomitants of their old idolatrous superstitions. In the course of the tenth and eleventh centuries after Christ, Norway, Sweden, Denmark, Russia, and Poland, became Christian. Before that time they had no means of history, but the songs of their scalds or bards, and the sacred mysterious letters called *Runic*, which latter they used in their spells and enchantments, but whether they even employed them for the purpose of recording events, does not appear. No books written in that character exist, nor are any preserved in translation. Some inscriptions on stone have been preserved, which are supposed to be Runic, and as Woden is said to have brought the Runic letters out of Asia, it might be well to compare them with the oldest Sanscrit characters now to be found in India. As to our Saxon ancestors, who also claim descent from Woden, their chronology differed extremely from that of their Danish brethren. Hengist, who came to Britain A. D. 449, pretended to be only the great-grandson of this divine hero, who must therefore have lived above 1300 years later than by the Danish account. It does not, however, appear that either Hengist or the Danes were any great arithmeticians: and as no author of common sense of the present day would think of writing the history of the American tribes for a single century from their own traditions; so that is by no means to be called History, which is recorded from the dreams of the Scandinavian scalds, or built on some indistinct traditions of these Saxon freebooters. There are two principal modes of tracing the connexion of nations

where credible records fail; one is by a comparison of their physical conformation, the other of their language. Thus, the descriptive portrait of Attila, the formidable chief of the Huns, surnamed "The Scourge of God," as drawn by contemporary writers, about A. D. 450, proves that he was of the same race as the present Calmucks; and thus Sir W. Jones assigns strong reason to believe that the pure *Hindi*, or aboriginal language of India, was of an origin totally different from that of the *Sanscrit*; thereby confirming the general inference which we have drawn from Diodorus and other writers, that the laws and religion of that country, preserved in Sanscrit records, were at least not the production of the original inhabitants, but were brought to them from some distant region. The same comparison of language has recently proved that the traditions relative to a cosmogony, which exist among the Mongol Tartars subject to the Russian empire, abound with Sanscrit terms. Upon the whole, therefore, we may conclude, with some confidence, that the same idolatrous system which found its way first from Egypt to India, was communicated from the latter country, at least as early as the seventh century before Christ, to the neighbouring nations; and thence gradually spread to the shores of the northern Pacific ocean on the one side, and on the other to those of the Baltic.

History.

In conformity with general custom, we distinguish the Celtic nations from the Scythian, or Celtic Gothic: yet it may not perhaps be easy to draw the line of that distinction with any great accuracy. The languages called Celtic, in modern times, such as the Welsh, Irish, Highland Scotch, and Breton, do indeed vary much in their inflections from those which are of Gothic origin; but whether there be a radical difference between them may well be doubted. Neither is it very clear what title the dialects, just noticed, have to the exclusive denomination of Celtic; or within what limits that term was anciently applied, either to language, or to nations. If we listen to one class of antiquaries, we find that all Europe was called *Celtica*; and that the groundwork of all modern tongues, nay, some say of the Hebrew itself, was Celtic. Another set of writers pretend, that the Celts were a race alike inferior in mind and body to the valiant and enlightened Goths, before whom they always retreated westward, till they were at last shut up within those narrow limits, where the dialects called Celtic are still spoken. History supports neither of these statements. We speak not of wild traditions, recorded a thousand years, or more, after the alleged event; but of contemporary writing. From such sources, little is known of the Celts before the time of Julius Cæsar, who speaks of them as possessing only a part of Gaul. However, it is probable that the whole of that country was first named from them. Diodorus says that the Romans commonly called all the inhabitants of Celtic Gauls (*γαλαται*); but he himself gives that name only to the inhabitants of the south, west, and north of France, and of the adjoining countries, "as far," he says, "as to Scythia." It does not appear that they possessed letters, except such as the tribes subdued by the Romans had received from their conquerors. Priests they had, called druids; and poets or traditionary historians, called bards but their religious ceremonies were bloody and horrible, offering up to their imaginary deities human victims, together with their other sacrifices. Such was the state of these nations about, or very shortly before the birth of Christ: prior to which period it is vain to seek for any distinct traces of their history. Yet, that the British idolatry had a connexion with that of Egypt and Greece, is clear from various statements: and hence we are led to conclude, that it was immediately derived from the Phœnicians who, in very early ages, traded to Cornwall for tin; and whose idolatry was a cognate branch of the same superstition which first worshipped the great lights of heaven as visible types of the Deity; and afterwards, by an imperceptible transition, came to consider them as ruling intelligences themselves; and as gods, differing in character, rank, and power. Hence the monuments called druidical, which yet remain in various parts of Europe, and particularly the stupendous one, called by the Saxons Stonehenge, are of a circular form; and the entrance, and what is supposed to be the grand altar, lie reciprocally east and west. The druids, or priests, who formed here, as in the countries which we have before noticed, an hereditary class, probably introduced agriculture and metallurgy: both of which were practised in Britain prior to the

History.

Roman invasion. In fine, we trace the Celts, or Gauls, mixing with other nations in distant parts of Europe; as the Celto-Scythians, on the borders of Asia; the Celt-Iberians, in the north of Spain; and the Gallo-Grecians, in Greece; but whether the Asiatic Cimmerians, in the Crimea; the inhabitants of Holstein, formerly called the Cimbric Chersonese; the Cimmerians of Homer, who are supposed to have lived on the north-western coast of Italy; and the Cymry of Wales, agreed as much in origin as they seemed to do in name, and are also to be reckoned of the Celtic race, are questions which may admit of much doubt; and whose solution would throw little light on any points of History really important.

Babylonians and Assyrians.

As we began our historical survey with Egypt, because the sacred scriptures furnish us with the earliest accounts of its ancient state as a kingdom; so we now revert, and for a similar reason, to the Babylonian and Assyrian empires, which in all historical records are much blended together. These empires, whether distinct or united, possessed in very early times two vast cities, Babylon on the Euphrates, and Nineveh on the Tigris. The first is usually considered to be the same with Babel, mentioned in the 10th and 11th chapters of Genesis, and indeed is so translated by the Septuagint. It is not here the place to enter into any argument on the personal identity of Nimrod, or Nebrod, whether intended by the sacred writer to mean an individual, or a tribe; nor shall we dispute on the different expositions which have been given of the confusion of lip or of language. Suffice it to observe, that in the days of Moses, both Babylon and Nineveh existed, and were referred to as well known cities; and that the former was remarkable for a very lofty, tower and was built of brick, cemented together by a hard bituminous slime. It appears, too, that Amraphel, king of Shinar (the Babylonian or Assyrian territory), was about the year *B. C.* 1913, a sort of tributary or vassal to the king of Elam, or Persia; after which we hear no more of the Assyrians in Jewish history, till the year *B. C.* 771, when *Pul*, king of Assyria, invaded Samaria, and exacted from Menahem a tribute of 1000 talents of silver. It is to be observed, that the early date here given to the political establishments in the land of Shinar, is rendered probable by the nature of the soil and climate, and by the facilities which these afforded for building; the one supplying brick and cement, and the other hardening them by mere exposure to the air. With respect to the fertility of the soil, it is remarkable that Herodotus himself compares it to that of Egypt, the seat, as we have seen, of another of the most ancient monarchies in the world. When we turn from the Mosaic accounts to those of the Babylonians themselves, we are instantly encountered with fables the most extravagant and contradictory. Berosus, a priest of that nation, who lived in the time of Alexander the Great, carries back the antiquity of the Babylonian empire 150,000 years; Ctesias of Cnidus, who was physician to the younger Cyrus, and who is followed by Diodorus Siculus, gives to the Assyrian empire, which includes the Babylonian, a duration of 1400 years; and lastly, Herodotus tells us, that it had existed only 520 years when it was subverted by the Medes.

It remains to see how this obscure interval is filled up by these contradictory writers. Of Berosus, and his 150,000 years, it is needless to take any notice; but Diodorus sets out with the exploits of *Ninus*, the founder of Nineveh, and son of *Belus*. *Belus*, however, he shortly afterwards tells us, is the Babylonian Jupiter, to whom the celebrated tower in Babylon was dedicated. Now *Bel*, or *Baal*, among the Syrians and Assyrians, simply signified *The Lord*, and must have originally meant the one true God, the Lord of all things. The tower, according to Herodotus, consisted of eight stories, in the highest of which no image was placed; and therefore, in the mysteries known only to the Chaldeans, or sacerdotal order, it was probably dedicated to the spiritual Creator, whilst the seven lower stories were respectively dedicated to the seven great visible objects of his power, the sun and moon, and five planets. The tower itself, we are told by Diodorus, was used by the Chaldeans for astronomical purposes; to which they soon joined astrology: and thus confounded true with false science, as they had before confounded true with false religion.

As *Belus* was an imaginary being, so it is probable was his son *Ninus*, to whom are assigned

the building of Nineveh, and the performance of many great and incredible exploits. The same History. we may still more confidently say of *Semiramis*, the queen who is stated to have succeeded Ninus in the throne, and to have built Babylon, a city far superior to Nineveh in magnitude and extent: but as we find this lady worshipped as the celestial Venus, we may conclude that the outline of her story is purely mythological. This is the more easily to be believed, because there are no facts connecting her pretended exploits with any thing else, either in the Babylonian, or any other history. She is said, after spreading the bounds of her empire to an immense extent, to have marched against the king of India with a force of three million infantry, half a million cavalry, a hundred thousand chariots, &c. &c.: yet her conquests were like those of Sesostris; they vanished and were obliterated like a dream. The Indian chronicles do not even name the king who had the glory of repulsing this tremendous invasion; nor do we find any of the natural consequences of such a greatness as is attributed to Semiramis, occurring in the lapse of several centuries from her death to the reign of Sardanapalus. This prince was certainly conquered about B. C. 820, by two chieftains, who had revolted from his authority, namely, Arhaces, a Mede, and Nebuchadnezzar, a Babylonian; but whether all that we read of his voluptuousness, and of his voluntarily burning himself with his wives, his concubines, and his treasure, be not fabulous, may very well be considered as matter of doubt. Shortly after this period, the light of history becomes tolerably clear. Ptolemy has handed down a series of astronomical observations made by the Chaldeans, beginning with the era of Nabonassar, B. C. 747. It is pretended, that Callisthenes sent to Alexander the Great a series of similar observations, going back 1,907 years; but probably either this story is altogether unfounded, or the pretended observations were themselves a fabrication; for even in the time of Nabonassar, the calculations were so incorrect as to occasion an error of twenty-five days in the first century. Berosus, in order to support his fabulous chronology, pretends that Nabonassar burnt all the records prior to his reign. It is curious enough to observe a similar tale invented in China, for a similar purpose. That the Assyrian kings, who about this time resided at Nineveh, were very powerful, there can be no doubt, since one of them, Sennacherib, B. C. 710, lost an immense army on occasion of his expedition against Jerusalem. About a century after this event, the famous Nebuchadnezzar became the greatest sovereign of his time; and enlarged and beautified Babylon, on a plan which, had it been fully executed, would have made that city the most magnificent ever seen on the face of the earth.

We have observed that the king of Elam, or Persia, was the paramount sovereign of those five Medes and Persians. kings with whom Abraham fought B. C. 1913; but kingdoms in those days must have been very petty chieftainships; and Elam itself, which afterwards gave name to Persia, was probably no more than the country known in later times by the name of Elymais, which comprehended great part of Susiana, the modern Khosistan. The extension and contraction of geographical names, in their application to territory, at various periods of History, is one of the most disturbing circumstances to the mind, in its formation of historical notions and judgments. Chedorlaomer, king of Elam, must have had very few forces at his command, since he was defeated and slain by Abraham with only 318 men; and from this time, the history of Persia remains in great obscurity till B. C. 536, when Cyrus the Great began to reign; at which time the Persians, divided into twelve tribes, amounted only to 120,000 men. The Medes, as Herodotus informs us, were anciently called *Arii*; a name still traceable in the modern *Airan*, or *Iran*, by which the inhabitants of Persia in general distinguish their country. The history of these nations, like that of the Babylonians and Assyrians, is much blended together in ancient records, and the whole has become still more confused, by the different manner in which it has been treated by different classes of writers. The Persian language itself has undergone at least three changes: the most ancient form being that of the *Zend*, which is supposed to have prevailed till Arbaces the Mede threw off the Assyrian yoke; the second the *Pehlavi*, which reached down to the Mohammedan conquest, A. D. 641; and the third the modern Persian, which contains a great mixture of Arabic. The

HISTORY.

latest and best writer on this subject, Sir J. MALCOLM, admits that the Persians themselves possess no documents that merit the name of History antecedent to the fall of the Arsacide, A. D. 226. The fragments of earlier tradition were collected together by the Mohammedan poet FERDOSI,* about A. D. 1000, but they present only a rhapsody of fables, among which it is extremely difficult to distinguish even the vestige of truth. His poem entitled the Shah Nameh opens with the reign of *Kiumers*, the first king of Persia, whose son *Scamuck* being killed by the demon *Râmen*, the Persian monarch sends his troops under the command of his grandson *Hoshung* to encounter the demons. *Hoshung*, being victorious, succeeds to the throne on the death of his grandfather, reigns for forty years over seven kingdoms, invents agriculture, metallurgy, and weaving, and introduces the worship of fire as an emblem of the divinity. It has been questioned who *Hoshung* was; but as it is admitted that the most ancient Persian traditions represent Kiumers not as the first king but the first man, so *Hoshung*, the inventor of so many arts, and the founder of a new religion, can be nothing but the personification of a body of men who in a long course of time succeeded in civilizing more barbarous tribes. The barbarians so civilized are in most early traditions described as demons, or monsters; hence nothing is to be inferred from the story of *Hoshung* but that the fire-worshippers, or Magi, taught arts as well as religion to the savages in their vicinity, and gradually extended the dominion of their own tribe over six others. As the Assyrian idolatry seems to have been less gross than the Egyptian, so the Persian fire-worship was certainly more refined than the Assyrian devotion to idols. It more distinctly recognised the ONE God, whose existence, we have seen, was the recondite doctrine of all the learned polytheists: but it recognised the truth under a veil of falsehood; it degraded spirit to body, the immaterial and eternal to the perishable and material. This doctrine is popularly attributed to Zerdusht, or Zoroaster, as its first teacher; but who he was or when he lived it is quite impossible to discover, some making him contemporary with Darius Hystaspes, some identical with Moses, and others with Abraham. His religion and philosophy are supposed to be set forth in the Zend Avesta, which however appears to be nothing more than the most refined part of the doctrines of the ancient Magi, as held long prior to the time of Herodotus. That writer says, "I speak from my own knowledge, when I say that the Persians have among them neither statues, temples, nor altars; the use of which they censure as impious and as a gross violation of reason, probably because, in opposition to the Greeks, they do not believe that the gods partake of our human nature:" and Cicero says, that, at the instigation of the Magi, Xerxes burnt the temples of the Greeks, because they confined within walls the deities who ought to be free from every kind of restraint, and whose temple and residence is the universe itself. The worship of fire, as an emblem of the divinity, was, however, extended so as to comprehend the sun, and moon, and the firmament; to which Herodotus, perhaps incorrectly, adds earth, water, and the winds. A singular circumstance occurs in the fabulous history of *Tahmuraz*, the son of *Hoshung*. This prince conquered the demons, but spared them on condition of their teaching him letters. The explanation which we would offer of this fable is, that the art of alphabetic writing was introduced into Persia long subsequent to the fire-worship, the original superstition of that country, and that it probably came from the frontier tribes of India, some of whom the Persians may have in early time subdued; nor was this the only custom derived from the same source. *Jemshid*, the fabulous son of *Tahmuraz*, is said to have reigned 700 years, to have attained great wealth and splendour by aid of the demons, and to have divided his people into four classes, answering to the four original castes of the Brahmans. In the latter part of his reign he oppressed the Magi, and, as a punishment for his impieties, he was dethroned by *Zohak*, or the dragon. Hence we may conclude that the

* The authors of the French *Dictionnaire Historique* say that M. Langlet, who in 1788 published, in a collection of tales, &c., from the Arabic and Persian, an *Analysis* of Ferdozi's great poem the *Shah Nameh*, first made that poet known; but the fact is that an English translation in verse of eight books of the *Shah Nameh* had been long before executed, and was published in that very year by JOSEPH CHAMBERLAIN, Esq.

dynasty typified by Jemshid, was that which was overthrown by the Assyrian domination; and that prior to its fall it was weakened by intestine divisions between the followers of the pure Magian doctrines, and the sects which had been introduced, together with letters and the division of castes, from India; these circumstances, therefore, occurred prior to the year a. c. 1340, if Herodotus be correct in assigning to the Assyrian dominion 520 years, ending with the revolt of Arbaces, which happened a. c. 820, or as some say a. c. 770. Even these dates would not disagree with what we have before said of the introduction of letters and idolatry from Egypt into India after a. c. 1635, and their spreading from thence over great part of the continent, in the course of the succeeding thousand years. However, it is extremely probable that the Medes and Persians were not so long as 520 years under the Assyrian yoke. The hero, who first threw off that yoke, cannot be mistaken. He is called by Diodorus, Arbaces; by Velleius Paterculus, Pharnaces; and is indisputably the Peridoun of Persian legends, whose exploits, his changing himself into a dragon, &c., &c., form the subject of three books of the Shah Nameh. After this period it becomes easy even to identify individual princes, as *Cai-Cobad* with the Arsæus of Ctesias, and the Deioeces of Herodotus; *Cai Caus*, with *Cyaxares*; and finally *Khosrou*, with *Cyrus*.

Between Egypt and Assyria were situated several countries which partook of the idolatry of both. Diodorus observes, and his remark has been in a great measure applicable to the state of things from his time to the present period, that the Arabians were never wholly subjected to any foreign yoke. In the Persians, and other histories, we sometimes hear of a king of Arabia; but there is no credible evidence that the inhabitants of that country were ever more united than they are at the present moment. Among the more ancient of these tribes were the Amalekites, whom some assert to have been the shepherd kings of Egypt. All the Arabians, however, agreed not only in the worship of the sun, moon, and five planets, but also of the fixed stars, above all which, however, they recognised the ONE GOD. They had images of inferior beings which they considered to be angels or demi-gods; but as it does not appear that they ever personified any of these divinities as mortals, so their early history is devoid of those fabulous dynasties which, as we have seen in the pretended records of many other nations, were nothing more than astronomical fæets allegorized. Adjoining to the Arabians were the Syrians, and beyond these, on the sea-coast, were the Phœnicians. Both these nations very early entered into the idolatrous system, of which the foundation was common to the Egyptians and Assyrians, but the great number of their deities, and diversity of their rites, appear to have been derived principally from Egypt. Diodorus mentions a tradition that the Phœnicians, who first brought alphabetic writing into Greece, were not the inventors of it, but learnt the use of letters from the Syrians; and as the latter people were often confounded with the Jews, it is possible that the Phœnician letters were really derived from Judea, though the more common opinion among ancient writers is that they came from Egypt. Certain it is, that in a very early age, the Phœnicians had made great advances in all the arts, and distinguished themselves exceedingly in navigation and commerce. Tyre, which is supposed to have been less ancient than Sidon, was nevertheless a great and distinguished kingdom, when Solomon ascended the throne of Israel, a. c. 1014. How long it had been growing up to that importance, cannot now be traced. The Phœnician records, no longer extant, gave it a duration of 30,000 years: but the fabulous histories of Greece represent it to have been built by Agenor, an Egyptian, whom some chronologers place a. c. 1497, and whose son Cadmus first introduced letters into Greece. Agenor, says Apollodorus, was a son of Neptune, by Lihya, daughter of Epaphus, an Egyptian king; that is, he came by sea to Phœnicia, from that part of Egypt which bordered on Lybia. Josephus, indeed, places the building of Tyre much later; viz., only 240 years before the building of Solomon's temple, or a. c. 1245, being about the time which some assign to the expedition of Jason and the Argonauts to Colchis. However the fact may be, as to the building of Tyre, it is tolerably certain that the arrival of the Egyptian settlers in Phœnicia must have been much earlier than the latter date. Since, according to all history, the Phœnicians had long previously sent out colonies into many parts of Greece, and other coasts of the Mediterranean; and the Argonautic expedition itself was no doubt the origin of the Phœnician colony, which, in the time of Herodotus, existed at Colchis, in the Euxine Sea.

cians.

History.

Grecians.

This naturally leads us to the origin of those splendid states which have left behind them imperishable monuments of their taste and genius, the ancient Grecians. It is admitted by all their writers that the original inhabitants of Greece were mere savages, feeding on acorns, living in caves, and clothing themselves in skins of beasts, till they received either directly from Egypt, or indirectly through Phœnicia, the rudiments of art and science, and therewith a general system of idolatry. The first colony of adventurers is said to have been commanded by Cecrops, and to have consisted of Saites from Egypt, who established themselves at Athens. This event is calculated to have taken place *n. c.* 1582; or, according to others, 1556. Even then the persecution of the Israelites in Egypt had begun; and it was still going on when Lelex brought another colony of Egyptians into the Peloponnesus. The introduction of the important art of alphabetic writing into Greece is universally attributed to Cadmus, who, though of Egyptian origin, came directly from Phœnicia. This circumstance is commonly placed two years before the departure of the Israelites from Egypt, but it may not improbably have been as shortly after it; and if so, the Mosaic writings may well be supposed to have laid the very foundations of Grecian literature. At all events, the near coincidence of time between the first appearance of letters in Greece and the first known use of them, in writing the Sacred Scriptures, is a fact no less curious than interesting. No sooner were letters introduced than there followed poets,—Orpheus, and Musæus, and Linus,—who are said to have tamed the savage beasts of the forest, and charmed the very trees and rocks by the power of song.

*Sylvestres homines sacre, interpretes Deorum,
Cædibus et victis fœdo deterruit Orpheus,
Dictus ob hoc lenire tigres rabidosque leones.*

A very marked distinction appears between the process of civilization which took place in Greece, and that which was pursued in Egypt, and in India. In both the latter, the priests formed an hereditary and sacred caste; in the former, they appear to have been mere individuals, or at most small fraternities. Another marked distinction was that the civilizers and civilized, the colonists and natives in Greece, were all speedily amalgamated together and formed one common nation, instead of constituting as in India a military and a labouring caste for ever distinct. It is beyond a doubt that they brought with them their Jove, and Apollo, and Hercules, and all the train of the greater gods and goddesses, some of which by their names seem to have been imported from Egypt, and others from Phœnicia. Nevertheless they represented them all as having lived in Greece: they found there a high mountain for them to dwell on; and introduced them as persons of the drama into all their tales of the heroic times. The coincidence of many of these tales with those which are to this day current in India, seems to point to a common origin, which it should seem can only have been in Egypt, and which would therefore infer that those tales existed, at least in a rude outline, so early as the residence of the Israelites in Egypt. The Grecians no doubt amplified and enriched these fables with all the stores of taste and genius; but it was long before they could persuade themselves to "stoop to truth." Homer, who is supposed to have written nearly 700 years after the arrival of Cecrops in Greece, takes the liberty of introducing gods and goddesses into his tale, without any authority but his own imagination; and it was 450 years later before the father of History, Herodotus, appeared. Hence we must not be surprised to find many Joves, Apollos, and Herculeses, appearing throughout what is called the heroic age. It would be but a waste of time to endeavour to identify the different deities of Greece according to the supposed times of their pretended exploits. We may only observe, that if the arrival of Ceres at Athens, to teach the culture of corn, is fixed *s. c.* 1383, it is probably because the solemn worship of that goddess, in the Eleusinian mysteries, was at that time first established there. So if Janus arrives shortly afterwards in Italy, it is because a body of his worshippers (for every idolator has his favourite idol) about that time established themselves on the hill which afterwards they called Janiculum, from this deity, who seems to be identical with the Indian Ganesa. It will be needless, and indeed we might almost say it would be endless, to go through all the fables of the heroic age, which seem to have very early occasioned the expression of *Græcia mendax*. Suffice it to say, that the kingdoms of Argos and Attica are almost the only ones asserted, and

that with very little probability, to have been founded before the arrival of the Egyptian colonies. Argos is said to have been a monarchy governed for no less than 543 years by the Inachidæ (who of course could neither read nor write, nor keep any account of time) before the arrival of Danaus, who, with his fifty daughters, set aside the descendants of Inachus without the least ceremony. The same improbability applies to the domination of Ogyges, the great Boeotian sovereign of Attica, in whose time happened a deluge, which laid that country waste for 200 years. The family of Lelex, it is stated, continued to reign in Lacedæmon for 400 years, when they were deposed by the Heraclidæ. Meanwhile we have the destruction of Argos by Perseus, of Thebes by the Seven famous Chiefs, and of Troy by the combined forces of all the Grecian kings.

The proper history of Rome begins without any other mixture of fable than what arises from the meagreness and obscurity of ancient records. This defect is fairly confessed by its great historian, Livy; but he does not pretend either to give to his country an existence of many thousands of years, or to mix up with its events the exploits of supposed gods and demi-gods. It has been before observed that he rather too easily credits the fable of Eneas's arrival in Italy, which other writers have satisfactorily disproved. We must be satisfied with the antiquity to which Livy carries up the Roman history, and not attempt to investigate the records of the Latin monarchy, which was established 614 years before the building of Rome, and which claims as its founder the god Janus, of whom we have before spoken.

The great rival of Rome was Carthage, in regard to whose history the Romans appear to have acted with a perfidy utterly disgraceful to them as a nation. All their own writers deal in perpetual declarations against the Punicæ fides; but they took care to deprive posterity of all means of appreciating the justice or injustice of that complaint. It is now impossible to ascertain the time when Carthage was founded; but it was probably anterior to the destruction of Troy, as stated by Philistus, the Syracusan, who wrote *b. c.* 350. The founders, according to him; were two Phœnicians named Charchedon and Zorus, from the former of whom the city took its Greek name of Charchedon. This is the earliest and best account yet remaining, and is cited as credible by Eusebius; but we must remark, that Philistus himself lived near 900 years after the supposed event; and that according to him, Carthage must have been almost 500 years more ancient than Rome. The arrival of Dido, a Tyrian princess, at this spot, and her enlarging the city, are believed to have taken place about 300 years after the destruction of Troy: and of course it is thought that Virgil's account of her adventures with Eneas is a gross anachronism. There is, perhaps, no people the loss of whose records is so much to be regretted as those of a nation which not only possessed a political constitution which was the admiration of Aristotle, but were at the head of very large confederacies of foreign states, and who established colonies both in Africa and Europe; some of which, as Cadix and Port Mahon, remain to this day. Much dispute prevails with respect to the great expedition undertaken by Hanno the Carthaginian, at the head of 30,000 men, with a view partly to colonisation, and partly to discover new countries and modes of commerce. It is clear that this large armament, consisting of sixty vessels, passed the Straits of Gibraltar, and founded several cities on the western shore: but whether they proceeded as far as Sierra Leone, or only reached the river of Nun, on the Moorish coast, is matter of contest.

Besides the Carthaginians and their dependents, there was no great nation in Africa known to the ancients, except that of the Ethiopians; but of these, the early history is singularly confused. In Scripture, we hear of them only as connected with the Egyptians. Homer seems to have thought them a very different people, innocent, and therefore favourites of the gods; but probably his notion, that the divinities went to feast among them, arose merely from an astronomical allegory, of the sun's declining in winter toward the south. Herodotus considers them as civilized by the Egyptians; but Diodorus is of the contrary opinion. It must be observed, that the name Ethiopians was loosely given to all the dwellers beyond the desert, though Ethiopia Proper included only Nubia and part of Abyssinia.

The rest of Africa was so wholly unknown to the ancients, and is, to this day, so destitute of any history of its own, that it is unnecessary to speak of it otherwise than as a land which fabled travellers

History. had filled with monsters of all kinds; hence we find pygmies here, as in Scythia: and as there were supposed to be, in the northern regions, monstrous Arimaspians, so here were no less portentous human beings; the *Cynanotgi*, with dog's heads; the *Blemmyes*, who had no heads at all; and many other such wild productions of the imagination.

America. That there was in the western ocean a rich and happy island, or large continent, was a vague tradition or superstition among ancient nations; but of its history no one pretended to have the slightest knowledge. We can hardly think that the notions which they entertained of it were any thing more than the mere dreams which all rude people have of some happier clime and country than their own, at a distance beyond the limits of sea, or mountain, or desert, to them impassable. This traditionary belief, however, was generally prevalent, down to the time of the actual discovery of the western hemisphere. One of the most ancient poems now extant in the old English language is founded entirely on it; beginning

*Far in sea by west of Spain
Is a land hight Cockaigne.*

This land of Cockaigne, or Coquinn, from whence our word Cockney is derived, was the supposed seat of idleness and sensual pleasure: the graver philosophical poets placed in the same situation the abodes of spiritual purity and celestial happiness. While however this vast land remained for so many centuries cut off from all intercourse with the rest of the world, it was occupied throughout its whole extent by numerous tribes, of whom some down to the present day exist in a state of barbarism; but two nations, those of Mexico and Peru, had each established a mighty empire, and had made considerable advances in some ornamental as well as some useful arts. Their progress, however, was greatly impeded by the total want of letters, for their picture writing could give no details of time and place, and their knotted words were mere memoria technica to the individual. The wildest traditions abounded amongst them; such as that their chiefs were descended from the sun and moon, and to these great objects of visible power and brightness they paid a barbarous worship. Some authors have endeavoured from these circumstances to trace a connection between the Peruvians and Egyptians; but we own the similitude appears to us to be too slight to build any rational hypothesis upon; and we rather leave all speculations on the origin of these nations to a time when physical science may have furnished better grounds for the foundation of a just theory.

SUB-INTRODUCTION

TO THIS DIVISION.

OF THE CLAIMS AND USES OF SACRED HISTORY.

SACRED HISTORY is that narrative of events, commencing from the creation of the World, which is recorded in the Bible, and is so called, because it is assumed to be written under Divine superintendence, and is evidently associated with the being, perfections, and plans of Deity. All other History details facts simply, but Sacred History combines them with the doctrine of Providence, and demonstrates the event to be coincident with the purposes of an infinite mind. Sacred History. Defined.

The connection of every mode of communicating the will of God to man with moral and eternal purposes, is a feature of Divine Revelation never to be overlooked; and Sacred History is but a part of that Revelation. In preparing mankind for another world, the Universal Parent has adopted and recorded a certain process with individuals, with families, and with nations in this: and as the distinctive Claims and Uses of Sacred History originate from its connection with the general subject of Revelation, we may be permitted to advert to that subject briefly, while further than this it is not here our province to pursue the argument.

It is a striking fact, that upon the great subject of morals, Philosophers who were agreed upon the whole, as to the amount of individual and social duties, were at variance with regard to the basis on which they should be constructed. Unless men coöper in their standard of moral duties, they must be doubtful as to the extent of their obligation; and when the most eminent of mankind were found to question what was the rule by which they ought to be guided, variance and opposition among those who looked up to them as teachers, became inevitable. When once the passions are moved, cool and rational discussion ceases: and when the individual becomes anxious to support the system which he has adopted, and is prejudiced against every argument which tends to render it doubtful, he but increases the distance from his object the further he pursues it. The great ends for which the disputants set out, the universal duties and benefit of mankind, are lost in the disputations between the Grove, the Porch, and the Lycæum. The object becomes less to elicit truth, than to establish a party. Besides which, what standard can be obtained? Is it nature? She is found under the government of the passions, rather than of the reason, and those passions manifest themselves to be corrupt. Is it the fitness of things? How shall this apply to the savage, who has no means of comparison? The most intellectual, as they possess the greatest power of ascertaining what is fit and harmonious, ought, on this principle, to be the most moral; but they are not so. Is it conscience? Alas, who is not aware that this moral power may be vitiated? that conscience may be depraved, perverted, extinguished? Is it philosophy? Philosophers are not agreed on this momentous point. Where is the standard, then? Socrates observes, there can be none unless it be revealed; and he, therefore, expected a Divine teacher. This is the tribute of reason, to the necessity of Revelation. Necessity of Revelation.

Sacred
History

But morals are not the only subject of human investigation that require Revelation. God has connected them with the most interesting and the most ancient records of the human race. The origin and destination of the material universe lie hid in shadows, which no light can disperse, but "the day-spring from on high." Some Philosophers contended that the beautiful order of nature was the result of chance; and that the grand machinery, so admirably filling up all the purposes of its construction, was nothing more than an effect produced by the fortuitous concurrence of certain solid and indivisible bodies, necessarily moved by the force of their natural gravity. This was the doctrine of the Epicureans. And Cicero justly asks, "if this concurrence of atoms can make a world, why does it never form a portico, a temple, a house, or a city, which are certainly much easier to be effected?"* Others held the eternity of the world. Among these, Aristotle has been classed. But his representations are so different on various occasions, that one can hardly decide, whether he meant to say, the matter out of which the universe was composed was eternal, or the form itself in which it subsists. The latter has been generally understood: and if so, he maintained his position in the face of reason and of facts; for it is reasonable to conclude, that whatever is eternal should be also unchangeable; and it is the fact, that the material world, which he assumes to be eternal, is every day undergoing some alteration.

Egyptians.

The Egyptians held, according to Diodorus Siculus, that man sprang from the earth, when it was in a mire, and almost fluid state, as insects exude from the mud of the Nile, when the intense heat of the sun causes putrescences to be formed out of it. Why marshy places, acted upon by the heat, do not produce men and women now, if this hypothesis be rational, remains to be explained: as also, since none of those productions are to be met with in the present day, and the laws of nature are assumed by such reasoners to be immutable, when, and from what cause, the earth lost her power to generate human beings, while she retains that of producing vegetables. Amidst these and other contradictory theories, the result of much study, and defended with no inconsiderable zeal, was it not essential to man's happiness that the questions, 'Whence am I? What am I,' should be answered? 'Whence are the existences around me? What is required of me? Whither am I tending? In what shall these things terminate?'—The greater part of the observances of the Ancients so completely originated in tradition, that their most distinguished men confessed they were unable to account for usages which they practised. Plato, Pythagoras, and Porphyry, expressed their astonishment at the universal prevalence of sacrifice, and their entire ignorance as to its origination. Whatever related to futurity, as it could be reasoned upon with so little satisfaction, was examined in its traditional shape, and adopted with an eagerness that proved at once the importance of the subject, and the scantiness of their information. "Being of Beings," said Aristotle, "have mercy upon me!" What would such a Philosopher have given for "a sure word of prophecy?" And can it be imagined that the Parent of the universe should leave his children destitute of that information which is so essential to their present well-being, their comfort in dying moments, and their interests in eternity? If Revelation be necessary (and after such considerations, furnished by reason, philosophy, facts, the concurrent testimony of antiquity, and the actual condition of human nature, the position is no longer problematical,) can it be imagined that such a Revelation has not been granted? and if it has been given, where shall we look for it but as it rises in the fountains of Sacred History? For all its doctrines are essentially connected with its FACTS.

The Bible.

If the question of Revelation be conceded, it will then be seen, upon the widest scrutiny, that no pretensions to it have been tenable, not to say established, but those advanced by the Bible. The Hindoo institutions, usually deemed the most philosophical and intellectual, have no sustainable antiquity in comparison with those of Moses. The boasted Koran of Mohammed is evidently of later date—borrowed in its most important facts and precepts from the book which it attempts to rival: the whole work is too contracted to apply to universal man; too mean to support the claim of

* Cic. de Nat. Deor. li. 37.

Inspiration ; and too sensual to emanate from the pure and infinite Spirit. Other assumptions, among different nations, when brought to the test, will be found to be no less defective : and if placed in comparison with Scripture, will only confirm its Claims. Sacred History.

The question of *Inspiration* arises out of Revelation, and is inseparable from it. Revelation Inspiration. must be either immediate or transmissive : it must be communicated to the human race one by one, individually and immediately ; or be committed to a few, by them written down, and thus circulated and perpetuated. The first supposition requires perpetual Inspiration in respect of every man ; the last is that which is claimed by the Bible, and connected with the character of Sacred History. We cannot have a Revelation without Inspiration. All that reason could achieve has been attempted by Philosophers of various ages and countries ; and the Sacred Historians could have no advantage over others, excepting on this ground. Whatever superiority of information distinguishes the Bible, must be Inspiration—whatever Inspiration rests upon the whole, must belong to its History, as a part of that whole ;—and in so far as this is true, it not only gives the facts recorded a superhuman authority, but imparts a different character to the Historians themselves. The character of the *Narrator* in all History stands first in point of order. He must possess integrity, or we cannot rely upon his representations ; wisdom, or we cannot confide in his discrimination ; an unbiassed mind, or we shall only obtain partial statements. The Narrator in this case is *God himself*, the Fountain of Truth ; to whom Narrator. all things are open, who is incapable of error, and whose authority is impressed upon the whole communication. The Historian becomes no more than the medium through which Inspiration acts ; and all his faculties are under the direction of a power superior to themselves. His memory acquires a supernatural extent ; while “ all things are brought to his remembrance ” in their order, and are recorded with an accuracy unattainable in any other way, unimaginable on any other principle. They are not original Authors, but Scribes to the Great Narrator. And if the principle be not carried so far—if in cases of which they were eye-witnesses they may be said to be Authors—the admission of their statements into Revelation supposes that their natural faculties were under a superior influence, preserving them from those errors to which human infirmity, with the very best intentions, renders the mere human Historian liable. This superintendence comports with leaving the writer to choose his own words, and retain his own style and manner. It is obvious, with regard to the Prophets, that, although they record events so evidently out of the reach of human presence at the time when they wrote ;—events unconnected with any existing train of circumstances which could give countenance to them as probable, much less enable them to embody them from futurity ;—nevertheless they retained their several peculiarities of style, and are as distinguishable from each other in manner and language as any other writers. Prophecy puts their Inspiration beyond doubt ; and the retention of their peculiarities by each, as clearly evinces that Inspiration does not necessarily interrupt the usual manner of the Historian.

Even had it been otherwise, and were we required to waive the plea of Inspiration altogether, the natural character of the Sacred Historians ranks them with the first of human beings. Character of the Sacred Historians. In point of grandeur and sublimity of conception, of the power of discrimination, of unaffected simplicity, of ingenuous disinterestedness, of unbending integrity, of successful execution, they are unrivalled ; and it is only necessary to compare their productions with the most admired labours of antiquity, to assign to them unhesitatingly the preference. From the enactments of Moses, almost all legislation has been drawn, both as to principle and to form ; and where any departure from his grand outline is attempted, the change has been perceptibly for the worse : while the most elegant Critic of the heathen world has produced the opening of his narrative, as the most striking specimen of the true sublime which could be presented.—“ God said—what ? Be light—and light was. Be earth—and it was so.” Few will dispute the authority of Longinus on such a subject ; and none can doubt his taste and judgment. If Sacred History be tried by the character of its Narrators, it wears the marks of undoubted authenticity.

Sacred
History.
Events nar-
rated.

Let it be tried by the *events narrated*, another important criterion of History. The earliest and most interesting events form the subject of its record. It begins where Revelation must be supposed to commence its testimony, with the origin of the visible creation. The first inquiries of man are directed towards the material universe, himself constituting so noble a part of it, and its destinies being so inseparably associated with his own. Urged by a nobler impulse than curiosity, he endeavours to retrace the stream of time to its fountain, and to penetrate even to the Infinite Cause, by whom all events are generated. What was to the Philosopher a subject of speculation, giving birth to numberless and contradictory hypotheses, is to Moses simply a subject of History. The first sentence of his narrative unveils the hidden and eternal cause, settles the disputes of Philosophy, assumes the fact of the Creation, declares the Creator, and proceeds to a detail of the circumstances attending this stupendous transaction. "In the beginning, God created the heavens and the earth;"—a grandeur of expression, not inferior, perhaps, to the celebrated passage so distinguished by Looginus. Around this revealed truth, as a central point, the scattered schemes of Philosophy rally; correcting their errors, reconciling their differences, and contributing their researches: Science finds the base upon which to place a fulcrum that can raise the world; History discovers the spring of the ever-flowing tide of time; and Chronology the *punctum stans*, the fixed, determinate, immovable point, whence all her dates are deduced, and to which all divisions of time are to be referred. This great fact being established, the Historian proceeds briefly, yet distinctly, to enumerate the leading particulars of this operation; passes on to a consideration of man's primeval state; unfolds the facts attending his degradation, leading to the miseries to which he is exposed, and accounting for the thousand natural shocks that "flesh is heir to."—The narrative thus instantly connects itself with the scheme chosen for his recovery, into which all other events necessarily resolve themselves; and the grand march of Providence is distinctly visible, through all the shadows of ages; from the chorus of the sons of God at the birth of nature, to the final shout of the Archangel, and the trumpet which shall awaken the dead.

Collateral
evidences.

To go over the various periods of this history is not the business of a preliminary dissertation: but to advert to them thus generally, at this early stage of the discussion, is sufficient to establish the position, that the events recorded are such, in their nature, as might be expected from Revelation, and as are suitable to the dignity and the purposes of History. To apply to them the general rule of historical judgment, they have all the *collateral evidences* of which such facts could be capable. Moses has no contemporary Historian; the most ancient writers fall centuries after him; and he records events which took place centuries before his birth. The Deluge forms the common epoch from which all nations commence their records; and, under different names, Noah is the first Monarch announced in History. Traditions relative to the Creation agree with the narrative of Moses, in all essential points, and even in form, whatever speculations and fables may disfigure the simple account. Historians, and Poets more ancient than Historians, drew from this common source. Traditions of the Fall are to be traced over all the East, and among the Western nations; they traverse the North, and occupy the South; they have penetrated the wilds of America, and are planted in the islands of the Pacific Ocean: in truth, the forms of worship and observances added to these traditions, every where authenticate the Mosaic Narrative; and from their universality, which would have been impossible had they not originated in fact, a sanction is given to Sacred History, which could scarcely have been expected, and which is altogether unexceptionable, because it is indirect in its nature, and infinitely diversified in its form.

Sacred
History a
clue to all
other

It is no small collateral proof of the truth of Sacred History, that it furnishes a *clue* to many facts, which, although known, could not have been understood without its assistance. It serves to correct other Historians, and in every instance into which the Sacred Writings and general History come into contact, it is to them what the chronometer is to the common watch; it measures the same period, but does it with superior precision; it relates the same events, but with greater

accuracy. Still further, as the floating traditions of the heathen world bear upon the facts recorded in the Scriptures; so, by a reaction, Sacred History develops the hidden import of many an ancient institution, the intention of which was not comprehended by those who lived under it, nor could it be otherwise understood; and gives consistency and reality to the traditions of antiquity. It brings distant occurrences to bear upon each other; it discloses political interests jarring among themselves, all tending to the harmony of the universe, and the ultimate amelioration of the human race. It supplies, in short, to time what gravity is to space—the *principle* which holds and draws every thing together.

Sacred
History.

If we examine the *manner* of narration; one of the most striking features of Sacred History, which, while it demonstrates its authenticity, renders it invaluable, is the *fidelity* with which it relates occurrences offensive to the existing powers, and not always honourable to the Historian himself. Patriotism is evidently a moral principle highly appreciated by Moses: yet he disguises nothing that reflects disgrace upon his country. While he could even desire to sacrifice himself for the interests of the people whom he governed; yet he never conceals and never palliates their rebellions, their ingratitude, and their rices. Self-love cannot be supposed to have been extinguished in the bosom of the Historian; yet he records his own failings and infirmities, with the same simplicity and sincerity with which he wrote down the sins of his countrymen. What a principle must that have been, which could thus absorb the prejudices of the writer, and induce him, with whatever painful feelings, to give his testimony alike against himself and his people! This faithfulness is especially exhibited in the *Biography* of the Old and New Testaments. It is more difficult to be honest in this, than in almost any other species of writing. In History the disgraces of a country are borne by multitudes; the guilt of a people, large in itself, is so divided among them, that the individual participation appears comparatively small, while our self-love induces us to take more than our share of its honours: but in Biography the attention is fixed upon an individual; to whom the whole praise or blame exclusively belongs. The writer also, in most instances, stands in some personal relation to him. If as a friend, he too frequently gives the *beau ideal*, the creature of his own imagination, instead of the living being, whose characteristics he professes to have marked as they arose, and to have written down in all the reality of their existence. If as an enemy, it is difficult for him to perceive, and still more difficult to record, real excellencies. He sometimes dips his pen, not in ink, but in the gall which flows from an envious heart; and in no instance fails to give a tone to his narrative corresponding with the actual state of his feelings in respect of his subject.

Fidelity of
Narration.

Biography.

In this, as in all other cases, Sacred History maintains its high purity of character; and the same inflexible adherence to facts, and the same simplicity of detail, pervades its Biography. The writer is indeed always a "man of like passions with others," but his passions are subordinate to sincerity and truth. Abraham, "the friend of God," shall be placed before us in all the poeillaninity of his equivocation, as well as in all the strength of his faith;—Balaam, the adversary of Israel, shall be delineated by the Jewish Historian in all the intellectual grandeur of his mind; and his sins, and his talents, shall be given in the same clear, untrifled, undisguised language.

We have noticed the moral purposes to which it is one of the decided excellencies of the Scriptures to subordinate every thing. Hence the space assigned to the life of Abraham in the book of Genesis, and to that of the Jews as a people in the subsequent portions of Scripture History. Upon that people were suspended the moral destinies of the world. But the most important objects that are held in view are never inconsistently pursued. They mislead us in nothing, they disguise from us nothing, to subserve *any* purpose. Unquestionably, the great object for which the whole narrative is placed before us, is to impress the claims of truth and virtue on the mind, and to win us to the path of wisdom by exhibiting its rewards. But the difficulties of a wise and virtuous course are not disguised. The total failures of some who have entered upon it: the partial failures of all. Cain, and Esau, and Lot's Wife, and Balaam, and Saul, stand in faithful record of a total

Frankness
of Scrip-
ture in
every thing.

Sacred
History.

departure from what most men would have thought the fear of God;—while the Scripture History of Noah, and of Abraham, and of Lot, and of David, and of Solomon, as faithfully exhibits the temptations that have charms for us all, and the failures of God's most favoured children. The whole Bible breathes the same tone of noble frankness. In the New Testament we have a Judas and a Peter; a Demas and a Barnabas; a Simon Magus and an Apostle Paul! One is constantly reminded of God, who CANNOT lie.

And why—perhaps we may be permitted to ask in this place—does the Holy Spirit of God, whom we have seen to be the real Historian of this volume, thus appear almost solicitous to detach our entire confidence from its greatest names? Because, in point of fact, even they were not worthy of *that* confidence—because other names less worthy had then claimed our unqualified imitation with some sort of specious precedent; but above all, because there was “a Name above every name,” toward which human attention was at last to be directed, and in which the most unhesitating confidence might be placed with safety.

Rules of
trying
Sacred His-
tory.

The *rules* of interpreting Sacred History must arise out of itself, and the peculiarity of its character. If its pretensions be established, so is its authority. It must be permitted to assume its own principles, and to furnish the data upon which it should be judged. To every Science something is conceded, as the axioms whence its truths are demonstrable, or the reasoning process cannot advance, nor any certain deductions be made. Its claims as Revelation are first to be examined; and if these be granted upon satisfactory evidence, it must state its own principles; it must be compared with itself; and it must be judged by its agreement, or the contrary, with its own pretensions. This mode of investigation applies as well to its History as to any branch of its information; with this difference, that on certain doctrines, or descriptions relative to the Deity, to eternity, and to spiritual subjects, we can have no other evidence than that which arises from the consistency of its own testimony, the harmony of the parts of the system with each other, and with the whole, and the inherent dignity of the subjects themselves: but its History is capable of corroboration, from many collateral circumstances, and from external and foreign testimony. While, therefore, it must be judged upon its own principles, it does not shrink from critical examination; and we should avail ourselves of the confirmations afforded by contemporary Historians, so far as they reach, and of the most ancient writers, relative to more remote facts, which they only learned from tradition.

Its charac-
teristics.

Already its *characteristics* have been adverted to; and those points in which it is distinguished from all other History are of no small moment, in forming our judgment respecting its excellence and superiority. It is more *extensive* than any other record. It has rolled back the cloud which hung over the earliest periods of time, and unveiled the fountain of being. It deduces the human race from one man, and not only traces all nations to a common stock, but discloses the political origin of the most distinguished among them. This is not the place to enumerate these, as they sprang from the sons of Noah, and were dispersed from the plains of Shinar, over the world: it is sufficient, at present, to advert to the fact. Herodotus, the father of Grecian History, did not flourish until after the regular records of the Bible had closed with the captivity of Judah; and Orpheus, if he ever existed, lived probably in the days of David or Solomon. Homer did not write until about eight centuries and a half before the Christian era. The earliest records of Egypt, of China, and of those nations which have assumed the remotest antiquity, have convicted themselves of misrepresentation in point of Chronology; and by comparing their assumed dates with known ones, especially with astronomical observations which they have recorded, it is demonstrable that no historical fact exists which can be traced further than about two centuries later than Noah; while the usual origin of Ancient History is at least eleven hundred years later than Moses; or even calculating the traditions of the earliest Grecian Poets, Hesiod himself did not write until seven centuries after the birth of the Jewish Legislator; that is, about fourteen centuries after the Flood;

the renowned Grecian Historian not flourishing until nearly nineteen hundred years subsequent to that grand event. Sacred History begins not with the narrative of any particular people, but is a history of the whole human race, until long after, when they were dispersed abroad, and the vast family of mankind divided into nations, it selected the illustrious ancestor of the Jews, and confined its attention principally to that people, as the stock whence the Messiah should spring, "in whom all nations of the earth are to be blessed." Such is the extensive character of Sacred History; and upon the principles already laid down, for reasons arising out of its Inspiration, it must be more certain than human record.

Sacred
History.

It may be asked, how far its belief is matter of Reason, and how far matter of Faith? This is an important inquiry; for Sacred History, being such as we have described, is the object of both. On points purely rational, its belief is undoubtedly as much matter of Reason as any other History. Most events are in the ordinary course of Nature: its record of them is simple testimony, subject to the rules applicable to any other record. Here one naturally inquires, whether the writer witnessed what he relates? If so, whether he were a competent judge of that which he witnessed? If he were not an eye-witness, through what medium he received his information? Whether the sources whence he derived it, were to be relied upon? In almost every case, these questions are rendered unnecessary by the fact, that the writer himself witnessed the event, that he recorded it at the time, and that his simple narrative gives no opinion, but leaves every man to make his own reflections upon it. The History grew, therefore, after the book of Genesis (and it might be shown through what channel Moses probably received his information of the facts therein recorded,) under the hand of the Jewish Legislator and succeeding rulers of that nation, from year to year, until it acquired the bulk and harmony in which it is now presented to us.

Matter of
Reason.

There are, however, parts of the History, the belief of which, as they relate to events out of the ordinary course of Nature, and to spiritual subjects, must be matter of Faith. In these we must repose upon the tried veracity of the Historian; at the same time remembering whom he introduces as the agent. Doubtless with God all things are possible. It remains, therefore, only to satisfy ourselves as to the fact of his interference. The laws of Nature are nothing more than her ordinary course, and they originate in the Divine volitions. The will of God is the great law, by which the whole machinery of the universe is governed. It would be too much to presume, either that these things are unalterable in themselves, or that they had never deviated from the course which we see them take, when the testimony of men of acknowledged veracity in every other case, is direct to the contrary. Miracles are capable of evidence; and when we say, that these things are subjects of Faith, we by no means wish to exclude the exercise of Reason. In short, in relation to the Scriptures, there must be an union of both. Revelation does not violate Reason, but exceeds it: Faith is, in this respect, but Reason matured; carried into an element purer than her own, and ripened into Religion. As sense rises to Reason, and Reason soars beyond the sphere of sense: Faith is but the higher sense; and, of stronger proof than Reason, takes her flight where Reason cannot reach. These are the gradations by which we ascend to the invisible God, from the footstool of his works, to the throne of his glory.

Matter of
Faith.

A question remains, whether there are degrees of Credibility in Sacred History; and if so, what they are; to what extent they reach; and by what standard they are to be measured. The answer to this inquiry must depend, first, upon the concession or denial of its character as a Revelation; as conducted under Divine superintendence, or as left to itself. If the fact of its Inspiration be granted, it is futile to speak of degrees of Credibility: the evidence belonging to the subject is complete in all its parts; every thing becomes absolutely certain; every thing must be admitted as infallibly true. Upon this point, we have given neither a sparing, nor a doubtful opinion. We have argued its Inspiration, and have intimated its corresponding claims.

Degrees of
Credibility.

It may nevertheless be conceded, and this will be found to be the fact, that there is stronger evidence for those portions of Sacred History which most require it, than for others in which we

Sacred
History.

have either an inferior interest, or are capable of gathering testimonies nearer home, or from existing circumstances. The Pentateuch, for instance, as relating to a remoter antiquity than any other portion, and to events connected with the very birth of time, comes before us guaranteed by a more ample scope of evidence, than any subsequent part of the Bible. It is also no less true, that certain leading facts in these books are more strongly attested in themselves, and more supported by collateral evidence, than others of less moment to the world. Such as the Creation, the Fall, the Flood, the Dispersion of the People, the Birth and Life of Abraham, the History of Joseph, the Miracles of Moses in Egypt, &c. ; all of which are preserved in various ancient records under different forms. Other facts are not weakened by the strength peculiarly attached to these ; their prominence arising from their preeminent importance in themselves, and to mankind. And it is evident, that if the remarks which have been made, apply to the Bible at large, they have peculiar force when directed to the New Testament. But this subject will be fully treated in a future Essay, on the Historical Evidences of Christianity.

Its penetra-
tion.

There are peculiarities belonging to Sacred History, so remote from every thing seen among men, and such an unearthly character is given even to its relation of ordinary concerns, that the most superficial observer can scarcely fail to distinguish it from every human production. Its true and faithful portraiture of our own nature, its appeal to the heart of the reader, alone suffices to establish this observation. There is a knowledge of the human heart, a master-key to its subtlest recesses, which not only surpasses human penetration in its origin, but astonishes while it terrifies the individual whose bosom is laid open to his own inspection ; and who finds himself a stranger, where he had thought himself most at home. Perhaps this is a fact more striking than even its impartial delineation of the character of others—and certainly infinitely more important to us. Not a lurking passion is suffered to remain undetected in its living pictures. Motives which we should be ashamed to avow, are dragged before our conscience, in the history of another: and while his sentence is passed, we feel a personal condemnation. This is, indeed, the true and highest Use of History : to speak to the heart through the understanding ; to make every character that is brought before us, promote the formation and consolidation of our own.

HISTORY.

CHAPTER I.

ANTEDILUVIAN PERIOD.

History.
History
from
the Bible.

Is the principles advanced in our Introductory Essays are just, it will follow, that we have no History of many hundred years from the beginning of time, excepting that which is contained in the Scriptures. The distinction of Sacred and Profane History is inapplicable to facts at this period, one source of authentic information alone subsisting; we may enter, therefore, at once upon our design, by breaking up the fountains of all human events, as they are discovered by Moses. At the same time, we shall not overlook those traditional circumstances which bear upon these earliest records, and which are noticed and presented, under various forms, by the poets and historians of remotest antiquity. These, confessedly later than Moses, amidst all the variations of their respective fables, have agreeing features, which show their alliance to each other, and betray the common source whence they were borrowed.

Creation.

The world was created; and was not, as some of the heathen philosophers affirmed, eternal. It was the result of design; and not, as the Epicureans held, the fortuitous combination of atoms impelled together by their own gravity—the production of chance. It was the work of one Being, infinite in power, wisdom, and goodness. "In the beginning, God created the heaven and the earth." Whether the matter of the world were before the era of this great transaction, in a chaotic state, has been the subject of much dispute in all ages: it seems most consonant with the simplicity of the only authentic record upon this subject, to conclude that the materials were created, at the time when they were employed to frame this beautiful structure of the universe. This could be effected by Omnipotence, and in a moment: and it seems to us the most natural

construction of the Mosaic account that so it was. The state of primeval matter was confused, the elements of all things commingled in an indistinguishable and inert mass—covered with darkness—empty, unformed, unfathomable.

The period at which this beginning is to be fixed is not now an object of inquiry: it would lead us too far, and it will find its proper place of discussion in our separate paper upon CHRONOLOGY. It may suffice for the present to observe, that the pretensions of the Chaldeans, Egyptians, and Chinese, are unsupported by any rational evidence; that some of their remotest dates may be traced to certain events recorded in the Scriptures, and consequently falling within its system of chronology; and that considerable confusion has arisen by regarding these ancient records as relating to remote sovereignties, when in many instances they respected particular families which governed at the same time several principalities (answerable to the Saxon Heptarchy), but which were represented by the Egyptians as successive, while they were in truth contemporary. Bochart indeed has shown that the earthly reigns assigned to the Egyptian gods, the oldest of their dynasties, extend not beyond the time of Joseph.

The idea of an original chaos, without any very material variation, except as to form and expression, has been adopted by the most ancient writers, as well by the poets, as by historians and philosophers. Orpheus and Hesiod, among the first; Sanchoniathon, Moses, and Manetho, among the second; and among the last, by no less a person than Plato himself; who says, that "chaos, or first matter, was the *ῥύος*, stock, out of which every thing was composed." These writers, indeed, differed as to the first principle, whether it were

Azothob-
vian period.

Chrono-
logy.

Chaos

History. water or fire, or a commixture of elements—a sort of fluid earth—and the last seems to have been the prevailing opinion of the poets; whose general conclusions on this subject may be found concentrated in the eloquent opening of Ovid's *Metamorphoses*.

Progressive creation. The work of creation was progressive. The whole was reduced to order in six days. The agency employed in the Word of God—"He spake, and it was done; he commanded, and it stood fast;" and the "Spirit of God moved upon the face of the waters." These representations accord also with the mighty *fiat* imagined in antiquity, expressed by Ovid; traced to Moses; applauded by Longinus; and, with the universal idea of a first principle, called by some a *crind*; by others, *lore*; impregnating the chaos, and giving birth to nature. We cannot consent to understand the six days mystically. The simplicity of the terms requires a plain and literal interpretation. He who formed matter out of nothing in an instant could, by the same power with which he constituted the materials, have given form to the creation. But he chose to interpose a sensible space of time between those works, which he could as easily have effected by a single act of his will.

The first impression made upon matter by the Creator was the communication of a rapid motion to a portion of it, which constituted *light*. And this is mentioned before the creation of the sun or of the stars. Some have conceived that the sun was then in existence, but had not yet become visible, except through a dense atmosphere, which gave this appearance of a diffused twilight, while the body whence it emanated was unseen. We adhere still to the literal history, and in so doing must conclude, that it was the diffusion of that light which was afterwards collected into one body—the sun. The means by which such a result was effected must be unknown to us, who are not yet agreed as to the sun itself, what is its nature, and how it produces or communicates light. The fact is simply we have light mentioned on the first day, and the creation of the sun on the fourth. After the grant of light, we have the division of it from darkness; the names of Day and of Night imposed; "and the evening was, and the morning was—one day." This mode of reckoning from the evening to the morning, and of placing the darkness first, accords with all the usages of antiquity, and gave birth to its mythological representation of *night* as the elder-born of nature. This was the work of the first day.

Second day. On the second day an *expansion* was made; for so the word (רָחַץ) rendered "firmament" signifies, and seems to refer to the atmosphere cohering the globe, possessing density sufficient to support the clouds; drawing up particles of water, until the accumulation is too great for it to sustain, and then suffering them to fall in showers of rain. This appears to be the import of the separation which it was said to make between the higher and the lower waters; useless, indeed, there is reference to an accumulation of waters in the heavens, supposed by some to have subsisted originally, and to have been expended at the deluge. The Seventy have rendered it by a word signifying *solidity*, which is rendered which we have preferred is literal, and seems perfectly accordant with the existing phenomena of nature.

The work of creation proceeded on the third day, to gather the waters, before universally diffused, into their grand receptacles, imposing upon them the name of "seas;" and to render the earth, thus made visible, and which now received its distinctive appellation, capable of producing, at the divine mandate, herbs, plants, trees, the innumerable varieties of vegetation; each possessing in itself the seeds of reproduction, and bearing the fruits correspondent with its kind.

On the fourth day the sun and moon were created, which are described by the historian, according to their visible appearance, as "the greater and the lesser lights"—his language being accommodated to the popular sense, rather than confined to philosophical precision: the moon, although much less than the sun, approaching so near us, appears of almost equal magnitude; and, far inferior in dimension to those heavenly and distant bodies which are so insignificant to the naked eye, she yet occupies a more important and useful station to us, in her immediate connexion with the globe which we inhabit. Such a mode of expression, conformed to ordinary appearances, is perfectly allowable, interferes with no system of philosophy, and is rendered more valuable, as it sinks to the level of the meanest comprehension. The heavenly bodies are evidently represented, in their immediate relation to us when their uses are specified, "to give light upon the earth"—to distinguish between day and night—to measure out, and to regulate the seasons of the year. The ancients regarded them as signs of another order, and built upon this imagination the splendid, imposing, but unphilosophical and futile theory of astrology. "He made the stars also;" but whether on that day, or whether the account extends to the entire universe; to the sun, moon, and earth only; or only to the solar system, of which our globe is a part, and which some celebrated writers have considered as most probable—the history does not determine. Of the same order is the inquiry, whether angels were created on the first day, and as the first work of that day?—or whether they subsisted before, and were called into being at some unknown and more remote period selected from eternity? We only know that they witnessed the process of the creation—which, indeed, they might have done had they been only the first-created on the first day. Of their creation Moses does not speak; but Job assures us (or rather God, addressing himself to Job), that at the creation of the earth "the morning-stars sang together, and all the sons of God shouted for joy." Our speculations must be utterly unavailing upon a subject, respecting which the historian himself is wholly silent.

The fifth day produced from the waters the inhabitants of the deep, the fowls of heaven—and, perhaps, insects are intended by "the moving creature that hath life," as found in connexion with winged animals; the first of those which inhabit the water being only wings adapted to the element to which they are confined.

On the sixth day all terrestrial animals were formed—both beasts and reptiles; then, also, man was made "of the dust of the earth," and animated with "a living soul."

As this creation of man was the most sublime work, and the very end of all other of the divine operations, a more enlarged account is given of it than of any of the rest; the historian resuming it, after he appeared to

Antediluvian period.

History.
Diverse
Images.

have rested from his short, but comprehensive narrative. The particulars stated are few, but they are most interesting. "God created man in his own image." There were striking points of resemblance between what we know of man, in his original state, from this historical record, and what we conceive of Deity, as essential to his nature and sovereignty. In his intellectual endowments, in his dominion, in his felicity, he was made after the image of God; but we apprehend the point of resemblance particularly intended is his purity. "Male and female created he them." In regard to this clause of the record, it evidently implies, that whatever is intended by the image of God is alike applicable to both sexes: he was created male and female; but *man* is his general title; and man, in this sexual distinction, is formed after the divine resemblance. From these expressions arose the monstrous fable, imagined by the Jewish rabbins, adopted by Plato, and very generally diffused in tradition, that the first man united in one person both sexes—(*androgynos*)—a singular and striking evidence this, that the history of Moses had not only been traditionally circulated in substance, but received even in form, since in *expressions* were so misunderstood and misapplied.

Woman.

The woman was formed out of the side of the man; but at what time is not absolutely fixed. He was first created; he was placed in the station which he was to occupy; he was there long enough to feel the barrenness of solitude, and to learn that it was not good for him to be alone. Cast into a deep sleep, the Creator took one of his ribs and fashioned it into woman. For reasons which cannot be fathomed he chose means to produce an end to which they were in themselves wholly inadequate; he who employed six days in the creation could have effected it at once; and he who formed the female from a rib, in the ordinary process of nature by which man is yet produced, evinces no less an act of creation, and from materials as disproportionate to the work.

t'completion.

"Thus the heavens and the earth were finished, and all the host of them." When the great design was completed, God was said to rest from his work; an expression, doubtless, accommodated to the common forms of speech, and our conception: for "the Creator of the ends of the earth, feinteth not; neither is weary." In commemoration of this consummation of his plan, "God blessed the seventh day, and sanctified it." This fact is established by observances kept up until the resurrection of Christ—by the separation of a seventh part of our time still, to religious purposes; although, for sufficient reasons, the day has been changed; and by the otherwise inexplicable circumstance of the universal practice, from time immemorial, of considering the number seven, as a number of perfection. The food allotted to man, was vegetable;—"every herb bearing seed, which is upon the face of all the earth" and the "fruit of every tree." The ancients all agreed in this fact. Poetry and philosophy contended that man lived upon the produce of the earth only. Pythagoras built his plea for abstinence from flesh, as much on this tradition as upon his doctrine of metempsychosis.

Eden.

Man thus created, male and female, was placed in a garden "eastward in Eden." The human race were all derived from two persons, Adam and Eve; who were endowed with all perfections of mind and of

body, and encircled with every arrangement of circumstances which could conduce to their felicity; heaven within, and paradise around. Some have imagined that the whole of these representations are allegorical, and that there never was a local paradise. If these incipient records are allegorical, all that follows may be so, for any sufficient reason that can be assigned for the contrary. But to put this speculation at rest, it is evident, that subsequent parts of the Bible speak of those events, and others which followed, as facts—that the apostle Paul so reasons upon them, and traces analogies between them, the scheme of salvation, and the person of Christ; and that to regard these narratives as metaphorical representations of man's primitive state, is to destroy the authenticity of the history, and to leave us without a record of the most important transactions in the infancy of time; and in which the human race has the deepest interest. Others, have transferred this blissful habitation, from the earth to we know not what unknown regions,—in the moon—the immeasurable expansion of space—the third heavens.

Antediluvian period.

Not all geographical.

There are several places which have borne the name of Eden; some have been mentioned in the Scriptures; others by different writers. These sometimes appear under a little variation, being written Adan, and Eden, as well as Eden. It seems to have been a name applied to various situations distinguished for beauty in themselves, or for their superiority over surrounding scenery; thus perpetuating, through all generations, and in all countries, the memory of this original garden of delight. The name of paradise has the same universality of application.

Several Edens.

It is evident that the historian speaks of it as a place upon earth; and distinguishes its locality by assigning countries and rivers as its boundaries, which were well known in his day, at least traditionally, and for ages afterwards.

Local.

The conjectures as to its situation have been unbounded. Asia, Africa, and Europe, have all been honoured with the imputation of bearing it on their bosom; and America, since her discovery, has not been excluded a share in the distinction. Persons have been misled, sometimes by similarity of names given to rivers and districts in different countries; others by geographical resemblances of certain portions of the earth to the sketch of the site of Eden, as given by Moses; others, again, by the produce of certain spots abounding with gold or precious stones—conforming, in their imagination, the particular gems of the selected country to the unknown words by which the riches of paradise are described, and which are rendered in our translation, "bellum and the onyx-stone."

Conjectures as to its situation.

The general opinion seems to lean towards Persia, which Sir William Jones is inclined to think was the fountain of knowledge to the world. But it is impossible to arrive at any certain conclusion on this point. The deluge must have made such an alteration on the face of the earth, as to have swept away all traces of local scenery. And here we differ in fact from the respectable and learned writers of the Ancient Universal History, who impugn this argument, and maintain "that Moses described things as they were supposed to be when he wrote." To constitute a correct history, especially with its distinct claims to

Cannot be determined.

History.

inspiration, he must have designed to describe the place as it really was originally situated. And we have said, that its boundaries were *traditionally* well known in his day, because they may be supposed to have been so distinctly marked as to be easily traced until Noah; by whom the knowledge of them generally might afterwards be transmitted through his family, although no features of the actual scenery remained; and with sufficient distinctness to guide their posterity of the earlier times, so far towards the spot where Eden once stood, as to enable them to fix upon some existing rivers to denote generally what could not be precisely determined. For when the garden itself perished, it seems reasonable to conclude that its express local boundaries should also disappear.

Heathen testimonies to these facts.

Tradition furnishes among the heathens abundant testimonies, both to this garden, and the blissful condition of its innocent inhabitants. Who can doubt that the golden age, celebrated with so much poetry itself, originated so universally by philosophy itself, first, in the state of primal felicity appertaining to the progenitors of the human race? The Elysian fields, and the garden of Adonis, seem to refer to their paradise; for Bochart shows that the name *Elysian* is Phœnician, and of similar import with the Hebrew term *Eden*, implying a garden of delight. To these we may add the garden of the Hesperides, the Fortunate Islands, Ogygia, Tiphonæ, and other celebrated bowers of happiness, conceived by the ancients, whose substance, if they were more than shadows, must be looked for in the paradise of Moses.

Marriage.

It may be necessary to add, that from the fact of the conjugal union of Adam and Eve, and the circumstances in which it originated, the historian takes occasion to establish a grand article of jurisprudence, as it has proved in the event, by its adoption into all well-cultivated states, regarding marriage; which demonstrates that the law of morals and the law of nature are in fact coincident; and that we come nearer the one, as to its detail we approximate to the other. "Therefore, shall a man leave his father and his mother, and shall cleave unto his wife; and they shall be one flesh." It is remarkable that Jesus Christ adopts this sentiment, and with it the express language; thereby giving his august and indisputable sanction to the Mosiac History as a narrative of facts, in form as well as in substance, when he quotes this passage literally, and affirms that the departure from it in some respects in the law of Moses was compelled by the peculiar circumstances of the case, and "the hardness of heart" (to use his own terms) of the people over whom this distinguished legislator presided; but that the institution, as here recited, is the genuine law of morals, and should be that of society, as conformed to the law of nature, "from the beginning."

State of innocence.

The state of Innocence is justly described as one of great simplicity, as well as purity. "They were both naked, the man and his wife, and were not ashamed." Such a representation accords with the circumstances supposed; and no other could be imagined conformable to truth. Plato, probably gathering this fact from tradition, but certainly adopting it, from whatever source he derived it, as amongst the features of that state of primal innocence which he imagines to be the golden age, describes the first inhabitants of the

world in similar language. "They lived," said he, "naked and exposed—uncovered to the seasons," for no storms were there! (*γυμνοὶ ἐν αἰσ ἀέρωντο ὑπερ-λευστοί καὶ τῶν αἰσθημάτων*). The earth was then also represented as producing spontaneously all necessary things; a renewal of which Virgil anticipates in the latter days, in the eclogue *Pollio*, and in language taken partly from the prophetic descriptions of the future reign of the Messiah; known to him, possibly, through the Greek translation; and certainly from the fables of the poets relative to the golden age, which he expects to be revived, and which we now see sprang from tradition, flowing from this primal state. That he refers to those delineations of the golden age is evident, when he describes his hero as one

Austrian period.

quo ferrea primùm
Desinet, ac toto surgit genis ævæ mœdo—

"by whom the iron years shall cease, and the golden age arise upon all the world;"—and as one of its principal features, he supposes

omnis feret omnis tellus
Non rastro patietur humus, non vinea falcem—

"every land shall produce all necessary things; the ground shall not endure the harrow, nor shall the vine need the pruning-hook."—Inspired by his subject, he seems to have caught the spirit of prophecy, while he details also the ancient representations of man's original state—

At tibi prima, puer, nullo munuscula cultu,
Krassus hederas possim cum baccare, tellus,
Mistatque ridens colubæ fundat acantho.

— nec magnos mercentur armenta iuvencos.

"The earth shall pour before thee, sweet boy, without culture, her smiling first-fruits: the timid herds shall not fear the formidable lions."—The golden age, so conceived, is evidently borrowed from the paradisaical state.

Such was the primal state of man.—He named the various animals as they were summoned before him, by some kind of immediate intuition, without which it would also be difficult to account for the origin of speech. He received the partner of his life and fortunes in the way which has been described; who proved, alas! the companion not only of his weal, but of his woe. His habitation was paradise; his occupation to "dress the garden, and to keep it"; his food was the spontaneous bounty of the earth; his prohibition, one only law—that, of a single tree in Eden, "he should not eat." The prohibition was a test of obedience—the penalty was death. The test was conformable to the simplicity of man's original state; and it is difficult to conceive what other test could have been applied to a moral agent in such a situation. It must be a test addressed to the reason, for to it alone could temptation attach. In all its simplicity, it was a covenant acknowledging the sovereignty of the Creator and the allegiance of the creature; demanding the seal of obedience, involving the happiness or misery of the subject, and attaching to it penalties and rewards. In proportion to the simplicity of the law was the criminality of the breach of it; its violation was an impeachment of divine truth, a suspicion of the wisdom and goodness of God;—a

The fall.

History. defiance of his authority, a dissatisfaction with their state, an ambition to surpass it; the breach of a positive law, with all its obligations, and an open renunciation of their allegiance to the Creator. We have ventured these remarks upon the facts about to be stated, because their simplicity has been objected against the Mosaic History by those who have not considered that the spirit of disobedience did not depend upon the extent of the actual offence, and that the act must of necessity conform to the simplicity of the state in which the moral agents were placed.

Mosaic History. The history of this melancholy transaction cannot be better given than in the words of Moses.—“Now the serpent was more subtle than any beast of the field which the Lord God had made. And he said unto the woman, Yes, hath God said, ye shall not eat of every tree of the garden? And the woman said unto the serpent, We may eat of the fruit of the trees of the garden: but of the fruit of the tree which is in the midst of the garden, God hath said, ye shall not eat of it, neither shall ye touch it, lest ye die. And the serpent said unto the woman, Ye shall not surely die: for God doth know, that, in the day ye eat thereof, then your eyes shall be opened; and ye shall be as gods, knowing good and evil. And when the woman saw that the tree was good for food, and that it was pleasant to the eyes, and a tree to be desired to make one wise, she took of the fruit thereof, and did eat; and gave unto her husband with her, and he did eat.”

Remarks. Such is the history—which we cannot conceive to be allegorical for reasons already assigned; the simplicity of which accords, as we have shown, with the primal state of man; and if it be rejected, we have no History whatever of what we were, or the way in which we became what we are. The serpent, described only by his subtlety, was originally a very different animal from what he now is—and he is still, in some countries, a very beautiful one. Some species of serpents bred in Arabia and Egypt have an unusual brilliancy, and are of a golden colour, reflecting the sunbeams with amazing splendour. The fiery, flying serpents, which are supposed to have been in this order, are called by Moses by the same name (in Num. xxi. 6.) as is applied to the highest orders of angelical existences—*seraphim* (שֵׁרָפִים)—an appellation which would never have been selected to describe celestial beings, had not the creature itself been transcendently beautiful. The serpent could be no more than the organ of an invisible agent; and we have here the first intimation of a spiritual being, fallen from rectitude, became the tempter of innocence; having loved others in his ruin, desirous to augment his victims; and subsequently spoken of in the Scriptures under the form in which he seduced our first parents.

Speech of the serpent. That the serpent should speak is a difficulty which has induced some to suppose that all animals had originally the gift of speech; others, that no speaking took place, but that the motions of the animal indicated his intentions; and others, that he spoke, and accounted for it as the virtue of the tree which he recommended, and of which he professed to have eaten. Moses said—he spake: to the rest we can say nothing, since it is not for us to supply what the history has left untold.

Trees—of life and knowledge. As to the trees, it is probable, that the one was planted as the preservative of man's immortality; its fruit being designed to invigorate him, and ward off

decay: the other, being the test of his allegiance, in Antediluvian period. allusion to that, and to the consequences of his disobedience, was denominated “the tree of knowledge of good and evil.”

Man transgressed—and felt the first consciousness of Sentence, guilt. Summoned by his Creator, he could not deny his offence; but he endeavoured to transfer the blame to the woman, by whom it was cast upon the serpent: each excusing themselves by referring to the organ of their rebellion, neither denying the fact. Sentence was passed upon the serpent, that he should be degraded from the rank which he held in the creation, whatever it was, and become a grovelling reptile; upon the woman, that the pangs of child-bearing should be entailed upon her, and her posterity; upon the man, that he should be driven from paradise, exposed to hardship, earn his bread by the sweat of his brow, and labour upon the soil which was cursed for his sake; upon both, that they should die, and return to their dust.

Such was the fall; of the consequences of which Conscience became immediately sensible in various ways. Shame took possession of them; their bodies no longer were guarded against the elements, which now changed; they needed a covering, and received it, from interwoven leaves and the skins of beasts. They were expelled Eden, and forbidden ever to return; a fiery guard of cherubim was placed to guard the hallowed spot, and its original possessors became (what men have ever since been) pilgrims upon the earth.

The principal features of this disastrous event are Tradition. preserved in tradition. Plato represents them in his Symposia. “Porus being drunk with nectar, enters the garden of Jupiter, is circumvented by Penia, and thence cast out.” This fable is mentioned by Origen, as referring to the fall. The deterioration of human affairs is generally stated by the ancients, in the golden age yielding first to that of silver, finally to that of iron. The history of Adam and Eve, of the tree, of the serpent of the circumstances of the fall, is blended with Grecian ceremonies; the very name of Eve being preserved in their observances, and the symbol of the serpent, employed in their mysteries. It is even to be traced amidst the traditions of Peru, and of the Philippine Isles; thus penetrating the idolatrous recesses of the new world.^a

The historian does not determine the residence of the Cain and first parents of the human race, after they were expelled paradise—it is probable that they would not wander far from a spot so endeared to them by recollections at once pleasing and painful; and tradition seems to fix their earliest abode somewhere in India.

The first-born of Adam was Cain—the second, probably about a year later, Abel. The name of the first, *possession*, indicates the fond expectations of the mother—that of the second, *vanity*, seems to intimate some early disappointment of her hopes. The youths grew up to manhood; they chose their occupations; the one was a husbandman, the other a shepherd. How long they lived together before the fatal catastrophe which rendered the one the first victim of death, and the other a murderer, cannot be decided: it may be inferred that several years had

4003.

History.

elapsed before this event, since Cain expressed apprehensions subsequently, which implied some considerable population on the earth. The brothers brought an offering each to God; the one appears to be an acknowledgment of the Creator, in the presentation of the fruits of the earth; the other a sacrifice, offered as the apostle assures us in faith, and therefore acceptable, and looking forward to the great atonement which should eventually be made for sin.* The characters of these brothers were very different. In the gracious expostulations of the Deity with Cain, and in the express testimony of St. John, connected with that of St. Paul, we are assured of what the tenor of the history would have allowed us fairly to infer, that the one was righteous, and the other wicked; Abel obtaining the witness of God in his favour. The offering of Cain was rejected, while that of his brother was regarded with approbation. The bad passions of this wicked man became infuriated, and were written in dark and legible characters upon his countenance. A conference between God and this rebel took place. Who shall say in what way it was conducted? for who can tell the inconceivable and innumerable channels of access which the Father of Spirits has to the spirits which he created? It seems to have been by an audible voice; it appears as though Deity had not yet left off conversing with his fallen creature immediately. Every appeal was made to his reason, and to his conscience; and every appeal was in vain. He was told of the equality of divine dispensations; of the equity of the divine character; his pretensions as the first-born were allowed, and the homage of his brother guaranteed; the unreasonableness of his displeasure was stated; and of the perilous circumstances in which his untamed passions placed him, he was admonished. All proved unavailing. Sin had "conceived," and it "brought forth death." Smothering in his own dark bosom his malignant design, Cain invited his brother Abel into the field; and, when they were distant from human habitations, assaulted and slew him. This was the first appearance of man's last enemy; and could mortality assume a more terrific shape than murder? Murder by the hand of a brother? We must not trust ourselves to detail all the emotions which we cannot but associate with this transaction. What family became fatherless in consequence of this fratricide, the historian has not said—his narrative is brief, and he hastens on to events more nearly approaching his own times: but it is not likely that Abel should have been unmarried, or his marriage unfruitful, although the history is silent on these particulars; especially as it is evident the world had no inconsiderable population at that time.

Sentence of Cain.

This atrocious crime could not be concealed. The eye of God was alike upon the murderer and his victim; the earth drank, for the first time, human blood; but not before its voice had pierced the heavens. The murderer was sentenced to quit for ever the domestic circle which he had diminished, and the advantages of society, whose laws, written upon the heart, he had broken; and to wander a vagabond over the face of the earth, rendered, as to the spots which he had been accustomed to cultivate, barren; hated, feared and

shunned by all. A dreadful sentence; and felt deeply by the fratricide.—His apprehensions were excited, lest he should meet the retribution of death for his crime; and this fear, while it speaks to the multiplied population of the earth, appears to us to imply posterity from Abel, who would of course be most likely to visit the blood of their parent upon the head of his murderer. We will only stop to remark, that, supposing this to have taken place about the 130th year of the world (and that longevity of which we are about to speak demands this concession, since Adam begat Seth, the son next to Abel, at that time), and granting that Adam and Eve had no other children than Cain and Abel, excepting two daughters as their wives, a considerable population will have arisen in that space from these connexions. It has been calculated, that, "supposing them to have been married in the 19th year of the world, they might easily have had eight children, both male and female, in the 25th year. In the 50th year, there might proceed from them, in a right line, 64 persons. In the 74th year, there could be 572; in the 98th year, 4096; and in the 122nd year 32,768." If the "other children born (during that time) of Cain and Abel be added, their children, and the children of their children," the calculator supposes that "in the 122nd year, the produce would amount to, at least, 421,164 persons."† It is unnecessary to contend for the whole of this calculation: remitting much of it as conjectural, enough remains to justify the fear of Cain, especially in respect of the descendants of Abel, and to prove that the world could not be at that time very thinly peopled.

Driven from his home, he went out, and his first settlement was said to be in the land of Nod—on the east of Eden. Now as the word Nod, signifies a wanderer, we are inclined to render the passage, "he went out from the presence of the Lord" (that is, from the spot where he had been judged and sentenced), "and dwelt," or sojourned, "a vagabond, on the east of Eden." Without naming the place, the historian will then be understood only to state that he first pitched his tent in the direction specified. After some years' wandering from place to place, a state not unfavourable to population, as he would have, probably, issued in various stations where he had fixed for a season, he became so multiplied, that he "built a city," and called it "after the name of his son Enosh." His immediate posterity are slightly sketched by the historian: and the manner and time of his death unrecorded. Josephus affirms that his punishment wrought no repentance; but that he became more hardened in sin as he advanced in years. This, Moses has not said; and we will not load the wicked with guilt not imputed to them by Infinite Truth. It is certain that he was the first who built a city—a defended place: that his descendant, Lamech, whose inexplicable history we cannot undertake to unravel, was the first who set the example of polygamy; and to these indications of a depraved state of society—man obliged to fence himself against man, and giving scope to unbridled passions, which, in every instance,

Antediluvian period.

* See Magee on the Attonement.

History. led to domestic contention and calamity—the useful and enchanting arts, “the artificer in brass and in iron,” and the inventor “of the harp and the organ,” do not form a counterbalance.

Enoch's translation. On the illustrious list of antediluvian patriarchs, the name of Enoch stands pre-eminent, on account of his translation. Although Moses expresses himself with a brevity according with the conciseness of his history, we can have no difficulty in understanding the expression—“he was not, for God took him;” since the writer of the epistle to the Hebrews assures us, “he was translated, that he should not see death.” As easy of interpretation is the beautiful figure employed to describe a holy life—“he walked with God;” explained by the same inspired commentator, with the like force and propriety, “for before his translation, he had this testimony, that he pleased God.” We may easily conceive of what importance such a triumph over mortality would be, in that early age, when death had but just commenced his ravages. It afforded, at one and the same time, an evidence of the immortality of the soul, and of the resurrection of the body. Almost the same reasons obtained for the translation of Elijah, in an age of darkness and apostacy. A singular chain of circumstances is afforded, by regarding each of the heads of the several dispensations of God's will, as affording similar evidence. Enoch, as standing at the head of the patriarchal dispensation,—Moses, of the law,—Elijah, of the prophets,—Jesus, of the gospel. In each of these cases is furnished a distinguished pledge of victory over death. Enoch is translated,—Moses is removed by a death, considered in all its circumstances, not inferior to translation,—Elijah is taken into heaven without dying,—Jesus dies, and rises the third day, “the first-fruits of those that sleep.”

Death of Adam and Eve. The father of mankind died at the advanced age of nine hundred and thirty years. *When* the partner of his bliss and laid reaped the bitter fruit of her transgression, or *where* they were buried, is not recorded.

Antediluvian longevity. One thing only requires, at this stage of the history, to be noted: and that is, the extraordinary age of the antediluvian patriarchs. Admitting the fact, physiologists have endeavored to account for it in various ways. By some it has been supposed to arise from temperance and simplicity of diet: by others, from the salubrity of the vegetable food of those days: others, again have imputed it to the constitutional stamina and organization of these men. Yet Shem, who was born before the flood, and had these advantages, fell short of the life of his ancestors 300 years. To original strength of constitution we may add a temperance which was probably destroyed at the deluge—and we must refer all to His sovereignty, who willed that human life should be shortened. Feeling these difficulties, some writers have conjectured that the years ascribed to these first men were lunar and not solar. It is a sufficient answer to this theory to observe, that on this calculation, their lives are reduced to a shorter period than our own; and some of them must have been fathers under, or about, six years of age. The fact affirmed in the Mosiac history is, however, not without powerful traditional support. Josephus enumerates the testimonies of Manetho, Berosus, Moschus, Hecataeus, Jerome the Egyptian, the writers of the Plineian antiquities, Hesiod, Hecataeus, Hellanicus,

Acusilanus, Ephorus, and Nicholas, who generally agreed that “the ancients lived a *thousand years*.” **Antediluvian period.**

We now come to an union between the wicked descendants of Cain, who retained the evil qualities of their evil progenitor, and the children of Seth, who began early “to call upon the name of the Lord,” and who preserved the worship of the true God in their families. These are called “the sons of God,” the former, “the daughters of men,” by the strong figures usual in eastern composition. The holy seed were seduced by the beauty of the degenerate stock. From this fatal commerce sprang “mighty men,” and “men of renown”—“there were” also “giants in those days”—and the whole “earth was” quickly “filled with violence.”

We understand by the term “giants,” not merely men of violence but of extraordinary bulk and stature. It is not necessary to suppose that *all* were such: but that there were giants in those days, and probably many of them. Tradition again corresponds with the Mosiac record. Pausanias, Philostratus, and Pliny, speak decidedly on this subject.†

As the result of the inauspicious union between the descendants of Seth and of Cain, fraud, and rapine, and all possible evils predominated. And with the narrative of Moses all antiquity agrees. Catullus and Ovid gave a frightful picture of this early depravity; and in terms which seem borrowed from the Scriptures.‡

This universal depravation opens the way for the tremendous scenery of the deluge: an epoch in History of the first importance; as all the authenticated records of profane History fall within the period as which it is said to have taken place—an event traditionally preserved among all nations, and corroborated by geological facts: a judgment the most awful and sublime in its character, and corresponding with the purity of that Infinite Being whose dignity and holiness had been outraged and insulted. Patience and pity were manifested amidst rising indignation; and the writers of revelation, in conformity with the testimony of Jesus himself, have corroborated the fearful page of History now to pass before us, and have appealed to it as a striking example of the justice and long-suffering of God.

When God determined to extirpate from the earth the wicked and abominable generation who had polluted it, and whose crimes cried to heaven for vengeance, he resolved to save Noah and his family, as the progenitors of a new race of men, and that the righteous should not perish with the wicked. For this purpose he announced his intention, and instructed him to prepare an ark for the saving of himself and of his family. In the sentence pronounced, an universal deluge is affirmed; and no partial inundation, of whatever extent, could justify the terms employed by the historian, and ascribed to the Deity. “Behold, I bring a flood of waters upon the earth, to destroy all

* Joseph. Antiq. Jud. lib. i. cap. 3.

† See Grotius, de Ver. Christ. Relig. sect. XVI.

‡ Catullus, Epithal. Pœl. et Theœ—Ovid, Metam. lib. i.—Grotius, ut supra—Horn. Il. lib. i. v. 233—276, Nestor complains that he shall never see such heroes for strength and courage as he had been accustomed in his youth to associate with.

History. flesh wherein is the breath of life, from under heaven; and every thing that is in the earth shall die!" To Noah and his family, led by an instinctive impulse, and disarmed for a season of their natural ferocity, all animals were to resort; that the ark might contain within itself the means of replenishing the earth, when it should be restored.

Warnings to the world. To the mean while, the patriarch was suffered to foretell this event, and to preach righteousness and repentance: but the world believed him not, and continued their crimes and indulgences, until a common and inevitable ruin overtook them. It has been commonly supposed, that this interval was 120 years: but this conclusion does not receive any countenance from Scripture, which only says, that "the long-suffering of God waited in the days of Noah, while the ark was preparing;"* without specifying the time which it occupied. The general misapprehension seems to have arisen from the declaration, "yet his days shall be 120 years;"† which alludes not to the space between the sentence and its execution, but to the contraction of human life. To suppose such a length of time to be consumed in the building, without the intervention of a miraculous preservation, one part of the structure must have perished, before the other had been completed. Besides, the calculations of the order of facts recorded by Moses destroys this opinion. "Noah was 500 years old when he begot Shem, Ham, and Japheth."‡ It is evident, that when he received the command to build the ark, those sons were married; since it is said, "thou shalt come into the ark: thou and thy sons, and thy wife, and thy sons' wives with thee."§ And "in the six hundredth year of Noah,"|| the flood came. While, therefore, it is not stated precisely when the command was given, nor, of course, what time the building of the ark occupied, it manifestly could not be so long as 120 years.

The ark. The singular structure which was to contain the remnant of the creation must have been of vast dimensions. Accordingly, the patriarch was instructed to "make it of gopher-wood:" a term used in no other place in the bible, and which has been supposed to signify cypress. It was to consist of three stories, and to be divided into various departments. The length of it was prescribed at 300 cubits, the breadth 50, and the height 30. The common cubit, originally imagined to be 18 inches, is now allowed to have contained 22. According to this measurement, it was 547½ English feet long, 91½ broad, 54½ high; and its solid contents amount to 2,730,781 ⅔ cubic feet. It was in shape an oblong square, with a flat bottom, and a sloped roof, raised a cubit in the middle; each of the three stories must have been about 18 feet high. It had windows, and an door; and seems to have had a covering which might be removed, probably made of skins drawn over the roof, and adapted to defend the apertures called windows. Upon this estimate, the ark appears to be sufficiently large and commodious for the purposes for which it was constructed.

Every thing being thus prepared, "in the 600th year of Noah's life, on the 17th day of the 2nd month, were all the fountains of the great deep broken up, and

the windows of heaven were opened; and it rained 40 Antediluvian days and 40 nights;" Noah, with his family, and the pairs of all living creatures, having entered into the ark. And such was the increase of the waters, that not only the ark floated, but the face of the whole earth was covered, the waters rising 15 cubits above the highest mountains—every thing died: "and the waters prevailed upon the earth 150 days."‡ They gradually abated after that period; but the earth was not dry until a year had expired from the opening of this destruction. In the mean while, as the waters assuaged, Noah put out a raven, which finding supply of food from the carcasses, returned not again. Afterwards he sent forth a dove, which, neither living on carrion, nor finding a suitable resting-place, came back to the ark. A second time he sent her out, and she returned with an olive-leaf in her mouth: a signal of the abatement of the waters, so far as that the trees were visible. A third time he dismissed this messenger, and she returned no more. These circumstances are noted, because they are not forgotten in the traditions which relate to this great event.

Various hypotheses have been imagined to account Means of for the accomplishment of this great work, which requires-ment we need not enumerate. Instead of so doing, we shall present a solution of the difficulty proposed by Sir Henry Englefield, and published by Dr. Geddes, in his Critical Remarks upon the Deluge. "The diameter of the earth being taken at 8000 miles, and the highest mountain being supposed four miles high above the level of the sea (which is a height greater than that of the Andes), the quantity of water requisite to cover them will be an hollow sphere of 8008 miles diameter, and four miles thick: the content of which, in round numbers, is 800,000,000 cubic miles. Let us now suppose the globe of the earth to consist of a crust of solid matter 1000 miles thick, enclosing a sea, or body of water, 2000 miles deep; within which is a central nucleus of 2000 miles in diameter: the content of that body of water will be 109,200,000,000 cubic miles; or about 137 times the quantity of water required to cover the surface of the earth as above stated. Now water, by experiment, expands to about one 25th of its whole magnitude, from freezing to boiling; or 100th of its magnitude for 45 degrees of Fahrenheit's thermometer. Suppose, then, that the heat of the globe, previously to the deluge, was about 50 degrees of Fahrenheit's, a temperature very near that of this climate; and that a sudden change took place in the interior of the globe, which raised its height to 83 degrees; a heat no greater than the marine animals live in, in the shallow seas between the tropics: those 23 degrees of augmented heat would so expand the internal sea, as to cause it to more than cover the surface of the globe, according to the conditions above mentioned. And if the cause of heat ceased, the waters would, of course, in cooling, retire into their proper places. If the central nucleus Sir Henry be supposed 3000 miles, and the internal sea only 1500 Englefield. miles deep, its content will then be 99,200,000,000 cubic miles; or, 125 times the water required: and in that case, an additional heat of 36 degrees to the previous temperature of the earth will be sufficient to

* 1 Pet. iii. 20. † Gen. vi. 3. ‡ Gen. v. 32.
§ Gen. vi. 18. || Gen. vii. 11.

* Gen. vii. 11—24.

History. produced the above-described effect. It is scarce necessary to say, that the perfect regularity here supposed to exist in the form of the interior parts of the globe, is of no consequence to the proposed hypothesis; which will be equally just, if the above-given quantity of waters be any how disposed within the earth. Neither is it here proposed to discuss the reality of a central fire, which many philosophers maintain, and many deny. It may not be unworthy to remark, that the above hypothesis, which does not in any way contradict any law of nature, does singularly accord with the Mosaic narrative of the deluge. For the sudden expansion of the internal waters would, of course, force them up through the chasms of the exterior crust, in dreadful jets and torrents; while their heat would cause such vapours to ascend into the atmosphere as, when condensed, would produce torrents of rain beyond our conception." Dr. Geikie adds, "It is not at all necessary to suppose, with Sir Henry, that the antediluvian mountains were as high as those of the present earth. They may have been of a very different form and size, and composed of other materials."

Statement of Moses. Moses derives the deluge from two sources: "the windows of heaven were opened, and the fountains of the great deep broken up." We can enter into no calculation, as to the inexhaustible stores of these great reservoirs. The historian is perfectly consistent with himself. He represented the earth as originally covered with waters, which were called off by the divine fiat; some of them gathered into seas, others probably impelled into secret receptacles within the earth: now the deluge only supposes the reduction of the earth to its original state, in this respect.

Tradition. It might be expected, that an event of such an order should be corroborated by correspondent collateral evidences. Accordingly, the deluge, is confirmed, not merely as a whole, but in important features of detail, by tradition. Whoever has carefully consulted Bryant's Ancient Mythology can have no doubt, if learning and argument in unusual combination are conclusive, that Prometheus, Deucalion, Atlas, Theuth, Zuth, Xuthus, Imachus, Osiris, Dagon, and others, were all different names by which Noah was intended. Eusebius has preserved a fragment from Abydenus' history of Assyria, bearing upon this fact; and even including some circumstances to which we have alluded, as characteristic of the Mosaic account, only under different

names. "Seisithrus" (another name for Noah), "after the waters were abated, sent out birds, that he might ascertain whether the earth had yet appeared through the flood. But these, finding only a boundless sea, and having no resting-place, returned to Seisithrus."* Berossus, according to Josephus, both relates this fact, and observes that fragments of the ark remained in his days in Armenia.† Abydenus, before-mentioned, directly refers to the dove, and to the signal which she brought in her mouth, that the flood had subsided. Lucian adverts to an universal deluge, in no doubtful terms; and specifies the suspension of animal ferocity: The change of appellation will excite no surprise, when we recollect that the ancients were in the habit of translating names into their own language; to give their signification, rather than their original form.‡ Diodorus Siculus says, that it is a tradition of the Egyptians, that Deucalion's was the universal deluge: and Plato corroborates this testimony by affirming, that this flood, recorded in the sacred books of that people, long preceded the partial inundations known to the Grecians. There is another remarkable coincidence with the Mosaic account. The very day fixed by Moses as the beginning of the deluge, agrees exactly with the day in which Plutarch tells us, Osiris went into the ark—the seventeenth of Athyr: which is the second month after the autumnal equinox, the sun then passing through Scorpio. Add to these traditional evidences, the geological proof of the deluge; the existence of vast quantities of marine productions upon the tops of the mountains, and under the surface of the ground, to considerable depths, over the whole earth, and at all distances from the sea; not to be accounted for upon all the hypotheses by which it has been attempted to impugn the Mosaic history; and the singular fact, that there is no nation, ancient or modern, savage or civilized, without a tradition of the universal deluge; the chain of argument is complete:—and it appears to us, that here we may close with propriety our first chapter of History.

HISTORY.

CHAPTER II.

PATRIARCHAL AGE.

History.

A. M.
1657.

A. C.
2347.

The descent from the ark.

NOAH descended from the ark in the 601st year of his age, on the 27th day of the second month; and in the year of the world, 1657. He raised an altar upon the face of the desolate scene, and offered sacrifice—the way of expiation revealed from the beginning. A covenant was made with him, as the parent of the new world: and the rainbow was its seal. Whether it before existed, or not, is of no moment: if there were ruin before, it must have been—the same causes in nature, uniformly producing the same effects: if the earth were watered, as Eden was, by a mist, the phenomenon in question might be new after the flood, as rain would then appear for the first time: either way, “I do set my bow in the clouds, and it shall be for a token of a covenant between me and the earth,” gives it a new import. The pledge implied in it was, that the waters should no more go over the earth to destroy it. Three laws were now solemnly dispensed, and seem particularly suited to the occasion.—1. The permission to eat flesh: man’s diet being originally restricted to vegetables. 2. The punishment of murder with death: perhaps the only crime that ought to be so visited. 3. The original law, which is innate that of nature, “be ye fruitful, and multiply,” and replenish “the earth.”

The vineyard and the prediction.

Soon after this descent, Noah planted a vineyard, and being ignorant of the effects that would be produced by the fermentation of its fruit, drank of the pressed grape, and became intoxicated. No longer sensible, he lay denuded in his tent. One of his sons, Ham, the father of Canaan, finding him in this situation, cruelly mocked and exposed him: his other children decently and piously covered him. The patriarch, although overcome unexpectedly with wine, was not insensible of that which had passed. He blessed Shem and Japheth, and cursed Ham. That this was the result of a divine influence, and not of any burst of passion, appears in this—that he cursed Ham, not in himself, but in Canaan, upon whose descendants, called after his name, the penalty more directly and immediately fell; and that no ebullition of human wrath could possibly be imagined to forestall events, much less to effect their accomplishment to the very letter: whereas this prediction of Noah, not only produced early results, according with the sentence, but has acted in all ages, and continues to do so to the present hour; the whole continent of Africa being

peopled by the descendants of Ham. This prediction Patriarchal was remarkably fulfilled in former events; of the historical truth of which, no doubt can be entertained. The Canaanites were reduced by the Israelites, the posterity of Shem. The Egyptians, the descendants of Shem, were subjugated by the Persians, who were of Shem, and the Grecians, who were of Japheth. Tyre, built by the children of Ham, fell successively under the posterity of his brethren. The great struggle between Carthage and Rome, which terminated in the ruin of the former, confirmed this prediction: Carthage being peopled by the posterity of Ham, and the Romans descending from Japheth. In the mean while, other points were no less accomplished. Shem was to be distinguished for spiritual privileges, and Japheth for increase. Accordingly, the light of revelation shone upon the descendants of Shem, for many centuries exclusively; and afterwards emanated thence to distant nations: while Japheth’s posterity inherit all Europe, the Lesser Asia, Media, a part of Armenia, Iberia, Albanis, the territories once belonging to the Scythians, now to the Tartars—India, China, and probably the continent of America. And it is remarkable, that the four grand empires of the world, the Assyrian, the Persian, the Grecian, and the Roman, descended, the two former from Shem, the two latter from Japheth.

Amidst a barren list of genealogical names, Nimrod Natrod appears. His name signifies *a rebel*: his description is “a mighty hunter before the Lord.” In this (if his name be excepted) nothing criminal appears; he might be a great benefactor to mankind, in following the labours of the chase, and extirpating wild beasts. It is generally understood, that he grasped at empire, and obtained it. The lead which he took in his amusement, accompanied as he probably was, would give him the habit of command, which he turned to more important purposes. Some have ascribed to him the project of building Babel: and although this cannot be decided, such a conclusion appears to agree with the character of his short and stormy history.

At this time a singular project was undertaken. It Babel was determined to build a city ample enough to contain the immense population contiguous to each other, (which had not hitherto been so compact as might conduce to mutual convenience) and an exceedingly lofty tower, for so we understand the hebraism, “whose top may reach

History. unto heaven." The land of Shinar was the place fixed upon, which we believe to be Chaldæa; and not improbably the site upon which Babylon was afterwards built. Various motives have been assigned for this project. Some have imagined that the fears of another deluge suggested it. In this case, the higher grounds would have been preferred to a plain; when it was known that the loftiest mountains had been covered. Others imagine it was intended as an object to be seen at a distance—that, when they wandered wide with their flocks, it might be to the dispersed population a common point of union. Others understand by it an indication of undue ambition, an appetite for celebrity, which, if unchecked, might lead to the most criminal excesses. However this might be, the work was displeasing to God: and it appears to have been so, principally, on the supposition that they intended it as a rallying point; thus defesting the end of their multiplications, in confining the population of the earth too much to one spot. Accordingly, it pleased God to confound their language, so that they could not understand each other. An inquiry after the original tongue would not be profitable, nor could it lead to any certain conclusion: if we trace all known languages to their sources, perhaps we should approach the Hebrew more nearly than any other. Nor is it a question, whether language might not have gradually changed—it was, the historian affirms, altered at once. Not by the introduction of a variety of accents and inflections merely, but by a total confusion and diversity of speech. However we may flatter ourselves that we have found a common original in any language as the basis of the rest, there are some which have no visible connexion with any tongue whatever, and the Chinese appears to be of this description; so that far the absolute contrariety, we can scarcely account on any other principle than that of a total change of speech.

Dispersion. The work was in consequence abandoned; and the people separated. We prefer this term to *dispersed*; because there does not appear to have been any violent disorganization of the mass of mankind; but that the different tribes arranged themselves according to their respective tongues, and, having thus embodied themselves, proceeded to take quiet possession of the earth, amicably adjusting their several boundaries, and dividing it among them.

Origin of nations. In attempt to trace the origin of nations, from this dispersion, at this distance of time, and with the slight sketch afforded by Moses, would be as impossible as unprofitable. In general, we may observe, that Shem appears to have settled near the plains of Shinar. Among his descendants are the inhabitants of Persia, from Elam; of Nineveh, from Ashur; of China, from Arphaxad; of Mesopotamia and Phrygia, comprehending the countries westward of Assyria, as far as the Mediterranean, from Aram. Ham probably dwelt in Egypt. His descendants occupied Shinar, from Nimrod; Arabia, from Cush; Ethiopia, from Mizraim; Africa, from Phil; Phenicia, and the land of Canaan, from Canaan.—When *Japheth* left Babel, it is uncertain where he settled. His descendants dwell in Phrygia, from Gomer; the eastern part of Asia Minor, from Ashkenaz; Cappadocia and Galatia, from Togarmah. Most of these divisions must, after all, be considered as conjectural, although a mass of reasons

might be assigned to support the general arrangements Patriarchal advanced here.

To this striking point of history, several traditions bear respect. Josephus quotes one of the syriac versions averring, "that mankind once spoke a common language; but building a tower immensely high, as though they would scale heaven, the gods sent a wind, and overthrew it, assigning to each a different tongue; and thence Babylon derived its name." Abydenus makes a similar statement: and in fix the era of this event, says, "then commenced the war between Saturn and Titan." Babylon was not built by Semiramis, as the Greeks affirm: this error is refuted by Berossus and Josephus. And can there be any question, upon divesting the history of its poetical decorations, that the fables of the giants' war with heaven originated in this fact? In some cases the poets seem to have borrowed the very language of this historian—"let us go down and see whether these things are so."¹

The names which we select in Biography, in pursuance of our plan, are, for the most part, centres, around which considerable portions of important history revolve: but the name of Abraham, as it is presented by Moses, and as it originates the Israelitish nation, is a fountain whence the grand stream of History flows in relation to that distinguished people, and from which those ramifications branch, which furnish the records of other nations. This great progenitor of the Hebrews is introduced rather suddenly. Terah, the father of Abraham, was the tenth in descent from Shem, the first-born of Noah. Idols had commenced; and it is not unlikely that the family of Abraham participated its guilt and danger: for the prophet reminds the Jews, that their ancestor was "a Syrian ready to perish." Whether the call to Abraham, to leave his country, influenced the whole family (far, after the decease of his father, it is spoken of in the past tense, as having occurred some time before); or whether Terah had himself received an intimation of the divine pleasure, that they should expatriate themselves, does not distinctly appear. They left, however, their country, and the probable cause was idolatry; of the evil of which they had been, it should seem, admonished. The city in which they dwelt was Ur of the Chaldeans; the centre of superstition, which took its name perhaps from the worship of fire, as did Heliopolis from that of the sun; the word *Ur* signifying *fire* or *light*. The illustrious exiles were, Terah; his son Abraham; Lot his grandson; and Sarah, his daughter, the wife of Abraham. Terah lingered unaccountably in Haran, and died there, at the age of 205 years: some difficulties of a chronological nature arise here, which are not of sufficient importance as to their result, to induce us to interrupt the narrative, to attempt to settle them.

It appears that God had expressly indicated his will, that Abraham should proceed to Canaan, without specifying the spot upon which he should rest: and so proceeds to soon as he had performed the last offices of filial affection in the sepulture of his father, at the age of seventy-five, "he obeyed, and went out, not knowing whither he went," accompanied by Lot, his nephew, taking with them all their servants and cattle. Thus the illustrious

History. pilgrimage commenced; and he proceeded first to Sichem, on the plain of Moreh, the Canaanites then inhabiting the land. He was favoured there with a divine revelation, assuring him that his posterity should possess that country; and he erected an altar to God, as a permanent memorial of this promise. Thence he soon removed to a mountain on the east of Bethel (so called prophetically, as it had not then received that name), apprehending any loud-utterance which might prove fatal to his cattle in the low country, or not, is not stated.

Removes to Bethel. Descends into Egypt. Journeying still towards the south, a famine arose, which compelled the patriarch to seek refuge in Egypt, whither its influence had not extended. In his way thither, it occurred to him, that the beauty of Sarah, although she had then attained her sixty-fifth year, might expose him to danger; and he accordingly entrusted her to pass as his sister, instead of his wife. This precaution, so unworthy his character, was not a direct falsehood in point of fact; as she was his half-sister, "the daughter of his father, but not the daughter of his mother;" but the sin justly produced its own punishment. Pharaoh (which was the common title of the Egyptian kings, as Cæsar was, long afterwards, of the Roman emperors) was captivated with her charms; bestowed princely favours, for her sake, upon Abraham; and took her into his family. Upon this step, some severe visitations fell upon the royal house, of a character sufficiently marked to denote on what ground they were sent. The monarch, justly exasperated at the deception practised upon him, and fearing to incur farther penalties of divine displeasure, restored the patriarch his wife, but banished him his dominions.

By this time the famine had subsided, and they returned to Bethel, whence they had set out for their southern journey before they went into Egypt. The increase of their wealth involved the servants of Abraham and Lot in contention, and it became necessary that they should part. The patriarch gave his nephew the choice of country; recommending that they should separate on terms of the most undoubted affection; and Lot chose the plains of Sodom and Gomorrah, watered by the river Jordan, and distinguished for fertility. In the mean while, Abraham, who abode in Canaan, received another intimation, that the country in which he dwelt should be inherited by his descendants. The patriarch pitched his tent on the plain of Mamre, in Hebron, and built there, as wherever he sojourned, an altar to the Lord.

About this time war broke out between the neighbouring potentates; five kings contending against four: the origin of which was, that the kings of Sodom, Gomorrah, and others, refused any longer to be tributary to Chetushomer, the king of Elam. The resisting powers were vanquished by their oppressor and his allies: the fruitful plains which charmed the eye of Lot ravaged, and him-self taken prisoner, with the spoil of his property. Abraham, being apprized of this disaster, applied to his friends and confederates, Mamre (who gave name to the country), and his brothers Eshcol and Aner, all of them evidently chiefs; and, adding to their assistance three hundred and eighteen trained and tried servants of his own household, pursued the conquerors, overtook them when they were on the left of Danascus, surprised and defeated

them; and rescued his relative Lot, with the other Patriarchal captives. Although this little band of warriors seems unequal to such an exploit, it should be remembered, the kings spoken of were no more than rulers of four little cities; that they were wearied with the previous conflict; that they were taken by surprise; and that it is not absolutely determined whether the three confederates of Abraham confided their assistance to their personally accompanying him; although it is evident that his own domestic forces were principals in the victory: which, indeed, appears to be exclusively ascribed to them.

On his return from this conquest he was met by an Melchisedec, extraordinary personage, Melchisedec, who united in himself the kingly and priestly dignity. His descent being unascertained, and his priesthood undefined as to its character, whether it were derived and transmissive, or whether it centred in this individual, the apostle considers him as a fit type of Him, whose generation could not be declared, and whose priesthood, centred in himself, was not derived like that of the Levites; nor could be transmitted, since he is himself eternal. The palmist adverts to this obscure page of history in the same way, and as a type of the eternity of the priesthood of the Messiah. 'This is all that is known; and every thing more must be considered as conjectural. He received tithes, and blessed Abraham in his priestly character, and is allowed by the apostle to have been the superior of the patriarch. He was probably the pious monarch and priest of some neighbouring territory. We cannot pretend to settle this question, and must leave it in the obscurity in which we find it, only observing, that his appellations denote, Melchisedec, King of Righteousness, and Melchisedec, or King of Salem, King of Peace. The king of Sodom, perhaps the son of him who appears to have perished in the slime-pits, where the battle was fought, came out to congratulate Abraham upon his victory; and to offer him all the spoil which he had taken, with the exception of the men and women. The patriarch accepted his courtesy, but disinterestedly refused to receive the smallest portion of the booty.

The tools of battle were succeeded by renewed intercourse with Deity, and a repetition of assurances of divine favour. For the first time, Abraham ventured to inquire how these predictions were to be effectuated, as he was childless, and advanced in years. His steward, Eliezer of Damascus, appeared likely to be his heir. A son was then promised him: and it was added, that his seed should be innumerable as the stars of heaven. As a ratification of this solemn covenant, he was commanded to prepare a sacrifice. An heifer, a goat, a ram, a pigeon, and a turtle-dove, were prescribed as the victims on this memorable occasion. These were divided, with the exception of the birds and the halves laid over against each other. He waited until the sun went down, driving away the fowl which would have desecrated on the offerings. At that time he was overtaken with a deep sleep, accompanied by impressions peculiarly awful: and in a vision he beheld a burning lamp passing between the divided pieces. A prediction of the slavery of his descendants in Egypt was then pronounced, and that the period of it should be 400 years; the most natural import of which is, that his seed should be strangers in the land on which he was lying, four centuries from the birth of Isaac,

A. M. Impatient for the accomplishment of the promise, and concluding that it could not be fulfilled in her own person, Sarah was desirous, according to the custom of that age and country, to have children by means of another; and to that end advised her husband to take her hand-maid, Hagar. From this step, sprang the domestic uneasiness, which seems to have been inseparable from polygamy, or the adoption of practices allied to it. Hagar no sooner found herself likely to become a mother, than she treated her mistress with insolence; and in the bitterness of her spirit, and excess of her indignation, Sarah reproached her husband, at the same time that she complained of her servant. Abraham desired her to follow her own inclinations in respect of her maid: and Sarah treated her with so much severity, that she left her lord's roof. She fled towards Egypt: while she rested by a fountain, an angel was commissioned to predict the birth, describe the character, and fix the name of her child. The declaration—"he will be a wild man, his hand will be against every man, and every man's hand against him; and he shall dwell in the presence of all his brethren"—was accomplished, partly in the personal character and circumstances of Ishmael, but principally in his descendants the Arabs; who are cruel, warlike, wanderers; given to rapine, and independent. Hagar, who had provoked the unkindness of her mistress, was commanded to return and to humble herself: she obeyed the injunction, and was again received under her master's roof, beneath the shadow of which her child was born.

Change of names.

Three visits.

About thirteen years from this period, it pleased God to renew his covenant with Abraham, and to promise him a child by Sarah, whose name should be Isaac, signifying *laughter*, in allusion to the way in which both the predicted parents received the communication: they laughed; either through joy or unbelief; or a mixture of both. The seal of circumcision was then given; possibly it was not then unknown. It is still practised in eastern countries, and seems necessary, from peculiar circumstances, conjointly with the heat of the climate; but it was here instituted as the seal of a covenant, and bears consequently a very different import from any physical reasons which might be assigned. The names of the patriarch and his wife were then changed (although for the sake of convenience and uniformity we have called them throughout by their last appellation), from Abram, signifying *high or exalted father*; to Abraham, implying, according to the extent of the promise, *father of nations*: and from Sarai, importing *my princess*, which is a term of endearment, to Sarah, *A princess*; which is a general title of honour and dominion. Abraham accordingly circumcised himself, being then nearly a hundred years of age; his son Ishmael, who was at that time thirteen; and his household, in one day.

In the same year, he was favoured with another celestial visit. Three personages approached him, as he sat at the door of his tent, wearing the appearance of men; two of them proved to be angels; the third is a mysterious character, who remained after the others departed, who is addressed by the name Jehovah, who

speaks as Deity, and who is supposed to be the Lord Jesus, under one of those manifestations, which are most reasonably ascribed to him in the earlier ages, and which comport well with his pre-existence and divinity. The promise of Isaac was renewed, and Sarah chided for unbelief and falsehood. On this occasion, the purposes of divine indignation against the infamous inhabitants of Sodom, and the cities of the plain, companions in iniquity, were declared: and Abraham, induced at once by general compassion, and by the remembrance that Lot was an inhabitant of that odious city, pleaded, not merely that the righteous should not be destroyed with the wicked, but that the offenders might be spared for the sake of the holy persons who might be found therein. His language, at once submissive and forcible, is a pattern for devotional fervour, pathos, and humility; and he pleaded so successfully, that he obtained a promise if but ten righteous persons should be found within the city, it should be spared for their sake.

The two angels, who had left Abraham previous to this intercourse between him and Deity, went on towards Sodom. They found Lot at the gate of the city, waiting, according to the usages of ancient hospitality, to invite any strangers who might arrive to his house; the common duty gathering force in his mind from the horrible character of the people among whom he dwelt. The angels arrived, still appearing as travellers; and after the most pressing importunity, consented to lodge with him. The brutal propensities of the inhabitants of the city soon began to disclose themselves: and the patriarch, alarmed at their violence, had recourse to a method of dissuading them from their purpose, which can be accounted for on no other ground than the terror he was in; and excused on no other principle than that, in the confusion of the moment, he seemed to himself to be proposing, where a certain evil was inevitable, the least of two;—he offered his daughters to prostitution, on condition that his guests should be left unmolested. The offer was rejected; they pressed upon him to use violence; when the angels smote his assailants with blindness, either producing a thick darkness, or depriving them of sight, or confusing the organ of vision: but at all events it was a miraculous interposition, sufficiently effectual to defeat their abominable purpose. They then declared their commission to destroy the city; and commanded him to bring forth his family from the sentenced spot. His sons-in-law refused to accompany him. But early in the morning the angels urged his lingering steps; hastened his departure; in a manner forced him from his dangerous situation; and led him beyond the precincts of destruction. He was suffered to retire to a little city named Zoar, in the neighbourhood; which was spared at his entreaty. In the mean while the sun had risen upon the earth: but when Lot entered into Zoar, a storm of fire and sulphur descended upon Sodom, and its vicinity; the bituminous nature of the soil easily enkindling by the lightning; and the whole of that once fruitful and beautiful country was turned into the fetid and melancholy lake called the Dead Sea. Lot's wife, lingering upon the road, was overtaken by the terrible shower, encrusted with it, and turned into a nitro-sulphureous pillar. Abraham, rising in the morning early, and looking towards the threatened country,

Tradition.

beheld its aspect of desolation, as one great furnace smoking towards heaven. He soon understood, that the entire corruption of the city had rendered his prayers unavailing: but it is not to be imagined, that he was left long in suspense relative to the fate of Lot.

The traditional testimonies to this awful event are numerous; though mixed with many fabulous circumstances. Such as, that the effluvia of the lake kills any birds which attempt to fly over it; that on its shores trees are found, whose fruit is fair to the eye, but, if tasted, is found to contain only ashes and bitterness: that the ruins of cities are discernible below its dark waves; and that the surface cannot be stirred by the winds. Let it be recollected that the mingling of fable with fact is no argument against the facts themselves: that this was to be expected, in an age when the imagination was accustomed to supply the deficiencies of information; and that it is the first duty of an historian to separate truth from fancy. Moses relates none of these fabulous circumstances. The traditions themselves, however encumbered with fables not mixed with the original narrative, are conclusive as to its truth in the main; and there is no tradition that did not originate in some decided fact, however it might afterwards become altered and dignified. But when so many striking occurrences were real, we may easily account for the addition of other and unfounded circumstances.

Something must also be conceded to the influence of time, and of natural causes. The Arabs are continually gathering bitumen from the lake, of which they make a considerable trade. The fresh waters of the river Jordan are continually pouring into it: these must gradually diminish its original saltiness. That thickness which rendered it once scarcely moveable by the winds, must now have become diminished. Still barrenness spreads around its desolate site; and still the travellers who have ventured to bathe in its unnatural waters, have suffered in their health for their temerity. It appears to have worn the same frowning features in general from age to age; and it still carries the marks of unconquerable sterility and horror. In the mean while, the page of ancient history is full of references to this event; and teems with accounts, some true, others mingled with fable, corroborative of the Mosaic history. Tacitus, Philo, Pliny, Diodorus Siculus, Strabo, Solinus, and others, support the leading features of this narrative; supplying some circumstances from their imagination: while Bissellus, Maundrell, Volney, Pococke, Shaw, and other modern writers, describe the face of the country as it appeared more recently.* Alexander Trallianus mentions a form of exorcism, which took its rise from a principal circumstance in this history—"In the name of God, who turned Lot's wife into a pillar of salt!"†

From the vicinity of Zair to this scene of destruction, Lot considered himself as not in a state of safety, and fled to the mountains. While he was there, his daughters, deeming probably the destruction more general than it really was, and anxious to escape the reproach of barrenness, in those days deemed very great; in short,

swayed by motives which we cannot at this distance, Patriarchal and under other circumstances, precisely appreciate (but which, be they what they might, could never justify their conduct); resolved to intoxicate their father, so far as that he should not distinguish their persons from that of any other female, and to obtain issue from him. This nefarious design was carried into execution; they became both pregnant by him: and Lot's two children, the offspring of this incestuous commerce, named Moab and Ammon, became the progenitors of two great people. As a just punishment of this crime, and according with the principles laid down in our introductory remarks, Lot from this time disappears; and here we must close his history.

Soon after these occurrences, Abraham journeyed further south, probably wishing to avoid the vicinity of Sodom, and the melancholy reflections inseparable from a destruction which took place almost before his face. He went to Gerar, and dwelt in the country of the Philistines. On this occasion, he resorted to the unworthy equivocation which caused him so much just embarrassment in Egypt; for Sarah, to her ninetieth year, had triumphed over the ravages of time, and was still beautiful. We have nothing to say to the sarcasms of infidelity, but that these things were so: and that it was just as easy to preserve the personal attractions of a female of ninety, as to make her a mother at that age: besides which, it ought not to be forgotten that human life then extended beyond its present boundaries, and that Sarah lived 37 years after this period. Abimelech, in similar circumstances with those of Pharaoh, received similar intimations of divine displeasure. The conduct of Abraham is here inexcusable; it wants its original apology; he should have learned something by past experience, even independently of principle: and it appears to us, that the reproach of Abimelech, is the most delicate that can be imagined: by changing a single letter* to another of a similar form (an easy mistake in transcription) it will import, "behold I have given *thy* brother" (the name which she gave to Abraham) "a thousand pieces of silver to purchase *the* wife" (the modest covering of a married woman, which Sarah seems to have dispensed with, to favour the deceit practised) "for thee, and for all the attendants; for every one that is married." The mild monarch added permission to his illustrious, although blamable friend, to dwell wherever it pleased him, in his dominions.

The time was now come for Sarah's delivery; and Isaac was born. He was circumcised the 8th day, and his mother suckled him herself. At the usual time, he was weaned. When young, he was exposed to some marks of contempt, if not of violence, on the part of Ishmael: which, whatever it was, is called by St. Paul, persecution; and was so resented by Sarah, that she insisted upon Ishmael's leaving the house, with his mother. Abraham dismissed them with "bread and a bottle of water," says the narrative: a hebraism frequently used to signify all necessary things, although nothing superfluous; and thus it became a promise, "thy bread shall be given thee, and thy water shall be

sure" Hagar was, we may infer, furnished with all things needful for her departure. These supplies were, however, exhausted; and in the wilderness of Beersheba she was overtaken by lack of water; the most terrible of all wants. Exhausted herself, Ishmael seems to have suffered still more; and supposing him actually dying, she retired from the spot where she had laid him, that she might not witness his last agonies. At this moment of extremity, an angel was sent to succour the mother and her expiring child: he conducted her to a fountain of water: the boy recovered, and grew, inhaling, with his mother, the wilderness of Paran; and gradually acquiring, from his habits of life, that fierce and independent character, which it was predicted he should possess, and which still distinguishes his posterity. He married an Egyptian.

Covenant
with Abi-
melech.

The harmony between Abraham and Abimelech continued uninterrupted; and to cement the bonds of amity between them, they entered into a mutual and solemn covenant: a dispute which had arisen respecting a well of water was adjusted, and the parties withdrew from each other with sentiments of perfect esteem and friendship. The patriarch seems to have intended to rest here: "for he planted a grove in Beersheba, and called there upon the name of the Lord, the everlasting God."

Offering of
Isaac.

A. M.
2132.

1872.

Upon this calm, an unexpected storm arose. To make trial of his faith and obedience, Abraham was commanded to sacrifice his only child, Isaac, as a burnt-offering, upon a mountain which should be pointed out to him. Without delay, he conquered the emotions of nature, and set forward upon this melancholy journey; assuredly deeming that his son must be slain, and by his own hand; but not doubting that God's promise should be fulfilled, either by his resurrection, or by the grant of another child to fill his place. To harrow up all his parental feelings, as they ascended the mountain fixed upon (and the patriarch had left his servants at its foot, that they might not witness or interrupt the sacrifice), Isaac, upon whom the wood had been laid, inquired, where was the victim. His father merely observed, that "God would provide himself a lamb for a burnt-offering." When they reached the summit, it was necessary that the fatal secret should be imparted to the victim (for Isaac was now a young man); and he appears to have mildly acquiesced in the divine decision. He was bound, laid upon the wood of the altar, and on the point of yielding his life: when a voice from heaven commanded the patriarch to forbear, and to release his child; approving his faith, confirming former promises, and renewing the covenant with himself and his posterity. Abraham observed a ram, caught in a neighbouring thicket, and taking him, offered him in place of his child; thus accomplishing the prediction of his own faith, but little understood when he pronounced it—God provided himself a victim. He returned to Beersheba, with far other feelings than he left it, and received soon after the pleasing tidings of the increase and prosperity of his brother Nahor's family.

De th of
Sarah.

A. M.
2145.
—
B. C.
859.

The tranquillity which succeeded was at length interrupted by the death of Sarah, the faithful and endearing companion of Abraham's long pilgrimage. She expired in the 127th year of her age. The patriarch wept over her with unfeigned sorrow; and his first possession in the promised land was a burying-place, which he bought of Ephron the Hittite, after having refused the offer of the

choice of all their sepulchres, in the first instance, and afterwards the request of Ephron, that he would accept the field which he wished to purchase. The land was bought, and secured to him by all the legal forms of the day; and he deposited the remains of his beloved Sarah, in the cave of Machpelah, the distinguished spot which afterwards contained the dust of so many illustrious patriarchs. To this sepulchre the last earthly wishes of Jacob and of Joseph turned; and their last solemn injunctions related.

Advancing far into life, Abraham now became anxious for the settlement of his son Isaac, who had attained the fortieth year of his age. Selecting one of his most faithful servants, he engaged him by a singular, but most solemn oath, in its form peculiar to the country, if not to the age, and in its purport most binding, to choose a wife for his son from among his own kindred; and dismissed him with suitable presents, authority, and instructions. Hastening to Haran, the spot where his mother's relatives resided, and anxious to be favoured with divine direction in so important an affair, he secretly prayed that a certain token should be given him of the choice which he ought to make; and that the sign might be, that when the females (to whom the charge of flocks at that time seemed principally to appertain) should come to the well by the side of which he rested, and he should ask for drink, that the wife-elect might offer to supply his cattle also. Scarcely had he finished his prayer, before Rebekah, a near relative of his lord, came to the spot, and hearing his request, answered in the express terms which he had desired. He made her some rich presents, and accompanied her home, where he was well received; and having explained his errand, his proposals were accepted by Rebekah and her family. The presents seem to have made some impression upon the mind of Laban, her brother: and no less than ten camels were laden with her dowry. Having succeeded, this trusty servant refused to be detained; and returned with his beautiful charge to his master. Isaac was walking in the fields on the evening of their arrival; and when introduced to his lovely bride, conducted her with much satisfaction to his mother's tent; and received that consolation for the loss of a beloved parent, which an affectionate wife alone could administer. It was not until 19 years after his marriage that Isaac had offspring.

In his 141st year, Abraham married again; his wife's name was Keturah, by whom he had six sons: these he portioned off during his life, that they might not interfere with the inheritance of Isaac, the child of promise. Thirty-four years after this event, Abraham died, at the age of 175 years; and was buried by his sons, Isaac and Ishmael, who seem to have forgotten at this time their animosities, in the grave which he had purchased for Sarah, his only actual possession in the promised land. Thus lived and died this distinguished patriarch, whose life has been more prominently and largely detailed by us, as he is the great ancestor of the Jews, and the fountain of their history.

Although Moses continues the narrative of Abraham's life unbroken to its close, it is necessary to remark, that his grandsons, Esau and Jacob, must have been born about 15 years before his decease. Singular circumstances attended the birth of these children, who were twins, after 19 years' barrenness, as has been observed, on the part of their mother. Some unusual throes

Birth of
Esau and
Jacob.

History. of nature, even before the time of her delivery, in loved her to inquire of God, what her severe pangs indicated; and she was answered, "Two nations are in thy womb, and two manner of people shall be separated from thy bowels: and the one people shall be stronger than the other people; and the elder shall serve the younger."^a It is necessary to observe this oracle, because it gives a clue to the subsequent history. The prediction relative to the superiority of the younger over the elder, affords no apology for the means subsequently adopted by Jacob and his mother to obtain this pre-eminence; and nothing could be possibly more distinct than the future character of the Israelites and the Edomites: they were even found in many instances engaged in the most bitter hostility. According to the prediction, Rebekah was soon delivered of twins; the first-born, Esau, was hairy from his birth; the second, grasped the heel of his brother, and was called Jacob, a *supplanter*, a name which he afterwards fully justified. Isaac was at their birth 60 years of age.

The failing of Isaac appears to have been, too great fondness for the pleasures of the table. Esau, who was a hunter, and contributed to the indulgence of his appetite, became a favourite. Jacob, on the contrary, who was altogether domestic, was as entirely beloved of his mother. Retaining one day from the chase, wearied and hungry, when the lads were about 20 years of age, Esau found his brother preparing some savoury provision; and desiring refreshment, requested it of Jacob, who refused it, unless he relinquished his birthright. This Esau did solemnly, and by oath; and the transaction is marked by the historian himself, who seldom comments upon facts: "Thus Esau despoiled his birthright;"—while St. Paul hesitates not to call him in consequence, "a profane person." This birthright included the priesthood, the paternal blessing, the government of the family; all of which were slightly estimated by Esau; and let it be remembered, that however criminal Jacob was, as to the means which he employed to secure it, Esau had no just reason to complain of the result; since he had voluntarily and solemnly assigned all his own claims upon it to his brother.

A famine compelled the patriarch to remove; and he was directed to go to Abimelech, king of the Philistines, rather than to Egypt, as he seemed to have intended. He here resorted to the falsehood of his father, on the same suspicion, that the beauty of his wife would expose him to danger; for which, when the fraud was discovered, he was justly and most severely rebuked. His labours of husbandry, and of every description, were crowned with unusual success; and excited the envy of the people among whom he lived. The jealousy of the king was roused, and he was required to remove. He departed from Gerar, and was exposed to much vexation and contention respecting various wells of water (most important possessions in connexion with much cattle, in which the wealth of the times consisted) which were forcibly taken from him. Abimelech, who seems to have both feared and hated him, was yet anxious to have a covenant of amity between them, and came to Isaac for that purpose; after some warm expostulations and just rebukes, they contracted a mutual friendship. About this time, Esau displeased

his father, and grieved his mother, by marrying two wives, both of them Hittites. He was still, however, regarded by his father, from whom Rebekah appears to have concealed the original oracle, and to whom probably the subsequent events were unknown, as his heir, with all the rights of the first born.

Old age was now fast stealing upon Isaac, and with it, all its infirmities. He was enfeebled, his eyes were dim, and he apprehended the quick approach of death. Under these circumstances, he commanded Esau to prepare him some venison; and apprized him that he intended, on account of the uncertainty of human life, immediately to confer upon him his paternal blessing; which was then unquestionably prophetic; as will appear in a variety of subsequent scenes. Rebekah overheard this arrangement; and preparing food of the description required by Isaac, dressed her son Jacob in the raiment of Esau, perfumed with the odour of the field. She covered his smooth flesh with hairy skins, and trusting to the imperfect vision of his father sent him in with a lie on his tongue, to defraud his brother of that which was his own by right, and would have come to him lawfully, had he been satisfied to leave to heaven the execution of its own purposes. The aged patriarch had strong suspicions excited, by the voice and other circumstances; and Jacob was reduced to the necessity of supporting his first false-hood by repeated prevarications: at length he succeeded in obtaining the blessing; and had scarcely departed, when Esau entered. The fraud was soon discovered, and the most piercing grief was expressed by Esau; but Isaac, who, however he disapproved of the stratagem, saw in the issue divine direction, firmly refused to revoke the blessing; it was indeed out of his power, and Esau imbibed so deep a hatred, from this circumstance, against his brother, that he resolved to kill him, so soon as his father expired; whose death he seems even to have anticipated with unnatural eagerness.

Rebekah, who had devised this iniquitous plan, was now seriously alarmed for her son's safety, and advised Jacob to flee into Mesopotamia, and to "tarry for a while" a few days with his uncle Laban, until his brother's fury should turn away. "Alas! more than twenty years elapsed, while he was a sojourner in Padan-aram; and when he had opportunity to return home, his mother was dead; he never saw her after this separation; a righteous punishment of their mutual crime. From this period, the life of Jacob is one continued scene of anxiety and suffering; a noble instance of the equity of God, and of the moral character of Scripture history: when the crimes of his most favoured servants are so closely connected with their punishment.

In his way to his mother's relations, night overtook Jacob at Luz; and taking a stone for his pillow, he slept under the open canopy of heaven, and was favoured with a vision, which greatly reassured and comforted him. He saw a ladder, whose foot rested upon the earth, and its top appeared to reach to heaven; upon it angels ascended and descended; while above it, God himself appeared, and declared his protection of the houseless wanderer. Awaking from this sleep, deeply affected and much impressed, he called the place Bethel, *the house of God*, and pouring oil upon the stone, on which he had rested his head, he consecrated it as a solemn and lasting memorial of this communication. He sealed it by a solemn vow and

Marriage
with Leah
and Ra-
chel.

departed; travelling cheerfully, until he safely reached the end of his journey.

He found his uncle Laban the same as his grandfather's servant had left him, avaricious and unprincipled. Jacob formed here an attachment of the strongest and tenderest kind to Rachel, Laban's second daughter. The father agreed that they should marry, if Jacob rendered him seven years' service free of wages. This condition was joyfully accepted; and at the close of the time specified a marriage feast was prepared, and Jacob supposed that his hopes were about to be fulfilled. He who had practised fraud upon a parent, was now to suffer fraud in his turn. Laban, sensible of the value of his services, resolved to secure them. He introduced his elder daughter to his son-in-law, instead of the younger; and when his imposition was detected, he pleaded the custom of the country, not to marry the younger before the elder; and stipulated that he should still have Rachel, and at the end of the week, on condition he would serve him, gratuitously, another seven years. To this unprincipled compact the love which Jacob bore to Rachel induced him to agree.

Kath's new
marriage.

In this interval Esau, perceiving how displeasing to his parents, his connexion with the daughters of the land was, married the daughter of Ishmael, and had a numerous family by his three wives, who attained princely rank, before the descendants of his brother Jacob became distinguished.

Jacob's disappointed affection could not settle upon Leah; Rachel occupied his heart; but God gave honour to the wife least esteemed, and Leah became the mother of Reuben, Simeon, and Levi, while Rachel was barren; who, mortified at this circumstance, expressed herself with an impatience which excited the indignation of Jacob. Supposing she should not have any children of her own, she followed the pernicious example of Sarah; and, conformably to the customs of the times, "gave him Bilhah, her handmaid, to wife," who conceived and bare Dan, and Naphtali. Leah, not satisfied with her own fruitfulness, adopted the same expedient, without the same excuse; and giving her servant to her husband also, Zilpah produced Gad and Asher. At this time Reuben gathered at the wheat harvest mandrakes, which Rachel coveted, as supposing they conducted to conception; and she obtained them by carnal concessions to Leah. What the mandrake was, it is impossible now to determine: certainly some plant, very different from that which at present bears the same name. Nor is it necessary to enter into these matrimonial contentions, further than to observe, that the minuteness of the historian in these cases is in itself a pledge to the truth of his history; and that the result of the whole was, Leah bare Issachar, Zebulon, and Dinah; and that at length Rachel became the mother of Joseph.

Rachel,
bears.

Jacob, in the mean while, suffered much from Laban, who was constantly changing the terms of his servitude, while he was exposed to the most arduous and consuming toils. Whatever recompense Laban proposed in cattle, Jacob prospered beyond him; at the same time that he acknowledged his substance had greatly increased under the management of this son, whom he treated as a slave. At length the patience of the patriarch yielded, and he resolved to leave his hard father-in-law. He imparted his intentions to his wives, who perfectly accorded with him as to the justice and propriety of the measure. Jacob departed secretly

and Laban pursued and overtook him: a warm contention passed between them; during which Jacob expostulated with Laban on the cruelty of his conduct, and justified himself with the honest indignation of an innocent and injured man. Laban accused him of having stolen his gods: *teraphim*, the word is; to which we can affix no correct meaning, after the most unbounded speculation and inquiry. They were portable idols of some description, which Rachel had taken away, probably from a superstitious motive, unknown to her husband. At length they parted in peace.

Advancing towards his native country, he remembered the hatred of his brother Esau, and thought it right to send messengers before him, to endeavour to appease him; or at least to ascertain his disposition towards him. He dismissed them with an humble and conciliatory message, and in the meanwhile journeyed slowly on, preceded by a princely present which he intended for his brother. A singular occurrence is noted by the historian. The patriarch having dismissed his family and attendants, was left alone. An unknown personage encountered him, and wrestled with him until break of day: but not prevailing, he touched the hollow of his thigh, and the sinew shrank, so that the patriarch became lame. This mysterious being changed the name of the patriarch from Jacob to Israel, in reference to this event: and "Jacob called the name of the place Peniel; for," said he, "I have seen God face to face, and my life is preserved." Soon after he met his brother Esau, and a complete reconciliation took place between them.

The patriarch purchased a field of the father of Shechem, king of the country, and settled upon this property. His daughter Dinah, visiting the daughters of the land, was ravished by the young prince. Willing to make the most ample restitution, the monarch made overtures to the patriarch relative to the marriage of his daughter with Shechem. His sons dissuaded their indignation, and affected to consent to the union, provided their people would submit to circumcision. This was at length agreed to, and accomplished. But Simeon and Levi, availing themselves of the state of helplessness temporarily produced by this rite, deliberately and cruelly murdered both prince and people, to the no small displeasure of Jacob, who could not but be sensible of the danger to which it exposed him, besides the iniquity of the transaction itself.

Soon afterwards he was commanded in a dream to go up to Bethel, which he had not yet visited, and to discharge there the vow which he had spontaneously taken upon him in his way from his father's house. On his arrival there, Deborah his mother's nurse died, which was but preparatory to a more severe and heart-rending visitation. After continuing a short time at Bethel, which was anxious to visit his father, who was now very far advanced in life, and whom he had not seen upwards of twenty years. In his way to Ephrath, Rachel, the beloved Rachel, was taken in labour, and expired. She had said, "Give me children, or I die." She died, not in the refusal, but in the grant, of her desires! What the feelings of such a man as Jacob must have been on such an occasion, and in connexion with an object so dear, may be imagined, but cannot be expressed. The historian relates it, with an inimitable pathos, and with a touching simplicity, which, while it makes its way to the heart, demonstrates beyond all argument, that a narrative must be genuine, which

Isaac dies. The mother died, but the son lived; and changing his name from Benoni, the son of my sorrow, which was given him by his dying parent, Jacob called him Benjamin, the son of my right hand. To aggravate the grief of the patriarch, his son Reuben was guilty of incest with his father's concubine—a circumstance which pressed upon his heart, even when he was expiring. Having at length reached his father Isaac, he continued with him 13 years; at the expiration of which period Isaac died, aged 180, and was buried by his two sons, Esau and Jacob.

Joseph's history. Joseph was now seventeen years old, endeared to his parent alike by this interesting age, and the superior qualities of his mind and disposition. These prepossessions would be greatly enhanced by the death of his mother. But Jacob evinced his partiality too plainly and imprudently. His affection for this beloved youth excited the envy of his brethren. Reports of the bad conduct of some of the family, which he brought to his father, had also roused their indignation. But the most irritating circumstance was, that he related to them two separate, yet similar dreams, which appeared to foretell his future greatness, and superiority over them. The brethren tended their father's flock at a distance from his residence; and Jacob, who could not but have remarked the ill effects of his unwise partiality, wishing to remove their prejudices, and to assure them of his affection, sent Joseph to inquire after their welfare. No sooner did they see him approaching, than they conspired to kill him; and agreed to deceive their father, by dipping his many-coloured robe in blood, and affirming that he had been destroyed by some wild beast. Accordingly, upon his arrival, they stripped him, and cast him into a pit. While they refreshed themselves with food, a company of Ishmaelites passed by; and deeming it more advisable, as well as profitable, to sell than to slay him, they put him into the hands of these merchants as a slave, for 20 pieces of silver. Reuben, who intended to have delivered him out of their hands, and to have restored him to his father, missed him from the pit (not having been present at this transaction), and was greatly distressed. Concealing the fact from him, they dipped the coat in blood, and took it home to their father, who entertained not the smallest suspicion of the deception practised upon him; but, concluding that his child was devoured, refused to be comforted. Joseph, in the mean while, was brought into Egypt.

Jacob's history. Before this time Judah had married a Canaanitish woman; by whom he had three sons, Er, Onan, and Shelah; but the history of this branch of the family is related at once by Moses, that it may not subsequently interrupt the story of Joseph; the principal occurrences taking place at this period. Er was guilty of some crime not recorded, and cut off in his prime, and before he had any children. His widow, according to the customs of that time and country, became the wife of Onan; who took such measures to defeat the end of his marriage, that he was punished with death also. Judah, terrified at the intimacy of the death of two of his children, under pretence of the tender age of Shelah, prevented his union with Tamar, and sent her to her father's house. Tamar, finding that she was deceived, and that Judah never intended to give her in marriage to his son, who was now of age, dressed herself as an

harlot, and waited in a place where she was likely to meet her father-in-law, her face being veiled, so that he could not know her. A criminal intercourse took place between them; the consequences of which were soon apparent. When it was discovered that Tamar was with child, Judah cited her to the tribunal of her country, by the laws of which she would have been condemned to be burnt alive; but, at this crisis, she produced the pledges which Judah had left with her, when he supposed her to have been a harlot; and demonstrated, beyond all question, that the child was his own. He acknowledged the fact, brought her home, but had no further connexion with her. This intercourse produced twins; one of whom putting forth his hand first, the midwife put a scarlet thread round it, supposing he would be the first-born; but he drew back his hand, and his brother was born first: on which account he was called Pharez, and the other Zarah. Pharez is found in the genealogy of St. Matthew, among our Lord's ancestors.

To resume the account of Joseph: this interesting Joseph had been sold by the Ishmaelites to a chief officer of the story-keepers of the king of Egypt, named Potiphar. He conducted himself so well, and his master's affairs prospered so much under his management, that the entire conduct of his concerns was left to him. His mistress conceived a criminal passion for him; and when she found it impossible to seduce him from his reverence of God, and his loyalty to his master, she accused him to her husband, in consequence of which he was cast into prison.

He soon found the same favour with the keeper of the prison, which he had before found with Potiphar, and was treated with the same measure of confidence. It so occurred, that the king of Egypt was displeased with two of his principal servants, and imprisoned them. They were committed to the charge of Joseph. Observing them one morning unusually depressed, he inquired what troubled them? They related to him each of their dreams the preceding night; in hearing which, he interpreted to them, that the one implied a speedy restoration to favour; and the other, approaching death. As he said, so it took place. The chief butler was restored, within three days, to his office; and the chief baker hanged.

Not long afterwards, Pharaoh had himself two dreams, which exceedingly perplexed and distressed him; and as the sages of Egypt could not solve them, it occurred to the chief butler that there was a Hebrew captive whom he had forgotten, but who had truly interpreted his own dream; and he mentioned him to the king. Joseph was immediately sent for to court; and when the monarch told his dreams, he interpreted them as signifying seven years of plenty, to be succeeded by seven years of famine, both of them excessive. Pharaoh no sooner heard this than he appointed Joseph next to himself in power, that he might take such steps as should be necessary to preserve the state under these approaching vicissitudes. At thirty years of age, the Hebrew captive found himself at the head of the government of Egypt. He was proclaimed prime minister, and contracted a marriage of great distinction.

As he predicted, so it occurred: there were seven years of the most exuberant plenty, succeeded by seven years of the most excessive want. But Joseph had no husbanded the produce of the fruitful years, that ample provision was made against the years of famine. His zeal

In the mean while the famine extended from Egypt over all Canaan: and Jacob, oppressed with want, hearing there was corn in Egypt, sent his sons thither to purchase a supply for themselves and their families. He retained Benjamin, the only surviving son (as he imagined) of his beloved Rachel. When they came into Egypt, Joseph knew them, but they had no recollection of him. He treated them as spies, speaking sharply to them; and caused Simeon to be bound as a hostage for their return, requiring of them to bring Benjamin the next time; for they had acknowledged that they had a younger brother at home. He also gave secret directions, that the money which they brought should be returned, and lodged in their sacks' mouth. In the course of their journey, they perceived this to their utter dismay.

Upon their return to their father, the relation of these circumstances greatly increased his distress; and he peremptorily refused to let Benjamin accompany them when they next should visit Egypt. But the famine continued; and their wants became so urgent that he was compelled to yield: and Judah bound himself, by the most solemn ties, to restore the son, so reluctantly yielded by his father.

They came to Egypt: were more kindly received than at first: Simeon was released: and they returned homewards with their number complete. But in order to obtain them, Joseph had commanded his steward secretly to convey his cup into the sack of the youngest: and when they had left the city, he issued orders that they should be pursued, charged with the theft, and brought back to his presence. Secure to their innocence, they offered death or bondage as the punishment of the individual with whom it might be found. What was their grief and horror when the

cup was found in Benjamin's sack! They were brought back to Joseph, and offered to become his slaves. This he rejected, requiring only the individual in whose possession the cup was found. It was then that Judah pleaded for his brother Benjamin, and his aged father, with all the eloquence of distress, and in language which cannot be imitated. It was then that the feelings of nature overcame all the affected reserve of Joseph; and bursting into tears, he ordered all his servants to quit him, and made himself known to his brethren.

He seat for his father: required all his family to come to him into Egypt: introduced them to Pharaoh: and obtained for them the grant of the land of Goshen.

Seventeen years of quiet were afforded the venerable Jacob dies, patriarch, after his restoration to his long-lost and deeply-lamented child. At length the period arrived when he must die. He blessed his sons respectively, in terms that proved prophetic in regard to their posterity, and expired. According to his desire, he was carried up in Canaan, and deposited with Abraham and his family, in the cave of the field of Machpelah. The lamentation at his death was deep and universal.

Joseph returned to Egypt: and serving his monarch with fidelity; instructing his family in the fear of God; soothing his brethren, and nourishing their little ones, he filled up the circle of fifty-four more years; and then, at the age of 110, followed his father to the grave; leaving his bones to the charge of his brethren and their descendants, to be deposited with the dust of his ancestors, when the time should arrive that his people should be restored to their country.

It is only necessary to add, that the principal features in the history of Joseph are recorded by Troguus Pompeius, and preserved by Justin, in his abridgment of that work. We have now arrived at another important pause in History: and if the authenticity of the book of Genesis be denied, we are in a world full of eventful histories which have neither beginning nor connexion; design nor consummation.

History. Within the periods comprised in these chapters, we find the following names, of which some few details have come down to us, but not sufficient to form a separate Biography. ENOCH, son of Cain, after whom his first city was called. LAMECH. JABAL, a test-maker, who first practised husbandry on a large scale. JUBAL, inventor of musical instruments. TUBALCAIN, first artificer in brass and iron, whence probably VULCAN; dropping Tu, and substituting v for u; no unusual change. SETS, the first great link from Adam is the sacred genealogy. HAM, the father of Canaan. ASHUR, founder of Nineveh. MIZRAIM, the supposed Patriarchal founder of Egypt. EMER, whence some imagine the Hebrews derived their name. PLEO, so called because in his days the earth was *divided*. TERAH, Abraham's father. CHEDOR-LOMER, with his tributary and allied kings. MELCHISEDEC. ISHMAEL, who died aged 137, father of twelve princes. ESAU, progenitor of the Edomites, ancestor of an illustrious train of dukes and kings; among the last of whom we find JOBAB, supposed by some to be Job.

Period of
his birth.

MOSES, who is characterized in the Scriptures as "meek above all the men which were upon the face of the earth," and who as such was singularly qualified to be the agent of Providence in some of its most wonderful operations, was born in Egypt, of Amram and Jecobebe, about sixty-four years after the death of Joseph, and one hundred and thirty-six from the descent of Israel into that country. His history is interwoven with that of the people over whom he presided, whose deliverance from a state of bondage he was destined to effect, and whose civil and ecclesiastical polity he was chosen to establish. His life, which spreads over a period of one hundred and twenty years, brings down the annals of the Israelites from the two thousand four hundred and thirty-third, to the two thousand five hundred and fifty-third year of the world;—a period replete with prodigies, and illustrative both of the divine perfections and the character of man.

The period now to be introduced to the reader's consideration admits of an advantageous division into three parts: the first of which may comprehend the personal narrative of our illustrious Hebrew, including such collateral histories as connect themselves with the general subject; the second, a demonstration of his divine mission; the third, an inquiry into the nature, character, and spirit of those laws which he promulgated amongst the ancient Israelites.

I. THE PERSONAL HISTORY OF MOSES.

His personal history.

At the time when Moses was born, a king had arisen, who cherished very different feelings towards the Israelites from those with which a sense of obligation had inspired his celebrated predecessor, who had introduced them into Egypt; and who, perceiving they had multiplied so rapidly that they might soon be in a condition to take possession of the entire kingdom, determined upon a very cruel method of checking their progress: this was to oppress them with exactions and labour of the most intolerable kind. The inspired history states, that "the Egyptians made the children of Israel to serve with rigour. And they made their lives bitter with hard bondage in mortar, and in brick, and in all manner of service in the field: all their service wherein they made them serve was with rigour:" which is subsequently explained by the recorded commands of the king to his officers; "Ye shall no more give the people straw to

make brick, as heretofore: let them go and gather straw for themselves; and the tale of bricks which they did make heretofore, ye shall lay upon them; ye shall not diminish aught thereof." In this instance, however, as in most others, persecution failed of effecting its purpose; the severities with which they were treated not in the least tending to prevent their multiplication. The country indeed had been always notorious for the fruitfulness of the women, which was attributed, says Strabo, to the air, and particularly to the waters of the Nile; but the strangers seem at this period to have so excelled the natives as to excite their alarm; which can be attributed to nothing less than the interposition of an extraordinary Providence, whose designs were hastening to the moment of their intended development.

The king accordingly enacted, that every male child of the Hebrews should be cast into the Nile: a measure which was unquestionably aimed at the total extermination of the race. Even parents were required to be instrumental to the death of their offspring; and the attendants upon the women were ordered to strangle the sons, but spare the daughters. Josephus represents the immediate occasion of this decree to have been the prediction of an Egyptian prophet, that a Hebrew child was about to be born who would hereafter diminish the power of Egypt, and enslave that of the Israelites.

At this critical juncture Moses was born; but, notwithstanding the anxieties which must have pervaded the maternal bosom at such a season, in addition to the usual pains of child-bearing (which, however, according to the testimony of Josephus, were in this case providentially prevented), Jecobebe was able instantly to nurse and to set about the concealment of her beloved little son. The same writer states, that assurances had been given to his father in a vision, that he should be miraculously preserved and raised up to the important work of effecting the deliverance of Abraham's posterity.

At the expiration of three months, his solitious parents found it impossible any longer to elude the sanguinary decree of Pharaoh: in order, therefore, to avoid the misery consequent upon being the direct murderer of her own infant, the ingenious mother contrives an ark of bulrushes, and, besmearing it with slime and pitch to render it water-tight, committed it to the rushy brink of the river, but with better hope to the care of the invisible God. Her daughter Miriam was at the

Pharaoh's cruelty.

Is hid in the bulrushes.

Biography. same time placed at a convenient distance in watch the event. It was early in the morning, and the daughter of Pharaoh, accompanied by several female attendants, went down to the river to bathe. Her eye was caught, and her curiosity excited, by the little ark or basket among the flags, and, upon examining its contents, her heart was touched with sympathy at seeing one of the most attractive objects in creation: a beautiful child of three months, whose tears seemed to correspond well with its melancholy situation, and whom she instantly conjectured to be one of the Hebrews' children.

Encouraged by the compassionate expressions and affectionate manner of the princess, his sister approached to ask if she should go in search of a nurse for the child, and by this little artifice obtained the real mother to become the protector of her own infant, under the promise of an ample recompence. Thus, in the very family of Pharaoh, the future emancipator of Israel finds an asylum, and is trained up, under the inspection of the princess who adopted him, in all the learning and wisdom which the Egyptian magi were capable of imparting. It was customary to name the child at his circumcision, which took place on the eighth day after his birth; but whether this had been omitted in consequence of the confusion and distress which the edict of the king had every where diffused, or whether the royal protectress determined to substitute another which should better transmit to posterity the remarkable history of his infancy, it is certain that she gave him the name by which he is now universally distinguished. *Mos* and *Mos* in the Egyptian, as well as in other ancient languages, signified water, as Philo, Clemens, (who expresses it *Mos*) Artaianus, (who styles him *Μωσως* Μωσους) and other authorities, testify.

Although the situation he occupied in the court of Pharaoh was favourable to his temporal advancement, it was by no means conducive to the accomplishment of those magnificent designs in which he was predestined to become the instrument of his nation's deliverance. If, instead of imbibing the superstitions of the age and country in which he resided, he acquired the knowledge and lived in the fear of the true God, it may be attributed with the greatest probability to the private instructions of his mother, to whom the care of his infancy was so singularly intrusted. And if, at the age of maturity, instead of lingering with fond delight and forgetfulness of his kindred and nation, amidst the attractions of earthly splendour, he was influenced to renounce every prospect of distinction for the friendship and fellowship of his brethren in adversity; we must attribute the choice, not only to that right thinking which his mother had inspired, and that judicious mind with which he was endowed, but to the over-ruling Providence; to the immediate influence of Him who had formed him for the accomplishment of his omniscient purposes. He had, besides, intimations of his calling; and when, at the age of forty, he quitted the prospects of elevation which Egypt afforded in order to visit his countrymen, he took the deepest interest in their concerns; and on one occasion, when he saw an Egyptian smiting so Hebrew, he slew the Egyptian and hid him in the sand. By this action he imagined that his brethren would be led to understand his destination as the deliverer of Israel; but that they mistook it can excite no astonishment. Probably this proceeding ought to be considered as indiscreet, resulting rather

from the impatience of zeal, than from purity of intention: it was succeeded by very disastrous consequences; for on the following day he saw two Hebrews striving together, and upon his attempting to settle the dispute by remonstrating with the aggressor, he was indignantly repulsed, with the inquiry "Who made thee a prince and a judge over us? Intendest thou to kill me as thou killedst the Egyptian?" By this it was evident the action of the past day was discovered; and as the king was resolved to put him to death, according to the laws of the country, no alternative remained but immediate escape. Having fled across the desert into Arabia Petrea, he stopped and took up his residence in the land of Midian, which was situated upon the farther side of the two inlets of the Red Sea, to the east of the wilderness of Sin and Etham. Upon his arrival he sat down by a well of water, where he had an opportunity of displaying both his sensibility and his courage. The daughters of Reuel or Raguel, seven in number, coming to water their father's flocks, the rind shepherds of the neighbourhood rudely drove them away, upon which Moses rose up and volunteered his successful interference. They hastened home—and their father, astonished at their early return, inquired the reason; which was no sooner discovered, than he set out to invite him to participate his hospitality. Jethro (for such was the name of his host) soon formed a more permanent connexion with Moses, by marrying one of his daughters to the stranger, who took up his residence in the family to superintend his possessions. By this marriage he had two sons, named Gershom and Eliezer.

The father-in-law of Moses was the priest of Midian, and probably, as these officers were usually conjoined, the ruler also of the people, who were Cushites. It has been supposed, that in this retirement Moses, under the influence of inspiration, composed the five historical books of the Pentateuch, which constitutes the first portion of the sacred record. The book of Job is also assigned to the same author and the same period. Others, however, are of opinion, that in this seclusion he relinquished his former views, and that his zeal expired with his hopes. Midian was unfavourably situated for any communication respecting his brethren in Egypt; and perhaps imagining, that if the design itself were not abandoned, his particular agency was dispensed with, he alienated himself from the Hebrews by forming an intimate connexion with another race. Year after year rolled on, till another forty years was added to his life, but no deliverance was effected; and none, according to human probability, likely to be effected for his people, who continued to groan beneath the yoke of Egyptian bondage. Circumstances seemed to have encircled him with an impassable barrier, and could he even return to his brethren, what influence did he possess, or what patronage could he anticipate? A question may here very naturally arise, why should God permit the nation, for whom so wonderful a manifestation was intended, to continue for a succession of years in a state of such galling servitude—or why, if Moses were to become their leader, was he suffered to waste the strength of his days in solitude and inaction? To this there is but one reply—the ways of God are above our ways, and his thoughts above our thoughts. So certain are all his arrangements, that no event need be hurried, to secure it against contingency; and so wise, that the general advance of the

Divine appearance of Horeb.

The hour of liberation at length arrived. Having led the flock of Jethro to a part of the desert near mount Horeb, Moses was surprised, amidst his usual occupations, by the phenomenon of a bush involved in flames, without being consumed. Having immediately approached, for the purpose of investigating the cause of this mysterious appearance, a voice suddenly issued from the fire; and after twice distinctly uttering his name, commanded him to put off his shoes, declaring that the spot on which he stood was consecrated by the presence of the eternal God. Overawed by the manifestation, he hid his face while he listened to the solemn proclamations of majesty and mercy. He was assured that the God of Abraham, the God of Isaac, and the God of Jacob was there; and that having watched with incessant solicitude the condition of his afflicted people in Egypt, he was come down to deliver them out of a state of servitude, with a view of eventually establishing them in the luxurious borders of Canaan, whence the Hittites, Amorites, Perizzites, and other nations were to be expelled. Moses was further informed, that he was fixed upon as the agent of Providence to accomplish this change, and must immediately repair to Pharaoh to commence the undertaking. With a modesty eminently characteristic of this extraordinary man, he expressed his consciousness of being disqualified for so important a service; but "certainly," said God, "I will be with thee;" a declaration which ought to have removed every apprehension from his mind, and to have induced the most unhesitating compliance. He is, however, still scrupulous; partly from a sense of personal incompetency, and partly from a suspicion of some possible illusion. "When I come," said he, "to the children of Israel, and shall say unto them, The God of your fathers hath sent me unto you, and they shall say to me, What is his name? What shall I say unto them?" The reply to this question was truly striking and impressive—**I AM THAT I AM.** Thus shalt thou say unto the children of Israel, **I AM hath sent me unto you.** In addition to this, he was furnished with a detailed answer to the anticipated inquiries of the people of Israel, which contained an exposition of the merciful designs of God respecting their future happy destiny. Moses continued reluctant; domestic fondness, perhaps, played about his heart; he had formed interesting connections in the country; he recollected the severity with which he had once been treated by the people from whom he had now been many years estranged; he felt aware that he incurred the forfeiture of his life by returning to Egypt; and he imagined that those to whom he was especially sent would dispute his commission. We cannot justify this distrust; but we must admire that amazing condescension in the Divine Being, which performed successive miracles in order to inspire him with a proper degree of confidence. Being directed to east the rod which he held in his hand to the ground, it instantly became a serpent; when he put forth his hand to regain it, the serpent was re-transformed into a rod. He was then commanded to thrust his hand into his bosom, and it became leprous as snow, till, upon his repeating the action, it was perfectly restored to its original appearance. These signs he was

Remarks.

directed to repeat in the presence of the Egyptian king.

After this, a new objection is named: "O, my Lord," said Moses, "I am not eloquent, neither heretofore nor since thou hast spoken unto thy servant; but I am slow of speech, and of a slow tongue." A promise was immediately given of affording him every requisite assistance, which does not appear to have removed his unwarrantable hesitation, till the further assurance that his brother Aaron, who was, by the special appointment of Jehovah, already on the way to meet him, should be his spokesman, while he was to be endowed with the power of performing miracles with his rod. It is singular enough that Moses was afterwards called by the Egyptians *Alphi*, which signifies the *mouth or oracle of God*.

Determined at length upon pursuing the course which duty prescribed, he introduces the subject to Jethro, and gains his consent to re-visit his brethren in the land of bondage. His wife and his sons accompanied him as his journey: when the Lord met him, and it is said "sought to kill him." The reason of this remarkable circumstance is mentioned in the history. Circumcision had been prescribed to Abraham as a badge of admission into the covenant with which it had pleased God to enter with the Israelites through his instrumentality, and it was enjoined with the attendant penalty of excision to every uncircumcised individual. It seems probable that Moses had been seduced by his wife into a neglect of this ordinance, with regard to their son, and it was nothing but an apprehension of danger that urged her to comply; which she did, however, with this bitter taunt, "a bloody husband art thou to me."

"We see now," says Mr. Bryant, "the shepherd of Horeb, the man slow of speech, arrived upon the confines of Egypt, with a design to free his people. If we set aside all supernatural assistance, he stands single and unsupported, without one requisite towards the completion of his purpose. How can we suppose a person so circumstanced capable of carrying on a scheme so arduous in its execution? We must continually bear in mind the time that he had been absent, and his ignorance of every thing which had happened in that interval. We are assured, that he did not know whether his brother Aaron was alive. Hence it is manifest, that previous to his departure from Midian, he had never sent to try the temper of his people, nor to know how the prince of the country stood affected towards them. Great revolutions might have happened during the time that he had been away; and those whom he intended to deliver might not have stood in need of his assistance. He purposed to lead them to another country, when they might have been contented with that which they enjoyed; or they might already have migrated, and Moses not have been apprized of it. These were circumstances of consequence, of which he should have obtained some intelligence; but he seems not to have had power or opportunity to gain it. His brother was alive, and appears to have resided in the court of Pharaoh. And there must have been, among the elders of the people, persons who could counsel for their brethren, and preserve them, if their deliverance were to be effected by human means. Moses sets out singly to perform what their wisdom and experience jointly could not effect; and this without

Moses.

He leaves Midian.

Biography. knowing for certain that he had any friend or ally. Let us, however, suppose, that his zeal, which had been dormant for so many years, at last induced him to prosecute this scheme; and that, having quitted his place of ease and retirement, and bidden adieu to his connexions of very long standing, he arrived, with his staff in his hand, like a pilgrim, in Egypt. He had here two difficulties to encounter. The first was to get together some hundreds of thousands of people, who were scattered over the face of the country (Exod. 5. 12), and then to persuade them to follow him to Canaan. This was a real difficulty, as it could not be easy to collect them, much less to gain their confidence. Some of the tribe of Ephraim had, upon a time, made an invasion upon the land of Canaan, but were cut off by the natives of Gath (1 Chron. ch. vii. ver. 21). This could not afford any encouragement to the remaining Israelites to undertake an expedition against the people of that country. The next difficulty was to get access to the prince who reigned, and request, or demand, the dismissal of so many useful subjects. Moses was quite a stranger at the Egyptian court, and not gifted with the powers of persuasion; and at the same time, in character no better than a Midianitish shepherd. What plea could he use, or what art employ? All that he could say upon the occasion was, that he was a prophet of the Lord, the God of the Hebrews; and that he desired, in his name, to carry the people collectively, old and young, to sacrifice in the wilderness. But this would prove but a weak plea, when not supported by some sign, to show that it had the sanction of divine authority. What answer could be expected from a monarch upon such an occasion? Even the same which was really given, Exod. v. 2.—“Who is the Lord, that I should obey his voice to let Israel go? I know not the Lord, neither will I let Israel go.—Get you unto your burdens.” And what was the consequence?—A^o imposition of double duty (v. 9). “Let there more work be laid upon the men, that they may labour therein: and let them not regard vain words.” They were in consequence of this to make bricks without the requisites, being denied straw (v. 12). “So the people were scattered abroad throughout all the land of Egypt, to gather stubble instead of straw.” Yet the same tale of bricks was demanded. This was enough to make the people detest the name of Moses. It must have ruined him in their opinion, and defeated all his views; for the people, whom he wanted to collect, were separated more than ever. Their disaffection may be learnt from their words, when Moses had delivered his message: “And they met Moses and Aaron, who stood in the way as they came forth from Pharaoh, and they said unto them, The Lord look upon you and judge; because ye have made our savour to be abhorred in the eyes of Pharaoh, and in the eyes of his servants, to put a sword in their hands to slay us.” (Exod. v. 20, 21.)

Remarks.

ingly, when upon the display of his wonders, they acknowledged the hand of the Almighty, and proffered their obedience to his prophet, they were delivered by him from those evils, from which no power on earth could have freed them. Thus we see that the same mode of acting may be wisdom in God, and folly in man.”

It was not without extreme difficulty, nor till after repeated miracles, that the commissioned agents of a wonder-working Providence succeeded in procuring the escape of the enslaved children of Israel. The application for their release only exasperated the king and for a time increased the miseries of these poor people. The first in the series of miracles performed by Moses and his associate, Aaron, was in the immediate presence of Pharaoh: the latter cast down his rod, and it became a serpent. The magicians and sorcerers of Egypt being sent for to confront the servants of the most High God, imitated this action, and each man's rod became a serpent; but there was this proof of superiority furnished—the rod of Aaron swallowed up their rods. Prejudice, however, is never discriminating, and the evidence of divine interposition not only failed to subdue the incredulity, or allay the vengeance of the king, it only hardened his heart the more against every proper impression. Moses was consequently directed to adopt a larger scale of miraculous operations, in the distinct mention of which, we propose to give the reader a brief illustration of the peculiar adaptation of each of these *PLAGUES OF EGYPT* (as they have been designated), to the idolatries of the people upon whom they were inflicted.

The first plague consisted in the river being turned first into blood, of which the account is preserved in the seventh chapter of the book of Exodus. This was effected by Moses striking the waters with that rod which had once been converted into a serpent; and as a rebuke to the obduracy of the Egyptian monarch, the river immediately became putrid, and the fish perished. A very powerful blow was thus aimed at one of their most deeply rooted idolatrous prejudices. No nation carried their reverence of the Nile to such a pitch of extravagance. On solemn occasions, they invoked it as their chief guardian and protector, and imagined, that it gave birth to all their deities—*εσθρον Νιλου* (says Diod. Siculus), *προς η και τις των διων γυναικων ιναρται*. This opinion spread extensively amongst other nations, and produced a very general veneration for all rivers amongst the pagans. It was, therefore, calculated to strike a salutary conviction of their folly into the minds of the Egyptians, and to have proved a warning to the Israelites, when they perceived the insufficiency of their divinity, and the baseness of this now desecrated stream. Nor was it merely polluted, but changed into blood, than which nothing was more abhorred by the priests, who pretended to extraordinary sanctity. The destruction of the fish, in particular specified, for in some cases, they too were worshipped as real deities; so that to complete the absurdity, there was a city built in honour of one species called Ostrinchus, and a temple where this fish was publicly worshipped. (Strabo, i. 17.)

The second plague was that of the frogs, which was secondly accomplished by Aaron, who, by the direction of Moses, plucked stretched out his hand over the waters; upon which the frogs came up and overpread the land, where they died

Interview
with
Pharaoh.

First
plague of
EGYPT.

Biography. in immense multitudes, filling the air with pestilential exhalations. This was a second disgrace inflicted upon their sacred river; and it prevented the natives from performing their usual ablutions. It is not absolutely certain, whether the frog were an object of worship, or of abhorrence in Egypt, possibly of both—as in other instances, where religious adoration was offered from sentiments of terror; and if so, they were punished as well by what they venerated, as by what they abominated. Most aquatic animals, however, were in Egypt sacred and emblematical: and as frogs were engraven upon the basis of Apollo's statue at Delphi, the seat of prophecy, they were, it is probable, characteristic of the priests and prophets, and sacred to the Nymphs and Muses. This animal is notorious for swelling itself up, and hence it became an emblem of Apollo, the god of inspiration, and of priests, and prophets in general, particularly of the magicians of Egypt. The present miracle, therefore, constituted an appropriate punishment inflicted upon them, and their royal patron.

The third plague was that of lice. This was inflicted by the rod of Aaron, under the express direction of Moses, who, as before, received the command from God. The Egyptians were peculiarly solicitous of external purity; for which purpose they were continually bathing themselves, and observed the utmost nicety in their clothing. Herodotus has furnished ample evidence of their care in this respect. "The priests," says he, "wear raiment of linen only.—And the linen garments which they put on are continually fresh washed: concerning which they take particular care." It was usual for the people to wear a woollen garment over a linen one; but the former was thrown off when they approached their deities, from an apprehension of its harbouring vermin. It was also dispensed with at burials, from considering it as an impurity. The priests had their heads and bodies shaved every third day for the same reason. Plutarch furnishes a similar testimony, stating, that they abhorred all woollen as foul, and exulting flax, for *λευκὰ ἐκ πορείου καὶ καθαροῦ ὑψηροῦ, ἧστα δὲ φθιμαρῶν*—it affords a delicate and pure covering, and is not at all liable to produce lice. As, therefore, these infatuated worshippers made the essence of religion to consist in external cleanliness, to the utter neglect of internal sanctity (for their temples were defiled with the most abominable practices), the present judgment was peculiarly adapted to confound their superstition; and so obvious was the interposition, that the magicians appealed to Pharaoh in the language of astonishment and conviction, "this is the finger of God!"

The king, however, remaining obdurate, he was visited with the plague of flies, the fourth of this melancholy series. Moses went out in the early morning to meet Pharaoh when he was taking his walk upon the banks of the Nile, and repeated his request for the liberation of Israel, threatening, in case of his persistence in the refusal, that his own house, the houses and premises of his courtiers, and of all the people, should be covered with swarms of flies; while, as a certain indication of the power that accomplished this judgment, the land of Goshen should be exempted from the calamity. The appeal was received as before, and the predicted evil filled the country. The Egyptians had allotted to several deities the office of driving away flies, and many heathen temples were supposed to be free

from these troublesome insects, in consequence of the influence of the presiding deity. Nor was this all; they were even worshipped in various places. Elian mentions, that in his time, an ox was sacrificed to them in the temple of Apollo, at Actium; Clemens confirms the statement; and Antiphanes, in Athenæus, alludes to a similar observance at Olympia, in Elis. There was anciently a deity styled *Deus Musca* and *decaros*, who was worshipped under the semblance of a fly. This idolatry originated in Egypt, whence it was brought by the Captivum to Palestine, out by the Phœnicians to Sidon, Tyre and Bihbas, and thence diffused into other regions. Hence, the Egyptians must be led to perceive, by the miraculous multiplication of the flies which they so absurdly revered, that instead of being able to defend them from mischief, they were under the control of a superior will, and their punishment was inflicted in the very track of their superstition.

The fifth plague was the murrain of beasts, which was attended with two striking peculiarities:—the swiftness of the execution, for it was to be on the morrow after the denunciation by Moses; and the exemption of the people of God from the visitation:—"All the cattle of Israel died, but of the cattle of the children of Israel died not one." Their idolatrous attachment to animals is universally known, and is ridiculed with great keenness of satire by Lucian: "In Egypt," says he, "the temple itself is found to be beautiful and ample in its dimensions, built with choice stones, and ornamented with gilding and hieroglyphics. But if you pry within to find out the god, you meet with a monkey or a crane; or else a goat or a cat." The lion, wolf, and dog, were also objects of adoration; but the greatest reverence was shown for the ox, the cow, the heifer, and the ram. The Apis, or sacred bull, was worshipped at Memphis, and the mnevis at Heliopolis; both of them being esteemed gods. This judgment, therefore, was very appropriate and significant; for their imaginary deities were seen to yield to the God of Israel, without the capacity of offering the least resistance. In vain did the soul of Osiris, as they believed, reside in the body of Apis; the infection spread far and wide, in defiance of his power, exhibiting the despicable imbecility of their divinities.

To the murrain of beasts succeeded the sixth plague, *Sixth* of boils and blains. Handfuls of ashes being taken by Moses and Aaron, and sprinkled towards heaven in the sight of Pharaoh, they became dust, producing a boil breaking forth with blains upon man and beast! It is particularly stated, that the boil was upon the magicians as well as on the Egyptians in general. This was another evidence of the impotency of their gods, who could neither prevent nor alleviate the calamity. Many of them were supposed to possess extraordinary skill in pharmacy and medicine, among whom, Esculapius was regarded with singular esteem and confidence. The action of Moses was highly significant. The ashes were to be taken from the fiery furnace, which is referred to perpetually as a type of the miseries suffered by Israel during the period of their Egyptian bondage; and it contained an allusion to a cruel rite to which they were addicted. In several of their cities they sacrificed men, who were foreigners, for the good of the people. At the end of the ceremony, the priests collected the ashes of the victims, and scattered them upwards in the air, probably with an idea of entailing a blessing wherever the

Third
plague.

Fourth
plague.

Biography: particles descended. Moses did the same with an opposite purpose, diffusing plague and a curse around in every direction, and thus confronting the operations of Providence with the superstition of the age.

The seventh plague was that of *rain, hail, and fire, attended with thunder*. The Egyptians could scarcely fail of perceiving the drift of these complicated judgments. Rain is extremely rare in that country, and not to be met with at all in Delta, or Egypt Proper. Hence Claudian designates the country, *Ægyptus sine nube ferax—Egypt, fruitful without a cloud*. In addition to this, hail and fire mingled with it, as it ran along upon the ground, to the great annoyance of their characteristic superstition respecting portents and prodigies. This visitation was distinctly foretold, and none of their gods were able to afford them deliverance. It should be observed also, that they were strangely addicted to the worship of the elements of fire and water, as deities: and the former they even believed to be a living creature, endowed with a soul—*ψυχὴν ἔχει τὸ πῦρ*—*Herod*. And hence, not only the presiding deity, but the elements themselves were adored: consequently the present judgment was a formidable attack upon their vain and idolatrous confidence.

Locusts, constituted the eighth plague; which, as on other occasions, Moses inflicted after a plain and solemn warning. They overspread the whole country, devouring every herb, and all the fruit-trees which remained after the hail. It is scarcely possible to conceive a more terrible calamity than that of swarms of locusts, who speedily convert a paradise into a desert, eating up the very bark and roots of vegetation. They are known to come in clouds, extending in length fifteen or eighteen miles, and ten or twelve in breadth; and wherever they settle, all the crops vanishes in two hours. Moreover, of the present swarm it is said, "Before them there were no such locusts as they, neither after them shall be such." The Egyptians cherished great confidence in some of their gods, who were supposed to be able to preserve their country from these invading insects, especially Isis and Osiris, the gods of plenty; but Moses so confounded their misplaced dependence by this isolating miracle, that Pharaoh sent in haste to solicit deliverance from death. A strong west wind was accordingly brought over the land, which carried off these terrible assailants to the Red Sea.

It was not long before it became requisite to inflict a new calamity on Pharaoh, in the form of *thick darkness*, for the space of three days, which constituted the ninth plague. The Egyptians, in common with the Persians, Phœnicians, Syrians, and other nations, esteemed themselves as descendants of the Sun, which they worshipped as their sovereign and parent, believing it to be the soul of the world, the mundi caput, the principal being in the universe. Thus Homer, who took his theology from Egypt, ascribes intellect to the Sun:

Ἥλιος, ὁρ' ὅστις ἔσθ' ὁρα, καὶ τὰς ἐπαινεῖ.

Odyss. b. xii. v. 108.

Originally, indeed, they viewed the light and the fire as proper emblems of deity, on account of their being the parent of all the elements, and because of their salutary influence upon created nature; but this specious sentiment soon degenerated into an adoration

of them as primary sources of being, to the dishonour of the universal Creator: nothing, consequently, could be more significant, nothing more illustrative of their crime, nor better calculated to warn others, than to fill the land with palpable darkness. Their god arose, but could not afford them the least assistance in this perplexing and preternatural obscuration.

The tenth and last plague, which consisted in the infliction of *death upon all the first-born in the land*, exceeded, both in terror and effect, the preceding. This was accomplished at midnight, and after Moses had given them a full warning; in consequence of which the calamity must have been considerably aggravated by anticipation. The Egyptians were addicted above most nations to extravagant mourning, running through the streets, smearing their faces, beating their breasts, and rending the air with cries, not only at the funeral of a friend or relative, but even at the death of any sacred animal. They were accustomed, moreover, to scourge themselves, and to conduct most of their ceremonies with stripes and lamentations in honour of Isis, and Adonis, or Osiris: but now they were supplied with a real cause of the deepest grief, in the deprivation, by a single stroke of the sword of Omnipotence, of every first-born in the country; so that there was a cry, "such as there was none like it, nor shall be like it any more." This was surely a just retaliation for their disobedience, and a proper expression of the divine displeasure for their cruel behaviour to Israel, who is represented as God's *first-born* (Exod. iv. 22), the object of his special favour, and the family whence Christ, "the first-born of every creature" (Col. i. 15), was to proceed. This judgment, besides, was attended with another significant purpose. The Israelites were liable to lose their elder children by the destroying angel, unless they observed a particular conservatory regulation, in consequence of which the *passover* was instituted, not only with a view to their present security, but as containing secret intimations of the blessings to be hereafter dispensed by the Saviour of the world.

It was worthy of the infinite God to punish the Egyptians by that series of calamitous visitations which have now been briefly stated and illustrated: because they prostituted the noblest talents, and the best attainments in general knowledge and learning, to the very basest purposes; and after the preservation of their nation by one of the family of Israel, they had, contrary to every principle of integrity, every pledge of security, and every feeling of gratitude, reduced their benefactors to abject slavery.

The people being at length suffered to depart, they began their journey exactly at the expiration of 430 years from the date when Abraham quitted his kindred in Mesopotamia. At their original settlement in Egypt, their numbers amounted only to seventy, but so prodigiously had they multiplied, in defiance of the worst of treatment, that in about two hundred years, they were increased to 800,000 men capable of bearing arms, which, together with their families, may be estimated in the whole, at four millions of individuals, who set out with vast possessions of flocks, herds, and other property, on the most extraordinary adventure that was ever recorded by the pen of History. If Moses, as their leader, had acted by his sole authority, the measure must have been pronounced imprudent,

Sea.

and the way in which he conducted them, impracticable: for instead of proceeding northward, in the short and direct road to Canaan, he took them eastward to the wilderness, which bounds Egypt and Arabia Petrea, in consequence of which they wandered about for many years, enduring the most painful and unexpected privations. This, however, was wisely ordered by that God who superintended their journey, and who was too well aware of their refractory spirit to allow them to pursue a route through Palestine, which would have allowed them easily to return at the first appearance of difficulty. Marshaled, therefore, under Moses, as the commander in chief of the expedition, God himself went before them, "by day in a pillar of a cloud; and by night in a pillar of fire, to give them light."

The first encampment of the children of Israel was at the top of the Red Sea, in Etham, on the edge of the wilderness, which stretched from this point towards Midian and Edom eastward, and towards Parua southward. Pharaoh was now preparing to pursue them with a force which he deemed adequate to compel their return, or effect their destruction; but though they might easily have escaped into the fastnesses of the wilderness, Moses, who acted solely under divine direction, led them into a narrow defile between the mountains, through which there was no outlet; so that when the enemy approached, they were enclosed on all sides. This appeared to the people so bad a piece of generalship, and they were in consequence exposed to such extreme danger, that their complaints were most bitter and clamorous. They tauntingly inquired whether he had brought them into this situation because there were no graves in Egypt; and loudly declared, that they should have considered prolonged servitude far preferable to so melancholy a fate. Had the object been merely to effect their escape, or had Moses acted solely from his own authority, their remonstrances might have been correct; but we are informed that God wisely contrived this dilemma for the purpose of exciting Pharaoh to the pursuit, that, by his manifest interposition, he might acquire honour to his great name, and effectually cure those prejudices in favour of Egypt, which were still so prevalent in the camp. In these critical circumstances, the cool fortitude, magnanimity, and piety of their leader, were most conspicuous: he silenced their murmurings, allayed their agitation, and in the exercise of strong faith, stood up in the midst of them, stretching his rod over the sea, which instantly divided to form a dry and commodious passage. They passed in safety; guarded on either hand by the watery element as by walls of adamant. In vain did their foes attempt to follow; Moses again stretched forth his rod, and the deep closed upon them—chariots, horsemen, and all the host of Pharaoh—for ever! This deliverance was commemorated by Moses in a song, which is not only worthy of attention on account of its numerous beauties as a composition, but as the most ancient piece of poetry in the world, antedating the works of Homer, by at least six hundred years.

It is now generally agreed, that the transit of the children of Israel, was at the bay of Colsum or Clymas. It is now called by the Arabs *Bedra*, and is almost dry: and in the immediate neighbourhood the natives

still preserve a tradition of the drowning of a numerous army near the place.

Three days after this miracle the Israelites marched through a barren wild without any water; on the fourth they arrived at Marah, where, indeed, they found a supply, but it was bitter. This occasioned prodigious murmurings; upon which Moses, as in all his difficulties, applied to the Lord, who directed him to cast in a tree, by which it became instantly sweetened. Hence they proceeded to Elim, and then again encamped by the sea, but afterwards went in a northerly direction inland to the wilderness of Sin, where manna was first afforded them from heaven. Subsequently, as they approached the borders of the Amalekites, they were opposed by that people and pursued to Rephidim. In this place the people again complained for want of water, and were miraculously supplied by the rod of Moses being struck against the rock in Horeb. (Ex. 18.)

The Israelites were now conducted to the wilderness of Sinai, in the third month of their departure out of Egypt, where the law was given them, with all the circumstances of terror and magnificence which suited that extraordinary period. Moses was, on this occasion, admitted to an intercourse with the Supreme Being, more familiar than any which had hitherto fallen to the lot of a mortal; but for which he had been prepared by the manifestation of the burning bush, and by the capacity to work miracles with which he had afterwards been endowed. Having been called up into Horeb, by a voice which proceeded from the summit of the mountain, Moses was desired to remind the people of the past interpositions of Providence, as evidences of the divine goodness, and to assure them of God's intentions respecting their future destination, to which they had been introductory. They were now to become the "peculiar treasure" of the Most High, "a kingdom of priests, and a holy nation." When this declaration was reported to the camp by an assembly of the elders, the whole multitude expressed their readiness to comply with unhesitating obedience with every divine requisition. Moses conveyed this language to the Lord, who, having intimated his determination to appear in a thick cloud, and communicated his will in an audible conference with his chosen servant, directed the use of certain precautions previously to the solemn manifestation. The people were to sanctify themselves, and a fence was prepared, that no one should touch the borders of the mountain upon pain of death. On the third day from the interview of their leader with God, in which these preparatory measures were arranged, thunders, lightnings, and a thick cloud, invested Sinai, accompanied with the sound of a trumpet, so tremendously loud as to put the whole camp into extreme agitation. The mount itself shook to the very base; while smoke ascended like the smoke of a furnace, into the midst of which Moses entered, ascending to the very summit, where he received a new charge to preserve the multitude from indulging an eager and obtrusive curiosity: after which the ten commandments were pronounced, in a voice so solemn and superhuman, that the people requested Moses to become the medium of future communication. Accordingly, after endeavouring to allay their fears, he approached the thick darkness, and received from the present Deity a minute specification of laws, by which Israel was henceforth to be governed. These were all written in a book,

Moses.

Sinai.

Biography, and an altar, to serve as a sacred memorial of the wonderful transactions, was erected upon the spot, with twelve pillars to correspond with the number of the tribes. Having first sprinkled blood upon the altar, Moses read the volume; and when the people expressed their unanimous consent to every requisition, he proceeded to sprinkle blood upon them, in attestation of the solemn covenant. After this, he was again called into the mount, where he abode forty days and forty nights, receiving instructions for the building of a tabernacle, in which it was the divine purpose to display his glory to his favourite nation, for the benefit of the universal world.

Idolatry of the people.

During the absence of Moses, the people relapsed into idolatry, so justly incurred the Lord, that his anger was only appeased by the intercession of Moses, who, upon descending the mountain with the two tables of the law written upon stone in his hands, was filled with such indignation, that he threw them upon the ground, and dashed them to pieces. As a further punishment for their rebellion, he ground the idolatrous image to powder, and strewing it upon water, compelled them to drink it. Aaron endeavoured to excuse himself, by pleading the importunity of the people; and when Moses saw how completely they had stripped themselves, in order to furnish the means of forming the calf, he went to the gate and proclaimed, "Who is on the Lord's side? let him come unto me." The Levites instantly repaired to the spot, and by divine command, they were ordered to pass through the camp armed in hand, by which three thousand perished miserably. The people were now threatened with the withdrawal of the presence of God, which necessitated the deepest lamentation; but their faithful leader and friend pitched the tabernacle in the midst of the congregation, into which he entered when the cloud descended upon it, and successfully interceded for their preservation. For himself, he requested some encouraging display of the divine glory, which was graciously accorded, and an account of it is given in the concluding passage of the thirty-third chapter of Exodus. In addition to this distinguishing favour, he was directed to prepare two other tables of stone, and bring them into the mount, where they were again inscribed with the commandments, by the finger of God; and whence, having remained for forty days and nights in a state of strict abstinence from food, he descended with such a supernatural splendour upon his countenance, that he was under the necessity of putting on a veil, to allay the apprehensions of Aaron and the children of Israel. Whenever he went in before the Lord, he removed the veil till he returned to the people.

The tabernacle.

The tabernacle was now erected in exact conformity with the pattern that had been presented to Moses in the mount. It was completed in the first month in the second year, on the first day of the month, when the glory of God appeared in a cloud, which so entirely pervaded it, that Moses was unable to enter; and this miraculous cloud continued with them in all their future journeyings; so that they halted while the cloud rested on them, and went forward as often and as long as it was taken up. In the night it always assumed a luminous appearance, and was every where conspicuous.

The first remove of the Israelites from Sinai was into the wilderness of Paran, and on their way we find several acts of divine forbearance at the intercession of

Moses. At the voice of his supplication, fire was quenched, and manna and quails supplied. It would have been strange indeed, if a person of so much eminence had been exempted from that envy which commonly prevails, upon occasions far less calculated to excite it; yet we cannot but wonder that his dearest connexions should have attained the first ignoble distinction of attempting to depreciate his character, and diminish his well-merited reputation. Miriam and Aaron were, however, both influenced by this detestable spirit; on which account, the former was smitten with leprosy, that was only healed at the powerful entreaty of their injured brother, who procured her the mitigated punishment of only a seven days' exclusion from the camp.

Hitherto, no measures had been taken to obtain information respecting the country they were marching to invade: its length, a ruler from each tribe was dispatched as a spy, secretly, to ascertain the nature of the soil, the disposition of the inhabitants, and the military state of the cities. At the expiration of forty days they returned, bringing with them a favourable report of the fertility of the land, of which they produced some satisfactory specimens in the grapes of Eschol, with several pomegranates and figs; but they described the fortifications which they had seen, as so strong, and the people as of so gigantic a stature, that every one seemed dispirited, and refused to attempt the proposed conquest. So much, indeed, did the spirit of rebellion display itself, that they were on the point of selecting a new leader to guide them back to Egypt, and were about to stone Joshua and Caleb, whose report widely differed from that of the other spies, and whose remonstrances they could not endure; when the glory of the Lord appeared in the tabernacle of the congregation, and the smiting pestilence was threatened to exterminate the rebels. Nothing, indeed, could have prevented its fatal and immediate operation, but that earnest entreaty, with which it was the honour and privilege of Moses so often to avert the displeasure of the Almighty: not to mark with an indeble sign of disgrace the offending multitude, they were made to understand, that only two individuals, whose fidelity had rendered them worthy of such a distinction, Joshua and Caleb, out of their numerous thousands and tens of thousands then alive, should ultimately see the promised inheritance: nor should even their children enjoy it, till after they had wandered forty years in the wilderness, in correspondence with the number of days it had occupied to survey the land. The individuals who had given the report which occasioned the present murmuring, were instantaneously smitten by a fatal plague "before the Lord." The next morning, a party, deeply affected with the predicted chastisement, presumed contrary to orders, to attack the enemy, and were repulsed by the Amalekites and Canaanites with great loss. But Moses did not aim to remedy the misfortune, to renew the contest with a larger and more efficient force, or to march directly forward towards the desirable residence of which they were in search; but, in obedience to a heavenly intimation, turned back to the wilderness of Sin, and then passing near Ezion Gaher, at the eastern extremity of the Red Sea, and proceeding round the land of Edom, he at length led the people to the plains of Moab, near mount Nebo.

At different times, during this circuitous journey,

several memorable events occurred, in which Moses was particularly implicated. An envious spirit having again manifested itself in the revellings of Korah, Dathan, and Abiram, ministers before the Lord, who had formed a party of 250 princes of the assembly, they were summoned to the door of the tabernacle, each with his censor having incense. The Lord then appeared in glory, requiring Moses and Aaron to separate themselves from the congregation, who were to be consumed in a moment. The former, as at other times, interceded, and the three ring-leaders of the faction were placed apart; when, at the voice of Moses, the earth opened and swallowed them up, their families and property, with their associate delinquents. Surprising as it may appear, this awful judgment failed to produce a proper impression upon the infatuated multitude; for, on the very next day, there was an universal murmur against Moses and Aaron, when the God of Israel again descended in the magnificence of his displeasure. Fourteen thousand seven hundred were consumed by a plague, which was only arrested in its fatal progress by Aaron, at the command of his brother, standing up between the living and the dead, to offer incense and make an atonement for the people.

Aaron's
death.

On arriving at mount Hor, Moses had the melancholy task of accompanying Aaron in his ascent to its summit, where the latter died; immediately after which, he invested his son Eleazar with his sacerdotal garments, at the express command of God. This loss was commemorated in a general mourning of thirty days.

Soon afterwards, at an encampment on the borders of Edom, the people became extremely discouraged; and, as usual, gave vent to their feelings in impious speeches against Moses and against God. This produced the tremendous visitation of fiery flying serpents, through the effects of whose venomous bite multitudes perished. The people once more humbled themselves; and, upon their application to Moses, he besought the Lord, by whom he was directed to make a fiery serpent and set it upon a pole; "and it came to pass, that if a serpent had bitten any man, when he beheld the serpent of brass he lived." It has been supposed, that in this emblem there was at once a significant punishment of the idolatry of the times, and a striking typical representation of the Saviour of the world, and the redemption which he accomplished for the human race. Had it pleased God, says Mr. Bryant, to have explained his meaning to his prophet upon the spot, I presume, that in express terms, it would have amounted to this: "You have been devoted to serpent-worship; and I punish you by these very reptiles which you have idly adored. You have esteemed the serpent the emblem of health, life, and divine wisdom; and under this symbol, you have looked up to an unknown power, styled Thoth and Agathodæmon, the benign genius. For these things you suffer. But I will show you a more just and salutary emblem, by which health and life, as well as divine wisdom, are signified. It is a type of the true Agathodæmon, that human divinity, the physician of the soul, by whom these blessings are one day to accrue. Behold that serpent upon a perch of cross; whoever looks up to him shall be saved from the primal venom of the serpent, as well as from primal infection. This is an emblem of that benign power, that

good genius, by whom the world will be cured of every inherent evil."

After occupying various stations, upon their arrival at mount Pisgah, ambassadors were sent to Sihon, king of the Amorites, to negotiate for a passage through his border; but instead of consenting, he collected a numerous army and attacked the Israelites; who, under the direction of Moses, vanquished the enemy and took immediate possession of all his territories. A similar result soon afterwards followed the hostility of Og, king of Bashan.

Moses now led forward the people to an encampment in the plains of Moab, where they continued till they crossed over Jordan. Balak, the king of the country, invited Balaam to come and denounce curses upon these multitudinous strangers; but the magician having, contrary to the requisition of his sovereign, blessed them, Balak envenomed, at the instigation of Balaam, to corrupt them by sending women into the camp to allure them to idolatry and fornication. This impious stratagem so far succeeded, that 23,000 who had conformed to the worship of Baal-peor were put to death, besides 1000 others consigned to execution by the judges. The Midianites having adopted similar measures, Moses was commanded to make war against them; and Phineas, the grandson of Aaron, who had nobly resisted the prevalent iniquity, being appointed to head the expedition, overthrew the foe with 12,000 men.

The fortieth year of Israel's predestined residence in the wilderness, was now hastening to its termination, when Moses was apprized, that he would not be permitted to enter the promised land, in consequence of an act of disobedience of which he had formerly been guilty (Numb. xx. 7—13); but that he should enjoy the satisfaction of surveying it from the summit of Nebo, and then expire. His eminent prudence, and his reigned piety, were remarkably conspicuous on this occasion. Having first entreated the appointment of a successor to his office of leader of the children of Israel, who should faithfully discharge the high duties of such a situation, he was commanded solemnly to designate Joshua to the work; a man whose extraordinary qualifications enabled him honourably to perform it. Moses then proceeded to order a variety of regulations with regard to civil and ecclesiastical affairs; particularly stating the limits of the land they were to subdue, and the divine will respecting its distribution: then assembling the people about him, he recapitulated the principal events that had occurred since the time of their departure out of Egypt, and exhorted them to fidelity, plainly declaring the fatal consequences of rebellion, and the felicities which would certainly accrue from obedience. Afterwards he caused the nation to assemble and ratify the covenant of Horeb; and presenting a copy of the law to the priests and elders, enjoined the solemn reading of it every seventh year to the whole assembled nation. His charge to Joshua is most pathetic and affectionate, assuring him of the presence of his God in going to take possession of Canaan, and the divine determination never to leave or forsake them. The substance of his different addresses being compressed into a song of exquisite beauty and finish, it was first read, and then delivered to his successor to be learned by the people and their descendants. At length he summoned them together once more, to receive his final benediction, which was

Warned of
his death

His mea-
sures.

Biography. not only pronounced with great solemnity, but blended with several predictions relating to such tribes distinctly. He had no sooner uttered it, than he ascended mount Nebo alone, and from its highest point, distinguished by the name of Pisgah, he contemplated the promised inheritance, and departed to that " recompense of the reward" which he had so often and so long anticipated. This occurred in the year before Christ 1451, when Moses had attained the age of 120, and when none of his faculties were impaired: "his eye was not dim, nor his natural force abated." His sepulchre is said to have been in the valley of Moab opposite Beth-peor; but the precise spot was miraculously concealed, probably for the purpose of preventing an idolatrous veneration of it. The children of Israel held a general mourning on account of their illustrious chief for thirty days.

Death.

To these authentic particulars of the life of Moses, which we have deduced from the volume of inspiration, the Jewish rabbins have, as usual, made a variety of whimsical additions, which it is quite needless to quote; but the accounts of Josephus, and other historians, must not be wholly discarded as fabulous. This author and Eusebius, affirm that he acted as a general in the wars of Egypt, and obtained many splendid victories. Plutarch states, that at his birth, he was distinguished by a more than ordinary beauty of countenance, which seems confirmed by the testimony of the Acts, where he is said to have been "exceeding fair;" and Josephus represents his aspect and figure as so engaging at an early age that people would leave their occupations to gaze at him.

Personal character.

The *meekness* of his spirit is repeatedly mentioned in Scripture; and it was combined with what are very uncommon associates, *fortitude* and *zeal*. With what boldness did he censure the disobedience of the people; and with what a fearless and peremptory tone did he frequently address them, though wholly exposed to the mercy of an incensed multitude! Still more than this, there was a portion, and no ordinary portion, of that vehement *enthusiasm*, which is an essential ingredient in the constitution of every great character: for, discontented and rebellious as the people were, so devoted was their leader to their interests, that on one occasion he declared that he would submit to death and the loss of the promised blessings, if he could obtain a pardon for the Israelites (Exod. xxxii. 32). This feeling betrayed itself in almost every remarkable action of his life, and led him to become the intrepid opposer of sin, and the no less intrepid and powerful intercessor with God for the transgressors; on the one hand checking, by his holy heroism, the progress of rebellion, which must have proved ruinous in its consequences; and on the other, arresting in midway the divine displeasure, already on its destructive march. It was long indeed before the flame of enthusiasm appeared; but when once kindled it blazed with a glorious and insatiable brightness. His affectionate regard for the people, whom he had guided through the wanderings of the desert, was in no degree diminished by the prospect of his own departure; for, after it was revealed to him that he should not enter the promised land, he continued the same unwearied assiduity, in promoting the interests of the Israelites, as had distinguished his previous conduct. In all the great transactions of his eventful life, we perceive a singular

wisdom in his proceedings: in the distribution of wealth and honour he furnished the most decisive proofs of *liberality* and *disinterestedness*. His freedom from all the *vices* and *littlenesses* that are apt to adhere to eminent rank and exalted station, was strikingly manifest; particularly on one occasion, when the *spirit* of prophecy was diffused amongst the seventy elders, and Joshua desired Moses to forbid Eldad and Medad, who were reported to be prophesying in the camp:—"Enviest thou," said he, "for my sake? Would God that all the Lord's people were prophets, and that the Lord would put his spirit upon them." (Numb. xi. 29.) Over all these virtues was thrown the *charm of piety*—a piety not only genuine, but of so pre-eminent a nature as to qualify him for extraordinary intercourse with the Deity. Scripture testifies that he conversed with God, "face to face, as a man speaketh unto his friend;" and accordingly the Jews have always affirmed, that he enjoyed a much higher species of inspiration than any subsequent prophet. It was his exclusive privilege to address God at all times without the assistance of the High Priest, who consulted by means of the Urim and Thummim; which, with the miracles he was enabled to perform, conferred upon him a decided pre-eminence and superiority above every other human being. His character as a *legislator*, must be referred to a future part of this account of his life. As a *writer*, his peculiarities are modesty, simplicity of narration, diversity of style, and copiousness of information. In the Pentateuch he has furnished an account, luminous, concise, and accurate, of the earliest period of time, commencing with the creation itself, and closing with the arrival of the Israelites on the borders of the promised land; of which they were to take possession under the guidance of his illustrious successor in office. This narrative comprehends a period of more than two thousand two hundred and fifty years. Moses is also said to have composed many of the psalms; and the most anciently received opinion is, that he was the author of the book of Job. Many apocryphal works have been ascribed to him; the evident design of which was to raise them to distinction, by investing them with the splendour of his name.

The celebrity of Moses extended far beyond the limits of his nation; so that his history, in its main features, though distorted by many additions and misrepresentations, may be traced in the narratives of pagan antiquity. The Greeks, the Romans, the Chaldeans, the Egyptians, and others, not only admitted his veracity as a historian, and his superiority as a legislator, but enrolled him under different names among their gods, and preserved a no very obscure memorial of his actions in the fables of their mythology. The dispersion of the Jews into different countries, at an early period, furnished them with the means of authentic information; and the love of the marvellous, which is so inherent in the human mind, induced them to construct entertaining and ingeniously deceptive narratives, upon the narrow basis of historic reality. Among the most distinguished inventors of this kind, may be reckoned Manetho, an Egyptian, and priest of Heliopolis, who lived under Ptolemy Philadelphus, and whom Josephus quotes liberally in his first book against Apion; distinguishing, however, what he derived from the records of the Egyptian temples, to which he was secretary, from what he relates of his own, or has collected from mere report.

II. PROOFS OF THE DIVINE MISSION OF MOSES.

The most cursory perusal of the preceding biographical sketch, must not only have prepared the reader for this division of the subject, but have suggested some of its most obvious demonstrations. They are not so reconcile as to require a very profound and laborious investigation; though unhappily, the passions and prepossessions of mankind render it necessary to bring forward, into more distinct prominence, what, to an unprejudiced mind, is already quite apparent. Omitting a variety of minute details, we shall endeavour to establish the argument by an induction only of the most important particulars.

1. There was an extreme improbability in the attempt of Moses to release the nation of Israel from Egyptian servitude,—an improbability which would have stamped it with the indelible disgrace of adventurism, not to add, of folly—upon the supposition of his being undirected by a commission from heaven, and unsupported by supernatural assistance. Some part of his conduct in early life had, as we have seen, exposed him to the severity of the Egyptian law—he had no external means of recommending himself to the nation he proposed to emancipate, or to justify his pretensions to become their leader: but, without a friend or ally amongst them, he expected to gain their universal concurrence, to place themselves under the direction of his yet untutored capacity. How was it probable, that an individual so circumstanced, should be able to collect and combine under his standard, so many hundred of thousands of people in a state of considerable dispersion? How could he hope to gain access to the court and the king, without either eloquence to attract, or reticence to overawe them? And yet, in defiance of every obstacle and improbability, he not only succeeded in this mighty project, but every step was so easy, every circumstance so accurately adjusted to promote his design, and yet so perfectly independent of his control, that we are forcibly and at once impressed with a conviction of his superiority to any other person, and behold in him the agent of a superintending Providence.

2. All the proceedings of Moses, subsequently to the deliverance out of Egypt, were characterized by an imprudence bordering upon insanity, if he be considered as acting from his own sole authority, uninfluenced by a divine appointment. The people, whom he voluntarily undertook to guide, were plunged by him into labyrinths of inextricable difficulty. Instead of leading them in the short and direct road to that luxurious residence, of the possession of which they were assured after expelling the present occupiers, he takes them in an opposite direction; so that a journey, which might have been accomplished in a few weeks, was protracted into forty years; during which, they wandered about from wilderness to wilderness—in a thousand contrary paths—destitute, and anxious. His personal safety was evidently endangered by this apparent misconduct; for what else could he anticipate than discontent and rebellion? Was there not every reason to suppose they would rid themselves of so injudicious a commander? and, in point of fact, they frequently upbraided him in the bitterest language, and demanded to be carried back to the country from which they had been induced to depart. But infinite wisdom knew how to relieve the people from distress, and to supply

their every want. No embarrassments could possibly perplex the mind of God; and the Israelites were obviously involved in them according to his directions given to Moses, as the chief agent in his mysterious movements, in order to evince their dependence upon his power and goodness, and to show them that human means were altogether unavailable for their salvation.

3. The miracles of Moses could not but afford to the Israelites, as the well-attested record of them affords to us, indisputable attestations to his mission. Miracles must be considered in the light of divine credentials when they are performed by one who delivers a message in the sacred name of God; and appeals to them as evidences of having received a commission from heaven—supposing them to be wrought at the time by or in favour of the person himself who makes the pretension. They are to be viewed in such a case and signs and testimonies of the divine approbation; and nothing can be more decisive. For the Supreme Being could never sanction falsehood by a miraculous interposition, inasmuch as he could neither deceive others, nor be himself deceived; and it is most obvious, that nothing but the execution of some design of the highest importance, could induce the Supreme Being to depart, in such a manner, from the order of his government, and suspend those laws by which he regulates the universe. The twofold purpose of Moses, was to prove his own commission, and to exhibit the true character and undoubted supremacy of that God, in whose name he demanded the release of the Israelites from their servitude: the miracles he performed, both before Pharaoh, and during the sojourn in the wilderness, furnished these requisite illustrations. At the outset, he was indeed confronted by the Egyptian magicians; but Farmer has shown, by a series of ingenious demonstrations, that his opponents were not able to perform work really supernatural, nor were they assisted by any superior invisible being. They pretended to magic, and were jugglers by profession and practice; so that Scripture not only denies them the power of discovering or effecting any thing miraculous, but denounces them in express terms as *liars*, and their performances as *lying vanities*. The intention of Pharaoh in sending for them, was to ascertain from them whether the sign given by Moses was really supernatural, or only such as their art enabled them to accomplish: it would be contradictory to the fundamental principles of the pagan theology, to represent them as engaging the gods of Egypt in a contest or trial of strength with the God of Israel, because the claims of their deities were supposed to be consistent with each other; and, instead of being taught that one deity should act in defiance of another, for their protection, they were led to believe that they should rather attempt to appease and conciliate other deities. They had, at the same time, a very powerful inducement to try their utmost of deceptive skill, since they must perceive the solicitude of the king to retain the Israelites as his subjects and servants. All the sacred writers, and Moses in particular, describe the heathen deities as unsupported by any invisible aid, and as utterly impotent; and the point which the legate of Heaven was to establish, was the sole divinity of Jehovah, in opposition to idolatry; it is not, therefore, conceivable, that the gods of the heathen should be able, through the instrumentality of the magicians, to

perform supernatural works; Moses, besides, appropriates all miracles to God, and urges each one distinctly, as a separate proof of his divinity and of his own mission.

4. The prophetic character of Moses ought to be viewed, in connection with his miraculous performances, as furnishing accumulative evidence in his favour. The volume of inspiration has transmitted to our age a variety of his predictions, particularly with regard to the advent of the Messiah, the character by which he should be distinguished, and the condition of his far distant posterity in the closing dispensation of time. There is to be observed, in all these prophetic intimations, a precision and accuracy of reference, by which the shadowing forth of the marvellous events anticipated may be discerned with all that certainty which arises from the most exact coincidence. The frame of the prophecy is in every case so accurately constructed that the subsequent and corresponding event fits into it as by a sort of moral mechanism; evincing the designed connexion and conformity. After furnishing a general illustration of the Mosaic predictions, a learned writer concludes in these terms: "Here are instances of prophecies, prophecies delivered above three thousand years ago, and yet, as we see, fulfilling in the world at this very time: and what stronger proofs can we desire of the divine legation of Moses? How these instances may effect others, I know not; but for myself, I must acknowledge, they not only convince, but amaze and astonish me beyond expression. They are truly, as Moses foretold they would be, a sign and a wonder for ever.

Laws of di-
vine author-
ity.

5. An important and decisive argument, in support of the divine authority of the mission of the Jewish leader, may be deduced from the very nature and character of those laws which he promulgated among the Israelites. These we shall have occasion hereafter to explain: and to the *whole* of our subsequent statement upon this subject, we refer the reader for corroborative evidence; but there is one peculiar feature of Mosaic legislation, which has excited no small discussion in modern times; and which, from the celebrity of its author, and the eloquence with which he defended it, requires upon the principles of our work a brief development. "We demand only," says WARBURTON, "this single postulatam, that hath all the clearness of self-evidence: namely, that a skilful lawgiver, establishing a religious and civil policy, acts with certain views and for certain ends; and not capriciously, or without purpose or design. This being granted, we erect our demonstration on these three very clear and simple propositions. 1. That the inculcating the doctrine of a future state of rewards and punishments is necessary to the well-being of civil society. 2. That all mankind, especially the most wise and learned nations of antiquity, have concurred in believing and teaching that this doctrine was of such use to civil society. 3. That the doctrine of a future state of rewards and punishments is not to be found in, nor did make part of the Mosaic dispensation. Hence it must be inferred, that the law of Moses is of divine origin: upon this principle, that whatever religion and society have no future state for their support, must be supported by an extraordinary Providence. Such was the Jewish religion and society; and as this was the universal conviction of all ancient lawgivers, Moses, who instituted such a religion, and was a person

of that description, believed his religion was supported by an extraordinary Providence. With regard to the first of these propositions, be it observed, that society is in itself essentially defective; for its laws can have no further efficacy than to restrain mankind from open transgression; private delinquency being concealed from view, escapes censure. But even the influence of civil laws cannot extend to every case, as when the prohibition of one irregularity tends to produce another—the care of the *whole* may often lead to the neglect of *individuals*; civil laws are necessarily silent respecting duties of imperfect obligation, such as gratitude, hospitality, and charity: and besides it originates a new set of duties of the same description; society tends also to increase those very desires it was contrived to correct, in consequence of the multiplication of our wants proportionally with the arts of civilized life. Society is not only imperfect with respect to the administration of that power which it possesses, of punishing the disobedient, but still more so, in the dispensation of rewards to the obedient; understanding by this term, not the recompense bestowed in consideration of meritorious service, but such as is conferred on every one for obeying the laws of his country. Two things are here to be noticed—the first, that by the original constitution of civil government the sanction of rewards was not established; the only stipulation between the magistrate and the people being the mere protection on the one side, and *obedience* on the other, which arose out of their respective conditions: the second, that by the very nature of civil government rewards could not be enforced by it; for society could neither distinguish the objects of its favour, all that could be done being merely to discover whether the act were willful or voluntary, without taking cognizance of the motive; nor could it reward, though it should discover them, because no society can find a sufficient fund without raising it on the people as a tax to pay it back as a reward. Some other power, therefore, is needed to remedy these defects, and preserve society from confusion; but there is no other power to be found than religion, which teaches an ever-ruling Providence, the rewarder of good men, and the punisher of bad ones; and thus obliges to the duties of what are technically termed *duties of imperfect obligation*, which are overlooked by human regulations. Were it possible, which it is not, that there could be religion not founded on the doctrine of a Providence, it would be of no service to society; consequently, whatever is necessary to support this doctrine, is necessary to the well-being of society. The doctrine of a future state of rewards and punishments is thus necessary, and must be inculcated. The second proposition, relating to the concurrence of all mankind in believing and teaching the utility of this doctrine, is demonstrable by appealing, first, to the conduct of lawgivers and substitutes of civil polity, who always propagated religion wherever they instituted laws. There never was a people in any age, the Jews only excepted, who had a religion, the chief foundation of which was not the doctrine of a future state of rewards and punishments. The care of the civil magistrate in cultivating religion is evinced from the universality of it amongst all civilized nations;—from the very apparent absence of all traces of it, in many savage people, proving the extraordinary care taken for its preservation in a different state

Biography of society;—and from the genius of pagan religion, with regard to the origin and nature of their gods, who were chiefly departed legislators, kings, and founders of civil polity; the attributes assigned to them, which corresponded with the nature and genius of each government, as gentle or severe; and the mode of their public worship, which concerned individuals who were confessed to be under an unequal Providence, which necessarily introduced the doctrine of a future state for the support of the divine government and society in its corporate character, which displayed a more equal Providence administered to the state. Hence, religion and government were blended together, and prodigies constituted a part of the public administration, no less than civil edicts. The particular arts employed by the magistrate to support and propagate religion, consisted in pretending a revelation from some god, by whose express commands his policy had been framed: and hence Plato represents legislation as proceeding from God, and not from man; and Homer constantly describes kings by the epithets *Δαίμονες*, born of the gods; and *Δαίμονες*, bred or tutored by the gods. This pretence to inspiration was adopted for the purpose of establishing the opinion of the superintendence of the gods over the affairs of mankind, not to secure the reception of their laws, nor to render those laws perpetual and immutable. Aristotle, in his maxims for setting up and supporting tyranny, gives this direction: "To seem extremely attached to the worship of the gods, for that men have no apprehension of injustice from such as they deem to be religious, and to have a high sense of Providence. Nor will the people be apt to run into plots and conspiracies against those whom they believe the gods will, in their turn, fight for and support." (Arist. Polit. l. v. c. II.) Another measure of the legislator was to introduce the general doctrine of a Providence, as a preface to give a sanction to his regulations: of this, antiquity has transmitted two valuable specimens in the prefaces to the laws of Zaleucus and Charondas, lawgivers of the Locrians, and contemporaries with Lycurgus. The next art was the institution of the mysteries, the most sacred part of the pagan religion, precisely adapted to strike the imaginations of the multitude, and instituted solely for the support of the doctrine of a future state of retribution. They consisted of secret worship; which, in addition to the public solemnities, was paid to each of the gods; and to which none were admitted, but those who were properly initiated, by certain preparatory ceremonies. This secrecy was observed for two reasons: the one, to excite curiosity; the other, to secure the sole instruction of the initiated into some things which it would have been improper to have communicated to all. A further instance of the care of the magistrate for religion was evinced in the establishment of a national worship. The direct purpose, in this case, was to support the religion which was already propagated, by taking it into civil protection, and uniting it with the state. This touches upon a subject of much and frequent controversy. Warburton endeavours to show, that an established religion is the universal voice of nature, and that the right to establish it is vested in civil government: but in whatever manner these questions may be decided, the general argument, illustrating the intention of the magistrate to secure the interests of religion, is by no means affected; but apparently

VOL. IX.

corroborated, by his extending toleration to those who conscientiously differed from the public faith. There is one remarkable circumstance which the progress of discovery has disclosed, tending to show the unremitting zeal with which the rulers of nations have cultivated the belief of the doctrine of a future state. Amidst the various transigrations which have arisen out of the contentions of rival states and empires, and the confusion incident to society, many people have probably fallen from a civilized to a savage condition, who have been found to have little or no knowledge of God, or observance of religion: notwithstanding which, they have still retained the belief of a future state. This could only have occurred in consequence of the legislator's assiduity in the propagation of this sentiment, and of the powerful hold which it naturally and easily obtains of the human mind. So that, as it has been well observed, no religion ever existed without the doctrine of a future state: yet the doctrine of a future state has sometimes existed without a religion.

Secondly. Having examined the conduct of legislators, and the founders of civil polity, in proof of the concurrent opinion of mankind, with regard to the utility of the general doctrine in question; it remained to specify the views of the wisest and most learned of the ancient sages: and however at variance upon other topics, on this point they appear to have been unanimous. Without multiplying quotations, one from Polybius, and another from Piny, will suffice. The first of these writers says, "The superior excellence of this (the Roman) policy, above others, manifests itself, in my opinion, chiefly in the religious notions the Romans hold concerning the gods; that which, in other places, is turned to abuse, being the very support of the Roman affairs—I mean the fear of the gods, or what the Greeks call *superstition*; which is come to such a height, both in its influence on individuals and on the public, as cannot be exceeded. This, which many may think unaccountable, seems plainly to have been contrived for the sake of the community. If, indeed, one were to frame a civil polity only for wise men, it is possible this kind of institution might not be necessary: but since the multitude is ever fickle and capricious, full of lawless passions and irrational and violent resentments, there is no way left to keep them in order, but by the terrors of future punishment, and all the pompous circumstance that attends such kind of fictions. On which account, the ancients acted, in my opinion, with great judgment and prudence, when they contrived to bring these notions of the gods, and of a future state, into the popular belief; and the present age as inconsiderately and absurdly, in removing them and encouraging the multitude to despise their terrors." (Polyb. Hist. lib. v. c. 54.) Piny Piny, the elder speaks in a similar strain:—"It is expedient for society that men should believe that the gods concerned themselves in human affairs; and that the punishments they inflict on offenders, though sometimes late, indeed, as from governors busied in the administration of so vast an universe, yet are never to be evaded." (Piny. Hist. Nat. l. ii. c. 7.) It is observable, that none of the ancient theological philosophers believed the doctrine of a future state of rewards and punishments, though they all taught it to the people, obviously because they were deeply impressed with the conviction of its being essential to the support of religion. The

Biography of society;—and from the genius of pagan religion, with regard to the origin and nature of their gods, who were chiefly departed legislators, kings, and founders of civil polity; the attributes assigned to them, which corresponded with the nature and genius of each government, as gentle or severe; and the mode of their public worship, which concerned individuals who were confessed to be under an unequal Providence, which necessarily introduced the doctrine of a future state for the support of the divine government and society in its corporate character, which displayed a more equal Providence administered to the state. Hence, religion and government were blended together, and prodigies constituted a part of the public administration, no less than civil edicts. The particular arts employed by the magistrate to support and propagate religion, consisted in pretending a revelation from some god, by whose express commands his policy had been framed: and hence Plato represents legislation as proceeding from God, and not from man; and Homer constantly describes kings by the epithets *Δαίμονες*, born of the gods; and *Δαίμονες*, bred or tutored by the gods. This pretence to inspiration was adopted for the purpose of establishing the opinion of the superintendence of the gods over the affairs of mankind, not to secure the reception of their laws, nor to render those laws perpetual and immutable. Aristotle, in his maxims for setting up and supporting tyranny, gives this direction: "To seem extremely attached to the worship of the gods, for that men have no apprehension of injustice from such as they deem to be religious, and to have a high sense of Providence. Nor will the people be apt to run into plots and conspiracies against those whom they believe the gods will, in their turn, fight for and support." (Arist. Polit. l. v. c. II.) Another measure of the legislator was to introduce the general doctrine of a Providence, as a preface to give a sanction to his regulations: of this, antiquity has transmitted two valuable specimens in the prefaces to the laws of Zaleucus and Charondas, lawgivers of the Locrians, and contemporaries with Lycurgus. The next art was the institution of the mysteries, the most sacred part of the pagan religion, precisely adapted to strike the imaginations of the multitude, and instituted solely for the support of the doctrine of a future state of retribution. sidered.

contrary of this statement has been usually supposed; but this mistake has originated in not observing the distinction between the philosophic ideas of immortality, or the *eternity of the soul*, and the doctrine of rewards and punishments in another life; that is, where the happiness and misery consequent on virtue and vice are the positive and free appointment of the Divine will, not merely the necessary consequences of things. It is, indeed, a grave charge to affirm, that the sages of antiquity taught one thing, when they really believed another; but it is substantiated by an appeal to the general practice in the Greek philosophy of a twofold doctrine: the external and the internal; a vulgar and a secret. The former communicated to all indiscriminately; the latter to a select number: and this occurs, not only with regard to different subjects, but to the very name; which is treated popularly or scientifically, according to *opinion*, and according to *truth*. This representation is not applicable only to individuals. The Academies and Pyrrhonians agreed in this, that nothing could be known; and that without interfering in any sentiments of their own, everything was to be disputed. Neither the Pythagoreans, the Platonists, the Peripatetics, nor the Stoics, believed in the doctrine of future rewards and punishments. Nor is this all: the fundamental principles of the ancient Greek philosophy were altogether inconsistent with the doctrine in question, so that it was *impossible* they should believe it. They universally embraced two metaphysical principles: the one relating to the nature of God, that he could neither be angry nor hurt any one; and that, having no affections, he could neither reward nor punish—the other to the nature of the human soul; some conceiving of it as a *quality*, and therefore totally annihilated at death; others, and the far greater number, believing it to be a *substance*, and as such a separated part of a mighty whole; which whole was God, into whom it was again to be resolved. Imagining God to be the soul of the universe, and the body the matter; they concluded, that as the human body was resolved into its parent matter, so the soul was resolved into its parent spirit.

We now proceed to the **THIRD PROPOSITION** before mentioned, which concentrates the previous arguments in the final and principal demonstration. In the Mosiac institutes, there is no mention of the rewards and punishments of a future life; the promises by which they were incited to obedience, including only health, peace, plenty, dominion, exemption from disease, war, famine, captivity, and whatever else belongs to the class of *temporal blessings*. Nor is anything further intimated in the language of the prophets, during their long succession, to the times of Malachi. It is observable, also, that Solomon, at the dedication of the temple, when addressing an ardent supplication to heaven, for the continuance of the ancient covenant, distinctly appeals to the sanction of the Jewish law and religion; which, as he explains it, comprised nothing more than temporal rewards and punishments.

That this omission was not accidental, but designed, appears from several considerations. It is obvious, from the history of the book of Genesis. In detailing the account of the fall of man, the *serpent* only is mentioned, not the diabolical agent; because there was an intimate connexion between that agency and the future redemption of the world, which developed the doctrine

of a future state, with all its destined arrangements. There is a singular obscurity thrown over the brief notice of the death of Enoch; but how much more circumstantial is the narration of the translation of Elijah: because, in the latter instance, the period was arrived, when it was deemed proper to prepare the human mind for the revelation of a future state, by unquestionable intimations of its reality. In the history of the patriarchs, those discoveries which, as we learn from the New Testament, were made of the redemption of mankind, to certain favoured individuals, are either wholly omitted, or veiled by cursory statements, which evince the *intentional* nature of this concealment. That Moses really understood the importance of this doctrine to society, is evident, from a provision made in his institutes to obviate the evil consequences likely to result from so extraordinary an omission; for as the irregular passions of men would render some of them superior to all apprehension of personal and temporal evil, the due acquiescence was maintained by the punishments inflicted on their posterity, which the strength of natural affection must render truly distressing; and that this was devised as substitutionary for the doctrine of a future state appears hence, that as soon as the *new dispensation*, in which such a state with its rewards and punishments were revealed, the law of punishing children for the crimes of their parents was annulled. (Comp. Jerem. xxi. 20—33; Ezek. xl. 19—21, xviii. 2—4.) And further, as Moses did not teach this doctrine, but studiously concealed it from view; so, as might indeed be inferred, the Israelites were ignorant of it during that entire dispensation to the period of their captivity. The Bible contains a very circumstantial account of this people, not only with regard to their public transactions, but private and individual histories, and their compositions of every kind; yet in none of these is any knowledge of future rewards and punishments displayed, or any curiosity upon the subject expressed. This life, and this life exclusively, circumscribes the good and the evil, which excites their pursuit or kindles their aversion. Nor does the mere silence of the inspired writers support this conclusion: the non-existence of any popular belief of a resurrection or future state is demonstrable from their positive declarations. To this purpose, the following may be cited as a remarkable evidence:—Job, vii. 9: *ay, 7—10*; Ps. vi. 5. The question, therefore, is here triumphantly put, “Could this language have been used by people instructed in the doctrine of life and immortality? Or do we find one word of it on any occasion whatever in the writers of the New Testament, but where it is brought in to be confuted and condemned?”

But the argument presses with resistless weight, when it is recollected, that the inspired writers of the New Testament expressly assure us that the doctrine of a future state of rewards and punishments did not make any part of the Mosiac dispensation. The evidence is in two parts: 1. They show that *temporal* rewards and punishments were the sanction of the Mosiac dispensation: thus it is explained in 1 Tim. iv. 8, that though numerous ritual observances were enjoined by the law, and some there must be under the gospel, yet they are of little advantage in comparison with real piety; the reward of the life that now is referring to temporal rewards, and the life which is to come to those of the Christian economy. In the epistle to the

Moses.
A. M.
2553.
—
A. C.
1451.That Moses
did not
teach it.New Testam-
ent.

Biography. Hebrews, vii. 15, 16, the Jewish religion, called a *caral commandment*, is opposed to the christian, called the *power of an endless life*. 2. The Mosaic dispensation had only the sanction of temporal rewards and punishments, which is proved by an appeal to the express language of the inspired writers, in the following passages:—Rom. v. 12, and seq.; 2 Cor. iii. 7, and seq.; Gal. iii. 23; 2 Tim. i. 10; Heb. vii. 19, viii. 6, 7, cum mult. alia.

Conclusion. From the preceding premises, then, the conclusion is short and obvious:—if the doctrine of a future state be necessary to the well being of civil society, under the ordinary government of Providence; if all mankind have uniformly so considered it; and if the Mosaic dispensation were destitute of this support, and yet did not need it, then the affairs of the Jewish nation must have been administered by an extraordinary Providence, distributing with impartial propriety both rewards and punishments: consequently the mission of Moses was *divine*.

Such is the elaborated argument of Bishop Warburton, upon the merits of which the learned world is still divided. Excessive admiration of this mighty disputant has been generated on one side; and, perhaps, excessive fears of some consequences of his argument on the other. We simply state it; observing, however, that were this argument resigned, the great truth of the divine authority of the Jewish legislator appears to us (as it might with perfect consistency have appeared to the ingenious author of the Divine Legislation) to rest no still higher and firmer ground.

III. THE NATURE AND CHARACTER OF THOSE LAWS WHICH MOSES FORMULATED AMONG THE ISRAELITES.

Laws of Moses.

In the wrecks of time, the most ancient specimens of legislative wisdom have perished; so that we have no knowledge, by direct communication, of the laws of Minos, Zaleucus, or Charondas: but a singular providence has preserved entire to the present day, in the hands of the Jews, and fully authenticated by their acknowledgment and religious observance of them, those regulations which were prescribed to ancient Israel in the wilderness, and which are worthy of investigation; not merely on account of their theological application, but as tending both to gratify a legitimate curiosity respecting remote ages, and to furnish a guidance to enlightened and pious speculation.

Their basis. The first object we have in view, in the present inquiry, is to point out the *basis* on which the *Mosaic laws were founded*: a distinct idea of which is essential to a just estimate of this very extraordinary system of legislation. The whole depended upon one great fundamental principle, which stamped it with a characteristic simplicity and grandeur. In opposition to the polytheistic inventions of surrounding nations, Moses at once asserted the worship of one God as the central truth, and which, in intimate association with it, every other doctrine, every service, and every enactment should be arranged. Idolatry was, at that period, prevalent among all the people with whom the Israelites had any intercourse; and absurd as all its observances appear at this day, and to every enlightened understanding, that very nation were not fully purified from its infectious influence by the wisdom of that policy which was introduced by their great legislator; nor even by

the miraculous attestations which sanctioned his original proceedings. It was not even peculiar to the multitude to relapse continually into these strange superstitions; for their wisest men, in subsequent periods of their history, nay, Solomon himself became addicted to them: nor did this impious and foolish habit suffer much, if any, diminution of its prevalence till a considerable portion of Asia was subjected to the power of Cyrus. Considering the degradation which the human mind suffers wherever idolatrous worship prevails; the strong propensity which has ever been manifested towards the adoption of its absurdities; the consequent difficulty with which the introduction of a new principle of thinking and acting must be attended; and the favourable effects which resulted with regard to the peace, purity, and dignity of mankind, Moses conferred a benefit of the highest order upon the world, by establishing the simple but sublime doctrine of *God the only object of worship*, as the fundamental article of his legislative policy.

The method adopted by the Hebrew lawgiver was precisely calculated to give stability and permanence to the principle he had avowed; for he engaged the Israelites in a solemn covenant, by which they accepted God as their king; he having the most unquestionable claim upon them, not only as the universal Creator, but as their deliverer from Egyptian servitude; and to whom, in consequence, they were indebted by obligations the most peculiar, and the most binding. This voluntary acceptance of the theocracy as their form of government, rendered idolatry an act of direct rebellion against the state, as now immediately under divine superintendence, and exposed the delinquent to those punishments which necessarily attached to the worst species of crime. It became not only a sin, but a treason, and the commission of it incurred the most marked displeasure. In conformity with this idea of God as the King of Israel, in a sense totally distinct from that general sovereignty which he exercises over universal creation, the Israelites are frequently represented in Scripture as a *chosen generation*, a *peculiar people*, a *holy nation*, a *kingdom of priests*, the *portion of God*, the *lot of his inheritance*. As the circumstances in which this people were thus placed, multiplied their privileges, they would proportionally enhance their responsibility, and perpetuate the impression of duty and allegiance to the one supreme Jehovah.

Connected with this principle, and in fact resulting from it, was the legislative policy adopted by Moses to prevent an intercourse between the Israelites and other nations: and this was wise, considering the contagious influence of example, and the imbecility of the human mind; especially as it was found, at the period in question, in the infancy of its views and attainments. Foreigners might indeed become partakers of the rights of citizenship and naturalization; but they were not sought, nor studiously welcomed; and the Canaanites, Ammonites, and Moabites, were expressly excluded from the privilege. The object perpetually kept in view was, the multiplication of their nation, not by an accessory, but a natural population: on the other hand, obstructions were thrown in the way of an Israelite who was disposed to withdraw from the community, and settle in a foreign land; for by such a measure he incurred the forfeiture of his hereditary possessions. Moses was careful to guard against the

Effects.

Originality
of Mosaic
institutions.

possibility of his nation becoming dependent and tributary; assigning its particular limitations, and interdicting the choice of a foreigner as their king. Not only did he frame no regulation for the advantage of commerce, he evidently discouraged it. Every Israelite had his own land, which was adequate to his subsistence; and interest for the use of money was prohibited, consequently there was no temptation to lend, and therefore no possibility of borrowing for the sake of pursuing a system of mercantile speculation. Commerce, then, was discouraged, probably because of its contrivance to the adopted policy of insulating the people of Israel from other nations; its tendency to entice the citizens of a trading country to leave their homes and establish colonies; the decrease of population which it naturally produces by multiplying the hazards of life; its influence in diminishing the martial spirit, which it was at that period deemed necessary to cherish; its introduction of luxurious habits, which would have impoverished the state; and the enemies it would have been likely to create, by the natural and almost necessary effect of national competition. Hence, the system of Israelitish polity was founded on agriculture alone, comprehending the cultivation of vineyards, olive-grounds, and gardens.

Our attention is required, in the next place, to the *originality* which characterizes the Mosaic institutions. The learned Michaels, indeed, in his *Mosaisches Recht*, or *Mosaic Law*, has endeavoured to show that Moses in his statutes presupposes a more ancient law, the *Jus consuetudinarium*, or that which is founded on established usage; which he sometimes confirms, sometimes improves, and sometimes annuls. The author in question contends, that several of the Jewish legislator's own laws existed long previously to his enactment of them; and that, in other cases, the very manner in which they are delivered, often evinces that they cannot be new. The ancient traditional law which Moses occasionally adopted and improved, was that which arose from the condition of the illustrious ancestors of the Israelites, as wandering herdsmen. There are, moreover, traces in his writings of a judicious policy, founded on the results of long experience, which the author alludes to, believes to be in a great measure Egyptian, as the foundation of government on a system of agriculture; the formation of a great and powerful state, independently on foreign commerce, which the Egyptians abhorred; and the measures resorted to for keeping the Israelites distinct from other nations.

It may surely be allowed, that there did exist an ancient consuetudinary law; and that in forming a grand system of legislation, the wisdom of past ages was in some degree incorporated with the enactments of the new and superior plan, or even taken as a model of particular regulations, adapted either to the circumstances or prejudices of the people among whom the new system was promulgated; all this and more may be admitted, without essentially derogating from that originality of character which attached to the Mosaic institutions as a whole.

Priestley,
on the laws
of Moses.

Dr. Priestley, in a dissertation on the originality and superior excellence of the Mosaic institutions, maintains, that they who suppose that Moses, in framing the institutions that bear his name, borrowed much from the Egyptians, or other ancient nations, can never

have compared them together, otherwise they must have perceived many circumstances of essential difference. The most considerable of these he represents to be the following: 1. No heathen ever conceived an idea of so great an object as that of the institutions of Moses; which appears to have been nothing less than the instruction of all mankind in the great doctrine of the unity and universal moral government of God, as the maker of the world, and the common parent of all the human race; in opposition to the polytheism and idolatry which then prevailed. The Hebrew nation was placed for this purpose in the most conspicuous situation among all the great civilized nations of the world, which were universally addicted to idolatry of the grossest kind;—to divination, necromancy, and other similar superstitions, practised as acts of religion. All mankind supposed that their prosperity depended upon the observance of their respective religions; hence, that of the Hebrews was made to do so in a remarkable degree, so as to furnish a visible lesson to the world: they were to prosper or to suffer in the most exemplary manner, according to their adherence to their religion, or departure from it. These ideas are distinctly advanced by Moses, and more fully in their latter prophets; but nothing of the kind could have been suggested by any thing he saw in Egypt, or heard of in other countries. 2. In no system of religion, besides Purity, that of Moses, was *virtue of morals* any part of it. All the heathen religions were systems of *mere ceremonies*; on the observance of which it was imagined that the prosperity of the several states depended; and the sole business of the priests was to attend to the due observance of these rites, many of which were so far from being favourable to morals, that they were of the most impure and abominable nature, as is well known to all who have any knowledge of them. On the contrary, it appears, not only from the ten commandments, but from all the writings of Moses, and those of the prophets who succeeded him, that the purest morality, the most favourable to private and public happiness, was the principal object of the system. 3. Nowhere, National in all the heathen world, could Moses have heard of such a proper *national worship*, as that which he introduced. The Hebrew nation had not only one single object of their worship, in which they differed essentially from all others, but one national altar; one precise ritual, and only one place for the meeting of the whole nation at the public festivals. Three times in the course of every year, all the males of a proper age were required to attend at this place, where they spent about a week in acts of worship and decent festivity; and at one of them the law was publicly recited, that all persons might be acquainted with it, and with the awful sanctions of it. A whole tribe, a twelfth part of the nation, was set apart for services of a religious nature, and their provision made to depend in a great measure upon their performance of them, being not in lands cultivated by themselves, but in the produce of lands cultivated by others. At this one national altar, sacrifices were performed every morning and evening, in the name and at the expense of the whole nation; and the manner in which this was done was invariable, and not left to the discretion of the performers. In all other countries the places of worship were numerous; and the diversity in the modes of worship varied with the objects of them. 4. In no country,

Moses.

Biography, besides that of the Hebrews, were the public festivals expressly instituted in commemoration of such great events respecting their history and religion. It is peculiar to this nation also, that the directions for the celebration of them were reduced to writing at the time of their institution, so that there could never be any uncertainty about the origin or the reasons of them.

They were only three: the passover, on their deliverance from their state of servitude in Egypt, when the first-born of all the Egyptians were destroyed, and all theirs preserved; the pentecost, on the giving of the law from mount Sinai; and the feast of tabernacles, in commemoration of their living in tents and booths during their travels through the wilderness.

5. In no other country was the place, and other circumstances of the public worship, so well calculated to inspire a profound respect for the object of it as among the Hebrews. No heathen temple could be compared, for riches and splendour, with the temple of Solomon, or even the tabernacle of Moses, erected in the wilderness, though designed for a temporary use, and portable. Into the holy place none were allowed to enter besides the priests; and into the holy of holies, only the high priest, and that only once in the year, when he was habited in the most humble manner, to confess his own sins and those of the nation: at other times, his dress was the most costly and splendid, far beyond that of any high priest or any prince in the heathen world. The garments of the common priests were particularly neat and decent, but not costly; and when the nation was in the wilderness, moving from place to place, they were far from marching in a disorderly manner, or encamping without regularity. How different from this were the most solemn processions of the heathens, when they carried the images of their gods from one place to another, generally on the idea, at least in the East, of giving them an airing and amusing them with no excursion from their temples and back again!

6. Sacrificing was a mode of worship more ancient than idolatry, or the institutions of Moses; but among the heathens, various superstitious customs were introduced respecting it, which were all excluded from the religion of the Hebrews. In the Hebrew ritual, the original and most natural idea of a sacrifice, viz. that of a gift by way of acknowledgment for the blessings we receive, or the partaking of an entertainment with the object of worship, was strictly adhered to; nothing being offered but what was an article of food, or what was used at entertainments as incense, with which at this day the entertainments in the East are closed: whereas several of the heathen sacrifices consisted of animals that were never eaten, but such as it was supposed the deity would be gratified in having destroyed. The Egyptians, from whom it might be supposed Moses would borrow the most, Plutarch says, always sacrificed such animals as were hateful to their deities. The heathen sacrifices were also different according to the rank and character of the Deity to whom they were offered. Thus, to the infernal gods, they offered black victims; to the good, white ones; to the barren, barren ones; to the fruitful, those that were pregnant; to the masculine gods, males; to the feminine, females. To Hecate, they sacrificed a dog; to Vaus, doves; to Mars, a bull; and to Ceres, a sow. 7. If the heathens had any temples before the time of Moses,

which is uncertain, they were constructed in a manner very different from the tabernacle or temple of Solomon. The furniture of the Hebrew and heathen temples, and the business that was done in them, bore no resemblance to each other. In the latter we have no account of such a symbol of the Divine presence as the covering of the ark between the cherubims in the holy of holies; the fire on the great altar was always maintained to consume the remains of the sacrifices, and the lamps were preserved burning to afford light; but the perpetual fires of the heathens were of no use for the purpose of fire or of light.

8. Both the Hebrews and the heathens allowed the privilege of asylum to those who fled to their temples: but with the latter, this was arrived to a length equally superstitious and dangerous to the community; for whatever was the alleged crime, the perpetrator could not be apprehended without the dread of incurring the vengeance of the deity who was supposed to afford protection. But no person charged with homicide, or any other crime, was secure from punishment by flying to the Hebrew altar, except till the cause could be heard by regular judges; when, if found guilty, he was ordered to be taken, even from the altar itself, to execution. Wherever design was discovered, no refuge could be found; but in case of accidental homicide, the person might continue in security till the death of the high priest. This singular provision was not copied from any other nation.

9. The provision of proper instruments, or Instruments for the performance of sacrifice, was dissimilar from every mode of worship practised in heathen temples. 10. Had Moses copied any thing from the heathens, he would probably have introduced something of their mysteries; but nothing of the kind is to be found in his institutions. There was no secret in the Hebrew ritual of worship; every thing in described in the written law, and though the priests only could enter the holy place, and the high priest, the holy of holies, every thing they did is particularly described; and no service, as in the case of the mysteries, was performed during the night, excepting the attendance at the great altar, to keep the fire in a proper state for consuming the remains of the victims; and of this no mention is made of the ritual. 11. There was no vision for an oracle among the Hebrews as well as with the heathens; but the difference is most obvious.

With the Hebrews, the responses were in a clear articulate voice, free from ambiguity, only on solemn occasions, and gratuitous; those of the heathens, obscure, ambiguous, delivered to a frantic manner, only at particular seasons, and at great expense. 12. The Hebrews and the heathens both had symbolical purifications, but the difference was great. Nothing was used for this purpose at the tabernacle or temple, for the priests or the people, but pure water, in which they washed or bathed; but the heathens, imagining that sea water was more efficacious, put salt into common water, and dipped in it a burning brand from the altar, flaming sulphur, or a branch of olive or beryl; but all the ceremonies of the Mosaic institution bore some relation to cleansing, and were not taken from other nations. 13. Religion directed the choice of the proper articles of food, both with the heathens and the Hebrews: but with the latter, nothing was forbidden but what was in some degree unwholesome; while the interdictions of the Egyptians, Syrians, and Hindoos,

Heathen and Hebrew temples compared.

Instruments of worship.

Biography. were evidently superstitious. 14. The Hebrew priests were not obliged to practise any peculiar *austerities*, as were many of those of the heathens. They might marry; the high priest only being forbidden to marry a widow. Moses assigned no part of the national worship to women; but in the heathen temples there were priestesses, and the oracle at Delphi was always delivered by a woman. 15. Moses could nowhere, in the whole heathen world, have obtained his idea of the *annual feast* for a general confession of sin and absolution; the latter denoted by the emblem of the dismissal of a goat, over whose head confession had been made. 16. A weekly *sabbath*, a *sabbatical year*, and the *jubilee*, were institutions peculiar to the Hebrews, and what Moses could not have borrowed from any other nation. The rite of *circumcision*, on the eighth day after the birth, was an indelible mark of the promise of God concerning their future destination; a token of the covenant of God with their ancestor Abraham. 17. Had Moses borrowed any thing from the heathens, he could not have overlooked the various modes of *divination*, sorcery, and witchcraft; their omens of a thousand kinds; their rites for consulting the dead in the art of *necromancy*; their distinction of days into lucky and unlucky; which constituted a great part of the religious observances of all the heathen nations: but all these are spoken of with the greatest contempt and abhorrence, and the pretenders to them are directed to be put to death.

Jurispri-
dence.

18. The general system of *civil government* laid down in the institutions of Moses is fundamentally different from any thing he could have seen or heard of in his time, and infinitely more favourable to personal liberty and happiness. The principal nations were governed by *kings* with no *written laws*; but in the institutions of Moses there is no provision for a king whose powers should descend to posterity, and the government was a government of fixed laws reduced to writing. Nothing was left to the arbitrary will of any individual, whatever might be his office or eminence in the state. 19. In the *civil laws* of Moses, we find several, and those of particular importance, of which we can trace no resemblance in those of any other nation, ancient or modern; though, had they been found among those of Solon, Lycurgus, in Hindostan, or in China, they would have been admired for their excellence. 20. In all ancient nations there were trials by various *oracles*, in which the accused person was supposed to be guilty, unless fire or water did not injure him. In the institutions of Moses, we find one trial by ordeal; but so essentially different from what was in use in other countries, that it could never have been borrowed from them. The case referred to is that of a wife suspected of adultery; to which recourse was had only in defect of any other evidence.

From all these statements, the originality of the Mosaic institutions is to be deduced, while the wisdom which pervades them all demonstrates their divinity.

Civil code.

The third consideration we have to propose respects the *civil part* of the Mosaic code, as *not intended to be unalterable or universally obligatory*. Though the laws in question were adapted to the circumstances of the Israelites, during their journey through the wilderness, yet when those wandering habits ceased by their settlement in the promised land, many alterations must necessarily occur. In the course of time, for example,

Necessary
alterations.

the value of money changed by the increased opulence of the community: it became requisite, therefore, to make a difference to the infliction of pecuniary punishments; otherwise, what in one state of society would be adequate to answer the ends of justice, in another would prove altogether disproportionate. Several changes took place in the time of Solomon, as in the case of a thief, who, by the law of Moses, was to make restitution four or fivefold, but who, at the latter period, is required to restore sevenfold. (Prov. vi. 31.) When Israel was encamped in the wilderness, Moses ordained that every one that killed an ox, a sheep, or a goat, should bring it as an offering unto the Lord, so that they could only eat flesh at the *sacrifice-feasts*; notwithstanding which, when they became fixed in their promised residence, and multitudes must have performed several days' journey to comply with such an appointment, it in fact became impossible, and even Moses himself allowed that at that period it should be lawful to kill their cattle and eat them at their respective places of abode. Some things were enacted expressly with a view to an alteration, when the improved state of society should render it expedient, as in the case of divorces, respecting which Jesus Christ affirms, "Moses, because of the hardness of your hearts, suffered you to put away your wives: but from the beginning it was not so." (Matt. xix. 8.) To the same cause may be referred the allowance of polygamy, the direction for the marriage of a brother's widow who was left childless, and the appointment of the avenger of blood to kill the person who had slain one of his relations. And from this it is obvious, that the wisdom of the Mosaic institutions partly consisted in the skilful adaptation of them to the character of the people among whom they were established: for though they were the best that could be framed for that people, and at that period, they were not, in the most absolute sense, the best that could possibly have been devised; and consequently do not constitute an invariable rule of future legislation. They were, undoubtedly, regulated by those considerations which must ever enter into the views of judicious lawgivers in every age: such as the particular nature of the climate where they are to be enforced; the state of the soil in point of agricultural capacity; the connexion of the country with adjacent or with remote nations; its relative power and political importance; the manner of life to which its inhabitants are addicted; and their general prejudices and prepossessions; which tend to show that future statesmen are not under an absolute obligation to adopt the laws of Moses, but are at liberty to use those which experience evinces to be most applicable to their own circumstances, and to reject others which the different state of the community renders either needless or pernicious.

Further, the ceremonial part of the Mosaic institutions is to be considered as *figurative*—the shadow of the gospel as the substance—or the elementary form which contained, as a model, the essential principles of that spiritual dispensation. Some divines of eminence have contended for a much more extensive application of this sentiment; maintaining with great plausibility, that the entire condition of Israel in the wilderness was a historical figure, in which future events were indistinctly represented; and, according to this interpretation, they consider the emancipation of the children

Moses.

Ceremonies
figurative.

Various in-
terpretations.

Biography. of Israel, from the servitude of Egypt, as illustrative of the deliverance of Christians from the bondage of Judaism, and from the slavery of sinful passions and habits; the difficulties and sufferings which that ancient people underwent in the course of their journey, as significant of the trials with which the people of God are exercised in every period of time, during their passage through the world; and the final settlement of the Jewish nation in Canaan, as emblematic of the ultimate attainment of the heavenly felicity by all who commit themselves by faith to the divine guidance, which still, by the light of Scripture, as formerly by the splendour of the Shekinah, directs them on the march to immortality.

And still further, the interpreters to whom we allude, maintain that the principal persons of the Mosaic dispensation were also figurative, and had each his antitype under the evangelical economy. Among these, the patriarchs and Moses are particularly specified. From the intimation of the latter, with regard to a prophet whom the Lord their God should raise up unto them, of their brethren, like unto himself, Bishop Newton and Dr. Jorin have traced out, from the original suggestion of Eusebius, points of analogy between the legislator of the Jews and the head of the Christian church; and the latter justifies the method he has adopted, by various preliminary remarks, adding, "the resemblance between Moses and Christ is so very great and striking, that it is impossible to consider it fairly and carefully, without seeing and acknowledging, that he must be foretold when he is so well described;" "and," says he, "it deserves consideration whether this consequence may be deduced;—that if Moses were a type of Christ, the people whom he delivered and conducted may be a type of the people to whom Christ was sent, and of the church which he established."

Extremes. We apprehend that no errors of interpretation are attended with more pernicious consequences than those which arise out of forced and unnatural analogies. Once permitted to pass its legitimate boundary, the spirit of allegory and accommodation will find an ample field in which to range, to the utter neglect of Scripture, truth, and even common sense. It is obvious, that as every interpreter possesses the same liberty of adapting his analogies to his own particular taste, and of appropriating them to the support of his own favourite system of faith, there can be no limit to the wanderings of fancy, and no safe method of acting among the pretensions of rival absurdities, but that of rejecting them all, and returning at once to the only standard of unsophisticated truth. This principle of interpretation being once adopted, is the more dangerous on account of its fascination: it possesses the charm of novelty; and is withal, when not duly regulated, so easy, that a very child in intellect and knowledge may practise it with considerable success.

Rules. The question therefore is,—and a question of great importance, the answer to which is not only requisite to be given, in order to check the progress of future adventurers into the mazy paths of the allegorical wilderness, but to vindicate the statements we are about to give of the emblematic character of the ceremonial law;—what is the legitimate boundary of allegorical and analogical interpretation? We reply, in the most condensed form of explanation we can devise,—that it is *Scripture itself*, pointing out its own designed coinci-

dences, as it does in the most perspicuous modes of language. If, therefore, we maintain, among other intelligible figures, and among an infinite variety of proofs, that the language of other parts of the sacred word is derived from the language of the Mosaic economy; that the ceremonial law significantly represented the system of salvation contained in the gospel; we do so, not because an ingenious imagination is subsidized to effect this analogy, but because it is given in the most express terms in *Scripture itself*, where in different parts of the apostolic *Scriptures* the interpretation, the inter-
preter. we are furnished with a detailed exposition of the Levitical institutions, the most important of which were the sacrifices and priesthood. How striking and express is the representation of the paschal lamb, as illustrative of our Saviour, who is called the lamb of God; who went as a lamb, meek and obedient to the slaughter, and who was without blemish! The occasion of his sacrifice was similar to that of the *pasover*. The destruction of the first born in Egypt was inevitable, had it not been averted by the blood of the paschal lamb sprinkled upon the houses;—in allusion to which, we are said to have "redemption through his blood." The frame of mind in which the Jews were to celebrate the *pasover*, and the various other ceremonies which were prescribed at the original institution, find their distinct illustration in the system of Christianity. This feast is to be kept with the "unleavened bread of sincerity and truth," "having our loins girded, our shoes on our feet, and our staves in our hands;" that is, in the posture of pilgrims on their heaven-directed journey. The case of the *scape-goat* turned loose into the wilderness, with the burden of sin upon his head, and the action of the congregation in laying their hands upon the head of the guilty person, previous to his execution, were very significant of Christ as our substitute and Saviour, upon whom "the Lord is said to have laid the iniquity of us all." Christ *instances*, in moreover, described as a *priest*, which he was not literally, and a priest *after the order of Melchizedec*, whose priesthood was prior to that of the Levitical order, who united the character of king with his other distinction, and who administered *bread and wine*, the very provision of the gospel festival; and "we have such a high priest who is set on the right hand of the throne of the majesty in the heavens." The *intercession* of Christ was annually prefigured in the service of the tabernacle, when the high priest went on the great day of atonement into the holy of holies with the blood of sacrifice; for the apostle declares, that Christ, as our high priest, should enter "not into the holy places made with hands, which are the figures of the true, but into heaven itself, now to appear in the presence of God for us." In fact, all the Jewish sacrifices may be justly regarded as types of the sacrifice of Christ; the purity required in every victim prefiguring his perfection, and the death of each prefiguring his offering upon the cross. The apostle seems to compare all the different kinds of victims with the one sacrifice of Christ, as types with their antitype, in Heb. x. 5—10. The expression, "he taketh away the first, that he may establish the second," shows beyond a question, that the sacrifice of Christ succeeded in the room of all the sacrifices which were offered by the law; and hence, upon the accomplishment of his sacrifice, they all ceased.

Outram on Sacrifices. Outram, in his two dissertations on sacrifices (lib. i. Sacrifices.

Moses.
A. D.
2553.
—
B. C.
1451.

Biography. c. 18), successfully contends, that there can be no doubt, that those victims whose carcasses were to be burned without the camp, were types of Christ, and that in a more eminent degree than the rest; for they not only prefigured Christ, in common with others, in his unblemished perfection and death: these victims were peculiar, as was the sacrifice of Christ. But the circumstance of their presentation *without the camp* is most observable. (Camp. Heb. xiii. 10—12).

There was no force in the apostle's argument in this passage respecting the place where Christ must suffer death, unless all the victims whose blood was to be taken to the sanctuary had typified his sacrifice; for although those victims were burned without the camp, it could not be necessary on this account that Christ should die without the city of Jerusalem, which evidently corresponded to the camp in the wilderness, but to produce a greater resemblance between those victims and Christ. Hence, all the victims who were burned without the camp, were types of the sacrifice of Christ, and in a more eminent degree than any other victims, because they prefigured not only his death, but the place where it was to occur. "The correspondences of types and antitypes," says Clarke, "though they be not themselves proper proofs of the truth of a doctrine, yet they may be very reasonable confirmations of the foreknowledge of God; of the uniform view of Providence under different dispensations; of the analogy, harmony, and agreement between the Old Testament and the New. The words in the law concerning one particular kind of death, *he that is hanged is accursed of God*, can hardly be conceived to have been put in upon any other account, than with a view and foresight of the application made of it by St. Paul. The analogies between the *paschal lamb*, and the *lamb of God*, slain from the foundation of the world; between the *Egyptian bondage*, and the *tyranny of sin*; between the *baptism of the Israelites in the sea and in the cloud*, and the *baptism of Christians*; between the *passage through the wilderness*, and through the *present world*; between Jesus (Joshua) bringing the people into the *promised land*, and Jesus Christ being the captain of salvation to believers; between the *sabbath of rest* promised to the people of God on the earthly *Canaan*, and the eternal rest promised in the heavenly *Canaan*; between the liberty granted from the time of the death of the high priest, to him that had fled into a city of refuge, and the redemption purchased by the death of Christ; between the high priest entering into the holy place every year with the blood of others, and Christ's once entering with his own blood into heaven itself, now to appear in the presence of God for us: these, I say, and innumerable other analogies between the shadows of things to come, of good things to come, the shadows of heavenly things, the figures for the time then present, patterns of things in the heavens, and the heavenly things themselves; cannot, without the force of strong prejudice, be conceived to have happened by mere chance, without any foresight, or design. There are no such analogies, much less such series of analogies, found in the books of enthusiastic writers living in such remote ages from each other. It is much more credible and reasonable to suppose, what St. Paul affirms, that *these things were our examples*; and that, in the uniform course of God's government of the world, *all these things happened unto them of old for examples, and they are written for our*

admonition, upon whom the ends of the world are come. And hence arises that aptness of similitude in the application of several legal performances to the morality of the gospel, that it can very hardly be supposed not to have been originally intended." (Clarke's Evidences of Nat. and Rev. Religion.)

The last observation we have to offer, concerns the moral part of the Mosaic law as a rule of life. Some of the law theologians have denied that the moral law of Moses was in itself of obligatory force upon the consciences of mankind. The persons referred to, place the gospel in opposition to the law; and blending the various parts of the code of Mosaic legislation into one mass, they sweep away the whole with indiscriminating zeal. Its requisitions, they plead, were fulfilled by Christ, and its penalties discharged; and all who are interested in his meritorious death, by the participation of its benefits, which faith confers, have nothing more to do with the demands of the law of Moses. Instead, therefore, of aiming at conformity to its precepts, as the evidence of an interest in evangelical blessings, persons of this habit of thinking seek visionary enjoyments as their favourite mental repose.

To this it may be replied, that there is indeed a sense in which the law is abolished, namely, that in which it is considered as a covenant of works, and as a yoke of bondage, Christ having called his people to liberty—a liberty characterized by the apostolic writers as *glorious*; that enfranchises them from the servitude of ceremonies and observances, with which even the true religion was primarily encumbered. It is to the disciple of the New Testament no longer a source of justification, or an occasion of alarm; the thick darkness, and the awful thunder, disappearing for ever from the peaceful summit of Calvary. But, in other respects, the law is of an invariable and unalterable character; and so far from being abrogated, the religion of the gospel places it on the most solid foundation, and invests it with peculiar dignity and lustre. To the disciples of the Son of God, it exhibits what is holy, just, and good; pointing out the duties which ought to be performed, and the evils which a man's regard to his superior and immortal interests will teach him to avoid. It reflects, like a clear well polished mirror, the genuine character of the individual who applies to it, exhibiting with perfect accuracy the impurities of the heart, the imperfections of the conduct, and the deformity of human nature and while it diminishes that high self-estimation which all men are so apt to cherish, by the unyielding strictness of its requisitions it virtually displays the importance of the means of salvation developed in the gospel, and disposes the man who feels himself condemned by its holy severity, to a ready reception of the Christian system. That system in the administration of the supreme lawgiver of his church republishes the law; reiterating its claims, enforcing them upon a new basis, and creating new obligations to obey its authority. Hence it is called "a schoolmaster to bring us to Christ," and we are "under the law to him." As the two great principles upon which the Mosaic commandments are founded, and upon which, as the legislator of the Christian church explained, "hang all the law and the prophets,"—namely, supreme love to God, and proportionate love to the whole neighbourhood of mankind, must have existed as obligatory on human beings, wherever they

were to be found, independently of their distinct specification and enactment by Moses, and from the very commencement of the world: as these principles have their foundation in eternal rectitude, resulting from the constitution of the universe, the dependence of creatures upon their Creator and upon each other, nothing can annul them; not even the rebellion of any portion, or of the entire universe. While there is a God, the intelligent creation must be under an obligation to love him, and to spread their affections as far as their nature, and through the vast extent of being. The resistance of any creature to the authority which he is required to obey, does not diminish the force of that authority; and consequently the sin of man can have no tendency to subvert the claims of Heaven upon his obedience. He is not the less obliged, because he has refused, or persists in refusing, to fulfill his obligations. And under whatever dispensations mankind may be placed, and whatever new requirements the Creator may see fit to institute, man can never be released from the binding duties which originate in the very constitution of his nature, and arise out of his existence as an intelligent being; and every further enactment of the Creator must be directly founded upon what is essentially consistent with the nature and comfort of man. The forms of obedience may change, but virtue is unalterable; consequently, moral obligation is the same in its principle, under the Patriarchal, the Jewish, and the Christian dispensations.

Further remarks.

It may be further argued, that it would reflect upon the character of God, to suppose him, under one dispensation, to have prescribed a law which is at variance with the institutions he has established under another. It is to place the Deity in opposition to himself, and virtually to deny his perfections: for this alleged abrogation of the entire law, with all its moral sanctions, is widely different from admitting the removal of its ceremonial services or typical adumbrations, which would only imply, that the former system, adapted expressly to the peculiar circumstances of the people for whom it was framed, naturally ceased with the progress of the human character, and the appointed manifestation of a sublimer order of worship. Hence it annihilates all personal religion, and all progression of moral character: it is a virtual reflection upon the conduct of our Saviour, who obeyed the precepts of the law, and fulfilled its requisitions, not surely to abrogate, but to exemplify and honour them; and it is, moreover, contrary to that spirit of attachment to all its demands, which the eminent men upon sacred record have expressed, in the language of praise and celebration. The greatest of the kings of Israel, in those devotional hymns which have been transmitted to us, perpetually, and in a thousand varied forms of expression, declares his love to the divine law, and the complacency of his mind in all its requisitions. He affirms, that it was his constant meditation and delight; that it was even sweeter to him than honey, or the honeycomb; and that nothing should divorce his affections from it: and the apostle Paul triumphantly asks, "Do we make void the law through faith? God forbid—yes, we establish the law."¹⁹

We have entered with considerable particularity of

detail into the personal history of Moses, the proofs of his divine commission, and the characteristics of the law which was promulgated by him, in its civil, ceremonial, typical, and moral parts; because these constitute, not only so many separate portions of a narrative thus distinctly and individually interesting, but because they form themselves into one mighty subject, that comprehends one of the most extraordinary appearances of heaven to man. The Mosaic dispensation is that central point in which the past movements of Providence converged, and whither, throughout all the generations of antecedent time, they tended: it also appears to have been the point from which the occurrences of succeeding periods emanated and diverged in every direction; no future state of mankind being unconnected with its transactions, or uninterested in its civil and ecclesiastical institutions.

Among other peculiarities, we wish to have it distinctly marked as introducing the *age of the written word*, which God had, indeed, from the very creation, maintained a constant intercourse with his creatures by means of dreams, visions, voices, and celestial messengers; but he had not hitherto communicated his will in a permanent form. By means of the longevity of the patriarchal ages, the incidents of past time could be transmitted through many centuries, with a degree of certainty which the veracity of those few individuals, through whom these traditionary accounts were conveyed, might well inspire. In addition to this, the possibility of mistake, as to truth, was prevented by the over-riding care of Providence. The historic facts in which Moses was not personally concerned, were most probably collected by him in this manner, and narrated in his writings with the utmost fidelity. There were, besides, certain *understood* principles of moral conduct, which descended from father to son, and which the finger of God had engraven upon human consciences; but never, till the ten commandments were inscribed upon the two tables of stone, was any commencement made towards the formation of that volume, whose sacred inspirations now constitute the source of hope, and the guide of reason to mankind. The necessity for this measure was apparent. Previously to this period, Adam might have conversed with Lamech, the father of Noah; Lamech, with his grandson Shem; and Shem with his descendants Abraham and Isaac: and these, with their immediate posterity: by which means, four persons would transmit the essentials of divine revelation through a series of upwards of two thousand years. But about the time of Moses, human life became reduced to nearly its present ordinary duration; in consequence of which, tradition would naturally become more uncertain, and the necessity of a written standard of faith and practice increasingly urgent. It was no longer possible to make a direct appeal to those venerable men who had held intercourse with predecessors that almost breathed the air of primal paradise, and who were laden with the mental treasures of a thousand years: a disadvantage which was compensated by the kind arrangements of Providence, in separating one people from the rest of the nations, and intrusting to them the sacred oracles.

Biography.

THE disappearance of a person of eminence from the scene of useful labour, is apt to occasion a feeling of despondency to survivors. They look around for a competent successor, with an air of vacant and wondering inquiry, which is strongly expressive of the deep-seated apprehension, that one who is to be found adapted to occupy the forsaken office, in a manner equally or comparably honourable. Affectionate remembrance magnifies the virtues, and assiduously obliterate the imperfections, of the departed friend or ruler who once inspired confidence in every bosom, or shed a lustre upon the annals of his country: and if the feelings of this nature are prompted by the ordinary deprivations of life, or the common course of human affairs, it is easy to believe that the sentiment of regret would be most poignant in every Israelitish heart at the loss of such a well-tried leader as Moses. But he who had taken this singular people under his patronage, was at no loss to accomplish his purposes by raising up qualified agents, and did not suffer them to remain destitute of a guide long trained and precisely suited to their circumstances. Moses had, indeed, previously to his departure, been directed of God to place Joshua over the congregation; to give him a public admonition respecting the diligent discharge of his office, and, according to the remarkable phraseology of the Scriptures, "to put some of his honour upon him." (Num. xxvii. 20.)

Joshua's accession to the government.

Joshua assumed the government of Israel about A. M. 2553. He was the son of Nun, of the tribe of Ephraim, originally called Oses or Hosen; but Moses made the alteration to commemorate his appointment to spy out the land, and to intimate, according to the Hebrew idiom, the assurance of salvation. Hence, he was not to be denominated, *יושע*, Hosen, salvator, but *יושוע*, Joshua, dominus salvator: corresponding, both in title and character, to Jesus, the author of eternal salvation; of whom, conformably to the character of the Jewish dispensation, he was an eminent type.

His qualifications.

Of his qualifications for the station to which he was elevated, we have the most decisive testimony of God himself, which is amply corroborated by his splendid career. His personal courage, integrity, and piety, are always conspicuous; and he was instrumental to those successes which have raised him to the pinnacle of heroic fame. He was "a man in whom was the spirit;" "full of the spirit of wisdom" (Numb. xxvii. 18. Deut. xxxiv. 9); sometimes obtaining his information by immediate revelation, sometimes from the sanctuary, and by Eleazar the high priest, Aaron's son, who consulted God by the Urim and Thummim, when he presented himself before the veil opposite the mercy seat, and was answered by a voice issuing from that sacred spot. The ancient Talmudists, in common with universal tradition, represent him as the author of that perspicuous and striking narrative which appears under his name; in which, with the faithfulness of the historian, the piety of the saint, and the odour of a hero personally engaged in conducting the military operations

recorded, he carries forward the history of Israel through seven years, during which the conquest of Canaan was completing, and eighteen additional ones of his subsequent government: the book itself, which includes the death of Eleazar, proceeds about five or six years by another pen.

It is not improbable that, knowing the warlike spirit of the nations whom the Israelites were about to dispossess of their territory, and the preparations which the report of the meditated attack had induced them to make, Joshua felt the necessity of some assurance immediately from Heaven, to afford him encouragement. Accordingly, he was no sooner invested with the supreme authority, than God spake to him, either immediately from the sanctuary, or by some angelic messenger, in terms which were highly calculated to dissipate every apprehension. He was given to understand, that to him should be accorded similar assistance and success as were bestowed on his illustrious predecessor; and that, upon the condition of his strict adherence to every command of the law, the promised possession should become an easy conquest. He was to act with the same zeal and courage, as though the result depended exclusively upon his exertions: but at the same time to preserve in constant recollection, that the real and supreme governor of Israel employed him only as an agent of his providence.

After these intimations the Hebrew general issued his orders. In three days they were to attempt the passage of the Jordan, and to prepare a supply of provisions, probably because the miraculous supply of manna was beginning to fail, as they had attained the extremity of the wilderness. This provision they were enabled to obtain from the country of Sihon and Og, which they had lately subdued, and in which they at present sojourned. In the mean time two spies were dispatched to collect information respecting the state of the opposite shores, especially the fortifications of Jericho, which was to be first assaulted. By some good contrivance the spies entered the city, and were received into the house of Rahab, who was probably the keeper of a public lodging-house. The king was soon informed, however, of the entrance of these strangers, and suspicious of every such intruder at so momentous a crisis, he shut the gates and sent in search of the men. Their hosts, to conceal them from this dangerous inquiry, took them up to the roof of her house, and covered them over with some stalks of flax, stating in reply to the questions of the king's officers, that the two strangers had made but a very cursory stay at her house, departing at the close of the evening; and if they had a wish to secure them, no doubt they might be easily overtaken: by which deception the officers were inveigled into an useless pursuit towards the fords of Jordan. No sooner were they out of sight, than she hastened to the spies, expressed her firm conviction that their God was the

Divine communication to him.

Preparations for the attack on Canaan.

Spies sent.

Biography. supreme sovereign of the world, whose miraculous interpositions on behalf of their nation had struck her countrymen with the utmost alarm, and that the land would inevitably be subdued by their arms; soliciting at the same time a benevolent requital of the kindness she had that day manifested towards them, in the future protection of herself and family. This was instantly and solemnly promised; when, as it was dark and her house was built upon the city wall, she was able to facilitate their escape by means of a cord let down through one of the windows. This scarlet cord was the agreed signal which, on the day of victory, was to distinguish and protect her house. By Rahab's advice the spies remained three days in the neighbouring mountains, and afterwards hastened to the camp to give an account of their adventure, and represent the consternation of the Canaanites.

Passage of the river Jordan. Joshua immediately advanced to the banks of the river, and prepared to pass over. The country which they had recently conquered was bestowed upon the two tribes of Reuben and Gad, and the half tribe of Manasseh, in order probably to be a barrier, or line of defence for the Israelitish possessions; nevertheless they were to assist their compatriots in the meditated conquest. The general, having marched the army forward, communicated precise directions respecting the particular order in which they were to proceed to the river, which at this period of the year, it being spring, usually overflowed its banks, through the melting of the snow upon mount Lebanon. When they advanced, the priests with the ark went in front, and no sooner had their feet touched the river, than it miraculously divided and stood on heaps on either side, opening a passage for the thousands of Israel. The priests stood in the centre of the bed of the river till the entire movement was accomplished: when, upon their gaining the opposite shore, and rejoining the people, the waters flowed back into their forsaken channel. By divine direction, twelve persons were nominated, an individual from each tribe, to select twelve stones in the middle of the bed of the Jordan, where the priests were commanded to stand; to set them up upon the spot; and to bring twelve others on shore for a similar memorial of the interference of Providence. Thus they departed out of the wilderness by miracle, as by miracle they had entered it. Moses conducted them through the Red Sea, and Joshua through the river Jordan; the one into the desert, the other into the promised and plentiful land; the one to prove their character, the other to secure their inheritance. These striking coincidences and contrasts it is the business of the historian only to name: the reader will find them worthy of being retraced in the hour of solitary reflection.

Two memorable circumstances attended the introduction of the Israelites into the promised land: the renewal of the rite of circumcision, which had been suspended during the long sojourn of the wilderness; and the ceasing of the manna by which they had hitherto been miraculously supported. Gilgal was the first place of their encampment; and so great was the terror that diffused itself throughout the country, that for the present, at least, they had little reason to apprehend any very considerable military impediments to their progress. Joshua seems to have availed him-

self of the earliest opportunity of going out to survey Jericho, from which place the army was only about two miles distant. Here he was met by an extraordinary personage, either an angel, or, as some suppose, the Divinity, in the form of a human being, clothed in armour, with a drawn sword in his hand. Unacquainted with the real character of this appearance, the Hebrew general advanced, and put the question, whether he was a friend or a foe? when the disclosure of his being the captain and guard of Israel produced in him those reverential feelings which inspired his predecessor at the manifestation of the burning bush. Similar injunctions, also, to put off his sandals were given on the present occasion; and very explicit orders were communicated respecting the manner of conducting the siege of Jericho. The whole army marched round the city six days successively, with seven priests having trumpets formed of rams' horns in their hands, preceding the ark: the armed men went before them, and the rest of the people followed the priestly procession. On the seventh day, the march commenced about the dawn, and the circuit was accomplished seven times, at the last of which Joshua commanded the people to shout, proclaiming the divine will to give them immediate possession of the city: the walls instantly fell flat to the ground in such a manner as to present no obstruction to the conquerors, who hastened forward, spreading the sword of destruction on every hand, irrespective of either age or sex, man or beast. To complete the work, the place was set on fire, and everything consumed, with the exception of the silver and gold, and vessels of brass and iron, which were reserved for the treasury of the house of the Lord. According to the engagement of the spies, Rahab and her friends were saved amidst the general massacre, with all the property contained in her house. Joshua denounced a solemn curse upon whoever should venture to rebuild it; which anathema, it was remarked by Maimonides, was pronounced that the miracle of the subversion of Jericho might be kept in perpetual memory; "for whoever," says he, "saw the walls sunk deep into the earth, would clearly discern that this was not the form of a building destroyed by men, but miraculously thrown down by God."

Proper persons were now dispatched to take a view Attempt of Ai, a place about twelve miles from Jericho, the upon Ai. report of whose inconsiderable size and ill state of defence induced Joshua to send only a detachment of three thousand men, which he supposed to be amply sufficient for its capture. They were, however, entirely routed, and pursued to their encampment. The effect of this failure was extremely dispiriting: Joshua rent his clothes, and prostrated himself before the ark of God, while the priests covered their heads with dust, in token of mourning. The expressions of the leader of Israel in his address to Heaven on this occasion must be considered as tinged with too much dependency, and he was ordered to rise from the ground, and instead of indulging in vain complaints or alarming forebodings, to institute an inquiry into the offence which he was given to understand had been committed, to occasion this early disaster. It was soon discovered that, notwithstanding the express injunctions of Joshua previous to the approach upon Jericho, not to spare any part of the property which was found in that devoted city, or to conceal anything consecrated

Taking of
Jericho.

Biography. to a sacred purpose, Achan, a man of the tribe of Judah, seized upon some of the spoil and hid it in his tent. He had secured and appropriated a rich Babylonish garment, with two hundred shekels of silver, and a wedge of gold of fifty shekels weight. The culprit, with all his newly acquired treasure, his family, his cattle, and his tent, were immediately taken into a valley, where the goods having been burned, and the several persons connected with him as participators in his crime stoned to death, a heap of stones was collected on the spot as a perpetual monument of this melancholy transaction.

At taken. A second attempt against Ai was now arranged by the direction of Heaven. The army advanced on the northern side of the town, and an ambuscade was planted on the western. The king hastened out with his army and the inhabitants, and being drawn to a distance by the feigned retreat of the troops under Joshua's immediate command, the thirty thousand men who constituted the ambuscade sallied forth at a preconcerted signal, and took and destroyed Ai by fire. At the same moment the main body turned upon their pursuers, who were soon cut to pieces: every man, woman, and child, was given to the sword; and the king, having been hung till sunset, was afterwards buried at one of the gates beneath a heap of stones: the cattle were reserved for the use of the victorious Israelites.

The Gibeonites. For the particular circumstances accompanying these and the future achievements of Joshua, we must refer our readers to the detail of the Sacred History; it being only necessary for us to mark the most important transactions, and offer such general observations as certain memorable events seem to require. The petty kings on that side the river Jordan now entered into a league, with a view to their mutual defence; but the Gibeonites consulted rather their own safety, by the adoption of a singular stratagem to obtain a peace with their invaders: they had deceived them into the idea that they were foreigners coming from a great distance; but three days afterwards, having discovered the imposition, they took measures to reduce them to a state of perpetual slavery, making them hewers of wood and drawers of water; an expedient which appeased the discontents of the people, and prevented the danger of incurring the divine displeasure for violating a solemn oath of alliance.

A. M. 2554.
—
B. C. 1450.

Displeased at this separation from the Canaanitish confederacy, the Gibeonites were soon surrounded by the Amorites, and shut up in their principal city. This reduced them to a state of great distress, and incited them to make application to Joshua, who instantly accorded to them a prompt and effectual assistance. Early in the ensuing morning he marched upon the enemy, and completely routed them with bloodied slaughter. In addition to the ordinary sufferings of a retreat before an incensed and warlike enemy, it is stated in sacred story, that "it came to pass as they fled from before Israel, and were in the going down to Beth-horon, that the Lord cast down great stones from heaven upon them unto Azekah, and they died: they were more which died with hail-stones than when the children of Israel slew with the sword" (Josh. x. 11.) This circumstance has given birth to several elaborate dissertations, in which learned men have adduced instances of the falling of immense stones from the atmosphere, to the

destruction of many lives. None of those cases, however, afford any very satisfactory elucidation of the present event; the truth of which appears to have been, that a heavy hail storm overtook the retreating forces of the Amalekites, and cut them off; the peculiarity of which consisted not so much in the circumstances of the storm, as in the time of its occurrence. Destructive hail has in other cases fell upon men, but this was in connection with an express promise from Heaven to assist the Israelites. It descended at the moment which must have been anticipated, exclusively too upon the enemy, and cannot be viewed in any other light than that of a miraculous interference. Joshua had been expressly assured before the battle that God would be with him; that the confederate princes should be delivered into his power, and not a man should stand before him; and while this excited his confidence in prospect of the conflict, it justified and substantiated that confidence in the progress of the victory.

Another accompaniment of this day's achievements has awakened a still greater curiosity, and produced in the minds of mankind a more wondering attention, than the preceding miracle. It is related in the following words:—"Then spake Joshua to the Lord in the day when the Lord delivered up the Amorites before the children of Israel, and he said in the sight of Israel, Sun, stand thou still upon Gibeon, and thou Moon, in the valley of Ajalon. And the sun stood still, and the moon stayed, until the people had avenged themselves upon their enemies. Is not this written in the book of Jasher? So the sun stood still in the midst of heaven, and hasted not to go down about a whole day. And there was no day like that, before it, or after it, that the Lord hearkened unto the voice of a man: for the Lord fought for Israel." (Josh. x. 12—14.) It will obviate the objections which have sometimes been advanced against this miracle, to remark, that the Hebrew general did not use a philosophic, but popular language, which was, indeed, absolutely necessary, unless he had chosen to incur the charge of insanity. In the ordinary intercourse of life, and even in those written communications which are not strictly scientific, philosophers themselves do not deem it necessary to deviate from the common idiom, otherwise they would be unintelligible to the mass of mankind. Besides, in the days of Joshua, and long posterior, the system of astronomy was conformable to the appearances of nature, and science had not yet conducted her votaries into those vast fields of discovery which have been thrown open to modern times, and are become accessible to the multitude; and yet, even at this advanced period of the world, it would be deemed pedantic, rather than necessary, were the language of science to be transfused into the records of history. Some have supposed that the command in question was issued, not at noon, when the sun was, according to the literal interpretation, "in the midst of heaven;" but at the time of his setting: when Joshua, observing the unfinished state of the conflict, requested a miraculous prolongation of the day. It has been remarked, that the words in question, *וַיַּעַם הַשֶּׁם*, signify merely that division of the heavens which is formed by the visible horizon; and that *שָׁשׁ*, rendered *sun*, properly signifies the solar light, which it is supposed was made to linger in the heavens or in the horizon about twelve hours. In this case the rotatory motion of the earth was not

Standing
still of the
sun and
moon.

Biography. suspended: but the miracle consisted in the retention of the light, by giving it perhaps an unusual refraction, so as to render it visible at once over the whole, instead of half the globe. It is by this means that the sun, according to the present laws of nature, actually appears above the horizon for some time after his descent below it; a phenomenon, which is not only of daily occurrence, but easily explained: the same refractive power of the atmosphere, being proportionally increased by a direct interposition of Providence, might produce the extraordinary prolongation of the day, which took place at the voice of Joshua. If the narrative of this extraordinary occurrence be considered, according to its most obvious and most natural interpretation, we must suppose that the motion of the earth upon its axis was suddenly suspended by a volition of God; and there are really no difficulties attendant upon this hypothesis, which a reflecting mind will deem at all insuperable. He, whose omniscient intelligence foreknew, and whose perfect wisdom arranged all the harmonies of nature, could as easily and did as certainly provide for this as for any other event in the progress of time: an event which, however it deviated from what our limited experience has induced us to denominate the course of things or the law of nature, could not possibly be contingent to an infinite and eternal being; and might as certainly as any other circumstance, whether important or insignificant, have formed a part of that system, whose basis is the eternal past, and whose consummation is the illimitable future. To a Providence, which spreads its operations over the whole of time, it was quite as natural, that at that precise era, when Joshua was pursuing the fugitive Canaanites, the sun and moon should be made to stand still; or that that should occur in nature which inevitably produced such a phenomenon; as that, at a previous period, these orbs should begin to shine, or that at any subsequent moment they should retain their station, and diffuse their influence. It may be inquired, indeed, if the revolution of the earth upon its axis were so suddenly suspended, how is it possible to account for the circumstance, that none of those disastrous consequences ensued, which in such a case would seem inevitable? As every being and substance upon the earth's surface is carried round with it at the rate of a thousand miles an hour, must not a sudden stoppage of this motion have whirled every thing moveable from the surface, dashed the ocean into air, and overturned the most stupendous rocks and mountains? Surely this instantaneous suppression of the diurnal movement of our planet must have necessarily produced a most calamitous re-action! The reply is obvious: the same miraculous energy which arrested the luminaries of heaven in their course, or, to speak philosophically, which caused the earth to rest upon its axis, could have prevented, at the same moment, the effects which, in an ordinary case, would have naturally resulted from the suspension of any one of the laws of nature. The same volition which arrested the whirling globe, could unquestionably, and would most assuredly avert the ill consequences of that mighty jar which must otherwise have overspread the world with confusion and ruin. The one of these operations is quite as conceivable as the other, and both were equally requisite to complete the miracle.

The sun and moon were worshipped as gods

throughout the heathen world, and many nations boasted of the title of *Helios*, or descendants of the sun. This was an ancient superstition, and may be traced in the records of the very earliest times. All things were supposed to be under their influence, as the chief deities, and universal preservers and creators. Heliodorus introduces the queen of Ethiopia as invoking the sun, *Ἡλιακαὶ θεῶν βασιλεῦς κ. τ. λ.*—*Let the sun, the great author of our race, be invoked as a witness upon this occasion.* Both luminaries are thus addressed as a sacrifice, *ὦ Δίαστρο, Ἥλιε, καὶ Σελήνη ἐσπέρου.*—*Our Lord the sun, and our governess the moon.* We find the sun invoked by the Egyptian priests, at the funeral of a deceased person, as the fountain of being, *ὦ νεφέρα Ἥλιε, καὶ θεῶν κέντρος κ. τ. λ.*—*O overweening lord, the sun, and all ye other deities who bestow life upon mankind; receive me, I beseech you, and suffer me to be admitted to the society of the immortals.* (Cosa. Helios. l. 10. Ethiop. l. 4. Porphyry de Abst. l. 4.) If, as is most probable, if not absolutely certain, the inhabitants of the district where this extraordinary battle occurred, were worshippers of the celestial luminaries, esteeming the sun and the moon as their principal deities; nothing could have been more appropriate than the miraculous interposition of the God of Israel at the voice of Joshua. The very gods of these people were compelled to see the overthrow of their votaries, and even to lend an unwilling aid to the hostile forces of their enemies. The Gibeonites had certainly joined, in considerable numbers, the army of the Israelites, and must have been witnesses of that stupendous miracle, which was so calculated to nullify their religion, and confirm the faith of the people of God. Each must distinctly perceive an omnipotent agency, as the towers of Gibeon retained the lingering splendour of the day, and the valley of Ajalon was filled with the undeparted mildness of the lunar beam. The Providence which operated these effects, will appear to have been still further triumphant, if it be admitted, what is indeed most probable, that Gibeon had a relation to the sun: for *Giba*, as Bryant observes, signifies a hill; and the term *On* is well known to denote the sun. *Gibson*, therefore, is literally the *hill or high place of the sun*. In like manner Ajalon, which, from *אָלון*, should be expressed *Aia-Lun*, denotes the *place or shrine of the moon*; for *Al* or *Aia*, in the language of ancient Egypt and of many other countries, signified a place, as *lun* signified the moon among the ancient Hebrews, Germans, and many other nations. Gibeon, therefore, most likely contained a temple of the sun, the king of heaven, and the valley of Ajalon, a temple of the moon, the queen of heaven; by resting on whose turrets, each heavenly luminary would diffuse an unwelcome radiance through the recesses of idolatrous adoration.

While their forces were in full and disastrous retreat, the five confederate kings hid themselves in a cave at Makkedah, a place about eight miles distant from Eleutheropolis; in which they were blockaded by the orders of Joshua, as soon as he obtained information of their attempted concealment. Upon his return from the pursuit, the cave was opened, the royal fugitives brought forth, and hung upon the spot: after which the sword of excision traversed Makkedah, Lihnah, Lachish, Egton, and other places, in rapid succession; till the whole of southern Canaan having yielded to the desolating power of the conqueror, he

Cave of
Makkedah.

Biography. returned to his encampment at Gilgal. A new confederacy, however, was soon formed to the north, under the direction of Jabim, the king of Hazor, in which a number of petty princes entered, who assembled an immense force at the waters of Merom; to the amount, according to Josephus, of three hundred thousand foot, ten thousand horse, and two thousand chariots. As the Israelites were interdicted the use of horses and chariots, by the express command of God, this new confederacy assumed a very formidable aspect, and presented itself in an imposing and advantageous attitude. But Joshua did not hesitate to meet the fierce encounter; and, encouraged by a divine assurance of success, he fell upon them suddenly, defeated them completely, slew Jabim, and burnt his city; and delivered up all the cities of the confederacy, to be plundered by the Israelitish soldiery.

After these transactions, it became necessary to apportion out the lands which had been subdued, among the several tribes which had hitherto been unsettled; for which purpose, proper commissioners were appointed to survey the country, and the lot resorted to as the most unexceptionable mode of determining the partition. And here the superintendence of Providence could not be overlooked, nor the prophetic character of Moses and Joshua. The appeal to the lot gave every tribe the possession which these servants of God had predicted, in all the circumstances of soil and situation. The tribe of Judah became enriched with a district abounding in vines and pasture grounds; Asher had a province full of oil, iron, and brass; Naphtali possessed a part extending from the west to the south of Judah; Benjamin, one in which the temple was erected; Zebulun and Issachar comprehended the different sea-ports; Ephraim and Manasseh, places celebrated for the "precious fruits of the earth." No particular district was appropriated to Simeon and Levi: the former participating with Judah, and the latter being diffused among the other tribes. Eight and forty cities, however, were bestowed upon them. Six places were also appointed as cities of refuge for those who had committed involuntary murder. Joshua had a residence in the vicinity of Shiloh, where the tabernacle was set up, to which perpetual recourse might be had for divine instruction.

These regulations being completed, the Reubenites, the Gadites, and the half tribe of Manasseh, were called together by Joshua, who dismissed them from the service in which they had so honourably engaged, with very solemn and wise admonitions respecting the distribution of the booty they had acquired in the war, and the future observance of the Mosaic institutions. To the other half tribe of Manasseh which had received no inheritance from Moses, Joshua appointed a residence among their brethren on this side Jordan, westward. Then, as the sacred historian emphatically represents it, "The Lord gave unto Israel all the land which he sware to give unto their fathers; and they possessed it and dwell therein. And the Lord gave them rest round about, according to all that he sware unto their fathers; and there stood not a man of all their enemies before them; the Lord delivered all their enemies into their hand. There failed not sight of any good thing which the Lord had spoken unto the house of Israel: all came to pass." (Josh. xxi. 43—45.)

As soon as the two tribes and a half had crossed

the river, they proceeded to erect an altar, at the place where the miraculous passage of the Israelites had been so recently accomplished, as a memorial to future ages of their connexion with the inhabitants of the opposite banks and country, and a testimony of their similarity of religion. Too suspicious of their friends, and neglectful of the proper methods of obtaining information, the people assembled in Shiloh, to concert a warlike expedition against the offending tribes, whose altar they had hastily concluded to be an idolatrous construction. But previous to the commencement of hostilities, they dispatched an embassy under the direction of Phinehas, the son of Eleazar the priest. Ten princes of distinction accompanied him. The overbearing zeal of the multitude appears to have so far infected the individuals of this mission, that they addressed the persons to whom they were sent in a manner sufficiently blunt and uncourtous; prejudging the case by a direct impeachment, and referring with an intelligible severity, to the history of the trespass of Achan. To this the Reubenites, Gadites, and Manasseites, promptly answered, that so far from intending to adopt a measure calculated to seduce any part of the people of Israel from their allegiance to God, they had raised the altar in question, for the very opposite purpose of perpetuating his worship and transmitting to their posterity the rich inheritance of the true religion. If in time to come, it should ever be objected to them, as it probably might be, that they were excluded, by their very circumstances and situation, from the body of the Israelitish nation, they thought it highly expedient to make an altar conformably to the divine pattern, as a proof that Judah could not separate them from a participation in the privileges and religion of their brethren; and they expressed a horror at the thought of being guilty of that apostasy which had been so unexpectedly imputed to them. This explanation was, of course, satisfactory; the embassy returned, and the people dispersed. A name significant of its real design was given to the altar, that it might occasion no future misapprehensions: it was called *Ed*, that is, a witness.

Civil peace being thus restored, and external quiet secured by the undisputed sovereignty of the country acquired by the arms of Israel, a long period of prosperity and leisure attended the declining life of Joshua. At length, perceiving the approach of that day, when he must tread the valley of death, in which so many illustrious men had preceded him, he limited the enduement of Moses, in assembling the chiefs and magistrates, with their tribes, at Shechem; where he delivered to them a farewell and affectionate address. He retraced the goodness of that God who had guided and guarded them through the years that were gone by, reminding them of the assistance they had received, and the victories they had obtained; and faithfully warning them of the fatal consequences that must inevitably ensue, should they forget their obligations, falsify their vows, and amalgamate themselves, in any degree, with the nations whom they were bound to exterminate. With a solemnity peculiar to a good man, he adverts to an eminent Israelite, he engages them to renew their covenant with God, by fresh and solemn asseverations of eternal obedience.

Biography. The words of each party were written in the book of the law, and a great stone was set up under an oak, near the sanctuary of worship, that they might be perpetually reminded of their renewed engagements. After this solemnity the people were dismissed to their several residences, and their illustrious leader, at the age of a hundred and ten years, died in faith, and invested with a glory which religion only can confer upon mortality. He was buried at Timnah-serah, in mount Ephraim, in the year of the world 2561. a. c. 1443. Soon afterwards Eleazar, the son of Aaron the priest, followed him to the grave; and was interred in one of the neighbouring hills, which descended as a possession to Phinehas, his son and successor in the priesthood. The two tribes of Ephraim and Manasseh, availed themselves of this opportunity of public mourning, to fulfil the wishes of Joseph, whose bones were brought out of Egypt, according to his request, and now buried in Shechem, in a piece of ground which Jacob purchased of the sons of Hamor, and bequeathed to Joseph's posterity. (Josh. xiv. 32.)

His writings, character, and fame. Joshua is the reputed and probable author of the book which passes under his name; with the exception of a few concluding verses, containing an account of his death, which were supplied by one of his successors. The whole narrative is distinguished by that animation and preciseness of description, which evince that the historian was also the principal actor. His mode of writing is at once simple, concise, and glowing. His exploits were long preserved in memory, through the distorted representations of the pagan nations of antiquity. There is an evident allusion to the miraculous passage of Jordan, in the story of Neptane drying up the river Isachus. Hercules was certainly the same with the Hebrew general: the scene of his victories, and his various achievements, may be traced in the accounts of the Phœnician hero, who is stated to have carried on a war with Tryphæus and the giants, in behalf of the gods, as Joshua fought the Canaanites; many of whom were reported to be of gigantic stature. The scripture facts of the descending stones, and the arrest of the sun and moon in their spheres, have each their respective antitypes: for Hercules received a similar kind of assistance in his contest with the sons of Neptune; and Callimachus describes the sun as stopping the wheels of his chariot, to hear the melodious chorus of nymphs; which occasioned the prolongation of the day. Statius also represents the sun as standing still at the sight of the unnatural murder committed by Atreus. (CALLIM. in DIEN. STAT. THEB. lib. 1. et 5. Comp. also OVIN. Metamorph. de Phaëton.)

The measure of exterminating the nations of Canaan, has been charged with extreme cruelty, and cited as an instance of unwarrantable aggression: but whatever objections may be urged against it, they cannot be imputed to Joshua, since he acted under a commission of paramount authority. The councils of heaven, therefore, are impeached by the objection; than which nothing can be more presumptuous in a short-sighted mortal. The governor of the universe may have reasons for his conduct which it would be improper or unnecessary to communicate to his creatures, and which, in many cases, could not be fully comprehended even by the utmost stretch of human sagacity. It is sufficient for a man that he has the commission of God, acting

in obedience to which, it is impossible to err; and whether the line of conduct we are directed to pursue, coincide with our predilections, or oppose them, the principle of obedience is simply the will of God. But we need not recur merely to this sentiment, in order to vindicate the conquest of Canaan: satisfactory reasons are assigned for the proceeding, in the sacred page. The iniquities of its inhabitants rendered them obnoxious to the divine displeasure, and proper subjects of punishment. When Moses summoned the Israelites to a general audience, previous to the passage of Jordan, he expressly states, and with reiterated declarations, "for the wickedness of these nations the Lord thy God doth drive them out from before thee." (Deut. ix. 34.) In executing that decree, which was founded upon this consideration, an ample space was afforded them for repentance, which would no doubt have had the effect of averting those calamitous visitations which they sustained by the hands of the Israelites. In this sense the severities which were predicted were conditional, implying the happy consequences that might result from their reformation; but instead of improving in character, they degenerated, becoming more and more confirmed in sin. The language of Rahab renders it highly probable, that some means had been adopted, some special monition had been given them, respecting the determinations of heaven; for this subject appears to have been familiar to her mind. Her acknowledgments of the supremacy of the true God, and the pre-determined capture of the land, are not a little remarkable, betokening the existence of an impression in her own mind, and in that of her countrymen, respecting their real situation. "I know," said she, "that the Lord hath given you the land... the Lord your God, he is God in heaven above, and in earth beneath."

The following judicious remarks of Dr. Paley are highly illustrative of this subject, and must prove eminently satisfactory to those who, being scrupulous of the divine honour, have strongly felt the difficulties which involve this dispensation. "When God, for the wickedness of a people, sends an earthquake, or a fire, or a plague amongst them, there is no complaint of injustice, especially when the calamity is known, or expressly declared beforehand, to be inflicted for the wickedness of such people. It is rather regarded as an act of exemplary penal justice, and as such, consistent with the character of the moral governor of the universe. The objection, therefore, is not to the Canaanitish nations being destroyed (for when their national wickedness is considered, and when that is expressly stated as the cause of their destruction, the dispensation, however severe, will not be questioned); but the objection is solely to the manner of destroying them. I mean there is nothing but the manner left to be objected to: their wickedness accounts for the thing itself. To which objection it may be replied, that if the thing itself be just, the manner is of little signification: of little signification, even to the sufferers themselves. For where is the great difference, even to them, whether they were destroyed by an earthquake, a pestilence, a famine, or by the hands of an enemy? Where is the difference, even to our imperfect apprehensions of divine justice, provided it be, and is known to be, for their wickedness that they are destroyed? But this destruction, you say, confounded the innocent with the guilty.

1443.

The sword of Joshua and of the Jews spared neither women nor children. Is it not the same with all other national visitations? Would not an earthquake, or a fire, or a plague, or a famine amongst them, have done the same? Even in an ordinary and natural death the same thing happens. God takes away the life he lends, without regard, that we can perceive, to age, or sex, or character. But after all, promiscuous massacres, the burning of cities, the laying waste of countries, are things dreadful to reflect upon. Who doubts it? So are all the judgments of Almighty God. The effect, in whatever way it shows itself, must necessarily be tremendous, when the Lord, as the Psalmist expresses it, "moveth out of his place to punish the wicked." But it ought to satisfy us—at least this is the point upon which we ought to rest and fix our attention—that it was for excessive, wilful, and forewarned wickedness, that all this befel them, and that it is all along so declared in the history which recites it."

The directions which the Israelites received with regard to the method of proceeding in the conquest of Canaan, were as follow. Every city to which they approached belonging to another nation, was to be formally summoned: if the surrender were refused, they were to besiege it, and smite every male with the edge of the sword, the women and children being spared: if on the other hand the gates were opened to them, the inhabitants were to be spared, but reduced to the condition of slaves and tributaries. A different course was to be pursued when those cities were taken, which belonged to the land of promise: nothing that breathed was to be saved alive: the Hittites, the Amrites, the Canaanites, the Perizzites, the Hivites, and the Jebuzites, were to be unconditionally exterminated. They were required most scrupulously to avoid all alliance with these nations, lest they should be tempted to conform in any degree in their idolatries.

Whoever is acquainted with the human mind, is aware, that moral contagion is much more easily diffused than moral purity; and that, other things being

equal, a system of religion comporting with human passions is more likely to predominate over one that opposes their indulgence, than that the latter should displace the former, by the mere influence of its intrinsic excellence over minds already enlisted in the service of evil. Besides, the government of Israel during this period being essentially *Theocratic*, it was peculiarly proper to maintain the divine authority by an absolute interdiction of every measure calculated to alienate the mind from God or dissatisfy it with his service. Contact with surrounding nations might have spread the infection of disobedience; for while a conquered people are apt to contract the manners of their conquerors, they are capable also of diffusing their own habits amongst them, and the two nations in time, lose a considerable portion of their respective and characteristic peculiarities. Hence, it was necessary to prevent this intermixture, by requisitions tending to insulate and dis sever Israel from the vanquished Canaanites; on which account they were commanded to "overthrow their altars, break their pillars, burn their groves with fire, and hew down the graven images of their gods, and destroy the names of them." (Deut. xii. 3.)

Nor is this all. It is notorious, that victory in war was at that period, considered as the most decisive evidence of the power of any of the gods of the nations, and the conquerors claimed the superiority in behalf of their own deities, above those who were adored by the vanquished party. Nothing, therefore, could be better calculated to impress upon the Canaanites, and upon surrounding enmities, a sense of the glory of the only true God, than these signal and repeated successes; nor would the ordinary judgments of Providence, as earthquakes and tempests (against which, by the way, infidelity does not venture to object, although the means of effecting the extermination were comparatively of little consequence), have accomplished in any proportionable degree so important an impression.

SESOSTRIS.

FLOWERED ABOUT A. M. 2519.—B. C. 1485.

Biography. THE reign of this monarch constitutes a remarkable period in the obscurer part of the ancient History of Egypt. The actions attributed to him being of extraordinary grandeur, and his character one of singular magnificence. In our introductory article, enough has been said to show that his history is but little substantiated by authentic documents, and that the statements respecting him, which Herodotus and other writers received from the Egyptian priests, contained a number of facts obviously fictitious. As these, however, may have been mixed up with some truth, and as it is hardly possible that the very existence of this personage should have been an absolute fiction, we shall proceed to form the most consistent account of him that we can, out of the discordant materials which have come down to modern times.

The various names by which Sesostris has been designated furnish evidence of the difficulty which has been felt in fixing his identity, and of the intermixture of fable with history, so as to render it no easy task to separate it with precision from the truth. By Pliny, he is called Sesoia; by Tacitus, Rhampses; and by Scalliger, both Rhampses and Egyptus. According to Herodotus, he succeeded to the throne upon the death of Meris; though Diodorus Siculus, whom we must regard as inferior authority, represents him as posterior to Meris by seven generations. Some modern chronologists of high reputation are of opinion that he is to be considered as identical with Sesac or Shishak, in the sacred history, of whom it is remarked, that he is the first king of Egypt who is designated in Scripture by his proper name; the rest being uniformly called Pharaoh, the general cognomen of Egyptian royalty. Sir John Marsham thinks, that when Sesostris, or Shishak, set out to invade Asia, he could not avoid Judea, and accordingly captured Jerusalem, divesting it of its riches, and making Rehoboam, the king, his servant. The Seventy and Vulgate versions mention that he was accompanied by vast multitudes of Libyans, Troglodytes, and Ethiopians; his conquest of which nations is recorded in profane history. Sir Isaac Newton considers Sesostris as the Osiris of the Egyptians; the Belshazzar of the Greeks; and the Shishak of Scripture.

These opinions, in the judgment of others, assign far too late a date to the age of this celebrated monarch; and some, therefore, represent him as the son of that Pharaoh who perished in the Red Sea. To this notion there appear to be valid objections, especially the consideration that it is improbable in the extreme that any king of Egypt at that period should be in a condition to have achieved the conquests attributed to Sesostris. The common chronology makes him contemporary with

Moses, by assigning him B. C. 1485; but it will be found impossible to discover any precise period in history when a sovereign reigned, to whom all the actions related of Sesostris can be reasonably referred. Of this truth our readers will easily be convinced by the following short narrative, in which we have comprised the least incredible parts of his story, as delivered by various ancient writers.

Whether by the direction of a dream or an oracle, Education. his father devoted him to military glory from his earliest years. Having collected together all the male children in his dominions, who were born on the same day with his son, he had them brought to court, to be placed under proper nurses and tutors, like his own offspring. His idea was, that they who were the companions of his son's childhood would be most likely hereafter to prove his faithful and devoted soldiers; and surely it must be admitted that this novel plan was no inconsiderable evidence of the monarch's sagacity. The system of education was of course adapted, not only to the character of the times, but to the particular destination of these nurslings of military genius. The first care of their superintendents was to habituate them to toil and manly exercise: they were never permitted to partake of any food till they had performed a course of one hundred and eighty furlongs, or upwards of twenty-two miles, on horseback, or had undergone a proportionate exercise on foot. Often they were engaged in hunting; and thus, while the body was inured to labour, and the mind to discipline, they were gradually training to the enterprises of the warrior.

Ælian represents Sesostris as taught the arts of government by Mercury; which may probably refer to the Egyptian custom, mentioned by Jamblicus, of publishing all new books or inventions under the name of Hermes or Mercury. Whatever works or writings were put into the hands of these youths by their preceptors, having this signature, they might be said to receive their instructions from Mercury.

No sooner was this course of education in some degree completed, than the king determined upon Arabia. giving Sesostris and his juvenile companions an opportunity of displaying their abilities, by sending them with an army upon an expedition into Arabia. The mode of warfare to which they were thus introduced, was, of all others, best calculated to call forth their mental and corporeal energies. The enemy were vigilant, active, daring; and hitherto they had been unconquered. It was in this war that Sesostris learned to endure every privation, and to brave every danger; and notwithstanding the difficulties of every kind which beset his career, he returned triumphant to his native

Names and
time of
Sesostris.

Biography. country. After this he was sent westward, subdued Libya and the greatest part of the African continent, and was arrested only by the waters of the ocean. It was during this period of military splendour, uncertain as to its duration, that his father died; when he was invested with the supreme authority.

When Sesostris was elevated to the throne, he showed himself alike capable of wielding the sceptre of government and the sword of war. His first care was directed towards those internal regulations in which consist the security, no less than the glory and happiness of empires. His policy was, perhaps, dictated by prudence as much as by zeal for the public welfare. He seems to have cherished the most ambitious ideas, and to have meditated, as some assert, at the instigation of his spirited daughter Athyræ, the subjugation of the whole world; and he had sagacity enough to perceive that so mighty a project could never be carried into execution, unless he could adopt measures to promote the prosperity of his own people during his absence, and to confirm the stability of his throne. He felt it necessary to guard against the subversion of his authority by civil commotions or foreign foes; precautionary considerations which have not always influenced the minds of conquerors in the heat of ambition.

Sesostris determined to begin by such acts of generosity, kindness, and justice, as should tend to rivet the affections of his subjects; he therefore distributed lands and money amongst them; remitted fines and punishments; and manifested in public the most obliging attention to all who applied to him for bounty, or surrounded him as friends. Thus he aspired to be the idol of the people, and seems actually to have acquired that grand pre-eminence. His next arrangement consisted in dividing the kingdom into thirty-six provinces, called *Nomi*; over each of these he constituted a governor of approved fidelity and well-tryed merit; these, by serving as a check upon each other, prevented any individual attempt at usurpation, and by satisfying a reasonable ambition, bound them more effectually to his interests. Still further to answer the same purpose, he confided to his brother Armais the supreme authority during his absence; but with the express stipulations, that he should offer no injury to the queen and her children; form no connexion with the royal eunuchs—and abstain from the use of the diadem. His last and chief object of solicitude was the selection of an army that should comport with the extent of his projects, in numbers and in bravery. This he succeeded in raising, to the amount of six hundred thousand foot; twenty-four thousand horse; and twenty-seven thousand chariots of war: placing his early companions, who were no fewer than seventeen hundred, as officers in the different divisions. These were all devoted to his service, trained to the utmost hardihood, and inflamed with military courage. To confirm his supremacy in the hearts of the soldiers, he settled portions of land upon them by lot, in the most fertile part of Egypt; which was designed to preclude the necessity of either themselves or their descendants having recourse for subsistence to mechanical or mercantile occupations: by which means a race of soldiers might be raised in perpetual succession. Thus prepared, in the full maturity of his ambition, and the plenitude of his hopes, Sesostris stood like an eagle

perched upon a rocky eminence to look round for a prey. With or without a plausible pretence, he was resolved to proceed; his ambition must be gratified, and his troops employed.

Ethiopia, situated to the south of Egypt, was the first object of his attack; nor did it prove capable of any considerable resistance. Immediately upon the reduction of the country, he made it tributary, compelling its inhabitants to furnish, annually, a specified quantity of ebony, ivory, and gold. Having reached the promontory of Dira, upon the straits of the Red Sea, he erected a pillar with an inscription in hieroglyphics. Other monuments of his progress, of a similar description, testified his advance to still farther conquests; monuments, which, according to Piny (Hist. Nat. lib. vi. c. 29) and Simbo (lib. xvi and xvii), were visible after the lapse of several centuries.

With the view of exceeding his conquests to the utmost, he prepared a naval armament, which, from his success, soon dispelled the ancient prejudices of the Egyptians upon this subject. Two fleets being equipped; the one, consisting of four hundred sail, was stationed in the Arabian Gulf, the other in the Mediterranean; the former was ordered to the Red Sea, and subdued all the islands and cities upon the coast; advancing till the navigation was intercepted by shoals. The Mediterranean fleet conquered Cyprus, the sea-coast of Phœnicia, and several of the Cyclades. With his army, Sesostris overran Asia, with a rapidity that must excite the utmost astonishment, were it not considered that his force was so considerable, and the nations whom he vanquished so unprepared for an attack. The later historians assign to him the conquest of India, affirming that he left memorials of his success on the banks of the Ganges, and pursued his desolating march to the ocean, eastward; but Herodotus, whose information was derived from the priests of Memphis, Heliopolis, and Thebes, and who has related his life with a considerable degree of circumstantiality, does not give the least intimation of such a progress: the probability is, that this achievement was attached to his name, by writers who lived between the age of Herodotus and Diodorus Siculus; for the sake of superadding a grandeur to his career, already marked with sufficient impressions of vastness and aggression. He passed over, however, from Asia to Europe, and invaded Scythia and Thrace, where it seems that he was but partially victorious. He even fled before the Scythians, after sending ambassadors with a summons to surrender, which was contemptuously rejected. Piny represents him as being totally defeated by the Colchians; and a tradition, preserved in Valerius Placcus, describes him as vanquished by the Getæ, who were the most warlike people among the Thracians. It is generally admitted, however, that he left a colony in Colchia: though whether it arose out of the soldiery who loitered behind through fatigue, or disgust at the war, or in consequence of being dispersed in different engagements, or whether it was merely a detachment of troops quartered in Colchia to secure a retreat, may be questionable. During the expedition into Thrace, Sesostris was in great danger of losing his army; and either in consequence of the difficulties in which he was involved, from the failure of provision and the intricacies of the country, or on account of information he received from the priest of Egypt, of an insurrection

Sesostris.

Biography. at home; here his progress ceased westward. No monuments of his victory were ever traced beyond this region, and in every other part of his career, they were erected usually with this inscription, "Sesostris, king of kings, and lord of lords, subdued this country by the power of his arms." It is remarkable that he added an intimation of the spirit with which the inhabitants had nobly defended, or ignobly yielded their liberties. He also erected statues of himself, the greatest number of which, as well as the pillars he raised in commemoration of his victories, had perished even at so early a period as the time of Herodotus. That interesting writer, however, mentions two such figures cut out of a rock in India; one on the road from Ephesus to Phocæa, the other betwixt Smyrna and Sardis. Both of them represented a man five palms in height, the right hand holding a javelin; the left a bow; the remaining part of the armour was partly Egyptian and partly Ethiopian. Across the breast, from shoulder to shoulder, an inscription was written in the sacred characters of Egypt, to this effect, "I conquered this country by the force of my arms." As these statues have neither the name of any person or country inscribed upon them, some mistake them for images of Memnon.

It has been remarked, as a peculiarity of this conqueror, that he never adopted measures to secure his acquisitions, but contented himself with the glory of subduing and ravaging distant nations; which he did for nine years, without extending the ancient limits of Egypt beyond a few circumjacent provinces. Such at least is the statement of Justin; but others have not coincided in this opinion. What then, it may be reasonably inquired, was the result of those mighty operations to which his military genius impelled him during so many years of activity? Say that he returned laden with spoils from the different nations he subdued and followed by a multitude of captives; and that, in consequence of his successes, he was enabled to gratify his officers and soldiers with magnificent donations, which placed them in circumstances of ease and comfort after their toils: the hero himself obtained nothing but glory; a glory, however, polluted with blood, and disturbed both by the recollection of some past reverses, and by the eternal detestation of entire kingdoms whose peace and whose liberties had been immolated at the shrine of ambition. That he possessed some great and good qualities, we shall have occasion to remark; but these must not render us indifferent to the miseries which he inflicted upon the unoffending, or reconcile us to the folly and the guilt of trampling the fertile earth into barrenness, in the toilsome pursuit of a phantom. Nothing, indeed, but the indication of some balancing virtues could redeem such a character from utter infamy, or render him worthy of any distinguished place upon the historic page, except as a necessary link in the chain of events, or as an instructive record deduced from the worst aspect of human nature: for where in creation shall we find a more hideous sight than the mere conqueror?

Conduct of Arms. Disregarding the solemn injunctions of Sesostris, his brother assumed the diadem during his absence, violated the queen, and took the royal concubines. On his arrival at Pelusium, Armais, or as he is sometimes called, Danaus, received him with every external evidence of gladness and congratulation; but at the same

time contrived a plan to deprive him, at one stroke, of his crown and life. Having invited the king and the royal household to an entertainment in which they drank freely, he took care to have the apartments where they retired to rest surrounded with a quantity of combustibles, to which he caused fire to be applied in the night, for the purpose of effecting their destruction. This villainy, however, did not succeed to his expectation. Sesostris was soon roused by the conflagration to a sense of his danger, and according to Herodotus, adopted, at the suggestion of his queen, a most cruel expedient to save himself. Two of their six children were placed across some passage that was in flames in order to form a bridge for the escape of the rest of the family. Diolorus Sienlus gives a miraculous character to this deliverance. Sesostris, he says, implored the assistance of the gods, and thus fortuitously escaped: the guards, who had been intoxicated, being unable to render him any assistance. For the honour of humanity, we should indulge the hope, that the account of the former historian is founded in some misrepresentation. Armais was of course destined to feel the weight of his brother's indignation; and being driven out of Egypt, retired into Greece. The gods, particularly Vulcan, received on this occasion large donations as thank-offerings for the king's escape.

The latter years of Sesostris, from this period, were distinguished by works of art, which have more deservedly become the means of transmitting his fame to posterity, than his military achievements. It is not a little singular, that having apportioned out to his soldiers rewards suited to the different degrees of individual merit, he disbanded the army, and relinquished all intentions to future conquest and spoliation. To what principle this is to be attributed, it may not be easy to determine with precision; but some of his future conduct renders it probable, that the love of glory was by no means extinguished in his breast; and that it only operated in a different manner: or we may suppose that pride rather than ambition, with which it is so intimately connected, became henceforth the ascendant passion. Of this we have a striking exemplification in his mode of treating the tributary kings. When they came at stated times to do homage, and to pay the arrears of tribute, he displayed the most ridiculous insolence; and when he entered his capital, or went into the temple, he unharnessed his horses, yoking these princes, four abreast, to his car, and highly valued himself on being thus drawn along by the sovereigns of kingdoms. It is said that he was restored to some sense of justice and humanity, in the following manner. On one of these occasions, a king, who was degraded to the office we have mentioned, was observed to look with peculiar earnestness at one of the wheels of the chariot, and being asked what it was that so riveted his attention, he replied significantly, "O king, the turning round of the chariot wheel reminds me of the vicissitudes of fortune: for as every part of the wheel is uppermost and lowermost alternately; so it is with men, who sit on a throne to day, and the next, perhaps, are reduced to the vilest degree of slavery."

One of the first labours of the retired conqueror was to build temples to the number of at least a hundred, which exhibited in every city where they were distributed, his gratitude to the tutelary god of every place,

Biography. for the renown he had acquired; but he showed an unusual solicitude to enrich the temple of Vulcan, to express his acknowledgments for the protection which he believed that divinity had afforded him at the period of his brother's treachery at Pelionium, as well as to perpetuate the glory of his successes. Six gigantic statues of stone appeared in front of the edifice: two of them thirty cubits in height, representing himself and his queen; and four others of twenty cubits each, representing his four sons. Some ages posterior to this, Darius, king of Persia, and father of Xerxes, was desirous of placing his own statue at Memphis, before that of Sesostris, which was strenuously opposed by the priest of Vulcan; who, in an assembly of his order, asserted as a reason for his resistance, that the actions of Darius were not yet equal in splendour to those of the Egyptian prince: for that the latter had subdued the Scythians, who had never yielded to the arms of the Persians. He pleaded that it would be highly unjust to supersede the statue of his illustrious predecessor, or to claim a pre-eminence without having even equal claims to distinction. Darius acquired greater honour by nobly pardoning this remonstrance, than he could have done by causing the erection of the most magnificent monument

Scoriotis also raised two obelisks of marble, a hundred and twenty cubits in height, upon which inscriptions were written, expressing the extent of his power and revenues, and the number of nations he had vanquished. He also took care to state in all his inscriptions, what he determined should be their distinguishing feature, that his own subjects were exempted from the toil of working in these mighty undertakings, which his captives alone were employed to complete. Diodorus Siculus mentions the following sentence as most usual on these splendid erections: "No native laboured here."

Distribution of the sand.

Herodotus assures us, that Sesostris made a regular distribution of the lands of Egypt, apportioning to each person a square piece of ground, deducting his revenue from a small rental paid for these divisions. If any one suffered by the inundation of the Nile, he was allowed to send information of this calamity to the king, who commissioned proper officers to inquire into the extent

of the damage which had been sustained, and remit a proportionate part of the rent as a compensation, that no one might be taxed beyond his ability.

To secure Egypt from foreign invasion, particularly from its warlike neighbours the Syrians and Arabians, all the eastern coast, from Pelusium to Heliopolis, was fortified by the erection of a wall. Some of the captives, however, grew refractory, and the Babylonians, resolving to disengage themselves from the galling servitude to which they had been compelled, seized upon a strong hold, and desolated the country. They were, however, pacified by the offer of forgiveness, and a settlement, hence originated their city of Babylon.

The numerous canals with which the country was intersected, may be justly considered as the greatest work of Sesostris. The entire distance from the city of Memphis to the sea, was disposed of in this manner, by which artificial conduits were formed with the Nile. By this means the communication between the cities was facilitated, and the interests of commerce advanced: those injurious inundations, of which the inhabitants frequently complained, were prevented, and water conveyed to the different villages and towns in every direction. Still further to promote the comfort of the people, their sovereign caused an immense number of embankments of earth to be raised, upon which towns were erected, and made inaccessible to the overflows of the river, while others were removed, which had previously sustained injury in consequence of their low situations. These canals really changed the aspect, and the very character of the country; and though they rendered travelling inconvenient on horseback, and impossible in carriages, Egypt was, by this contrivance, defended from the cavalry of its enemies by which it had been before repeatedly annoyed. Sesostris, as in other instances, made use of the involuntary labours of his captives from different nations to perform this work. (Herod. lib. ii. c. 104.)

Having reigned thirty-three years, and being grown blind with age, the *great* Sesostris committed suicide; an action which the priests were infamous enough to extol. (Diod. Sic.)

FLOURISHED ABOUT A. M. 2768.—a. c. 1236.

Biography. THE distinctions between the tales of fabulous antiquity, and the incidents of real history, are not so well defined as the inquirer after truth desires. From the most solicitous investigation he must often return disappointed, and content himself with probability, where he was most eager to obtain authentic information. Fable and history, therefore, cannot be represented as two streams running parallel with each other, whose respective springs and various courses are so distinctly traced; the resemblance is rather of a shadow to another description. Real history, which, by the volume of inspiration, may be ascertained from its very commencement, at the creation of the world, flows like a

river with translucent clearness through many successive centuries, widening as it proceeds by the perpetual influx of fresh facts and occurrences; but, in its ascent, becomes, because at length blended with fable, whose rills and rivulets flow in from every quarter, but especially from the regions of poetry, to gratify indeed our imagination, while they serve to perplex our researches. It happens, from this circumstance, not only that the great facts of history are distorted, and the origin of nations and events rendered impenetrable obscurity, but that the life and character of individuals is completely lost, and they are often made to assume a twofold aspect: the one arising from the traces of reality, the other f-

Biography. the embellishments of fiction: the same person is a man and a god: Truth assigns him a mortal sphere; admiration and the love of the marvellous unite to invest him with mythological immortality; the absurdity of which has been strikingly pointed out by Cicero, in speaking of the prevalent opinions of philosophers, with regard to the origin of the gods, which have been so ridiculously detailed and distorted by the poets,—“*Qui et ira inflammatus et libidine furens induerunt deos; secernuntque et eorum belli, pugnas, prælia, vulnera videmus; odia præterita, dissidia, discordias, ortus interitus, querelas, lamentationes, effusus in omni intemperantia libidines, adulteria, vincula, cum humano genere concubitus, mortalesque ex inmortali procreatos. Cum postarum autem errore conjungere licet portenta, Magom, Egyptiorumque in eodem genere dæmonia; tum stiam vulgi opiniones, quæ in maxima inconstantia, veritatis ignorantie, versantur.*” (Cicero, *de Nat. Deor.* lib. i. sect. 16.)

What we have alluded to has happened particularly to Theseus; so much so, that it is almost questionable whether he ought to be accounted a fictitious or a historical personage. Some have considered his life as nothing more than a combined view of the earlier and uncertain traditions of the fabulous times of Greece, united under a single name, and brought into one connected story; and such is doubtless the shape which his biography assumes in the pages of Pausanias, as well as among the mythological writers: but we are inclined to admit the real existence of the individual, and to view the marvellous and improbable part of the description as the ingenious embellishments of imagination. We can only give our readers, with cautious detail, the principal particulars with which antiquity has been pleased to favour us.

His lineage. Theseus is said to have been the sixth in descent from Erectheus or Erichthonius, whose reign was distinguished by the institution of the mysteries of Eleusis: in the maternal line, his lineage is traced to Pelops, who was of Phrygian extraction, and the most powerful of all the Peloponnesian kings. Ægeus, the king of Athens, and the son of Pandion, is reputed to have been the father of Theseus, and to him he succeeded in the government of the kingdom. Ægeus, wishing to have children, applied to the oracle at Delphi; by which he was directed to abstain from intercourse with women, till his return to Athens. The response, however, not being deemed by him sufficiently explicit, he went to Træzene, a small city which had been founded by his grandfather Pitheus, who was highly celebrated for his wisdom and learning. But it does not appear that his morality was very remarkable; for having beard the oracular communication to Ægeus, Pitheus inveigled him into a criminal conversation with his daughter. As soon as Ægeus suspected her pregnancy, he hid a sword and a pair of sandals under a large stone, which he hollowed out for the purpose. This secret he communicated to the princess previous to his departure, and left orders, that in case of the birth of a son, who should be able, when he arrived at maturity, to remove the stone and the things concealed under it, she should send him with the tokens, with all possible dispatch and secrecy, as he was fearful of the formation of some plot against him by the Pallantides, by whom he was held in contempt for being childless. Æthra had a son, who, as some affirm, was imme-

diately named Theseus; and who was educated by Pitheus, under a tutor called Connidas. The tutor was afterwards honoured, on the day preceding the Thesean festivals, by the offering a ram to his memory.

For a considerable time, Æthra concealed the name of her son's father, and Pitheus availed himself of this secrecy to represent him as the offspring of Neptune, æthra, who was the patron of his city, and the object of Træzenian worship. In his youth he went to present the first growth of his hair to Apollo at Delphi, in conformity to the custom of the times; but he shaved only the fore part of his head, in imitation of the Abantes, which fixed the name of *Theseis* on this method of tonsure. Athletic in body, and ardent as well as sagacious

in mind, his mother requested him to repair to his father at Athens, which he was not disinclined to attempt; but, in the spirit of adventurousness, he refused to go by sea as being the safest mode, resolving upon the more hazardous enterprise of an expedition by land. The country was at this period every where infested with bands of robbers, who were remarkable for the celerity of their movements, and the ferocity of their dispositions. Their principal employment was to prey upon the traveler, and to lodge in every species of licentiousness. Hercules had swept away great multitudes of these ruffians in the course of his peregrinations, but their violence was afterwards renewed, and with increased energy, in Greece. The news of that hero's exploits inflamed the soul of Theseus, and he burned to acquire renown by similar victories: contrary, therefore, to the advice of his friends, he started upon the race of honour which his imagination presented before him in the road to Athens.

He was first attacked in Epidauria, by Periphetes; who, on account of the weapon he was accustomed to use, was designated the *club-bearer*. Having slain his adversary, Theseus seized upon his club, adopting it as his distinguishing weapon. His next success was against Sinæus, surnamed the *pine-bender*, from his practice of bending down the heads of two pines; between which he fastened the unhappy travellers who fell into his snare, and by the sudden spring of the trees to their original position, tore the victim of his cruelty to pieces. This barbarian had a daughter reputed for beauty, who had attempted to conceal herself from her father's conqueror; but he discovered her retreat among the bushes and plants, and promising her indulgent treatment, she resigned herself to the arms of Theseus, by whom she had a son named Melanippus. She was afterwards married, by his consent, to Deloneus. To Melanippus was born Ioxus, who assisted in the formation of a colony in Caria; and the Ioxides were remarkable for their worship of rushes and wild asparagus.

Crommyon being infested with a ferocious sow, called Puma (which some have considered as in reality the representation of an abandoned female robber), Theseus undertook and accomplished the task of destroying her. Sciron, a Megarian robber, is also said to have been thrown down a precipice by his superior power. He usually compelled travellers to wash his feet by the sea-side, in order to take the opportunity of throwing them into it. Sciron, however, is represented by the writers of Megara in a very different light: for they assert, he was not a ruffian, but a good man, and a scourge of robbers.

Journey to
Athens.

Exploits.

Biography. At Eleusis, our hero killed Cereyon, an Arcadian, in wrestling with him; and immediately afterwards, at Erione, or Termium, terminated the cruelties of Procrustes, otherwise called Demastes, by forcing his body to fit the size of his own bed, as he had been accustomed to practise upon strangers. Theseus was hospitably received by the Phylalidae, who were intrusted with the mysteries of Ceres, and to which, after due preparation, which he thought was required in consequence of his hands being stained with blood, he was admitted. After this service, he received a cordial welcome to their habitations.

Arrival at Athens. The eighth day of the month Cronius, or Hecatem-boron, corresponding with July, is represented as the time of his arrival at Athens, where he found the state in considerable disorder, in which the *Ægea* family largely participated. Medea, on her flight from Corinth, had cohabited with *Ægeus*, promising him children; and upon the arrival of Theseus, of whom she had no information, persuaded her paramour to contrive to poison him at an entertainment. Theseus, in order to enable his father to discover him, drew his sword, as if to carve the meat which was placed upon the table, when *Ægeus*, dashing down the poisoned cup, recognised and embraced him as his son. The people were immediately convened, the father presented his child, and the universal voice celebrated his valor, and his accession.

Acknowledged by his father.

Marathonian bull.

This exasperated the Pallanidae, who were anticipating the sovereignty upon the death of *Ægeus*, and they instantly prepared for war. One part of their forces marched upon the city from Sybettus, the other lay concealed in ambush; but their herald revealed the whole plan to Theseus, who surprised and destroyed those who were in ambuscade, dispersing the rest. To maintain his reputation for heroism, he now proceeded to attack the Marathonian bull, which was ravaging the district of Tetrapolis. This famous animal he took and brought in triumph to the city, where he offered him in sacrifice to the Delphian Apollo.

Some time after this exploit, the collectors of tribute came the third time from Crete. The occasion of its exaction was as follows. Androgeus, son of Minos, king of Crete, had visited Athens at one of the sacred feasts, and became so intimate with the Pallanidae as to excite the jealousy of *Ægeus*; who is said, in consequence, to have ordered him to be put to death. Other writers allege that the youth was killed in an attempt to encounter the Marathonian bull. The Cretans, however, sought to avenge his death, by immediately declaring war against Attica, and the enraged father imprecated the vengeance of the gods.—The Athenians were decidedly unsuccessful, and the country was visited with famine and pestilence. By an oracle they were informed of the cause of these calamities, and directed to appease the Cretan monarch as the only means of their removal. Ambassadors were accordingly sent, and Minos required a tribute of seven young men and seven virgins to be delivered up to him at Crete every ninth year. They are said to have been destroyed in a labyrinth, by the Minotaur, a monster half-man and half-bull; "but more reasonably supposed," as the authors of the Universal History observe, "to have been a man of great strength and ferocity, and upon that account to have been surnamed Taurus, or the Bull."

The Minotaur.

The opportunity of encountering such an antagonist excited the adventurous spirit of Theseus, and the present situation of affairs at Athens rendered the exploit very seasonable. As the victims were selected indiscriminately, by lot, the childless *Ægeus*, whom the people regarded as the cause of this degrading impost, had hitherto felt nothing of its severity. When, therefore, this third tribute was to be paid, those who were obliged to resign their children, complained bitterly of *Ægeus*, that instead of participating in their affliction, he had advanced an illegitimate offspring to the succession of the government; upon which, Theseus voluntarily presented himself in the arduous service; his father in vain entreating him to desist from his purpose, while the populace admired his magnanimity. It had been represented to the appointed youths, that the only method of ending the dishonoured tribute, was to kill the Minotaur; but as no hopes were entertained of this release, the ship was furnished with a black sail, in token of their being conveyed to certain ruin. Theseus, however, united a white one with it; or, according to Simonides, a scarlet one dyed with the juice of the fruit of the dex, which was to be hoisted in case of their safe return. Previous to their departure, the victims joined in an offering to Apollo, of a branch of consecrated olive, bound with white wool. They embarked on the sixth of April; and upon their arrival in Crete, the poets and historians agree in stating, that Ariadne falling in love with Theseus, gave him a clue of thread, instructing him how to pass through the intricacies of the labyrinth. By this means, he killed the Minotaur, and escaped with Ariadne, and his companions in trouble. The Cretan historians, however, dispute the whole of this story, respecting the destruction of the young perenn; and affirm the labyrinth to have been only a peculiar kind of prison, and the captives to have become the parents of a race of slaves. The fancy of the poets has invested the return of Theseus with a variety of circumstances, which it is not necessary to enumerate. Plutarch states, that he touched at Delos, and after sacrificing to Apollo, dedicated a statue to Venus, which he received from Ariadne, and then joined the young men in a dance, afterwards practised by the Delians. Games also were instituted by him, in which the mazes of the labyrinth were initiated; from which originated the custom of bestowing a palm on victors. When they approached Attica, both Theseus and the pilot were no transported with joy, that they forgot to hoist the sail, the appointed signal of safety; which threw *Ægeus* into despair, who cast himself down a precipice, and was dashed to pieces. Theseus, upon his disembarkation, dispatched the intelligence of his arrival to the city, after performing sacrifices to the gods agreeably to his vow at Phalerum. The messenger met numbers of people lamenting the king, others rejoicing at the return of Theseus. When he came back to the sea-shore, the hero was seized in his sacrificial offerings, which he did not choose to interrupt; and therefore waited in silence their completion, when he announced the death of *Ægeus*. They all listened in the utmost grief in the city, where having solemnly interred his father, Theseus paid his vows to Apollo. The *Ouchophoria*, or *Feast of Boughs*, was afterwards established in commemoration of these circumstances; those present at the libations calling

Adventure.

Biography. out *Eleten! Jôû, Jôû!*—an exclamation both of haste and confusion. A branch was also carried, bound round with wool, such as was used in supplications, which they called *Eireione*, laden with fruits. To intimate the ceasing of scarcity at the time, the following strain was sung:

"The golden ear, th' ambrosial hives
In fair *Romane* thrives
See the juicy figs appear!
O'er the crown the wealthy year!
See the cluster, bending vine,
See, and drink, and deep stupor shine!"

The chronology of the return of Theseus from Crete may be fixed about B.C. 1235. But it is not certain what heame of Ariadne. Several stories concur in representing her as deserted, probably at the isle of Naxos; but other writers say, there were two Minos; and two Ariadnes: one married to Bacchus in Naxos; the other, of later date, carried off by Theseus, who being forsaken, came to this island for an asylum, with her nurse Corecye. There she died, and received appropriate honours. The poet Poon represents her as put to shore in a tempest at Cyprus, where she was only to remain during its violence; but Theseus, being driven out again to sea, was unable to return till some time afterwards. During the interval, she had died in childbirth, though kindly attended, and received funeral rites. Theseus being deeply afflicted, left money with the people, with a desire to render her divine honour, and caused two statues, the one of silver, the other of brass, to be made. A strange festival was observed in commemoration of her; and the Athenians show her tomb, calling the grove in which it is placed the *Grove of Venus Ariadne*.

Conduct on the throne. Scarcely had Theseus ascended the throne, which had been left vacant by the death of Ægeus, when he commenced a novel and beneficial plan of government. The twelve boroughs or districts into which Cecrops had divided Attica were become so many independent republics, with their separate magistrates, and clashing interests. Division had generated discord, which not unfrequently terminated in sanguinary contests; and while the inhabitants cherished reciprocal jealousies, the fluctuating character of the supreme authority, sometimes proving despotic, at others servile, rendered the people alternately slaves and freebooters. The foundations of a just confidence being removed, the entire superstructure of the Attic community was gradually falling to ruin. Theseus foreseeing the consequences of their present division, instantly formed a sagacious plan to prevent it, and took upon himself the labour of carrying it into execution. Traversing Attica in different directions, he represented to the several classes of the people the advantages of his proposed arrangement; which, as they seemed adapted to promote liberty, captivated the lower orders; but, though he suggested to the more opulent citizens the happiness which must result from the democratic system, in which he wished only to act as the guardian of the laws, and the general of their armies, many of them felt apprehensive of his influence, and submitted, rather than acquiesced in the scheme. The city of Athens was now constituted the metropolis of the empire;—the separate councils and corporations in each district were abolished, or blended into one common court-hall, called the *Prytaneum*; and

the people were classified under three divisions:—the nobles, husbandmen, and mechanics the former were to superintend the affairs of religion, the magistracy, and the administration of the laws; and to serve as a balance against the preponderating influence of that splendour with which they were invested, the husbandmen were raised into importance by their services to the state; and the artificers by the superiority of their numbers. The currency was marked with the impression of an ox, probably with reference to the Marathonian bull, or perhaps as significant of agriculture, which Theseus was solicitous of encouraging. A solemn festival was instituted, called the *Metageia*, or *feast of the migration*; to commemorate the removal of the people from their cities, to become incorporated into one society: the feast of Panathenea was established as a common sacrifice; and the Isthmian games in honour of Neptune were restored. These were intended to attract strangers, and to incite them to form a settlement at Athens: they were incorporated into the republic with common privileges. "Come hither, all ye people," are said to have been the commencing words of the proclamation which Theseus issued.

He enlarged the capital, added the territory of Megara to the country, and erected a pillar on the isthmus of Corinth, as a boundary between Attica and Peloponnesus. This pillar, Strabo informs us (lib. ix), continued to the reign of Codrus, when it was demolished by the Heraclidae, who gained possession of the Megarensian territory. Our legislator further made an agreement with the Corinthians, that they should relinquish the place of honour to the Athenians at the Isthmian games, as far as the ground could be covered by stretching over it the sail of the public ship.

Amidst all these peaceful and judicious arrangements, Theseus could not totally abandon his original passion for military renown. The glory of Hercules was perpetually stimulating his too ardent feelings, and he wished to rival his fame by some new exploits. Plutarch quotes some ancient writers, who have particularized his adventurous expedition into the Euxine sea, in company with Hercules, to carry on a war with the Amazons: but the most credible historians consider the whole statement as fabulous. Many other expeditions are attributed to him; in some of which he unquestionably participated. He assisted the Lapithæ against the centaurs of Theessaly: he joined in the chase of the wild boar of Calydon, for which pursuit Meleager had assembled the most celebrated princes; and some have represented him as accompanying Jason to Colchis.

Conformably with the romantic heroism of the times, a Thessalian sovereign, named Pirithoüs, the son of Ixion, made an incursion into the plains of Marathon, and carried off the oxen. Theseus immediately prepared to revenge the injury: but the aggressor, instead of flying from his fury, approached to meet him; and being struck with admiration of his character and exploits, offered his hand in token of peace, declaring at the same moment that he would abide by whatever sentence he might think proper to inflict. "Be my judge," said he; "what satisfaction do you demand?" Theseus equally impressed with the courage of his adversary, intimated that the only satisfaction he required was that of engaging him as his friend and fellow warrior: upon which they mutually took the

Peithoüs.

Biography. oath of indissoluble union, and arranged together the plans of future enterprise. Hence, the attention of all Greece was directed to the three heroes—Hercules, Pirithoüs, and Theseus—who from similarity of disposition had bound together in the ties of such a friendship as that of which we may suppose such barbarians capable; and who rivalled each other in the pursuit of that fame, which the temper of the times readily bestowed as the reward of their actions.

One cannot but regret that a life which might have been honourable, had it been wholly consecrated to the superintendence of that government which Theseus had displayed such capacity in framing, should have lost all its dignity and use, by being occupied in ridiculous or criminal adventures. We have now to follow him to Sparta, whither he was accompanied by Pirithoüs, who assisted him in a deed of villany, which drew in its train the most fatal misfortunes, and raised the perpetrators to the very pinnacle of a shameful celebrity. Seeing a young girl of the name of Helen, who was reckoned the greatest beauty in the world, performing a dance in the temple of Diana, they seized her, and escaped with all possible haste, from pursuers who followed no farther than Tegea; when they agreed to determine by lot to whom she should belong. Theseus, by this means, became possessed of her; but on account of her tender age he placed her with her mother, under the care of Aphidnus; availing himself of this interval to fulfil a promise to Pirithoüs, of procuring him another wife, by accompanying him into Epirus, for the purpose of gaining Proserpine, the daughter of Aidoneus, king of the Molossians. This king had a dog named Cerberus, whom all his daughter's suitors were required to fight upon condition that the victorious combatant should be entitled to his daughter. Finding, however, that the heroes did not visit him with honourable intentions, but were planning to carry off Proserpine by force, he threw Pirithoüs to his dog, and imprisoned Theseus. From this miserable confinement he was only released by the friendly interposition of Hercules, who happened to come on a visit to Aidoneus, to whom, as a testimony of his gratitude, he afterwards assigned all the temples and groves which his citizens had bestowed on him, with the exception of four, changing their denomination from *Thesea* to *Heraclea*.

Helen. The period of his return was most inauspicious; for his kingdom was torn with factions, and his family in a state of disgrace. His enemies had taken advantage of his absence to inflame the people against him, and assiduously employed every artifice to bring contempt upon his administration. Menestheus, great-grandson of Eretheus, was the exciter and ringleader of this sedition; and being endowed with a fascinating eloquence, he was precisely adapted to influence the popular mind. His never ceasing insinuations that they were ill governed, and that instead of being under the pleasing authority of a native king, they were oppressed by the despotism of a foreigner, combined with a war proclaimed against the state by the Tyndarids, to excite the general discontent. Castor and Pollux, the brothers of Helen, produced their complaints against the royal ruffian who had stolen their sister; and before rescuing her from the custody of those with whom she had been placed by Theseus, ravaged Attica, and in consequence filled every bosom with indignation against his debased sensuality. At the same time, the Pallantides, aided by the principal citizens, endeavoured to seize and secure the supreme authority.

Overpowered by faction, and finding his affairs irretrievable, Theseus dismissed his children privately into Eubœa, to Elepheor, taking refuge himself in the court of king Lysomedes, in the isle of Scyros. The bitter imprecations which he uttered against the Athenians induced them afterwards to appoint solemn sacrifices to appease his ghost, and to render him divine honours. In this state of voluntary exile he died, whether by accident or by treachery is by no means ascertained; some affirming that he fell down a precipice, through missing his step, in one of his customary perambulations; others, that Lysomedes threw him down, in order to acquire the friendship of Menestheus, who succeeded Theseus in the government of Attica. After his death the sons of his predecessor, who had attended Elepheor to the Trojan war, returned and regained the kingdom. "The actions of Theseus," remarks the Abbé Barthélemy, "and the impressions they made on the minds of men during his youth, at the commencement of his reign, and at the end of his life, present to us successively the image of a hero, a king, and an adventurer; and under these different points of view, he merited the admiration, the love, and the contempt of the Athenians." Their revolt was afterwards expiated by a conduct expressive of extraordinary veneration. Having consulted the oracle of Apollo, they were ordered to take up his bones and inter them at Athens. This was accomplished by Cimon, son of Miltiades, who subdued the island; and having found the grave of the departed hero, he conveyed his remains to the city, where the Athenians received them with transport, and re-interred them near the gymnasium. A temple was erected over the tomb, which became the asylum of the wretched of every description, and was richly decorated by the arts. His memory was honoured by the institution of various sacrifices; the principal of which was appointed on the eighth of October, in commemoration of his return from Crete. He was also regarded as one of the goëti who presided over the days of every month.

JOSHUA had no immediate successor. The dispositions of the people over whom he had presided with such singular success, were now relaxing into that indifference to the divine favours which is the sure prelude of their withdrawal; and thus neglectful of the principles of their unity, as a nation, they lost the secret of their strength and of their past progress. Joshua, indeed, as presiding over the whole of the tribes of Israel, and carrying forward victoriously the accomplishment of God's promises to give them all the land of Canaan, had no successor until the times of DAVID. It will accord, then, at once with our plan, and with the circumstances of the case, to give a brief view of the fates of this remarkable people during the time of their JUDGES, under the name of the most distinguished of them (and perhaps their own historian), SAMUEL, as the connecting link between the conquests of Joshua and those of David.

Tribe of Judah presides.

By a divine decision, the tribe of Judah was selected, shortly after the death of Joshua, to lead forward their brethren in their future wars; and over that tribe CALB, the distinguished and faithful companion of their late commander, appears at this time to have presided. As the possessions of Judah closely bordered upon those of the tribe of Simeon, the cautious veteran was induced to call for the assistance of the latter tribe more particularly than for that of the rest, and their first efforts were directed to the deliverance of their own respective territories from the hand of the enemy. The two tribes unitedly undertook the siege of Bezek (a town of Canaan, near the Jordan, about seventeen miles from Shechem) and Jerusalem. In the neighbourhood of Bezek they obtained a complete victory over the united forces of the Canaanites and Perizzites, amounting to upwards of 10,000 men, and finding in the city seventy mutilated princes who "gathered their meat under the table" of Adoni-Bezek, the tyrant of the place, they inflicted upon him a retaliatory punishment by cutting off his thumbs and great toes. Jerusalem, then called Jebus, submitted to their arms at about the same time, for to this place they brought the captive king of Bezek (whose conscience appears to have been touched with the justice of the government of God), and there he died. Though the king of Jerusalem had formerly placed

himself at the head of that alliance over which Joshua gained his great victory at Gibeon, the Jewish general does not appear to have subdued the capital, which was now taken by assault and burnt; except a strong fortress on the top of Mount Zion, which resisted every attack. The mountainous country around, and towards the south, to the wilderness of Paran, was immediately added to the lot of Judah; and the united tribes proceeded to attack in succession, Hebron, Debir, Gaza, Askelon, and Zephath, the possession of which they divided between them. At Debir we hear finally of Caleb, in the proclamation which he issued, offering his daughter in marriage to whoever might subdue the place; and on his nephew Othniel, the son of Kenaz (afterwards the first of the Judges) becoming the successful champion, he adds a liberal dowry to that honourable gift. The character of Caleb will always rank high among that of the greatest of men. He was one of the few "among the faithless, faithful" found, when twelve princes of the tribes were deputed from the wilderness to search the promised land; and their report was so important to the hopes, and even to the peaceable conduct of the people. Joshua and Caleb were the heroes and helpers of that day, who, when the whole of their companions discouraged all further trust in God, and in his servant Moses, "stilled the people," avowed the difficulties, but anticipated the future triumphs of their way; and at the peril of their lives insisted that what their eyes had seen of the promised possessions, would abundantly compensate for every effort in obtaining them. He had the testimony of God "that he followed" Him "fully"—was the only individual then above twenty years of age, except Joshua, who afterwards was permitted to enter into the land he had described—and at the period before us, of his last achievements, as a leader and commander of God's people, was engaged in the subjugation of a portion of that very race ("the sons of Anak"), whose gigantic stature had been transferred to all the people of the land, and formed one of the chief grounds of the cowardly and faithless apprehensions of his brethren.

The other tribes, aroused by these repeated successes, made several efforts to extend their respective territories. The tribes of Ephraim and Manasseh assisted the

Micah's idola-
try.

Danites in the subjugation of the Amorites, and took possession of Bethel; but contented themselves, even "in their strength," with rendering the conquered nations tributary, instead of fulfilling the divine commission to extirpate them from the land. This now became the general conduct of the fickle but highly favoured tribes. They found, perhaps, in the immediate possession of the skill and labours of their captives, in the splendour and imposing character of their idolatry, the soothing solemnities of their groves, and the silver and gold of their idols, (which they were commanded "nterly to detest,") as well as in the personal charms of their females, those very seductions from obedience to the true God, of which they had been so often warned, and which constituted one of the principal reasons for the awful mandate of the entire destruction of these nations. While the Canaanites, on the other hand, would have every motive to submit for a time to that yoke to which resistance was so evidently in vain, and to contract alliances which enervated the conquerors more than the conquered; as they might ultimately have the opportunity of shaking them off at pleasure. A divine messenger announced to the Israelites God's high disapprobation of this idle and unfaithful policy; but at the death of Caleb that generation was swept away, which had seen His greater interpositions on their behalf, and the rising generation appears to have mingled without reluctance in all the habits and idolatries of the land.

During these times of confusion and apostasy, occurred the two events, highly characteristic of such a period, which are related, at considerable length, at the conclusion of the book of JUDGES, that the narrative of the public affairs of this people might not be too much interrupted. An Ephraimite, of the name of Micah, having erected a splendid private temple for certain idols belonging to his mother, made his own son his priest. But a young Levite accidentally travelling into the neighbourhood, Micah persuaded him to accept the office, regularly stipulated his salary, and provided for him habiliments in imitation of those in which the regular priesthood were accustomed to appear before God in Shiloh. This ignorant devotee now anticipated with confidence that his worship would be acceptable to Jehovah; but the Levite, upon whose idolatrous services he so warmly congratulated himself, became the means of his utter ruin. A party of Danites, in their researches after a more extended territory, came to Mount Ephraim, and lodged at Micah's house. Finding in the Levite an old acquaintance, and having inquired into the nature of his present occupations, they first pretended to ask the counsel of God respecting their success in a projected enterprise upon Laish, and receiving a favourable answer, the army of the tribe assembled in the neighbourhood. But instead of manifesting any gratitude for the hospitality of Micah to their messengers, or reverence for the character assumed by his priest, they now took advantage of their numbers to seize upon his idol, and the riches of his shrine, which they carried with the accommodating priest to Laish; and having subjugated the city to their own dominion, set up the idol for public worship there. Here it is said that he had been established and resorted to, all the time that the ark of God was in Shiloh. The idols of Micah remind us of the *teraphim* of Laban, the *talismans* of the oriental nations, and the *penates* of the Romans. In

some instances, as in the case of Micah, they seem to have been hieroglyphics, or symbols, borrowed perhaps from the eberaim, or such figures as were commanded to be made for the tabernacle, and which might be supposed to be emblems of Deity; although image worship was expressly forbidden, and the Israelites were reminded that, neither in the giving of the law, nor upon any other occasion, had the Deity appeared in a visible shape. In the case of Laban, they were not unlikely household gods, similar to the *penates* of the later ages of idolatry, as it is highly probable that such a man as Laban would yield to the superstitious customs around him, especially if it should in any way conduce to his worldly interest. It seems, by the testimony of the Rabbins, that *teraphim* is a word sometimes applied to magical preparations, involving the most cruel rites, and supposed to possess oracular powers. The *talismans* of the east were metal figures formed under the aspects of certain planets, and supposed to possess great efficacy in active and protecting qualities and virtues. It is evident, that in families in which we should have expected greater purity, we find a strange propensity to idolatry—even in that of Jacob, who commanded his household to deliver to him their idols previous to his going to Bethel to worship, and he buried them under an oak. Various conjectures have been formed respecting a word (*עֲבֹדִים*) which in various parts of the scriptures signifies simply an image of any kind.

The other circumstance which the inspired penman has perpetuated, presents a still more disgraceful picture of the times, and was more extensively disastrous to the tribes. A Levite of Mount Ephraim was returning home with a concubine who had eloped from him, and lodged for the night with a brother Ephraimite at Gibeah, a town belonging to the tribe of Benjamin; when the inhabitants of the place surrounded the hospitable abode, and demanded the stranger for the gratification of their brutal lusts. In vain, like just Lot, did the master of the house expostulate with these wretches; no method of appeasing them could be found except that of delivering up the concubine of his guest, who remained with them until morning; when she died at the door from the cruelty of their treatment. The Levite, with the coolness of determined vengeance predominating in his mind, took the body home, divided it into twelve pieces, and sent one to each of the tribes, with an appeal against the outrage he had suffered. A general assembly of the Israelites was called in consequence at Mizpeh, amongst whom appeared an army of 400,000 men. Here they examined into the case of the indignant Levite more fully, and agreeing that nothing so disgraceful had ever occurred amongst them since they had been formed into a nation, the whole assembly resolved that they would not return until their bones until the perpetrators of this abominable deed were brought to punishment. Messengers were despatched, making instant requisition for them of the princes of the tribe of Benjamin; who instead of uniting in detestation of the crime, armed themselves in defence of the criminals to the number of 20,000 chosen men. The divine approbation seems to have sanctioned the sense of justice which now appeared to fill the bosom of the tribes; but as it existed very feebly there, and in union with vindictive and oppressive dispositions, God's interposition for them was but partial and temporary. They were instructed by an oracular communi-

Outrage at
Gibeah.

Biography. cation to march as heretofore under the direction of the tribe of Judah; they penetrated quickly to the town of Gibeah, and though twice repulsed with considerable loss, they obtained (partly by stratagem) a final and most decisive victory over the Benjamites, who were all put to the sword except about 600 men. These fled into the mountains of the neighbourhood, while the fury of the other tribes urged them to the utter destruction of the cities and villages, and even the wives and children of their devoted brethren. Of this excessive vengeance, however, they soon saw reason to repent. The threatened extinction of a tribe from Israel, by its own sin or their own arbitrary measures in punishing it, was an unparalleled calamity, and the tribes again met in council, over the consequences. The 600 men who fled into the rocks of Rimmon, constituted the whole remaining strength of the tribe of Benjamin; and at the beginning of the war, the other tribes had vowed to give no Benjamite wife from amongst them. They now therefore devised two most strange and unjustifiable expedients to obviate the effects of this rash vow. Finding that the inhabitants of Jabesh-Gilead (a portion of the tribe of Manasseh) had not repaired to the general assembly at Mizpeh, and recollecting an awful oath they then had made respecting all who did not come, they issued an edict for the destruction of that place, with the exception of the unmarried women, whom they assigned to the Benjamites. They also encouraged them to take advantage of the annual feast unto God in Shiloh, by seizing for wives the young women who repaired thither. The fugitives availed themselves of these expedients, and the tribe, though it always remained a small one, gradually recovered from these severe disasters.

Othniel. The valor of OTHNIEL, who seems to have been born to sustain the honours of Caleb's family, had shortly after these transactions, a noble field for its display. The tribes of Israel by their impiety and pusillanimity, after the death of his father-in-law, had been subjected to the dominion of Cushan-Rishathaim, king of Mesopotamia, for upwards of eight years; when Othniel found means to raise an army against the oppressor; and so unwearied and successful were his exertions, that he established a permanent deliverance for the Israelites, and judged them in peace forty years. Their captain in the season of difficulty and danger, and guided generally in his steps by the immediate dictation of the Spirit of God, this important person would naturally obtain that ascendancy in the national councils which the proper improvement of his own victories might require, and which the prevention of future subjugation would appear to make essential to the public safety. Ever in danger from their own propensities to rebellion against God, and from the watchful ambition of the neighbouring states and princes, the tribes required a description of governors to be thus especially raised up for them by their Almighty King, as their zealous magistrates in peace, to watch over and extirpate the seeds of all their calamities in their vices and idolatries; and to lead them into in the divine strength to war. A series of such deliverers, now called JUDGES, and generally men of exemplary piety and virtue, began in the person of Othniel, was continued at intervals, and according to the public exigency, for the space of three hundred years, and ended in that of SAMUEL.

On the death of their first distinguished leader of this series, the Israelites fell under the yoke of the Moabish

princes for eighteen years, and appear to have been in the habit of acknowledging their suzerainty by an annual tribute. EUTH, a Benjamite, who became their second judge, was deputed to carry this token of submission, at the end of that period, to Eglon, the king of Moab, whom he privately stabbed on the occasion, and roused the Israelites in the adjacent provinces to immediate revolt. He seized the passes of the Jordan, and obtained a complete victory over the Moabish forces, which established the eastern part of Canaan in a peace of eighty years. Disconnected from those considerations which must always be preserved in recollection while reading the history of these and similar transactions, the conduct of Ehud can only be viewed with abhorrence; but if he acted under a commission from heaven, it admits of that vindication which we have already suggested with regard to the general conquest of Canaan.

To Ehud succeeded SHAMGAR, the son of Anath, Shamgar, but of what tribe is uncertain. As the Philistines insisted the western coasts by their perpetual incursions, he was raised up to repel their attacks, and keep them in constant check. It is recorded, that he slew six hundred of them with an ox-goad, or, as the Vulgate and the Septuagint render it, "a plough-share" which, whether it were accomplished on one occasion, or in the course of several interruptions, was sufficient to advance him to the distinction of a deliverer of Israel. The insignificance of his weapon proves that he must have possessed extraordinary dexterity and zeal, combined with incessant vigilance.

After the decease of Ehud, the Israelites again departed from God; and their disobedience and misconduct compelled their divine protector to subject them to similar discipline with that which had previously restored them to allegiance. Although the city of Hazor had been, at a former period, utterly consumed by Joshua, the Canaanites, it seems, availing themselves of the unsettled state of the country, had repaired thither and rebuilt it. Here Jabin, who assumed the more general designation of king of Canaan, had fixed his residence, and oppressed the people of Israel, who are described as "sold into his hand," during twenty years, i.e. from a.c. 1316 to a.c. 1296. He commanded a mighty armament, supported by nine hundred chariots of iron, which had diffused such consternation abroad, that many of the tribes were in a state of despair, and others were on the point of emigrating into distant countries. The Greeks were accustomed to fight in chariots, as we learn from Homer, and others. They were first adopted, probably, for the purpose of elevating the warrior, and thus enabling him to see the field and direct his course whither it might be most necessary, as well as for giving him an advantage in taking a surer aim with the bow, the sword, or the javelin; and they were especially adapted for speed, either for succour or flight. Those of the king of Canaan, under the command of Sisera, appear to have been constructed for strength, either to resist attack, or to break the ranks of opposing warriors. Thus the war-chariots of the ancient Britons were armed with scythes and other deadly instruments, turning with the wheels of the carriage, and driven with great fury; wherever they were impelled, such machines would become almost irresistible, mowing down whole files of men, and producing the most terrible slaughter.

Trade now perished, for no caravans dared to occupy

Barak.

In this critical emergency, DEBORAH, a prophetess, was also a judge and ruler of several, if not of all the tribes of Israel. She is represented, in conformity with the simplicity of the times, as sitting under a palm-tree, between Rama and Bethel, in Mount Ephraim, to discharge the important duties of her station. As the supreme magistrate, she sent an authoritative message to Barak, the son of Abinoam, who resided in Kedesh-Naphtali, to collect forces from the tribes of Zebulun and Naphtali to the amount of ten thousand men, and repair immediately to Mount Tabor, assuring him of complete success in an expedition against the army of Canaan, under Sisera. This disclosure of the event, with which Deborah was of course acquainted by an immediate inspiration, was intended to dissipate those feelings of despondency, which had so long prevailed even in the pious part of the Israelitish community. Barak at first started an objection, amounting to a positive refusal to go, unless accompanied by the prophetess herself, which ought perhaps rather to be imputed to that modesty which is characteristic of eminent men, than to any disinclination to engage in the service of his country, or any feelings of jealousy against its present ruler. Deborah instantly replied in terms indicative of the heroism and energy of her mind, "I will surely go with thee;" and the forces of Israel were mustered under their joint inspection, to attempt the honourable service of breaking those fetters of bondage, in which their country had been so long confined. Sisera receiving intelligence of this arrangement, encamped with his nine hundred iron chariots, between Harosheth and the river Kishon. The numerical superiority of the enemy might well have excited a painful apprehension of the issue, had not full confidence in God inspired both the prophetess and her general with a courage suited to the occasion. Deborah seized the important moment, and urged Barak to put his chosen band of intrepid warriors in motion. They descended upon the foe like a thunderbolt of providence, and discomfited the three hundred thousand foot and ten thousand horse (such is the estimate of Josephus) which stretched along the circumjacent valley of Mount Tabor. So complete was the victory, that the Canaanitish general being reduced to the utmost extremity, alighted from his chariot, and defeated, dispirited, and alone, fled to the tent of a Kenite family in the neighbourhood, with which he was acquainted. Here he was welcomed by Jaël, the wife of Heber, who appeared to pay him every attention that a sympathizing hospitality demanded; and whom he implored to guard his slumbers at the door of the tent. He felt himself additionally secure, perhaps, from the custom of the country, which interdicted all strangers from entering the women's apartments. But no sooner was he in a sound sleep, than she seized upon a long tent-nail and a hammer, and softly approaching the couch of the fugitive, she struck the nail through his head and transfixed him to the ground. In this condition she presented him to the Hebrew general, with an exultation that is more than justified by the extraor-

inary eulogium pronounced upon the action in the song composed upon the occasion of this victory, by the prophetess who planned and accomplished it. The pursuit continued the whole of the day, and the river Kishon swelling to an unusual height, and overflowing its banks, swept away thousands; so that the very elements seemed ready to assist in promoting the Israelitish cause.

The north of Canaan was now emancipated from slavery for forty years, in which interval this perverse people returned to their ancient course of rebellion, and again provoked their supreme ruler to chastise them. During this period, we read of another messenger of vengeance. They were exposed to so distressing a famine, that multitudes were necessitated to remove from their country in quest of a foreign settlement, and among these Elimelech, a Bethlehemite, with his wife Naomi, and his two sons, who afterwards married two Moabitish women, Orpah and Ruth. Upon the decease of their husbands, Naomi, who was now a widow, returned to her home. She was accompanied by Ruth, Orpah having declined the journey after commencing it. The mother-in-law at length contrives an advantageous marriage of her daughter to Boaz, by whom she had Obed, the father of Jesse, and grandfather of David, through which line the Saviour of the world descended. The beautiful episode containing this story, has been thought worthy to form a distinct book of the Sacred Canon.

In consequence of the new departure of the children of Israel from God, the Midianites, in conjunction with the Amalekites, and other eastern nations, (probably the Ammonites and Moabites), were permitted to oppress them for seven years, driving them into the secret recesses of the mountains, and into the fortified places. It was in vain that they attempted to cultivate the fields, for the enemy rushed in upon them to gather the ripening harvest, covering the whole land like grasshoppers for multitude, and sweeping away every description of cattle. In this state of extreme impoverishment, they presented their earnest supplications to him whose ears were never shut against them, and whose strong arm never refused to undertake their defence. A prophet was dispatched to reprove them, but at the same time an angelic messenger arrived to provide for their deliverance. GIDEON, the son of Joash, the Abiesrite, was threshing wheat by the wine press for the purpose of concealing it from the Midianites, at the place of his residence, Ophrah, in the half tribe of Manasseh. The angel sat down under an oak, and in a familiar conversation intimated that the Lord had chosen him to the important service which the present exigencies of the Israelitish state demanded. Gideon expressed in reply, great despondency at the posture of public affairs, intimating that he was convinced they were abandoned to the merciless fury of their enemies, and that the age of miraculous interferences was past. The angel then gave him a solemn commission, accompanied with a promise of success; upon which a new difficulty arose: the good man considered himself perfectly disqualified for such an undertaking, and at the same time of too mean an extraction to be employed in so honourable a service. To this the only answer was, a preceptory command to undertake their deliverance, and an encouraging promise of divine support. Gideon expressed his wish to perform the usual rites of hos-

pitability, by spreading an entertainment before the stranger, to which he signified his assent. A kid was accordingly prepared with unleavened cakes, but the angel commanded him to place them upon a neighbouring rock, and pour out the broth: as soon as this was done, the celestial visitant touched the provisions with the end of a staff that was in his hand, and there arose fire out of the rock, which consumed it. The immediate disappearance of the instrument of this miracle, convinced the astonished Israelite of the true nature and design of this manifestation; and upon being induced to dismiss his apprehensions, by a voice from Heaven, he built an altar to the Lord upon the spot, demolishing the altar and the grove of Baal previously erected there, and offering sacrifices to the true God. The inhabitants of the city were prodigiously exasperated at this proceeding, and required Jotham to revenge the insult to their deity, upon his son. He, however, very properly suggested, that they had no need to interfere, for it belonged to Baal to maintain his own authority; which seems to have pacified these idolaters, and gave occasion to the new name of *Jerah-Baal* being conferred upon Gideon, which signifies "the opposer of Baal."

His conduct.

In the mean time the Midianites, and their allies from the east, assembled their forces and encamped in the valley of Jerzeel; intelligence of which no sooner reached Gideon, than he was instigated by a divine impulse, to summon by trumpet his own family and neighbourhood, and to despatch messengers to the tribes of Manasseh, Asher, Zebulun, and Naphtali, to unite in the common cause, and disengage themselves by one noble effort from their disgraceful servitude. With this they complied, and his army soon amounted to thirty-two thousand men, which, though very considerable under the circumstances, was disproportionate to the numbers of the enemy, who opposed him with a hundred and thirty-five thousand. Previously to the anticipated conflict, the Jewish leader solicited a divine manifestation to confirm his hopes, and inspire his soldiers. He placed a fleece of wool on the ground, which he requested might be wet with the dew of heaven, while the surrounding surface remained dry, and the next night reversed it, entreating that the fleece might be dry, while the ground was moist with dew. In both cases he was gratified, and all his apprehensions respecting the cessation of miracles removed.

This, however, was only the prelude to still greater interpositions. Gideon was informed by a divine intimation, that the army was too numerous; for daring the Theocracy, it was constantly made evident, that though an arm of flesh wielded the sword of war, success proceeded solely from the Omnipotent God; and he was required to issue a proclamation, that whoever was apprehensive of the result of the pending conflict, was at liberty to leave the camp, which occasioned the departure of two-and-twenty thousand. But as ten thousand still remained, and were still deemed too numerous, Gideon was ordered to take the soldiers to a certain water to drink, where he should decide by a certain intelligible signal upon the men who were to engage in the battle. Every one that lapped up the water with his tongue like a dog, was to be placed apart from the others who laid down to drink, the former of whom, amounting only to three hundred, were ultimately appointed to the arduous service. These three hundred chosen men were divided into three companies, with a trumpet in every man's

hand, and a lamp in an empty pitcher. While this arrangement was making, Gideon, by divine direction, took his servant, and went down to the Midianish camp, where he overheard a conversation between two soldiers, in which one was relating to the other a dream, which the latter interpreted as significant of the complete overthrow of their army. Returning to the camp, the general drew out his men, and advanced upon the Midianites at the commencement of the middle watch of the night; when suddenly breaking their pitchers, and sounding their trumpets, they exclaimed, "The sword of the Lord, and of Gideon!" This unusual sound and appearance at the dew of the night, spread instant consternation throughout the Midianish camp; every one smote his fellow, incapable of distinguishing each other in the darkness, and impelled to mutual slaughter by a spirit of insatiation from the Lord; and the whole host fled in different directions with the utmost precipitation. While Gideon warmly pursued them, he despatched messengers into Mount Ephraim, and the vicinity, requiring the adoption of measures to secure without delay the passes of the river Jordan, to intercept the enemy's retreat. Two Midianish princes, Oreb and Zeeb, soon fell into the hands of their pursuers, and were immediately decapitated.

Gideon, with his three hundred men, having crossed Jordan, "his faint, yet pursuing," applied to the towns of Succoth and Peniel, for a supply of provisions; but meeting with a refusal, he went forward, leaving only a threat of exercising upon them an exemplary retaliation at his return. The two kings of Midian, Zebah and Zalmunna, being at Karkor, with fifteen thousand of their own troops, and as many of their confederates as had survived this disastrous flight, the Israelite hero suddenly attacked and dispersed them, taking captive the kings. He hastened back in triumph to the two cities that had refused him provisions, and ridiculed his inferiority of force; the princes of Succoth he tore in pieces with thorns and briars; the inhabitants of Peniel he slew, and demolished their fortifications. As Zebah and Zalmunna had slain his brethren at Tabor, Gideon desired his son Jether to fall upon them; but his youthful timidity left the hero to execute his vengeance with his own hands. These instances of real induced the people to solicit his acceptance of the supreme authority, proposing to secure the succession to his posterity; his impression, however, of the true nature of that government under which they lived, and the guilt of usurping the divine dominion, led him at once to decline their offer, and to satisfy himself with merely taking the golden ear-rings, with the other ornaments and apparel of the Midianish sovereigns, and the chains with which their superstition, no less than their vanity, invested the necks of their camels. Of these materials, he formed an ephod, which he placed as a memorial of his successes in the city of Ophrah; but it afterwards proved a snare to his family, and to the tribes, who perverted it to idolatrous purposes. Gideon had many wives, by whom he had seventy sons, and one named Abimelech, by a concubine at Shechem. He had given so effectual a blow to the enemies of his country, that it enjoyed forty years of tranquillity during his administration, and he expired at Ophrah at an advanced age. But no sooner had they closed his sepulchre, than the Israelites revolted from God, addicted themselves to the worship of Baalberith,

parable.

and superadded to their other impieties the basest ingratitude towards the family of their late deliverer.

At length Abimelech, full of ambitious projects, repaired to Shechem, where he obtained the interest of his family connections to support his claims to royalty; and after putting an effectual end to the rivalry of his seventy brethren, at Ophrah, by murdering them, with the single exception of Jotham, who contrived to escape, the fratricide returned to receive the dignity of king from a people who ought rather to have promoted him to a scaffold. As soon as Jotham was informed of this proceeding, he hastened in the top of Mount Gerizim, whence he overlooked Shechem, and addressed the inhabitants in a parable, descriptive of the great superiority of the modest Gideon above the vain aspirant whom their votes had elevated to royal power, comparing the one to a bramble, and the other to the olive tree. The parable of Jotham, the most ancient in the world, is also one of the greatest beauty. Its force, point, simplicity, adaptation to the feelings of the speaker, and the circumstances which had overwhelmed him with indignation, impart to it the most touching pathos. His glances at the services rendered by his father to an ungrateful people—the humility which had characterized him in his glorious career—the mean birth, the cruel qualities, and the boundless ambition of Abimelech—and concludes with a burst of indignant passion, calculated to move the most insensible heart. Antiquity, afterwards so fruitful in parables, can produce few things that equal, and none that surpass, this first specimen of figurative reproof and instruction.

Jotham's remonstrance, however, does not seem at the time to have produced any considerable effect; but at the expiration of three years, the sin of Abimelech began to find its punishment; his subjects became universally dissatisfied, and even formed a plan of assassination. One Gaal, the son of Elbed, at this crisis insinuated himself into their confidence, assumed a temporary government, protected their agricultural labours, and promoted by his example, that spirit of dissipation which accords with an unsettled and factious state of public affairs. In the absence of Abimelech, Zebul, who acted for him, communicated all that passed; the threats of Gaal and his companions, and the measures which they had already adopted, by fortifying the city, to exclude him for ever from the sovereignty. Abimelech hastened by forced marches all night, and invested the city in four companies. Gaal went out to meet him, but was soon defeated. The next day the attack was renewed: Zebul procured the expulsion of Gaal; Abimelech pressed into the gates, carried the place, and utterly destroyed it: the inhabitants perished miserably; a thousand of them were burned by the conqueror and his associates, in a fort belonging to the temple of their god, whether they had fled for refuge. The neighbouring town of Thebez having united in the revolt, Abimelech immediately assaulted and took it, hot the inhabitants endeavoured to secure themselves in a tower. He attempted to set this also on fire; but a woman cast a piece of millstone upon the head of Abimelech, which fractured his skull, so that he had only time to desire his armour-bearer to despatch him, that he might be saved from the dishonour of so ignominious a death. The Israelites instantly dispersed, and the civil commotion subsided.

TOLA, the son of Pniah, of the tribe of Issachar,

next succeeded to the government, which he held with ^{the Judges.} Samuel and seeming credit to himself during three-and-twenty years. After him JAIR, a Gileadite, judged Israel two-and-twenty years. He was intent upon the aggrandizement of his own family, and suffered the people to relapse into so corrupt a state, that there was not an idol of any neighboring nation which they did not worship: in consequence of which they were delivered up by providence to the power of the Philistines and the Ammonites.

Punishment, as on former occasions of a similar kind, restored them to their senses; and becoming deeply humbled for their transgressions, a new deliverer was raised up in the person of JEPHTHAH. He was the son of Gilead, by a concubine; and when his father was dead, the sons of his wife expelled him from their society, on the ground of his illegitimate birth, which disqualified him for a common inheritance. He accordingly took up his residence in the land of Tob, a place no where else mentioned, but probably situated near Gilead, at the entrance of Arabia Deserta. In process of time the Ammonites sought an occasion of war, and the Gileadites sent their chiefs to solicit Jephthah to head their forces. He at first reproached them for their past disrespectful treatment; but at length agreed to accept the command, upon condition of their engaging to confer the government upon him, in case of success. His first measure was to send an embassy to the king of Ammon, to demand an explanation of the cause of his hostility; to which an answer was returned, intimating his title to a land of which he had been unjustly deprived during the journey of the Israelites from Egypt: to which Jephthah replied, that the Amorites, who were the original proprietors of the country, had been dispossessed by the successful arms of his ancestors, in consequence of their refusal to allow the Israelites to pass through it; and that the right to the continued possession of what conquest had conferred upon them, and a conquest obtained under the special direction of heaven, had never been disputed, till his unwarrantable invasion, for the period of three hundred years. This negotiation was, however, closed by the determination of the king of Ammon at all events to prosecute the war. Jephthah, therefore, immediately made the necessary arrangements, under the direction of a supernatural influence; and, according to the religious custom of the times, pledged himself in a vow to God, that if he should be favoured with success, whatever came forth of the doors of his house to meet him upon his return, should be devoted to the Lord as a burnt-offering. His most sanguine expectations were speedily accomplished, in a complete victory over the enemy, with a general slaughter. Upon his return to his house at Mizpeh, to his inexpressible sorrow, his daughter, an only child, came out to meet him with those congratulations which from the nature of his vow must have awakened the deepest anguish; but whether to fulfil it he really sacrificed her, is an historical question, that has occasioned many and vehement disputations.*

* Although it is not possible here to recapitulate the various arguments adduced by opposite writers on this great question, we acknowledge ourselves disposed to submit to the judgment of our readers as our opinion, upon the whole, that she was not sacrificed, but consecrated. 1. Because such an offering would have been impious; human sacrifices being held up always in the scriptures as most abhorrent to God. 2. Because a provision was made in the

1143.

After these transactions, a disturbance of a different nature, and quite unexpected, arose from the resentful feelings of the Ephraimites, and involved Jephthah in great embarrassment. They fancied themselves neglected in the summons which had been issued to unite against the late invaders of the country, and threatened to set his house on fire to revenge the insult. They had expressed a similar jealousy on a former occasion, and had been pacified; but now they were so perverse that Jephthah found it necessary to resort to arms; and, having conquered them in battle, he took possession of the passes of Jordan, whither if any one came, and they discovered him to be an Ephraimite, which was ascertained by his pronunciation of the word *Shiloheth*, he was slain. On this fatal day forty-two thousand perished. Thus, after an honourable administration of public affairs for six years, Jephthah died, and was buried in one of the cities of Gilead.

1112.

It is again said of the Israelites, that they "did evil in the sight of the Lord;" and in consequence of this defection, they were delivered up to the oppression of the Philistines forty years; for although these enemies were very inconsiderable in point of numbers, in comparison with the Hebrew nation, having only five cities of any magnitude, yet were they the appointed scourge of the rebellious people of God, who determined to display his interposing authority and providence, by the feebleness of the human agent employed to execute his purposes of punishment, as well as by the grandeur of his miraculous manifestations in dispensing victory, to Israel. Once more a person of a singular character was raised up to effect a new deliverance. The circumstances of his birth, the course of his life, and the manner of his death, were all extraordinary. *SAMSON* was the son of *Manoah*, a Danite, whose wife was assured by a celestial visitant, that the barrenness which had so long occasioned her very painful anxieties, should be removed; and as it was the divine intention to bestow a child upon them, he gave directions respecting her own mode of living, which was to be abstemious, and the consecration of her future son as a *Nazarite* from the womb; a term applied to those who were separated, either voluntarily or by their parents, to a life of mortification and hardship, with a view to

Samson.

accomplish some important design. She hastened to communicate the pleasing intelligence to her husband, who entreated God to permit the return of the messenger, whom he supposed to be an ordinary prophet; but his second visit was to his wife, in the solitude of the field. She immediately went in search of *Manoah*, to whom the same injunctions were repeated with those which had been previously given to his partner; after which the truth of the prediction, and the real character of the stranger, were attested by a miraculous disappearance in the flame of a meat-offering.

Samson, the son of this pious pair, gave frequent indications of his martial spirit in his youth, and is expressly said to have been blessed by the Lord, and at times moved by his Spirit. (*Judges* xiii. 24, 25.) At a maturer age he fell in love with a Philistine woman at Timnath, from a connection with whom his parents in vain endeavoured to dissuade him, ignorant at the time that this was a secret arrangement of Providence to accomplish important purposes. Their objections, however, soon yielded to parental fondness, and they accompanied him to Timnath, in order to negotiate the projected union. On the journey he had an opportunity of displaying his strength and heroism, by destroying a lion; though it was done in some bye-path into which he had turned, and for the present he concealed the exploit from his parents. Upon his return some time afterwards to consummate the marriage, he found a swarm of bees and honey in the carcase of the lion; for though, as naturalists have observed, these insects are averse to flesh, and to any offensive smell, it is easy to believe that in so sultry a climate the moisture was quickly exhaled from the carcase, leaving nothing but a dry skeleton, on which the bees settled. He took the honey, and shared it with his father and mother, without informing them how he had obtained it. A few days afterwards, at the wedding-feast at Timnath, where thirty youths had been invited to do him honour, he proposed a riddle in these words, "Out of the eater came forth meat, and out of the strong came forth sweetness," which they could only explain, after seven days of vain conjecture, by forcibly obtaining the secret from the bride. He had of course to pay the forfeit, which he had himself appointed, of thirty sheets and thirty suits of clothes; but to procure them he repaired to Askelon, where he slew thirty men; an action which cannot be even plausibly defended, excepting on the ground of a divine impulse prompting him to hostilities against the Philistines, and thus assiduously maintaining the prerogatives of the Theocracy. The treachery of his wife, however, induced him to leave her, though without any formal divorce. Soon afterwards he took a kid as a present, and went to seek a reconciliation with his wife; but being denied admittance to her chamber by her father, who informed him that she had been given to one of his companions during his absence, he sternly refused the offer of her firmer sister, and prepared to resent the injury upon the Philistines, whom he regarded as the secret contrivers of his misfortune. Having procured about three hundred foxes, or jackals, he fastened them tail to tail in couples, with a lighted firebrand between, and turned them into the corn-fields, which they set on fire, with the vines and olive-trees. This singular act of *Samson* will remind the classical reader of a feat observed by the Romans, and mentioned by Ovid, to which it would be difficult to assign any other origin,

Jewish law for the redemption of that which was not suitable for a burnt-offering, at a price expressly stipulated in the law. 3. Because the original text does not require any such conclusion; the Hebrew particle *u* signifying *or*, as well as *and*: *Jephthah's* vow will then read, "It shall surely be the Lord's; or, I will offer it up for a burnt-offering." I. e. supposing it to be a victim fit for sacrifice, otherwise it shall be devoted by consecration. Nor does the story affirm the sacrifice, every subsequent part of it stating only that he did "according to his vow." 4. Because her desire to break her virginity, and the visits of the daughters of Israel seasonally, appear best to accord with this representation—the same word, which is rendered to lament her, being capable of the translation to mourn with her. The Fathers, indeed, take the other side of the question. There can be no doubt that the story of the sacrifice of *Isidore* originated here; and it is remarkable, that several of the learned writers who relate it, represent the goddess *Diana* (the patroness of virginity) as interposing and preventing the execution of so horrid a purpose.

*Cor ignis miser vinctis ardentia iudis
Tergis ferant vulpes, caussa decemda iudis.*

Orid. Fant. lib. iv. l. 691.

As soon as the Philistines discovered the author of this mischief, they burned his father-in-law and wife in the house, which only provoked him to fresh and eager resentment. Great numbers of them were slain by his hand, when he retreated to the rock Etam, in the tribe of Judah, and took up his residence on its summit; but the Philistines being determined to avenge themselves, collected a considerable force, and demanded of the people that they should deliver up Samson. Willing to comply, probably from an apprehension of the consequences of a refusal, they sent three thousand men, first to expostulate, and then to seize upon him. He readily yielded himself up, on condition that they should not personally interfere in the present quarrel; accordingly he was bound with two new cords, and taken to the Philistine encampment. They began to exult; when a divine impulse invigorated his nerves, and snapping the cords asunder, he snatched up the jaw-bone of an ass, and levelled a thousand men with the dust. His exhausted spirits were recruited after the action by a miraculous supply of water in answer to his prayer.

*Carries
away the
gates of
Gaza.*

After a repulse so dispiriting to the enemy, the Israelitish hero did not scruple to venture into Gaza, one of their cities, and lodge in a house of public entertainment. A guard was immediately placed round the house and at the city gates to prevent his escape; but he rose at midnight and carried off the gates, posts, bars, and chains, to the top of a hill, near or in sight of Hebron: the distance between the two places was no less than twenty miles. The guards, who did not interrupt him, were probably paralyzed with astonishment at this extraordinary, and, to every appearance, superhuman action.

The next adventure exhibits Samson in a very unfavourable light. He attached himself to a woman, named Delilah, who lived in the vale of Sorek, a place celebrated for its choice wines, and in the immediate vicinity of Eschel, whence the Israelitish spies formerly brought the luxuriant saps of grapes. Some of the Fathers maintain that this was a legal marriage, but with too little probability; no illusion being made in scripture history to any such contract, and there being nothing in the whole conduct of either to justify any other conclusion, than that she was a mercenary prostitute, and he her infatuated captive. The five Philistine princes were not a little gratified to hear of this amour, expecting that by dextrous management they might render it subservient to their hostility against Samson. They immediately offered the woman a large bribe of eleven hundred pieces of silver each, or five thousand five hundred shekels in the whole, upon condition of her ascertaining from him the source of his extraordinary strength, and how it might be contraverted. He at first amused her with the assurance that if he were bound with seven green *vitis* (probably the flexible branches of vines, which are very tough), he should become as weak as another man. This experiment was soon tried; but the Philistines found themselves deceived, for he broke them as soon as he was attacked. Next, pretending that new ropes

which had never been used would fully accomplish the purpose of enfeebling him, he suffered himself to be bound; but when they would have seized him, he snapped them as before. A third time he deceived Delilah and his enemies, by directing her to weave the seven locks of his hair, with the web, into tresses; but he awoke out of sleep, and went away with the pin of the beam and web, or the whole machinery of the loom.

At length, by incessant importunity, this crafty woman obtained the important secret that his strength lay in the preservation of his hair.* He stated to her that, having been a Nazirite from his conception, no razor had touched his hair; but that if deprived of this ornament and glory, which was also the sign of his obedience to the laws of Nazariteship, upon which divine aid depended, he should certainly be enfeebled. Upon this she despatched a message in all haste to the lords of the Philistines, who deposited in her hand the price of her treachery; and when she had cut off his hair as he lay asleep upon her lap, the Philistines took him, put out his eyes, bound him with fetters of brass, and, having carried him to Gaza, compelled him to do the work of a slave in a prison. In this ignominious condition he continued for some time, till on a certain occasion the Philistines assembled in great multitudes to offer a sacrifice and keep a feast in honour of Dagon, their god, to whom they attributed their success in securing the detested Israelite. In the midst of the festivity, and with a view to enhance its pleasures, they thought of sending for Samson, that they might indulge the dastard spirit of ridicule over a humbled enemy. But their sport was soon terminated by an unexpected calamity; for having requested the lad that he led him about, to allow him a little respite by reclining against one of the two pillars which supported the building, Samson uttered a fervent petition to heaven for strength to be avenged on the Philistines, and grasping firmly both the pillars, the one with his right hand, and the other with his left, he pulled them from their positions, and buried himself with three thousand persons, including the Philistine princes, in one mighty ruin. Thus ended the exploits of twenty years. It is not easy to determine what was the shape of the building in which the lords of the Philistines, and these immense multitudes of spectators were assembled, or to what purposes it was usually devoted. But it is evident that ancient structures frequently depended much, or wholly, upon a single pillar or stone; the whole strength of this building, for instance, rested upon the two pillars supporting the roof. A similar stress must be supposed, in other cases, upon the corner-stone (like the key-stone of the arch) to which such frequent allusion is made in the scriptures; it is said that a theatre of Rome, capable of holding many thousands of spectators, was so constructed as to depend upon a single pivot; and hence Cato expressed his astonishment at the folly and rashness of the Roman people, who would trust themselves in a building, wherein, if a single hinge gave way, more lives would be lost than were

Eli.

During the entire life of Samson, and after his death, the Israelites were in a state of general subjection to their enemies; and in what sense Samson is denominated a *judge* is not very obvious: not certainly as a civil magistrate, but probably as exercising a defensive power in behalf of the Israelites, against the exactions and insolence of their oppressors. As from the very nature of their office, the judges were not so much regular governors, as extraordinary protectors raised up and invested with a divine commission, for the purposes of occasional interference to effect reformation, or to afford a defence, we are not to be surprised that Eli, who is usually ranked in the order of succession next to Samson, should, however, be rather considered as supreme in the state during the period in which the latter performed his exploits. But although for forty years he united in himself the two principal civil and ecclesiastical functions, and though in some respects he was highly estimable, his history, as given in Scripture, consists only of a few fragments, interspersed through the more important life of his successor, SAMUEL; and in a similar manner we shall interweave it in our narrative, rather than aim to give it a very distinct prominence.

Hannah and Elkanah.

It was at the time when Eli was presiding as high priest at Shiloh, that Hannah, the wife of Elkanah, a Levite, and an inhabitant of Ramah, having gone to the usual sacrificial festival at Shiloh, availed herself of an opportunity of "pouring out her soul before God" at the tabernacle; requesting the removal of the reproach which she daily suffered from Peinnah, her copartner in the embraces, though far her inferior in the affections of Elkanah, by the bestowal of a son. The fervent, yet silent manner of her appeal induced Eli to mistake her emotions for intoxication, with which he most precipitately accused her, but upon the circumstance being explained, he as readily retracted, and changed the language of uncharitableness into that of benediction. The acceptance of Hannah's prayer was at length corroborated in the birth of a child, whom her piety and gratitude concurred to name SAMUEL, that is "asked of God." Having been devoted as a Nazirite from his infancy, he was no sooner weaned, than his parents presented him to Eli for the service of the tabernacle, by whom he was invested with the distinguishing ephod.

1171.

Samuel.

The extraordinary character of Samuel soon began to be developed, in a commission which he received immediately from Heaven, to denounce its displeasure against Eli, for his criminal remissness with regard to his two sons, Hophni and Phinehas, whose libertine baseness was severely reprov'd, and not at all restrained by parental authority. The spirit of the aged priest upon the occasion, demands notice, and deserves imitation; "It is the Lord" he exclaimed, "let him do what seemeth him good." The appearance of a prophet like Samuel in this period of suspended revelations, awakening in the bosoms of the almost desponding Israelites the liveliest anticipations, they immediately adopted measures to disenthral themselves from Philistine subjugation; but they were defeated with the loss of four thousand men. As they imputed this disaster to the

absence of the ark, it was fetched into the camp amidst great exultations, but a second overthrow involved the loss of thirty thousand foot (among whom were Hophni and Phinehas), and above all of the ark, which the enemy captured; intelligence of which latter calamity being suddenly communicated to Eli, he fell backwards "and his neck brake, and he died." The Philistines had but little cause to triumph in the captivity of the ark. This sacred possession was carried into the temple of Dagon, to whom they ascribed their victory; and the priests, upon entering the national shrine, the next morning, found their god fallen to the ground before the ark. Imputing this circumstance to accident, they again set up the statue. The following day, the image was discovered again fallen, and the head and hands broken upon the threshold of his own temple, so as to leave the trunk only remaining. The people themselves were smitten with grievous bodily diseases, which pursued them from city to city, wherever they transported the ark, until they restored it, with commemorative offerings, to the Israelites. Dagon is described by the sacred historian as being human in the upper part of his figure: in the lower, he is supposed, upon authorities too numerous to cite, to have been in the shape of a fish.

The captivity of the ark, and the consequent suspension of the public services at Shiloh, tended to the increasing debasement and degeneration of the people, which only stimulated our eminent prophet and ruler to exert his energies to accomplish a general reformation, by whose means an assembly was at length convened at Mizpel, for the purpose of publicly renouncing their sins, and returning to God by fasting, humiliation, sacrifice, and prayer. This solemnity excited the apprehensions of their enemies, who accordingly determined upon frustrating their plans, by coming suddenly upon them; but as their repentance was sincere, and their consequent reconciliation to offended goodness immediate, the Supreme Being declared himself in their favour after Samuel's sacrifice and intercession; the Philistines were panic-struck by a tremendous thunder-storm, and by their flight and dispersion enabled the pursuing Israelites ultimately to dictate terms of peace: in commemoration of which deliverance, Samuel erected a monumental memorial, which he called *Ebenzer*, or "the stone of help."

While victory had now rendered the Israelites secure from external attacks, the proper administration of justice, by their illustrious governor, conferred upon them internal prosperity and happiness. Samuel exercised his judicial authority with evident advantage to all classes of the community, and by annual circuits took upon himself the inspection and regulation of civil affairs. He moreover erected a public altar of worship, as the best substitution for the deserted ordinances of Shiloh; and to him have been ascribed those institutions which were called the *schools of the prophets*, of which we cannot at this distance of time of the prophets collect any very exact information. They appear to have been originally established in the cities of the Levites, which were diffused through the different tribes for the sake of facilitating the plan of general instruction. In these seminaries the prophets devoted themselves to the study of the law, were taught the art of psalmody, and awaited the call into public life under the superintendence of one of the same

ets.

class, venerable for wisdom or years. Age, however, relaxed the vigour of his administration; and Samuel, in consequence of appointing his two sons, Joel and Abiah, to execute his office, soon found, by the complaints of the elders, that he had devolved it into unworthy hands. He was in consequence solicited to appoint a king over them, that they might enjoy a similar form of government to that of other nations. This was no doubt an offensive request to Samuel, as it was an impious and ungrateful one toward their supreme Lord and benefactor. He at once, therefore, applied to God, in the exigency, who directed him to comply with their desires, after a solemn protest against their proceedings.

The introduction of SAUL, the son of Kish, to Samuel, and the several circumstances which attended his election to royalty, furnish remarkable illustrations of the ever active agency of providence; controlling every seeming casualty, and subordinating to its plans the most trifling coincidences. Saul and his servant were dispatched in pursuit of his father's asses, which had strayed from home; and having arrived at Ramah, at the instigation of the latter, Samuel was inquired after for information respecting them. The prophet had been already prepared for the visit, and instructed how to act, by a divine intimation. Treating him accordingly with marked distinction and respect, he first held a conference with Saul in the evening, probably to explain the secret designs of providence, and in the ensuing morning, after sending the servant to a proper distance, proceeded to anoint him the future king of Israel, giving him prophetic information of some other events in which he would be personally interested. This appointment, it must be remarked, was now only a private transaction, but calculated to satisfy him with regard to the divine decision of the lot by which he was subsequently chosen at Mizpeh. To that place, whither the ark was conducted, Samuel convened the people; and when the lot was cast, which successively pointed to the tribe of Benjamin, the family of Matri, and the person of Saul, his majestic appearance so well seconded the commendatory speech of Samuel, that he at once gained, with few exceptions, the universal attachment. He very soon signalized himself by rendering prompt and effectual succour to the inhabitants of Jabesh-Gilead, who were besieged by the Ammonites, and on the very point of a surrender; a victory which, by enhancing his fame, gave him a triumph over his secret enemies. A general meeting was accordingly called by Samuel, at Gilgal, where the election of Saul was confirmed, with the accompaniment of public sacrifices and rejoicings. Having now wholly to resign the government into the hands of the person he had himself anointed for the office, Samuel concluded his more public life by an oration, truly characteristic of his integrity of principle and his piety of mind. He challenged the people to produce any instances of perdition or iniquity during his administration; recapitulated some of the facts of their past history, which were illustrative of the consequences of disobedience, and intimated the impropriety of their conduct in desiring a king; appealing to a miraculous attestation of the displeasure of God, by calling for a thunder-storm in that season of wheat-harvest, when it was so unusual; suggesting at the same time the goodness of God in determining not

to forsake them if they did not finally renounce his authority.

In the second year of Saul's reign, hostilities were renewed against the Philistines. The king having repaired to Gilgal, waited with impatience for Samuel to assist in presenting burnt-offerings, till at length, on the seventh day, the services were ordered to proceed before his arrival; which occasioned a severe rebuke from the prophet, and an assurance that his precipitation would ultimately prove subversive of his dominion. Shortly after this, another instance of Saul's disobedience occurred; he was commanded by God through Samuel, to destroy utterly the nation of the Amalekites, but under the pretence of offering sacrifice he spared the most valuable portion of the spoil, together with Agag, their king. This produced a severe remonstrance from Samuel, who turned abruptly away from his excuses; and when Saul seized his garment, which rent in his hands, Samuel took occasion to declare, that the Lord had rent the kingdom of Israel from him, and had bestowed it upon another. The king's urgent solicitations, however, induced at length a compliance with his wish that Samuel would join him in a public act of worship; after which, the prophet slew Agag, and departed to Ramah, never more to hold any personal communication with Saul.

Still, however, he retained an affection for the king, and long, and deeply lamented his misconduct; till he was roused from unavailing grief by a message from heaven, desiring him to go to Bethlehem, and bestow the royal unction upon DAVID his distinguished successor, to whom we devote a subsequent article.

After the lapse of a few years from this period, in which David was encountering the relentless malignity of Saul, we find Samuel still at Ramah, and accompanying David to Naioth, a school of the prophets, as a temporary asylum, where the scripture narrative of his life closes.

Samuel died about four years before Saul, upwards of ninety years of age, and in the year of the world 2944, deeply lamented by the whole nation. His remains were interred at Ramah, the place of his usual residence; but afterwards they are said to have been removed to Constantinople, in the reign of the emperor Arcadius. Jerome states that they were conveyed in a golden vessel, wrapped up in silk.

Samuel was a character unquestionably of the very first class; of irreproachable integrity, undaunted fortitude, unabating zeal, unaffected and unblemished piety; sincere as a friend, gentle as a man, virtuous as a judge, and bold as a prophet. In the Chronicles, he is stated to have assisted in distributing the Levites appointed by David for the temple service, and as having enriched the tabernacle by spoils taken from the enemies of Israel. He is said also to have written the history of David, in conjunction with the prophets Nathan and Gad, which, of course, can be understood only of his early transactions. The first twenty chapters of the first book that appears under his name, are with the utmost probability ascribed to him by the Talmudists; and he was the first in the broken chain of prophets, that extended to the days of Malachi, and that "foretold," according to the testimony of St. Peter (Acts, ch. iii. v. 24.), "of the final establishment and triumphs of Christianity."

Chosen by lot.

Samuel resigns the government, and exerts his integrity.

DAVID.

BORN, A. M. 2919; B. C. 1085.

DIED, A. M. 2989; B. C. 1015.

Biography. DAVID, the prince and poet of the Jews, during one of the most prominent and most glorious periods of their history, was the first of the Jewish kings, who fully united the choice of God and man in his claims to the throne; and is the first monarch of antiquity of whose reign we possess any authentic details. He is introduced to us, by the scriptural narrative, in his youth, as early as any indications of his future greatness can well be supposed to have appeared, and he remains with us to his latest age. Perhaps he is that monarch in the history of the world of whose public and private character we possess the most complete and finished portrait.

The pretensions which have been urged by almost every nation of the globe to the honour of having once been divinely governed, were more than realized in the history of the ancient Israelites. The God of all the earth assumed the immediate direction of their affairs for several centuries, was consulted by their chiefs upon every important occasion, and suffered nothing of public consequence to be transacted without his direct commission. But when their capricious and idolatrous dispositions had broken down all the great moral distinctions between the surrounding nations and themselves, they felt that to be a restriction which God meant for a privilege; and as the chief design in the introduction of the THEOCRACY, that of a long-continued recognition of the *Unity of God* in their early history, had been accomplished, God granted them, in the first instance, a monarch of their own character, in the person of SAUL; and finally over-ruled and settled the change of their government, in subservience to his own purposes, under the administration of DAVID.

His birth and family.

This prince was born in the year of the world 2919, at the close of 406 years after the Exodus of his countrymen from Egypt, and was the son of Jesse, the son of Obed, the immediate offspring of the interesting Ruth. Of his earliest days we have no distinct account; but at the period of his first introduction into public life, and while very young, we have a remarkable character of him, from the court of his rival Saul, "as a mighty valiant man, a man of war, prudent in matters," and of an eminently pious disposition.* He was "comely in his person" too, we learn from the same authority, and accomplished in his manners. The interesting scene in which we first meet with him at Bethlehem, though singularly contrasted with the character thus given of him, is no more a necessary contradiction to it than Samuel's continued grief at the rejection of King Saul was a proof of his indulging any sense of injustice in that measure. For when David must have attained to about the 22d year of his age, this venerable prophet was directed to go to Bethlehem, where Jesse and his family resided; amongst whom, he was informed, God would intimate to him His choice of a future king; an errand toward

which Samuel manifested unusual reluctance. As an appropriate introduction to his commission, and an effectual security against his fears of Saul's interference, he was, therefore, commanded to call the town to a sacrifice, and especially to invite David's father and his brethren. Some have considered this circumstance as encouraging a MERE pretence of divine worship to accomplish ulterior and inconsistent views; or, at the least, to allow such a pretence as a cover for other and distinct objects. We presume that it is not fairly susceptible of either construction. That Samuel might not have received it as a part of his commission to call the family and neighbourhood to so suitable a service prior to the actual anointing of God's future servant, had he expressed so unwillingness towards that commission, is by no means to be gathered from the Scripture account; nor that, admitting it to be an expedient for his unwillingness, it was in any way inconsistent with one of the most eminent peculiarities of the Jewish church, reconciliation to God's will by sacrifice; while in the occurrences, as they actually stand narrated, an union of great interest and solemnity will be excited in every well-ordered mind. Jesse's sons passed in succession before Samuel. When he saw the eldest, a man of fine personal appearance, impressed forcibly, it is probable, with his similarity in this respect to Saul, "Surely," said he, silently, "the Lord's anointed is before him." A disclaimer of this construction, invaluable as a general principle of the ways of God, was immediately given—"Look not on his countenance, nor on the height of his stature, because I have refused him; for the Lord seeth not as man seeth; for man looketh on the outward appearance, but the Lord looketh at the heart." A like intimation was afforded respecting all the other sons present—"Neither hath the Lord chosen this." Samuel, who appears to have been brought into the house of this remarkable family, after the worship, and just prior to this scene, was now somewhat perplexed; until finding, on enquiry, that the youngest son of all was with the sheep in the field, he requested him to be sent for, and DAVID appeared. "He was ruddy, and of a beautiful countenance," says the inspired penman, which would evidently imply, in connection with the preceding narrative, that he possessed the rare junction of personal and mental excellence, for which the prophet had looked in vain in his predecessor Saul. "Arise, anoint him," said the Divine impulse now; "for THIS is he." Then, in the presence of David, all his relations, Samuel poured the anointing oil on David's head; the last public act of that prophet's life—and hastened home to his house at Ramath.

To what extent either David or his family were apprized by Samuel of the meaning of this ceremony, it might be difficult to ascertain. Beyond the limits of the household, the event itself was not known, as the scripture narrative would seem to intimate; and Josephus states, that the flattering secret connected with

David,

Anointing of David.

* 1 Sam. xvi. 18.

Biography. it was whispered only to David and to Jesse, while some writers * have conjectured that as it was usual to anoint men to the office of prophet, as well as to the regal dignity, Samuel might possibly leave the family to conjecture that the former was the designation of David. Certain it is that as immediate change of condition followed this circumstance. Though the dynasty of the most distinguished throne on earth was thus silently changed, and a peculiar blessing from God immediately followed this consecration; † (as a peculiar providence doubtless watched over the steps of David), he returned to the same honourable but unpretending obscurity in which his character had hitherto been formed; and his mercies and his merits, like the subterraneous courses of some of the noblest rivers, were destined to find their way to public notice through obstructed and unexpected channels.

David summoned to the court of Saul. Shortly after these interesting occurrences, a mysterious illness of the reigning monarch, Saul, induced the specious proposition from one of his courtiers, of sending for some skilful player on the harp to alleviate his depression. With this proposal he gave the early character of David, to which we have before alluded, and which instantly caused him to be summoned to the court. This is not the place to discuss the nature of the royal malady, nor the force of the constraint under which it is placed with the rising dispositions of David. Neither ancient nor modern times are without instances of a nervous temperament that would correspond with many indications of this disease, nor of the cheering triumphs of a growing piety that could always accomplish wonders with the harp of David. Goliath and irreligion, too, with their usual associates, perverseness, discontent, jealousy, and cruelty, have in all ages produced similar effects: Charles IX. of France, according to the testimony of Thuaus, had his symphony of singing boys to compose him to sleep after the massacre of St. Bartholemew's day; to say nothing of the awful and incontrovertible connection of man with the world of spirits. ‡ David fully answered the description of his equity friend:—he was at once the poet and the musician, designed for such a scene; and soon attracted to himself the notice and distinguished favour of Saul, who "loved him greatly," made him his armour-bearer, or one of his body-guards; and expressed a wish to his father Jesse that he should remain about his person until his disorder was completely removed. After this event, which does not appear to have embraced any considerable period of

His musical talents.

* The authors of the Universal History, vol. ii. p. 376. Note D, &c.

† 1 Samuel xiv. 14.

‡ 1h.

§ Josephus describes these paroxysms as "some strange and demoniacal disorders, which brought him such afflictions as were ready to choke him;" and calls David "the only physician against the trouble he had from the demons, whenever it was that his passion came upon him, and this by reciting of hymns, and playing upon the harp, and bringing Saul to his right mind again." Josephus, Ant. 1. vi. c. 8. *Αυτον οντος σπουδης ην εδωκεν εν τοις σωματι. Critique are very much at variance as to the true nature of the malady; that it was some species of madness, however produced, is the only point that has been generally conceded. The rest of the question seems fairly to belong to the general controversy on the Demonology of the ancients, upon which the reader may consult CUPERUS on the *Causes*, Preliminary Dissertation; the various works of FABRUS on this subject; JUSTIN on Ecclesiastical History; FELL's *Essay on Demons*, &c. "All authors," as Patrick says, "are full of the powers of music, both to stir up passions and to slay them."*

David. time, we find David, whether from the enviousness of royal favour, or the entreaties of the parent, who now "went amongst men for an old man," returning to the care of his father's flock; again, and finally, to be called forth to very different scenes.

The Philistines, the ancient enemies of Israel, having recovered from a late signal defeat by the band of Jonathan, and encouraged probably by the rumours of Saul's incapacity to oppose them, had advanced to the neighbourhood of Shochoh, to the tribe of Judah; and on the appearance of the Israelitish army, under that monarch, finally encamped on the side of a hill in Ephes-dammim, between Shochoh and Azekah. To the adjacent valley of Elah, Saul had summoned all the strength of the tribes, and three of the brethren of David were included in this army. On the part of the enemy appeared a man of extraordinary stature and strength, Goliath of Gath, proposing to decide by single combat the whole fate of the war. His accomplishments were more than any other man could have sustained, and Josephus represents him as followed "by many," for the purpose of bringing them into the field. The honourable distinction of an armour-bearer carrying his shield, indicated perhaps both his illustrious birth,* and the importance which the Philistines attached to his services; while his daily appearance between the two armies, renewing his defiance of the Israelites, filled the latter with overwhelming dismay. Goliath had repeated his vaunts for the fortieth time, and the forces of Saul were pouring forth from their trenches to a desperate struggle, when David approached the confines of the camp, on an errand of kindness from Jesse to his sons; and, in the midst of their conference, overheard the challenge. The Israelites fell back, but the courage and piety of David were equally roused to enquire into the nature of this champion's offer, the manner in which it was regarded by the king, and the unaccountable forgetfulness of his countrymen, that theirs were the armies of the living God. Replying mildly to the supercilious interrogatories of his brother Eliah, "Why comest thou down hither, and with whom hast thou left those few sheep in the wilderness?" (which these active enquiries had excited): he hesitated not to offer himself in the presence of the king as the antagonist of the gigantic enemy. Saul was as surprised as his brethren had been displeased, but David was cool and determined; he assayed, with equal boldness and simplicity, his past success in the most unequal conflicts, as the ground of his present confidence, and inspired the faint heart of Saul with such emotions of exalted trust in God, that after some slight expostulation with him respecting his youth, and his ignorance of the art of war, he could conclude the conference, with no other reply than "Go! and Jehovah be with thee." The personal armour of the king was now offered to David; but having equipped himself with it, and girded on the sword, the youthful hero was encumbered, and with modest firmness declined to use them. He selected from the valley five smooth stones, which he carried in

* Thus Alexander, according to Arrian, had the shield taken out of the temple of Trojan Pallas, to be borne before him in all his battles. Some writers have assigned to Goliath two shields, the one to be carried before him for attack, the other for actual use. Patrick, after Fortunatus Scarchus, suggests that the weight of his coat of mail, "a five thousand shekels of brass," might relate, after all, to its value, rather than to its bulk.

Biography. his shepherd's bag, or scrip; and with his staff and sling alone in his hand, advanced to meet Goliath. Their first salutation, and the short conference that ensued, were, perhaps, as memorable as the result. Understanding, by this time, that some Israelitish champion was preparing to come forth, Goliath advanced in all the pomp and circumstance of war; and having assured himself that David was his real opponent, "disdained him," we are told, with the most indignant contempt. In ridicule of his shepherd-like appointments, he asks "Am I a dog, that thou comest to me with staves?" and having cursed him by all the gods of his country, vows to give him, without effort, to destruction. "Come to me," said he, "and I will give thee to the fowls of the air and the beasts of the field." David's reply was full of the dignity, the piety, and the large-hearted views that animated his whole life and character. "Thou comest to me with a sword, and with a spear, and with a shield; but I come to thee in the name of Jehovah of Hosts, the God of the armies of Israel, whom thou hast defied. This day will Jehovah deliver thee into mine hand; and I will smite thee, and take thy head from thee; and I will give the carcasses of the hosts of the Philistines this day unto the fowls of the air and to the wild beasts of the earth; that all the earth may know that there is a God in Israel. And all this assembly shall know that Jehovah saveth not with sword and spear: for the battle is Jehovah's, and he will give it into our hands." He now instantly placed one of his stones in the sling, and springing forward to meet his gigantic foe, at one happy effort, he wounded him mortally in the forehead, and Goliath fell prostrate on the earth. Advancing with equal spirit up to the fallen carcass, David proceeded to the fulfilment of his previous declaration, by cutting off Goliath's head with his own sword; and while he was ushered into the tent of Saul with this memorable trophy of his success, the panic-struck armies of the Philistines fled on every side before the Israelites. "Where are now," says the eloquent bishop Hall, on this encounter, "the two shields of Goliath, that they did not bear off this stroke of death? or wherefore serves that weaver's beam, but to strike the earth in falling? or that sword, but to behead his master? What needed David to load himself with an unnecessary weapon? One sword can serve both Goliath and him. If Goliath had a man to bear his shield, David had Goliath to bear his sword, wherewith that proud blasphemous head is severed from his shoulders. Nothing more honours God, than the turning of wicked men's forces against themselves. There are none of his enemies but carry with them their own destruction. Thus didst thou, O son of David, foil Satan with his own weapon; that wherewith he meant destruction to thee and us, vanquished him through thy mighty power, and raised thee to that glorious triumph and super-exaltation, wherein thou art, wherein we shall be with thee."

David kills Goliath.

Bishop Hall's reflections.

* It is remarkable that at this moment David had no visible means of accomplishing the greater part of this positive declaration. To smite Goliath's head from off him, was not work for a shepherd's weapons, however successful they might be in slaying him, nor to give the carcasses of an army to the fowls of the air. It implied that clear view of the end, which anticipated the sure possession of all the means. This is also the first instance in antiquity of a public single combat.

Some slight incongruity has been conceived to attach to the Scripture narrative of these circumstances. David is treated as a youth, a stripling, by Saul and his courtiers, as well as by his gigantic opponent, although he had previously been recommended to the court under the graver character of "a mighty valiant man; a man of war, and prudent in matters. But surely to remove all semblance of inconsistency here, it is enough to advert to the most ordinary varieties of language in speaking of the same person under different points of comparison with others. In the first instance, to inspire Saul with confidence in the course he prescribed, the *stripling* courtier extols the steadiness and manly accomplishments of David; in this last case he stood in contrast with a man to whom Saul was as *little* as David was *young*.

Another circumstance of alleged inconsistency has been remarked upon. That Saul should enquire "whose son David was" on this occasion; though he is said to have made him so familiarly his attendant, and almost his companion before. To this the reply of Houbigant is definitive. "Non inquire Saulum quis sit David; sed cuius filius; quin ejus intererat scire, ejus familie esset si adolescebat, cui filium suum promiserat se uxorem daturum si vinceret Philistæum." Saul did not enquire who David was, but whose son; because it was of importance to him to know of what family he was, as he had promised to give him his own daughter to wife if he should conquer the Philistine.*

The splendour of this victory secured to David the decided admiration of the people and of his prince; it involved in its consequences all the leading events of his future life, and amongst its happiest first fruits, introduced him to the memorable friendship of Jonathan, Saul's son. He was again welcomed to the court of Saul, and received a permanent appointment in the army. Here his conduct conciliated the affections of all around him; though entrusted with a most important command, he seems to have disdained all sinister views in the exercise of it; his allegiance to Saul was most honourably sustained, and but for the rising envy of that unhappy monarch, might have remained as uninterrupted as it was important. But Saul had long forsaken his own allegiance to the ultimate Government

Apparent differences in the accounts of David.

Reconciled.

Rise of Jonathan's friendship.

* We should not omit to notice here, the doubts of Kennicott, followed by Gesenius, respecting the authenticity of the verses in 1 Samuel xlii. (1) to 32, nor that Josephus wholly omits the conversation between Saul and Abner respecting David, v. 55-58. A conjecture of Dr. Delany's is perhaps worth recording too. As "David going and returning from above Saul," would be a literal rendering of the clause in 1 Sam. xvii. (15.) as Josephus says that the physician advised him to get a man "to stand over his head," viz. as he lay in bed, to "play," &c.; and as the second message sent by Saul to David, is, "Let David, I pray thee, stand at my face," (to say nothing of the state of his mind) he could only see David's face face-shortened, and the harp might wholly hide both his face and person. Delany thinks his visits to court very temporary at first. The editor of CALDER, 3 v. 40, Lond. asks, "Was Saul, like insane persons among us, kept private in some dark apartment? Did David play in a separate apartment, &c.?" It does not appear that even Jonathan had seen David, at least familiarly, before.

* For though the immediate interferences of God with the government of the Israelites were now fewer, and the form of its administration changed, the piety of David and the despair of Saul both witness that the interferences were regarded as the highest proofs of an intimate connection between God and all their public affairs. "God is departed from me," is the climax complaint of the latter; "and knoweth me no more, neither by prophets nor by dreams;"

Biography. and true King of Israel; an allegiance that had been the source of all his personal successes, of Samuel's long and now exhausted affection for him, and of the almost exhausted attachment of his people. As David and the royal retinue were returning from the recent victory, the first indication of this change in their opinions began to appear in the congratulations of the populace. "Saul hath slain his thousands and David his ten thousands," said the women significantly, and in the very ears of Saul. However provoking to the haughty soul of the king, or indecorous towards his station such exclamations might appear, David, it is evident, was an innocent and deserving party on the occasion, but envy, which is never just, did not fail to transfer the evenommed hatred, which it was now necessary to smother, to the person of the youthful hero. "Saul eyed David," says the accurate penman of the scripture, "from that day forward." The next day, in a

paroxysm of his former disease, but sufficiently collected to form the deliberate attempt, he had the baseness to aim a javelin at the deliverer of his kingdom, and probably of his life, and repeated the attempt, but David again escaped; he gradually imbibed a settled fear of the "awful goodness" of David's character, and attributing his own vile dispositions to his rival, removed him to a command at some distance from his person. No decided arrangement appears to have been previously made for the fulfilment of his public promise to give David, as the conqueror of Goliath, his daughter in marriage; but whether that promise specified which of the daughters of Saul was intended, it may be now as difficult to decide as it was then convenient to doubt. The custom of the east at this time, and the general bearing of the scripture narration, would certainly induce us to suppose that Saul added to his other public crimes and follies, a breach of his public faith in giving, shortly after this time, his *eldest* daughter's hand to a comparative stranger. For "when Merab, Saul's daughter, should have been given to David, she was given unto Adriel, the Meholathite, to wife." Her younger sister, however, imbibed a strong personal attachment to David; and the wretched father could even congratulate himself on this circumstance as a means of ensuring David's life. Many are the steps that occur in the most decided plans of the Divine Governor that bid fair to lead to the happiness of his most rebellious subjects. There had been nothing irreconcilable with the divine decision of transferring the throne of Saul to David (compared especially with similar declarations and their fulfilment) in the continued relation of sovereign and subject between them, exactly as it now stood during Saul's life—much less in the honourable fulfilment of Saul's own proposal of an alliance with his family; which might have offered an arrangement that would have united the claims of each house. Saul now added an *ex post facto* condition to the marriage of David with his daughter Michal; that he was to bring 1000 ore-skins of the Philistines, as a dowry to his father-in-law.* Of this, David made no diffi-

culty—"What is my life, or my father's family in Israel, that I should be son-in-law to the king?" was his manner of reasoning throughout these trying circumstances; he brought double the expected dowry "in full tale" to the king, of whom we only read in this most promising circumstance of his life, that he "became David's enemy continually."

Why David's conduct in these expeditions against the Philistines, who were continually watching for opportunities to attack and subjugate his country, should need any more defence than the patriotism of other heroes of antiquity, can only be accounted for on the supposition of his peculiar claims to be the servant of God in them, which very supposition answers the chief argument of the objector, and is confirmed by all the facts of the case. "The earth was filled with violence"—God had never ceased to indicate his claims to control the evils which he did not originate; and had repeatedly asserted, and confirmed by miracles, his peculiar determination respecting this people and the land they inhabited, of which the Philistines occupied one of the richest districts. The whole history of their public conduct towards the Israelites had been marked with treachery, with insult, and with blood; often and long had they debased and disarmed them, when in their power (1 Sam. xiii. 19, 21); had outraged the sanctity of the ark, and witnessed many of the direct interferences of God for his people in vain. David appears at this time to have generally headed the military expeditions of Saul against them.

As ignorant of the mity of virtuous minds, as he was tormented with the distractions of his own, the growing friendship of David and Jonathan, was either wholly unperceived by the king (though it arose from Jonathan's opportunity of observing the correctness of David's present conduct to Saul), or he supposed that the commands of a capricious and tyrannical parent were superior to every other law with Jonathan. Certain it is, that about this time, Saul made no secret of his determination, if possible, to take David's life. "The voice of the charmer" could touch his heart no more, for the voice of nature, and of common gratitude, was stifled within him. He issued an express command to Jonathan, and to his confidential servants, to watch the opportunity of secretly dispatching David; and though that true friend and respectful son expostulated with the besotted parent of them both, not altogether in vain;† war having ensued between the Philistines and the Israelites, fresh obligations were incurred by Saul, with every act of David's valour; and the hateful burden of gratitude under which he could not learn to feel

"At once
Inebriated and discharged"—

urged him again to throw his javelin at the hero, from which he very narrowly escaped. These spears, which were probably the origin of sceptres, it was a custom of antiquity to have constantly about the person of a monarch, and very frequently in his hand.† Saul now

while David speaks, in one of his last addresses to the people, of Solomon being advised to "sit upon the throne of the kingdom of JARONAH over Israel."

* According to the custom at this time, and still subsisting in some eastern nations, of the husband bringing a dowry to the wife or her friends. Compare Gen. xxiv. 12, and Ex. xii. 16, 17.

* Ps. lxxi. 5. a passage which might allude to this memorable period of David's life.

† 1 Sam. xiv. 6.

† The classical reader will not fail to remember Homer's kings, and their sceptres. Pausanias says, expressly, that the kings of Argos called their sceptres, spears; and Justin tells us, that in the first ages of the Romans, they had spears as ensigns of royalty, which the Greeks call sceptres.

stratagem.

sent openly in pursuit of David, yet retained some compunction at the thought of violating the sleeping couch of his own son-in-law. He directed the messengers to encompass the house, and put him to death in the morning; but the affection of Michal enabled David to elude their vigilance. From an unperceived part of the wall she let him down, and substituted an image covered with a cloth, and adorned with goats' hair, for his person, in the bed. The oriental goat is said to be capable of yielding a shining, silky hair, which might have deceived completely a casual glance on a supposed sick bed, if we understand, as the original phrase will admit us to do, that she used it as an imitation of David's flaxen locks, and not for his pillow. The guards too would thus be capable of saying they had seen him stretched upon the couch. Saul quickly commanded them to return, and bring David, sick or in health, to his feet; Michal's expedient was discovered, and the unrelenting tyrant reproached her with sending away "his enemy," and becoming so herself. Other outrages were to complete this monarch's abandoned character. David fled to *Samuel*, at Ramah—to *Nanniel* their common friend, and the upright judge of Israel—could Saul have alleged any just complaint against David. Here he narrated his persecutions and his dangers, which induced *Nanniel* to proceed with him to the neighbouring establishment of some of the prophets at *Naioth*, where it is probable he frequently resorted to watch over their education, and occasionally conducted their worship. The messengers of Saul having pursued him thither, arrived at the moment of its celebration, and were incapacitated from accomplishing their errand by catching a kind of kindred devotion. Other messengers arrived a second and third time, and suffering David to remain unmolested from the same cause, Saul himself proceeded to the spot, and fell under the power of similar impressions. He cast aside his armour and royal vestments ("rejecit veste superiore," as Tacitus says of the Germans, when they throw off their upper garments), and again astonished his subjects by continuing a whole day and night amongst the prophets.

Returns to
Jonathan.

David availed himself of this unexpected detention of Saul at *Naioth*, to rejoin Jonathan at Gibeah, the seat of the royal government, and freely to commune with him on his present situation. Jonathan endeavoured himself, perhaps, to believe in the sincerity of his father's present change, much of whose confidence he still retained, assured him there was no present danger; but promised to ascertain Saul's mind more fully, and devised a method of communicating the result to David. He was to wait at an appointed spot, in the field where they were communing, and Jonathan, after sounding his father's disposition, on his return, proposed to bring his archery and an attendant on the ground the third day, as if for the purpose of shooting arrows at a mark; when, if Saul continued implacable in his enmity to David, he was to call to the lad that the arrows were "loosed" him; and David was forthwith to escape. As this may be called the last deliberate interview between these illustrious friends, and as for constance, disinterestedness, and discretion, their attachment has been rarely if ever equalled, we may be allowed to advert the more freely to so memorable an occurrence in David's life. By a solemn appeal to God, the princely Jonathan declared his present openness and full determination of mind to communicate

to David every thing that should concern his future interest; imploring pathetically a final blessing on his friend should Saul's rage render it impossible and unavailing for them to abide together. And now, as if with a presentiment that this might be their last meeting, he opened up a further view of things, which must have awoken all the powerful feelings of David's soul, and brought every principal circumstance and prospect of his life distinctly before him. "Thou shalt not only while yet I live," said he, "show me the kindness of Jehovah, that I die not: (it was too much to expect, at this time, that he should refer more explicitly to David's designation to the throne) "but also, thou shalt not cut off thy kindness from my house for ever: not when Jehovah hath cut off the enemies of David every one from the face of the earth." To this effect he pressed David twice to swear; and concluded the interview with the memorable and repeated adjuration, "Jehovah be between me and thee for ever." His father was found in the sequel as malignant as David could have anticipated;—disappointed of whom as the object of his rage, he was wise enough to hurl his spear at Jonathan as his supposed protector: the appointed signal of this state of Saul's mind was given: the friends met to weep together, until "David exceeded;" (for the noblest minds like some of the noblest metals, according to the ancient proverb, can still be melted) and Jonathan and David parted to renew their former constant intercourse no more.

§ 2. David's exile, and personal situation, until his final possession of the throne of all Israel.

The life of David assumes a singular and instructive division into four very distinct periods:—his *personal prosperity*, succeeded by his *personal trials*, previous to his possession of the throne; and his *public prosperity*, succeeded by his *public trials*, after that memorable event.

Hitherto, though followed all the way by the unnatural, but not surprising, efforts of envy and malignity, his path has been shining, his steps have been just. A shepherd youth, the youngest son of an inconsiderable family, has been expressly designated as God's future king over his people; introduced within the precincts of that very court in which he was afterwards to preside, he has enjoyed an unrestricted personal access to the monarch, but has made no personal efforts after the throne. His accomplishments, and his distinguished valour, have been devoted, on the contrary, to the service and support of its present possessor. He has obtained an alliance with his family, and the closest friendship of the immediate heir to that throne (while he has excited by the same conduct the vilest passions in the king), but he has never attempted to invade the filial duty of Jonathan; he has voluntarily disturbed neither the domestic nor the public peace of Saul. But the long period of David's *personal trials* had now commenced; and commentators have ascribed to this part of his life the composition of the seventeenth Psalm. Certainly the devout reader will feel no small pleasure in perusing it in connection with his present circumstances. We shall occasionally venture to give an opinion upon the probable date of some other of these compositions, as entering strictly into the character of one of the earliest and most eminent poets of antiquity.

Doeg.

ened to the shade of the high priest Ahimelech, or Ahithair, at Nob, a city of the tribe of Benjamin; prevented, it is probable, by his profound respect for the character of Samuel, from again disturbing the repose of his old age. But whether with a deliberate design to quit the kingdom of Saul, at this time, as he shortly afterwards did; or whether the unwelcome presence of the wily Edomite, Doeg, whom he accidentally found here, induced him to resolve on this step as a further measure for his safety, does not appear. Perhaps, that circumstance, however, had some influence in the reply which he gave to the enquiry of Ahimelech, why he came unattended? David stated that the king had entrusted him with a confidential business, upon which his servants were to meet him at a further place. He requested of the high priest some loaves of the shew bread, in his necessity (a measure afterwards justified upon this ground by the highest authority*) and any weapons for his personal use, which might be deposited at the sanctuary. The well-known sword of Goliath, happening to be the only one, was therefore offered him; and supplied to him originally by God's peculiar providence, he made no hesitation of accepting it, exclaiming, "There is none like that." Whether David may not be justly charged with a criminal violation of truth on this occasion, we are not inclined to dispute. Saul had sent him on no such errand. It was a remarkable beginning of his personal troubles, in any case, and led to other degrading expedients.† Let us be allowed to suggest, however, that as David would anticipate Saul's future knowledge of these circumstances, the case does not rest altogether on an effort for self-preservation, but he might suppose that this account of himself would furnish to Ahimelech, as it afterwards did, a plausible excuse for assisting him.

To Gath.

Expelled.

David now, for the first time under the influence of "fear," resolved to throw himself on the protection of a stranger; and repaired to the court of Achish king of Gath. His stay, however, was short, and his measures unworthy of his spirit. Finding that the princes of Gath remembered, with as much hostility as Saul, his popularity in Israel, and the national songs in which he was celebrated, he feigned himself to be deranged, and seemed glad of the expulsion of a madman, as a refuge from worse treatment. We need not occupy our pages with references to similar conduct in the heroes of ancient times, upon less perplexing occasions; but neither Ulysses nor Solon had the same excuse for this unmanly degradation; while Brutus, perhaps, in the opinion of many of our readers might plead a better. On the occasion of his first dangers (which probably led to his personal confinement) at the court of Gath, he penned the fifty-sixth Psalm, and on his escape, the thirty-fourth.

Retreats to
Adullam.

His next retreat was the cave of Adullam, near a city of the same name, in his own tribe. Here his family and friends quickly joined him, with many others that were

discontented or in difficulties; amongst whom were Joab, David, Ahishai, and Benaiah; and those eleven distinguished Gadites who are described in the final register of his captives (1 Chron. xii. 8.), as "men of might and war, fit for the battle; that could handle shield and buckler, whose faces were like the faces of lions, and they were swift as the roes upon the mountains." After these came an unexpected reinforcement from the mixed tribes of Benjamin and Judah, under the direction of Amasa. David, justly cautious of such a considerable number of Saul's tribe, but no longer fearful of committing his cause into the hand of God, met them with a pious frankness. "If," said he, "ye be come peaceably unto me to help me, my heart shall be knit unto you; but if ye be come unto me to betray me unto mine enemies, seeing there is no wrong to mine hand, the God of our fathers look down thereon and rebuke it." To this address their leader replied with similar candour and devotion, "Thine we are, O David, and on thy side, O son of Jesse. Peace be to thee, and peace to thy helpers. For thy God helpeth thee!" David's forces now amounted to upwards of four hundred men.

His first precaution, on finding himself in strength, was to place his father and mother in security—the questionable security of the court of the king of Moab. Perhaps, however, David conceived his own continuance in the neighbourhood as a sufficient guarantee of their safety; while the precarious and comfortable shades he inhabited, would ill suit the extreme age of his parents. From Adullam he departed, at the command of the prophet Gad, into the forest of Hareth, in the interior of the tribe of Judah; and not far remote from the scenes of his former advancement and retreat, at Gibeah and Ramah, where Saul quickly heard of him. On his expostulating with the neighbouring tribes for their partiality to David, the official zeal of Doeg now revealed to Saul the succour formerly afforded to David by Ahimelech; and that wretched king, after a mockery of expostulation with him, sacrificed nearly the whole of the sacerdotal family to his rage, and destroyed the town of Nob; while David was pressing towards the relief of his country from an invasion of the Philistines. Abiathar, the only surviving male branch of the high-priest's family, escaped to David.

The town of Keilah was situated to the south-west of the tribe of Judah, bordering on the territory of the Philistines, and these marauders came up, in repeated incursions, after the time of harvest, to rob the threshing floors of the Israelites. David, through the prophet or the priest who now adorned his camp, enquired the will of God respecting the propriety of attacking them; and presents the singular instance of a public man, who could only maintain himself with difficulty against the tyrannical government of his own country, advancing to the attack of her enemies. His men appeared sensible of the danger of being thus placed between two inveterate foes, but David having ascertained God's will, proceeded without hesitation to the battle, and to victory. Danger now arose from a third quarter, and the last that could have been expected. Saul hearing of David's stay in the town, sent a message to the inhabitants of Keilah to deliver him up, and, ungrateful as their master, they were ready to obey. Assured of this by the divine oracle, David fled to Ziph (his men now amounting to 600), and successively to the wilderness of Maon and Engedi; Saul pursuing him (with

His followers.

* Matt. xii. 4.

† We know of no service that it can yield the cause of truth to observe on such occasions, with some commentators, that Esau's idea is of opinion, when truth is likely to be attended with great evil, falsehood is pardonable; or, that Cicero says, he is a good man who does all the good he can to others, and injures no one unless grievously provoked: any more than it would apologize for David's fault to add, that a celebrated moralist of our own country admits of some fashionable and some legal lies.

Biography. n slight interruption from the Philistines)* all the way, and latterly with a force of 30000 men. At Ziph, in another n the friendly wilds of nature, Jonathan and David met for the last time. The interview was short, but full of the greatest consolation to David that any creature could have afforded him. The sacred historian says that Jonathan "strengthened his hand in God." His friend could now speak expressly (if he did not speak prophetically), not only of David's final deliverance from Saul, but of his future possession of the throne: "and I," said he, fondly, and with the due mixture of what was human in his views, "shall be next unto thee, and that also Saul my father knoweth." They here again renewed their solemn engagements to each other in the name of Jehovah, and parted to meet no more.

Spores Saul at Engedi.

At Engedi was a cave of some considerable extent, in which David and some few attendants had secreted themselves, when Saul came into it to rest, or for some other temporary purpose.† His men now urged David by every consideration of justice and propriety, to avail himself of this complete committal of their common enemy into his hand. David advanced toward the mouth of the cave,—and cut away a part of Saul's outer robe, but strictly forbade his men to touch the person of the king. When Saul had withdrawn, he presented himself with this irresistible proof of his forbearance before the rival troops. Addressing Saul with the utmost respect, and appealing to God for the patency of his motives, he again subdued the guilty conscience of the king, before the voice of truth and reason; until Saul acknowledged, with an ill-founded humiliation, the superiority of David's character, and his conviction that he would ultimately possess the throne.‡

A. M. 2944.
B. C. 1060.

We next find David in the wilderness of Paran, which exhibits one of the most characteristic scenes of his life. Nabal, a rich, but childish landholder, who had previously been indebted to David's protection for the security of his flocks, was shearing sheep in Carmel; and David sent a respectful request to him to be allowed to participate in his abundance. To this he replied by an insulting taunt, and David advanced at the head of 400 of his men to resent it. But Nabal had a wife of a very opposite character, "a woman of good understanding, and of a beautiful countenance," who hearing the account of this refusal, prepared in person to avert the consequences. While her husband was revelling in wine, she met David with a valuable present of provisions, and delicately requesting him to impute the conduct to herself, which she now entreated he would pardon, reminded him that when Jehovah should have destroyed all his enemies, it would be "no grief nor offence of heart" unto him if he should have forbore to shed blood carelessly in such an instance as this. This appeal to all David's best principles was irresistible; he assured her of peace, and even of his gratitude for

her interference; and on the death of Nabal, shortly afterwards, made this interesting woman his wife. Some writers assert to consider the conduct and character of David at this juncture, as that of a mere captain of banditti. Many forcible appeals are made to our justice on behalf of the suffering creditors of his hands in particular; but not one decided feature of such a character is made to appear. What districts did he ravage but those of the enemies of his country? Whose property did he invade, or whose domestic tranquillity did he disturb? Moreover did he not place all these debtors in far more promising circumstances than those in which he found them? It is no small credit to his associates to have known and followed such a master. For their use and at an early period of their acquaintance, Delaney thinks he composed the 34th Psalm, and planted the vineyards of Engedi.

Once more Saul is brought in contact with David. The Ziphites giving intelligence of David's retreat in their neighbourhood, Saul pitched in the hills of Hachilah with a considerable force, and lodged personally amongst the baggage. David having intelligence of his exact situation, and attended only by Abishai, ventured promptly, in the dead of night, into the royal tent, and again saw his bitterest foe at his feet, with a spear stuck in the ground at his head. But he again resisted the thought of violating his security, and only took away the spear and a cruse of water. The next morning he ascends the opposite hill, and calling for Abner, Saul's general, in a fine vein of satirical reproach relates the fact, and exhibits the proofs. This produced a final acknowledgment from Saul that he had sinned, "and played the fool exceedingly," and a vow that he would seek to injure David no more. How far this promise was observed there are no means of directly ascertaining, but David seems to have apprehended fresh outrages; for we find him a second time in extreme despondency, and fleeing, as before, to Gath. Here he continued for about a year and a half, during which period he invaded several of the minor states (the old enemies of his country), in the south of Judah, but seems to have taken no part in the public affairs of Achish until the memorable and decisive period of a war breaking out between the Philistines and Saul.*

The town of Ziklag, near the southern borders of the tribe of Judah, was assigned to David at this time by

* We have no direct concern in this place with the circumstance of Saul's consultation of the witch of Endor. But as all the other events in the life of that unhappy prince have connected themselves naturally with the life of Samuel or of David, we may be allowed to state our opinion of the reality of Samuel's appearance to Saul on that occasion, by an immediate interposition of God, which as much confounded the juggler as the monarch. 1. It was an occasion on which the *dygma videlicet adus* was not wanting. The rebellious king of God's rebellious people had assembled one of the largest armies they ever brought into the field, to struggle with a powerful foe for every thing that was still dear to Saul in personal honour and the public safety.—Samuel, David and Abishai were with him no more. 2. The predictions were true that were uttered, and the phenomenon was worthy that prophet. It were to give credit to a still greater miracle, first to believe in the power of the witch to raise a specter, and, as has been thought, denominal representation of Samuel; and then that this personage was endued with an enigmatical and accurate prescience. 3. And above all, the Scriptures on this occasion are very explicit; "The woman saw Samuel," we are told. "Saul perceived that it was Samuel.—Samuel himself," as it will very well bear to be rendered, "and Samuel said to Saul" all that passed;—*namque, for the first time by divine authority; who should be his successful rival.*—David.

Nabal and Abigail.

* To the period of this providential diversion of Saul's forces, Patrick, and others, ascribe the composition of the 54th Psalm.
† *Etrogynae* are the male goats.—Josephus. *U* purgare recitum.—Vulgate.

‡ We have a psalm expressly penned by David on this occasion. Psalm cxxi. "But good thoughts," says Dr. Trapp, speaking of Saul's confession, "make but a thoroughfare of wicked hearts; they stay not there, as those that like not their lodging; their purposes, for want of performance, are lost as clouds without rain; or as Herod's club in the tragedy, of a great bulk, but stuffed with noise and rubbish."

the king of Gath, for his residence, and remained ever after (with the exception we are about to relate) in the possession of the kings of Judah. David had requested this place of Achish as likely to be less obnoxious to the court, and on being dismissed from the muster of the Philistine army, through the jealousy of the princes, he was about to retire again to the town, when he found that it had been sacked by the Amalekites. David's men now manifested for the first time symptoms of revolt—the town had been burnt, their wives and children taken captives, and the chieftain and his followers were equally perplexed and desponding, "but David encouraged himself in the Lord his God." He called for the ephod, and was oracularly assured, through Abiathar the priest, that if he instantly pursued the enemy he might yet recover all. David needed no other encouragement; he selected 600 of his best troops for the expedition, and meeting opportunely with an Egyptian slave whom the Amalekites had left behind, he was enabled to track their route, and came up with them while they were in the act of rejoicing over their great spoil. After a well-fought day he routed the whole force of the enemy, which seems to have been considerable (as 400 of them still fled homeward), and according to the prediction, brought back in safety all the families and flocks of his followers. Two hundred of them, however, who were detained by fatigue from following the pursuit, were now navillingly allowed their share in the booty by the rest, but David took occasion at this time to establish a law, long afterwards observed in the Jewish wars, that all soldiers fairly embarked in a contest should equally divide the spoils. He also distributed large presents on this occasion to various towns which had been friendly to himself and his men.

The Philistine army in the interim had marched to Jazerel. The sword which David would not raise against his "master," as he still considered Saul, was committed to less scrupulous hands, and in a general engagement in the plains of Githon, to which Saul appears to have brought the whole of his forces, and all the effective male branches of his family, the Israelites were totally defeated; the sons of Saul, Jonathan, Abinadab, and Melchishua, were slain, and he himself in a close pursuit was mortally wounded. He now called upon his armour-bearer to dispatch him, retaining an unavailing aversion to die by the hands of "the uncircumcised," and on his refusal fled, in fact, by his own hand, in falling upon his sword. The Israelites fled in all directions, and ultimately abandoned a large tract of their territory; the Philistines stripped the body of Saul, which they nailed to the wall of Beth-shan, with the remains of his sons, while they deposited his armour in the temple of Ashtaroth; but the brave inhabitants of Jabesh-Gilead soon recovered the royal corpse, and buried them with due solemnity in their own neighbourhood.

Upon the generous David, the tidings of this final discomfiture of his greatest personal enemy, operated in a very different manner to what a less noble heart would imagine. He ordered a lying messenger of the news, who assumed to himself the supposed credit of dispatching Saul, to be instantly slain; he sent a message of personal thanks to the men of Jabesh-Gilead for their respectful conduct to the late king, and composed a memorable funeral ode on the death of the

fallen family, in which it is only difficult to decide, whether the just and generous enemy, or the affectionate friend, shine more conspicuous. It was an occasion to call forth all his soul, and all his soul is in it. The joy and pride of his life were involved in the friendship of the fallen Jonathan; all the trouble and degradation of his past days were terminated in the death of Saul. But both shine "as the beauty of Israel" in his song; both are celebrated as "the mighty fallen." Our limits will not allow us to transcribe this honourable effusion of pious and dignified grief, upon which all comments are superfluous; but we fear not to refer the reader to the entire composition, as exceeding, under the circumstances, any rival production of antiquity.

David's path to the throne was now comparatively smooth and unoccupied, but he moved not without consulting that divine Director who had always been his first resort in distress. He was commanded to repair to Hebron, where all the princes of his own tribe and that of Benjamin (greatly intermixed with it) met him, and solemnly tendered him the crown. A rival, however, appeared in the person of Ish-bosheth, a weak surviving prince of Saul's house, whom Abner, his uncle, supported, and declared king of all the remaining tribes. "There was long war" between the contending claimants, but little of active hostility, as it would seem from the sacred narration; the only instance of a battle originated in a kind of hostile sport between the out-posts of the armies commanded by Joab and Abner. The forces of the house of Saul were defeated on this occasion with the loss of three hundred and sixty men, while on the side of David but nineteen were missing, though Asahel the brother of Joab (through his own imprudent temerity) was amongst the slain. During this interval the family of David increased considerably, and of his sons, Amnon, Chislegab, Absalom, Adonijah, Shephatiah, and Ithream, were given to him in Hebron. The correctness of his administration daily increased his power, and his well-known talents for war kept all the outward enemies of his people in check. The period approached that was to consummate his early anointing, and evident designation to the throne of all Israel; his foes were divided amongst themselves; and Abner, after seven years of inglorious and unavailing opposition, secretly offered to abandon the wretched Ish-bosheth, and transfer his influence to David. From this event we date

§ 3. The period of David's public prosperity.

But that God to whom David resigned every thing, and who in every thing relating to his advancement, appeared peculiarly to evince his independence of means, was hastening the catastrophe of Saul's house from another quarter. Abner perished by the hand of Joab as he was about to bring his various projects to completion. Two of the principal officers of Ish-bosheth, under pretence of hringing or taking out wheat for the household, approached the palace of this unhappy prince at noon-day, and finding him asleep on his couch, assassinated him, and travelled thence at day and night to bring his head to David. Their reception was worthy their deed, and of the often-tried magnanimity of the king. "As the Lord liveth," said David, solemnly, "who hath redeemed my soul out of all adversity, when one told me, saying, behold Saul is dead, thinking to have brought good tidings, I took David.

David.

Biography. hold of him, and show him in Ziklag; how much more when wicked men have slain a righteous person in his bed: shall I not, therefore, require his blood of your hand, and take you away from the earth?" He instantly ordered their execution, and interred the head of Ish-bosheth in the sepulchre of Abner.

The tribes now unanimously invited David to the throne. In the midst of their past inconstancy to God, and inconsistency with the character of his chosen people, a silent stream of pious and observant individuals still fertilized the moral waste of Israel, and in the present public acknowledgment of David as peculiarly their "bone and flesh," their leader, their shepherd, and their captain, such persons would doubtless remember the ancient promise to all Israel, in the distinguished tribe of Judah, that *there*, at least, a law-giver and a sceptre should always be found, until SHILON, his greater son, should gather the nations to his feet. David is recorded to have been at this time in the thirty-eighth year of his age, during seven of which he reigned over the united tribes of Judah and Benjamin, in Hebron.

After three days devoted to gratitude and national festivity,* we find David marching forth to war, for the first time since he wore the honours of royalty, against the Jebusites at Jerusalem. This place never before was fully subdued to the Israelitish yoke. Jeshua slew its king, and Caleb, a worthy predecessor of David, in the history of the tribe of Judah, had taken the town, but there was a strong fortress, now called ZION, which resisted every attack, and in which the ancient inhabitants seem to have possessed a long and secure retreat. Emboldened by this circumstance, they sent out an insulting message to David, that if he could contrive to take away the blind and the lame out of the fortress, he might, perhaps, prevail against it; but some commentators have understood this to allude to the Israelites having culled the idols of the old inhabitants by these opprobrious names. However this may be, the taunt seems peculiarly to have excited David's anger, and he ordered, in consequence, the assault of the place; promising immediate promotion to the first who should succeed in smiting the blind and the lame, thus described. The fort quickly fell, and David is supposed to have celebrated the conquest in the 115th Psalm, part of which (v. 2 to 8), would strongly confirm the conjectured allusion. David enlarged this fortress considerably, removed the seat of government to Jerusalem, and called this part of it the city of David.

Prosperity now shone upon this illustrious prince, with a steadiness only equalled by his patience in obtaining it. He went on, and grew great, "going and growing," until it was at once the conclusion of truth and modesty, that God had "exalted his kingdom for his people Israel's sake." He formed a friendship of great public benefit to him with Hiram, the king of Tyre, from whose dominions he imported timber and masonry, and received a considerable accession of artificers in the various public buildings he carried on. To this season of uninterrupted peace most critics have assigned the filling up of a considerable valley between the fortress of Zion above named, and the hill *Akra*, on the south of Jerusalem, with streets, "Midlo," in which he is said to have "built round

about and inward," is thought to have been the name of this valley. He erected a sumptuous palace in that quarter of the city which was honoured by his name, and increased his family by various children: he indulged also in the evils of polygamy, and afterwards repaid its bitter fruits.

A new war, however, upon a most formidable scale, now demanded his attention, and for a short time suspended all his improvements. The Philistines, confederated, as Josephus states, with the Phœnicians, the Syrians, and several other surrounding nations, appeared in great force in the neighbourhood of Jerusalem. The irruption appears to have been sudden and well concerted, for David was evidently unprepared for the war; and was compelled to retire to his former refuge in the fastnesses of Adullam. In this well-known retreat, he marshalled his troops with his accustomed prudence and piety; and at this time occurred the adventurous journey of his three valiant chiefs through the encampments of the Philistines, to fetch water for David from the well of Bethlehem (1 Chron. xi. 15), and his memorable reply—"Shall I drink the blood of these men that have put their lives in jeopardy; my God forbid it me that I should do this thing!" and he poured out the water as a libation of thanks to God. But his army was now to be prepared and animated to more serious strife. The enemy filled the rich valley of Rephaim, on the south-west of Jerusalem, about the time of barley harvest, and David must have been most anxious to dislodge them. He commends his cause to God in the 83d Psalm, and pressed forward so eagerly in person to attack the Philistines, that this appears to have been the time when he suddenly found himself, with his three chief captives, alone in the midst of them; and gathering courage from the danger, headed the route described in 2 Sam. xxiii. 10, until, with his brave supporters, "his hand was weary, but it still clave to his sword." If this adventure shall appear rash, it must be remembered that he was stimulated to it by counsel that never misled him, and though the victory was but partial, he commemorated the deliverance by surmounting the place *Perazim*, the place of breaches; for God, he said, had appeared for him as suddenly and unexpectedly as the breaking out of waters. The enemy were soon able, however, to re-occupy their former position, and David was directed to a very different kind of victory. He was to march round their encampment toward some mulberry-trees in the rear, and when he heard (either by means of an unusual wind, or some other decisive interposition) a sound as of a flying army in the tops of the trees, he was forthwith to commence the attack, assured of success. He obeyed the monition, and obtained a triumph which compelled the enemy to retreat, and ultimately closed the war.

The consequences of these repulses of the Philistines are not further stated than that they brought him fame and glory in all the neighbouring nations; but they now left him leisure to prosecute a design, which he appears previously to have meditated, of removing the ark of God to Zion. To assist at this solemnity he summoned all the Levites, princes, and rulers of his people, from Sihon of Egypt (near the mouth of the Nile) to Hamath northward, at the fountains of the Jordan, a description of his northern and southern frontier, which may give us some conception of the

Biography. extent of his dominions. At the appointed period, the king himself, attended by 30,000 troops, the high-priest and his brethren, and all the magistracy of the land, repaired to a hill near Kenath-jerim, in the tribe of Judah, and removed the ark from its long abode in the house of Abinadab and his family. According to the best chronologists, it had been deposited here about 90 years.

To success
at first.

David led the way in the heartfelt melodies of the occasion, and played before the Lord, we are told, "with all Israel, on all manner of instruments made of fir wood, with singing, and with harps, and with psalteries, and on timbrels, and on cornets, and on cymbals." But the procession was imperfectly arranged, and ended in a fatal error. A new cart, or open carriage of some description, drawn by oxen, was intended some confused memorial of the miracle whereby the ark had been brought back in the preceding century from the land of the Philistines, as it is certain (on the other hand) in the conductors appointed, Uzzah and Abio, the sons of Abinadab, there was a strange forgetfulness of the express designation of the Levites only, to the care of every part of the tabernacle, Num. i. 51. Times of confusion, however, had long been corrupting the public mind; God was now pleased to show that his laws, when forgotten by us, are not necessarily extinct with Him. The oxen arriving near a corn floor at Gath-rimmon, in the tribe of Dan, suddenly grew restive and shook the ark, which Uzzah venturing to touch, in the effort to replace it, to the terror of the people and of David, fell dead upon the spot. Convicted of an error which as yet he could not comprehend, David now wisely delayed the further execution of his design, until he should be able to offer a more acceptable service. He ordered the ark to be deposited in the house of a neighbouring Levite, Obededom, and proceeded to Jerusalem disappointed, but still determined to understand the will of God in this affair. No one could better fit explain than, after a very short interval, he was enabled to do. "The Lord our God made a breach upon us," he says, "for that we sought him not after the due order."

Final and
joyful re-
moving of
the ark.

Having ascertained what this was correctly, and given the Levites that prominence in his new arrangements which the law of God had so expressly assigned them, within the period of about three months from the first attempt, David once more essayed to bring up this sacred vessel to Jerusalem, and in the animated language of his own poem on that occasion (the sixty-eighth Psalm), "The singers" again "went before, the players on instruments followed after, among them were the damsels playing with timbrels." And finding, on advancing a few paces, no further interruption to his progress, he offered oxen and fatlings on the spot, and probably at intervals all the way. David's animation increasing with his progress and evident acceptance with God, the whole of the interesting composition alluded to was appropriately sung as they approached Jerusalem.—(Delany has suggested the possible adaptation of the twenty-fourth Psalm as a final chorus at this time, and certainly it is eminently in unison with the occasion.)—David danced in the sacred procession, and gave his soul up to joy, as the ark of God passed to its rest in the hill of Zion, and

Jehovah in his chosen symbols "ascended on high," leading these once dishonoured "captives captive!"

One painful interruption of the festival, now instituted, was found in the unaccountable conduct of Michal, his lately restored wife. Seeing David's almost boundless devotion in the scene just closed, she charged him with an indecorous exposure of his person before the women in the procession; an allegation so unfounded, and arguing a state of mind so averse to David's conduct on the occasion, and so forgetful of his generosity to her, that David warmly retorted the rebuke, and she was visited with the opprobrium of haughtiness for her impiety. He closed this most important of all his triumphs by the composition of a Psalm, given at length in 1 Chron. xvi. and forming part of the 96th and 105th of the canon.

David now proceeded to regulate to the best of his discretion, and with the constant aid of God's appointed ministers, the various religious services connected with the immediate presence of the ark at Jerusalem; but comparing his unparalleled honours and security with all the previous history of his people, his heart gradually overflowed with a desire to consecrate some nobler dwelling than he had yet found to the service of his God. The eighty-fourth Psalm will be found to express great anxiety on this point, though some commentators have ascribed it to scenes of greater distance from God's worship than David could now complain of. To the general disposition evinced by his deeply-seated desires upon this subject, the prophet Nathan was commissioned to reply with God's decided approval; but the execution of his wish to consecrate a settled and magnificent temple to Jehovah, was almost immediately denied to him, and referred to a promised and more peaceful son. Yet for his anxiety to erect a house for God's worship, he was assured that God would "build *him* an house;" that his mercy should not depart from him, as it had departed from Saul; but that his seed should possess the throne of Israel "for ever." An eloquent and humble acknowledgment of these distinguished mercies closed the several interviews with the prophet on these occasions, and will be found in 2 Sam. vii. 18—29.

From the Philistines, David shortly after these circumstances took the important town of Gath and its dependencies, called in one part of the sacred narrative "Metheg-Ammah," or the Uddle of the Angle, because it commanded all the adjacent country of Judah, and had often, indeed, been a bridge on its inhabitants. He next invested and subdued the greater portion of the territory of the Moabites, fulfilling an ancient prediction of a prophet of their own, that "a sceptre should arise out of Israel, and smite the corners of Moab, and destroy all the children of Seth: that Edom also, and Seir, should be a possession, and Israel should do valiantly."

The Syrians and Edomites then submitted to his arms. Of the former, Hadadzer seems to have been the magnificent ruler, and the scripture narrative of his subjugation is confirmed by Nicolaus Damascus, who says, as quoted by Josephus, "that Hadad, who reigned over Damascus and the other parts of Syria, except Phœnicia, made war against David, the king of Judea, and tried his fortune in many battles, but was beaten at last at the Euphrates." It is said, that "David smote Hadadzer as he went to recover his border at the river Euphrates," which seems to bear

reference to the ancient covenant with Abraham, never fulfilled until this period, "Unto thy seed have I given this land from the river of Egypt unto the great river, the river Euphrates." The prisoners and spoil which David took on this occasion were very considerable, "a thousand chariots and seven hundred horsemen," and "twenty thousand footmen;" while the Syrians of Damascus afterwards coming to the succour of Hadad, or Hadadezer, incurred a loss of twenty thousand slain. David destroyed all the chariots, according to an express precept of God, and hamstringing all the horses except a hundred, which were probably reserved, however questionably, for purposes of state. From Hadadezer several shields of solid gold (some have thought from an allusion in the Song of Solomon, ch. iv. v. 4, as many as a thousand) were taken and sent to Jerusalem, and from his cities Betab and Berothai, large quantities of brass; "wherewith Solomon," adds the writer of the Book of Chronicles, "made the brazen sea, and the pillars, and the vessels of brass" for the temple.

The Edomites.

The tidings of these successes brought David the homage of Toi, king of Hamath, and several valuable presents by the hand of his son. This prince appears to have had the further impulse of having been formerly at war with the defeated Hadadezer. Throughout the land of Edom, almost without a struggle, David planted garrisons and exacted a regular tribute, dedicating the accumulated spoil of all those various nations (except what was currently required for the exigencies of the state) to his cherished plan of a magnificent temple to Jehovah, and generally to his future service.

Mephobosheth.

David now inquired diligently for any of the surviving family of Saul, that toward them he might fulfil his well-remembered vows to his early friend Jonathan, and finding that a son of his friend was living, named Mephobosheth, (a cripple in both his feet), immediately sent for him to court. He restored to him and his family all the land which was the private property of Saul, appointed the servant who had acquainted him with Mephobosheth's circumstances, steward of the estate, and welcomed that afflicted and grateful prince himself to his own daily table.

B. C.
1037.

A friend of David's dying a short time after this occurrence in the king of the Ammonites, he sent ambassadors to congratulate his son Hanan, on his succession to the throne. The young prince had the folly to affect to consider them as spies, and eat off a considerable part of their clothes and beards, and sent them back in this state to David, who felt justly indignant. Aware of the probability of this, and perhaps eager to try his strength with this renowned conqueror, Hanan engaged the Syrians of Rehob and of Zobah, to the amount of 20,000 men, the king of Maacah with 1000, and the king of Ishbosh with 12,000 men, amongst whom were included 32,000 chariots, to come to his assistance. Against this formidable host David saw it necessary to arouse his strength, and sent out a well appointed army, under Joab and Abishai. Joab selected his best troops to engage with the Syrians in person, entrusting the command of the rest and the attack of the Ammonites and other nations to Abishai; the battle once more declared itself for Israel, and all the confederates fled. After this, they made head again at Helan, but David now joined the war, and in a second signal de-

Defeats the troops to engage with the Syrians in person, entrusting the command of the rest and the attack of the Ammonites and other nations to Abishai; the battle once more declared itself for Israel, and all the confederates fled.

After this, they made head again at Helan, but David now joined the war, and in a second signal de-

feet, seven hundred chariots and forty thousand horsemen were routed and fell, with Shohach the Syrian commander in chief. "So the Syrians," we are told, "feared to help the children of Ammon any more," and the latter were besieged in their capital city Rabbah.

A circumstance occurred at this time, in the life of David, upon which the malignity both of ancient and modern infidels has fastened with characteristic ardour. The facts of the case admit neither of colouring nor of apology. They charge upon David, certainly, some of the blackest of human crimes; for which, however, it is but just to add, that they exhibit also unaffected repentance and condign punishment. We shall endeavour to place these facts before the reader with the faithfulness and simplicity of the sacred historian.

This highly-favoured monarch was enjoying at Jerusalem that repose, during the season of war, to which his whole life had been hitherto a stranger, when, walking in the evening on the roof of his palace (after refreshing himself, according to the custom of the east, with a short sleep in the afternoon), the sight of a woman exceedingly beautiful attracted his attention and hurried him away from the path of rectitude. She was bathing in a neighbouring house or garden. A kind of merciful check to his rising passion appears to have been afforded by some honest courtier, in the answer which met David's first inquiries after this unhappy female. "Is not this Bathsheba, the daughter of Eliam, the wife of Uriah the Hittite?" But in vain! In the wife of a valiant "pillar of his state," and a convert probably to his religion; in the daughter of another of his most distinguished commanders; and the granddaughter of his chief counsellor, he saw an insuperable obstacle to the gratification of his lust, which he instantly indulged. The sudden pregnancy of Bathsheba now induced him to send to the army for her husband, under the pretext of receiving information of the war, but in reality to conceal, if possible, the violation of his bed.

Uriah came, but could not be induced to visit his wife. He constantly slept amongst the garrisons at the palace, and David, finding it impossible by any artifice to transfer to the living husband the fruit of his perfidy, rushed into the "blood-guiltiness" of ordering his death. "Set ye Uriah in the forefront of the hottest battle, and retire ye from him, that he may be smitten and die," were the words of his own death-warrant, with which this ill-fated warrior was sent back to his general. The cruel mandate was but too readily obeyed; Uriah's life was taken, with that of several of his brave companions, in an hopeless attack upon the besieged Ammonites; and Joab quickly dispatched the tidings of his death to Jerusalem. The guilty monarch, with apparent impunity, made Bathsheba immediately his wife.

A child was born from this adulterous cohabitation, before the message of God's wrath was sent to David. Perhaps he was mingling good and evil in rejoicing at his birth, when the prophet appeared, denouncing the evil of his conduct and the child's death! Under the parable of a rich man who had spared his own flocks and herds, and seized the only and favourite lamb of his poor neighbour to entertain a guest, he excited a warm and even angry sense of justice in the king, who instantly pronounced the rich man's death, though the law of Moses (still the criminal code of the state) did not

demand so severe a retribution. "He shall surely die," said David, with an oath, "and he shall restore the lamb fourfold, because he did this thing, and because he had no pity." With prophetic boldness Nathan answered, "THOU ART THE MAN;" and then proceeded to charge the monarch with his unaccountable ingratitude to God, and baseness to Uriah, in these complicated and disgraceful transactions. He threatens him, in conclusion, with those divine chastisements in the present life, and that immediate interposition of the Just Governor of all, to punish his sins after their own kind, for which these early ages of the world were distinguished. As he had slain Uriah with the sword, and desolated his family hopelessly, the sword was not to depart from his house for ever; and however secretly he had violated the honour of another, his own wives, the prophet declared, should be polluted in the face of the sun.

The memorable union of persuasiveness and power in this message of Nathan, quickly found its way to the monarch's heart. "I have sinned against the Lord," said David, frankly, and with such undissembled penitence, that the prophet immediately assures him of an alleviation in his punishment and the pardon of his guilt. The penalty of *death*, which he had pronounced upon the cruel robber of another's property (though expressly prescribed by the law of Moses for *adultery*), was graciously remitted by God, who assured him, however, that the fruit of his illicit intercourse was doomed to die; a sentence of which David afterwards, by fervent prayer and entreaty, endeavoured to obtain a repeal in vain.

While it would be idle to deny, in reply to the observations of infidelity on these painful facts, that the Scriptures both of the Old and New Testament exhibit David as a distinguished servant of God, and on the whole, as good a man, as he was a brave and great one, it is wholly contrary to every other instance estimating human character, to pronounce upon that of David from this single, though most disgraceful circumstance. It proves him but man in his present awfully degenerated state, while the whole tenor of his life beside will be found to exhibit a singular and most satisfactory freedom from the usual vices of his station and opportunities—the very vices here exhibited. Though he was extensively engaged in war, his *general* character is not that of a cruel man, nor do we find any other instance of his violating the bonds, or even the courtesies of social life; not, though he was for so many years treated as a kind of out-cast himself, and possessed of abundant means. The business, on the whole, must be considered either in its relation to the character of the criminal, or to the moral government of God. With respect to its connection with the general character of David, the friends of inspiration are entitled to insist upon it being considered an awful and most surprising exception to the general tenor of his life. They are entitled to add, that while they reprobate the whole affair as abominably gross and unjustifiable iniquity, it exhibits almost unparalleled repentance; perhaps taken in connection with those penitential Psalms* that immediately arose out of these circumstances, the most striking and most dolorous breathings of repentance, in the whole history of human crimes. As with regard to its connec-

* Psalm lx. lxi. &c.

tion with the divine government, it will be found, we would submit, THAT CRIME which was punished in the person of the transgressor with the greatest severity of any sin on record.[†]

David now felt it a duty to administer all possible consolation (mingled doubtless with the affectionate faithfulness to which he owed so much) to Bathsheba; of whom, as if to seal his forgiveness, and mark God's altered view of the sinner, though he long suffered for his sin, Solomon, the promised son of peace, was born shortly afterwards, and pronounced, by an express prophetic message, the Beloved of the Lord.

With heavy recollections of the past, however, David must have gone down to close the siege of Rabbah;—Josh having informed him that he was upon the point of taking the town; and with the generosity of a brave spirit (never to be denied this general in all his acts of public warfare) having requested David to come and reap the honours of the war. Rabbah is mentioned by Polybius (Hist. lib. v.) as advantageously situated on the top of several small eminences. When Antiochus took it, it was again a considerable city, and was, at this time, the capital of a large surrounding district in Arabia Felix, watered by the river Jabbock. The king David formally deposed from a station he had filled most unworthily, and probably placed Shobi, another son of his friend Nahash, of whom we shortly afterwards read in this neighbourhood, at victory over the place. The inhabitants of the town he brought forth, and "put them to the saw, to iron mines, and to iron axes, and transported them to the brick kilns," or "to the brick furnace and hod." In other words, he reduced them to slavery, and put them to the most servile employments of sawing, making iron harrows, working in the mines, &c. useful employments, as a substitute for the trade of war and private plunder. So, at some length, the learned Chaudler proposes to render this account of David's present conduct, and to his Life of David, vol. ii. p. 227—233, we refer the reader for some able criticism on these phrases.

§ 4. The period of David's public trials.

Now commenced, and though these principally arose from domestic circumstances, and were inflicted for the greater part by his own children, they place both his crown and character in a series of awful straits and storms which lasted to the very close of his reign.

About two years after the king's return from Rabbah to Jerusalem, Amnon, his son by Ahinoam, a Jezreelitess, conceived an incestuous passion for his sister Tamar, and feigning illness busied to avail himself of her affectionate attentions, violated her person and suddenly dismissed her from his house. Attired as she was, in a dress peculiar to her station, and which, from the secluded habits of females of rank and character in the east, might subject the last feelings of her out-

* The defilement of an affectionate daughter and sister by her own brother; the death of four sons, three of them before his own eyes, and one by the hand of his brother; Absalom's monstrous rebellion, which brought his father almost to the brink of ruin; the prostitution of ten of his wives before all Israel; to say nothing of the visitations of divine wrath upon his remnant's posterity (with which he was expressly made acquainted as a punishment), form the tremendous catalogue of misfortunes which attended upon this crime.

† And who brought David very large supplies of provision on his flight from Absalom, 2 Sam. xvii. 27, a proof that he did not at this time depopulate the district in the extensive way, a literal construction of this sacred narrative (2 Sam. xii. 31) would seem to import.

raged virtue to the worst of reproaches, she seems to have felt most keenly this final insult, and grieved to the quick, fled to the house of her brother Absalom. David's apathy or irresolution on hearing of this transaction, is almost unaccountable; certainly it paved the way to future extended mischiefs in his house. We are told he was "very wroth," and some writers have imagined that he was deterred from pronouncing judgment by there being no law strictly applicable to the offence. However this may be, Absalom, after retaining his revengeful purpose "two full years" unexecuted, and impelled by other motives than those of justice, or even, perhaps, of resentment, for this particular crime, entrapped Amnon (his elder brother), to a feast at his sheep-shearing, dispatched him and fled.

1023.

David now indulged an unavailing grief which gradually centred itself in the loss of Absalom, until Joab employed a woman of considerable address to induce him to give orders for his return. She appeared before the king with a well-constructed tale of a calamity similar to his own, and representing the demands of justice upon the life of one of her sons for the murder of his brother, with all a mother's feelings, she softened him to the purpose of her employer; who first procured a permission for Absalom to return to Jerusalem, and after two further years of penance, to the presence of his unhappy father.

Within about four years after this period, the true character of Absalom was finally developed. Availing himself of the now advancing age of David, and of the certainty of finding individual murmurs amongst the claimants for public justice, this ambitious prince could devote the revenue assigned him by his father to the purpose of producing disaffection in the hearts of his subjects. He appeared in splendid equipages, he soothed the discontented, and inflamed the clamorous, until "the conspiracy was strong," and a message came to David that the hearts of the men of Israel were with Absalom. David now seems fully to have anticipated the baseness of which this favorite child was capable; he was driven from his capital, and after a pious remonstrance with Zadok, the priest, who wished the ark of God to partake in his banishment, "he went up by the ascent of Mount Olivet, and wept as he went up, and had his head covered and he went barefoot"; halting a little beyond the hill, to understand the extent of the treason, and make proper dispositions for receiving tidings of his progress.

His rebellion.

Ahithophel, one of his chief statesmen, had joined the standard of revolt; David again commits himself to a wisdom rarely sought by statesmen; and keeping his eye firmly on the master-point of the enemy's strength (as that wisdom alone could enable him to do), he seems to embark his whole cause and crown on the issue of his memorable prayer, That "JEHOVAH would turn the counsel of Ahithophel into foolishness." He was not disappointed. After enduring the shameful curses and personal violence of Shimei, who stigmatized him as a bloody man and an usurper, and, in the spirit of his best days, forbidding Abishai to resent them;—after hearing of the violation of his wives by the counsel of Ahithophel, as predicted by Nathan, when he had outraged the honour of that statesman's own family;—after the very counsel had been given to Absalom which would have affected the final ruin of David; that counsel was overruled by a

* See the peculiar provision made Deut. xiii. 23, 24.

specious declamation of the secret friend of David, Hushai, who had joined himself to the advisers of Absalom; and the indignant Ahithophel hung himself! The king had now passed the Jordan, and encamped at Mahanaim, whither he summoned all his troops, and placing them under the joint command of Joab, Abishai, Ittai, and himself, prepared to go forth with them to the coast. Absalom in the interim had conferred the command of his forces upon Amasa, and had followed his father to the wood of Ephraim. The adherents of David remonstrating with him, on the needless exposure of his person which might ensue in a general engagement, he finally agreed to wait with a reserved force in the town of Mahanaim; and the day of this most unnatural strife approached. Peculiar inheclity would appear to have attended all the measures of Absalom; we read scarcely of any orderly resistance which his forces made; "the battle was scattered over all the face of the country," 20,000 of his followers fell, and "the wood devoured more people that day than the sword." In the sequel this aspiring prince himself was found suspended by his hair in an oak, which had thus entangled him in his flight, and Joab receiving the intelligence, came up and dispatched him there. Against this catastrophe David had so far expressly provided as to employ upon all his followers to spare the prince; and received the tidings of his death with heartfelt agony. *O my son Absalom, my son, my son Absalom! Would God I had died for thee, O Absalom my son, my son!* were the bitter strains which he repeated; and until roused by the anafeling threats of Joab, seemed hardly sensible that he had regained a kingdom, and had still the arduous task of ruling it.

Returning to Jerusalem over the Jordan, he was now met by the sly Shimei, suing for his life, which David promised him; by the grateful Mephibosheth, who came to refute the calumny with which Ziba had met David on his retreat; and by Barzillai, a Gadite, who had munificently supplied him with provisions at Mahanaim. But an unhappy jealousy arose between the men of Judah and the other tribes. The former had been most active in bringing back the king, and their brethren were angry that they were not specially invited to join them. An artificial political incendiary, Sheba, availed himself of this inflamed state of the popular mind; and the king had scarcely settled himself at Jerusalem when the great body of the tribes again revolted from him. Amasa, the former general of Absalom, who on his defeat had been peculiarly active in securing the tribe of Judah to the king, was now called upon to head the army; but being somewhat dilatory in his measures, a reinforcement was sent out, including the troops under the immediate command of Joab. This powerful chief once more becomes an assassin. Jealous of Amasa's present distinction, he stabbed him in a friendly embrace, and to silence the anticipated resentment of the king, proceeds after Sheba, and quickly brings back his head.

A famine now occurred throughout the whole of the dominions of David for three successive years. Inquiring the cause, he was answered by the divine oracle, that it was for Saul and his bloody house, because he slew the Gibeonites; a people, it will be recollected, whom Joshua, the ancient commander of the tribes, swore to spare from the general fate of the Canaanites. By the same authority he seems to have been directed to order the execution of seven of Saul's surviving

Sheba's revolt.

Biography. posterity (indeed Josephus asserts it expressly), and the famous cedar.

Three years after this period there was a short war renewed with the Philistines, chiefly remarkable for the personal danger in which David was thrown by another of the Philistine giants, from whom he so narrowly escaped, that the people resolved he should go out personally to battle no more. Four other men of remarkable stature and strength (all of them probably of the family of Goliath, and one of them expressly called his brother) fell at this time by the hand of David's servants and generals.

Another great public error produces a final public chastisement of David and his people. The most probable account of this appears to be that suggested by Delaney. The Israelites were commanded by the Mosaic law, whenever the people were numbered, to pay half a shekel into the sanctuary for every man twenty years old. David now seems to have ordered this census without paying the Mosaic ransom, and God immediately visited it as an act of pride and presumption. Of three evils, he was commanded to choose one; whether he would endure three years famine in the land, three days' pestilence, or flee three months before his enemies. He seems hardly to have chosen either in the general expression of his resignation to God's will, *Let us fall now into the hand of the Lord for his mercies are great, and let me not fall into the hand of man*; but he evidently inclined toward that judgment which came most immediately from God's hand—the pestilence. Accordingly a plague ensued which destroyed, in less than the short interval threatened, 70,000 men from Dan to Beersheba; a calamity without a parallel in history.

To the deeply-penitent monarch a vision of appeased wrath was at last granted:—to an angel hovering between heaven and earth with a drawn sword in his hand stretched out over Jerusalem, he heard the welcome address go forth—*It is enough!*—and distinguished the spot by the purchase of the estate over which the awful messenger was standing, and the sacrifice of numerous burnt-offerings to Jehovah; declaring, at the same time, that this must be the spot on which the future temple of God should be most acceptably erected.

Preparations for the temple.

Our limits will not permit us to dwell on the catalogue of materials for this building which David now reduced to order, or the actual preparations for that work which he commenced. Suffice it to observe, that the noiseless fabric which grew afterwards together, as a holy temple unto God, was begun full two years before his death; that a complete schedule of the necessary works, and all the means of accomplishing them, were handed over by this prince to Solomon; and that his dying charge to that monarch, (now declared his successor), and to the assembled people, respected their grateful and careful use of them.

The brief and indecorous attempts of Adonijah to disturb the arrangements of his dying father, as more properly belonging to the reign of Solomon, are given in a subsequent article. It remains but to notice some two or three personal particulars of the last charge of David to Solomon, which have been thought to exhibit a duplicity unworthy his character. That he should direct the speedy punishment of Joab for the crimes he specifies, the murder of Abner and Amasa, can surely need no apology; or that he gratefully remembered the attentions of Barzilai. But a difficulty

has been found in reconciling the instruction to Solomon respecting Shimei, with David's oath to that worthless person, that he should not die for his former crimes. We submit to the reader, that David himself very prominently names that oath in his charge to Solomon on this occasion, which there could have been no conceivable motive to do, had he meant that it should be violated; that he means to describe his true moral character, as David's it afterwards was fully confirmed, when he says, but charge. "hold him not guiltless," which he certainly was not; that the appeal to Solomon's wisdom had been useless ("for now thou art a wise man, and knowest what thou oughtest to do unto him") had no discretion been left with him, nothing but a plain direction to punish; and that the construction of the whole, therefore, fairly is, that the particular observation of Solomon must be directed toward this quarter, in which David plainly says he would find reason at last to inflict the vengeance which he did.*

David died in peace at Jerusalem, in the seventy-first year of his age, thirty-three of which he had reigned over the whole people of Israel, and seven over the united tribes of Judah and Benjamin, at his capital in Hebron.

What shall we say of a character which the writings of infidelity present with some new shade of deformity to every age? That it has no shades of its own? There is no candid reader of this memoir of David that will suspect us of leaning to such a folly; for do the Scriptures either profess to give us more than our perfect model of human character, or spare any one that comes short of it?

David was a poet of high natural genius, commanding a flexible and copious versification, in a comparatively barbarous age; the poets of all countries have borrowed from him, and the most distinguished of our own country have yielded him the highest praise. We first find his talents devoted to soothing the degrading and dangerous malady of a known rival; afterwards at numerous intervals they breathe forth God's praises in exile and in affliction, in defeat and in death. As the candidate for a throne to which he was divinely appointed, he spends the noon-tide warms of life upon lessons of patience, moderation, and unparalleled forbearance; possessing the throne of Judah and Benjamin, the most powerful of all the tribes, and more than equal under his administration to the forces of all the rest, he waits from thirty years of age to forty for the full establishment of his kingdom after the death of Saul. Brave and skilful in war, the habit of his soul was peace; successful as a commander, he is most conspicuous for his pious dependence upon God; as a friend his attachment to Jonathan never was surpassed; as an enemy his conduct to Saul is matchless; born in obscurity, he left his son the richest prince of his age; nursed in adversity, his counsels were remembered and practised by the wisest and most prosperous of men. "In youth a hero," as Delaney finely closes his character, "in manhood a monarch; in age a saint! This is DAVID. What his revilers are their own revivings tell!"

* Delaney contends, that the particle rendered, *consequently* in our received Version, should be translated *disjunctively*, as in Prov. xix. 3, when the charge would run thus, "Now, therefore, neither hold him guiltless (for thou art a wise man, and knowest what thou oughtest to do unto him) nor his hour hand bring thou down to the grave with blood."

Prosperity
of Solo-
mon's reign.

His unex-
pected fall.

David's
project for a
national
temple

THE era of History now to pass before us, will pre-
sent all those mingled characters, and sudden transi-
tions, which might well be deemed an epitome of
human affairs upon the largest scale, and a map of the
political changes made on the face of the whole earth
from age to age. It opens with a splendour eclipsing
the glory of the mightiest empires; it closes under a
cloud, which may diminish all notions of their instabi-
lity, and of the claims of truth and righteousness
to be the firmest pillars of a state. Nothing can more
distinctly prove the extent of the renown of the Jewish
empire at the period of which we speak, than the fact,
that the name of Solomon has passed over all countries,
and has ever been associated with the qualities of
power, of wisdom, and of glory; while the very fables
with which imagination has connected them, tend to
establish the facts which are recorded of this monarch
in the Scriptures. Had he been any thing less than
he is there represented, it had never occurred to the
wildest fancy to decorate him, almost in preference
to every other potentate, with superhuman attributes.
But all the east resounds with his name and his praise;
and the system of Mohammed has borrowed its most
vivid beauties from the traditions which have been cir-
culated relative to this prince. Not satisfied with the
fact, that he developed the secret laws of nature, they
assigned to him the command of the elements; and,
as though the material universe were too limited a do-
minion, they have subjected to his control the rebel
spirits and the invisible world; they have invested
him with an authority which survives the kingdom over
which he ruled; and have constructed the mighty
machinery of geni and magic upon the traditions of
his wisdom and their conceptions of his majesty.

The reign of David terminated in glory, yet it was
troubled to the last moment. He named Solomon his
successor, neither from caprice nor from parental par-
tiality, but by divine appointment. That illustrious
monarch had projected the building a splendid temple
to Jehovah; and the design was approved, but he was
not to be the instrument of carrying it into effect.
His hands were polluted with blood; the stormy char-
acter of his reign had compelled him too frequently
to make appeal to the sword, for the God of Peace to
think it fitting that he should rear the national sanc-
tuary; and when Solomon, whose very name became

a pledge of the peaceful character of his reign (מָלֵךְ
peacable, from שָׁלוֹם), was appointed as his successor,
it was promised that he should accomplish this pious
purpose; that the throne of David should be estab-
lished in him; and as well for the consolation of the
father, under the loss of his first child by Bathsheba,
as to mark the divine favour to this young prince, he
received another title from Nathan the prophet, Jedaiah,
i. e. *Beloved of the Lord*.

Notwithstanding this appointment, so evidently under
divine disposal, the eldest son of David, Adonijah, in
the closing days of that monarch, attempted to usurp his
throne, and formed a powerful conspiracy, in which Joab,
the celebrated Israelitish general, and Abiathar the
priest, who had remained faithful during the revolt of
Absalom, were involved, to exclude Solomon from the
succession. The tidings of this formidable coalition
were brought to the ears of the aged sovereign by
Nathan the prophet, and Benaiah, a rising general,
through Bathsheba, the mother of Solomon. In this
extremity, David commanded the immediate coronation
of Solomon, who thus came to the kingdom before the
death of his father; and Adonijah, unable to establish
his pretensions, submitted to the youthful monarch, and
was forgiven his rash attempt upon the empire. This
clemency proved, in the event, of little avail.

David having issued instructions relative to the pro-
jected temple, and placed in the hand of his son a
schedule of the immense materials he had prepared
for that purpose, in giving his last charge, did not
forget the indignities which he had suffered from Shimei
and Joab; the latter of whom he rejoined upon Solomon
decidedly to punish, while he was carefully to watch
over the conduct of the former. Accordingly, upon
the death of his father, one of the first acts of Solomon's
reign was to deal with these offenders. Adonijah, who
seems to have forgotten the perilous circumstances
from which he was just rescued, with a rashness at
which one cannot but be astonished, requested that he
might be permitted to marry Abishag, the wife of the
late king. This petition was also put in the most ar-
rogant terms, enforcing his right of primogeniture,
affirming the choice of the people, and making a merit
of the resignation of the throne, for which he would
consider the grant of this favour as a sufficient remu-
neration. It seems still more remarkable, that Bath-

Referred to
Solomon.
Adonijah's
conspiracy.

Solomon
crowned.

David's last
charge.

Adonijah's
rashness.

History sheba should have consented to prefer a demand so couched, especially when to marry any of the king's concubines was notoriously considered, by oriental nations, treason against the royal dignity. Solomon instantly perceived those covert designs, as well as the gross insult, which his mother had overlooked; and enraged at the temerity of Adonijah, he commanded him to be immediately put to death, and proceeded to the punishment of others involved in the former conspiracy.

Punishment of Adonijah. The king dispossessed Abiathar of the priesthood, and put Zadoc in his place; but he spared his life in consideration of his fidelity to his father; and, with strong menaces, confined him to his possessions in Anathoth. Thus, at the close of a century and a-half, the house of Eli was visited in the person of Abiathar, as had been predicted by Samuel; and the punishment which commenced with the death of Hophni and Phinehas, reached even to the reign of Solomon. Joab heard of these proceedings, and foresaw his own destruction. He fled to the tabernacle as a sanctuary, and was slain, even while he clung to the horns of the altar. This severity was justified by the crime of Joab, in shedding innocent blood in two instances, which the perilous situation of David's affairs at the time, did not allow him to punish. Benaiah, who executed the king's sentence, received his appointment as commander of the forces, in the room of Joab. It remained only to visit Shimei; and Solomon appears to have respected the original promise of David, that he should not die for his former offence (2 Sam. xix. 23.), by only confining him within the walls of Jerusalem;—at the same time apprising him that if he presumed to trespass upon the injunction his life would be the forfeit. To this condition Shimei thankfully subscribed; but violating it, three years afterwards, by passing over to Gath in pursuit of two of his servants who had fled from him, he voluntarily incurred the penalty, which Solomon immediately executed.

and of Shimei. Having firmly seated himself on the throne, Solomon sought to strengthen his kingdom by foreign alliances; and married the daughter of the king of Egypt, at that time one of the most powerful empires existing. This marriage has been differently regarded by different writers. Some, considering it a violation of the Mosaic law (Deut. vii. 3.), at least in the spirit of it, as including all foreign alliances, besides those expressly enumerated, have seen in this connexion the source of that idolatry into which this distinguished prince degenerated in his old age; while others have supposed that this princess had embraced the Jewish religion before he married her. It is certain that no disapprobation is expressed, or implied, on the part of Deity, and that this event was immediately followed by a very signal mark of divine favour at Gibeon, which laid the basis of Solomon's pre-eminent wisdom; while the idolatry of his advanced life may be traced to another origin than his alliance with the Egyptian princess, in his connexion with "many strange women (besides the daughter of Pharaoh):" from those very nations with whom marriages had been expressly prohibited, and whose manners and superstitions he was seduced to imitate. Upon occasion of his union with the Egyptian princess, it is supposed that matchless specimen of oriental poetry, called Solomon's Song, was composed as an epithalamium: together with the sublime forty-

Solomon's Song.

fifth Psalm. The latter bears evident reference to something beyond the occasion, and involves considerations relative to the empire of the Messiah of the highest order; and that the former should be considered not merely as an epithalamium, but as having a hidden and spiritual meaning conveyed in its symbolic imagery—its position in the sacred canon, and the concurrent judgment of many distinguished divines, may well induce us to suppose.

Before the erection of the temple, the tabernacle was at Gibeon; and while this sumptuous structure was rearing, Solomon went up thither to sacrifice. Hitherto, the testimony respecting him was, "Solomon loved the Lord:" and this testimony was recorded *after* his marriage with Pharaoh's daughter. On one solemn occasion, he offered no less than a thousand sacrifices. While he remained at Gibeon, it pleased God "in a dream by night," to signify his approbation of the youthful monarch; and to say, "Ask what I shall give thee." Sensible of the weight of government which rested upon his youthful shoulders, he implored for wisdom in preference to every other blessing. This choice was approved so highly, that not only was it promised he should excel all other men in knowledge, but the honour, and riches, which he had not sought, were superadded; and it was further stated, on condition of his keeping the divine statutes, that his days should be lengthened also.

An occurrence soon happened to put his qualifications to a public test. Two women brought before him a living and a dead child, each affirming herself to be the mother of the living infant, and assigning the dead one to her antagonist. The plea seemed so equal, that in the absence of other evidence than their own, which was directly contradictory, it was impossible to decide which had the real right in the surviving babe. Solomon took the most effectual way of determining this intricate question, by irresistibly calling forth the feelings of nature. He commanded a sword to be brought, that the living child might be divided between the claimants. This the real mother could not endure, but consented to relinquish her interest in the babe, rather than be accessory to its death; while the other applauded the equity of the sentence. To her whose tenderness discovered her relationship to the child, he commanded it to be delivered, amidst the admiration of his surrounding counsellors, and the reverence of his people, among whom the report of this instance of his penetration soon diffused itself.

The wisdom of Solomon was further demonstrated in his political appointments; the princes whom he called round his person, and the general provisions for the government of his empire. The prosperity and glory of his reign may be gathered from the extent of his dominions, from the Euphrates to the Nile, and even beyond the Euphrates; and from the profound peace which prevailed during his life. The nations around him were either tributary to him, or strengthened him with their alliance: "and Judah and Israel dwelt safely, every man under his vine, and under his fig-tree, from Dan even unto Beersheba, all the days of Solomon." In the mean while, the unbounded researches of his mighty mind were exploring the fields of nature; the animal and vegetable world submitted to his scrutiny; nothing escaped his penetration, from the loftiest to the most minute forms of the creation; while the

Solomon's dream and choice.

His wise judgment.

National prosperity.

History. fountains of intellectual being were broken up to his view, and displayed in productions, some of which only survive to tell the world what he was, and others have passed away with the age that produced them. His fame reached the remotest parts of the known world, and incorporated itself with the history of all countries.

Hiram. The attached and tried friend of his father David, Hiram, king of Tyre, was among the first to offer his sincere congratulations to the young prince, who so ably filled the throne. This prompt tender of friendship was as frankly and warmly met on the part of Solomon, who concerted with this monarch the means of carrying into effect the intention of his father, and of accomplishing his own magnificent plans for the temple.

Avails him in building the temple. Hiram engaged to furnish him with skilful artificers to co-operate with his own workmen, and to transport cedars, fir-trees, and other wood, from Lebanon, in floats to his own ports. Solomon, in return, agreed to furnish him yearly with "20,000 measures of wheat, for food to his household, and 20 measures of pure oil;" so the Hebrew and the Vulgate read; but it is generally agreed that it ought to be read, 20,000 measures of oil also. Starting as this circumstance

Variation of numbers. may at first appear, it should be remembered that the ancient mode of defining numbers by letters, with super-added marks, the least of which would swell units into thousands, and the omission of a point sink thousands into units, will easily account for certain numerical variations, almost unavoidable in such a process, while these variations, so easily and naturally accounted for, in mere numbers, leave the authenticity of the history unimpaired, and its general features unchanged. We make this remark here, and once for all, because other instances occur of differences in numbers, arising from those obvious causes, between the historical accounts of the books of Kings and Chronicles, while the facts in both are one and the same.

A. M. 2992. B. C. 1012. In the fourth year of his reign, and the 480th of the departure of Israel from Egypt, Solomon began that stupendous work, which was the admiration of the world while it stood, and has since been the theme of all ages. He employed, of the descendants of the Cannanites, 70,000 to bear burdens, 80,000 to hew timber and stone in the mountains, under 3,600 overseers; making a total of 153,600. In addition to these strangers, he levied 30,000 Israelites, whom he sent, 10,000 a month, by courses, under the direction of

The temple. Adoniram. To describe the magnificent structure which rose out of these astonishing labours, would demand a separate article, and cannot be attempted here. It may be necessary, however, to remark, that the only certain account of the temple must be gathered from the books of Kings and Chronicles; that in the general sketches furnished by these, many particulars must be deficient; that it is not safe to supply these from the extravagances of the Jewish rabbins; that Josephus himself had no other information respecting the first temple than that which lies before us in the sacred writings; that his descriptions, so far as they extend beyond the naked text, should not be depended upon, especially when his fondness for tradition is considered; that many who have written upon this subject, besides adopting such traditions, have confounded the temple of Ezekiel, as seen in vision, with the features and

proportions of the actual temple of Solomon; and that, after the closest investigation, we cannot arrive at any absolute certainty as to its form and dimensions.

Some remarkable circumstances in connection with this extraordinary structure must not be omitted. Of whatever its several parts consisted, the trees were shaped as they were felled, the stones were moulded at their quarries, the metals were formed for their several purposes at the forge, or the depository; every thing was completed before it came to Jerusalem, "so that there was neither hammer, nor axe, nor any tool of iron heard in the house while it was building; every part of the materials fitted for its respective position required nothing more than to be adjusted and cemented. The site of the temple was Mount Moriah, a solid rock, presenting unequal surfaces, which must have been levelled with prodigious labour, and might possibly have been attempted, and partly achieved, before the death of David, who had not only prepared materials for this stupendous structure, but actually assembled Tyrian workmen around him. The work being facilitated by these preparatory measures, stimulated by the ardent zeal of the youthful monarch, and superintended by the commanding spirit of wisdom which distinguished him, this astonishing edifice was reared in seven years. Completed.

It would be unpardonable to pass over a minute fact, which is one of those incidental circumstances that would be naturally noted by a true historian, but never occur to any man who planned a fiction. It is said, in the account of the placing the ark in the temple, "There was nothing in the ark save the two tables of stone which Moses put there at Horeb, when the Lord made a covenant with the children of Israel, when they came out of the land of Egypt." A confirmation is thus indirectly furnished of the history contained in the books of Moses, 491 years after that legislator had written. (See Exod. xiv. 16 and 21, compared with 1 Kings, viii. 9, and 2 Chron. v. 10.) In this magnificent sanctuary was a profusion of cedar, brass, silver, gold, and "costly stones," with the richest produce of Tyre, as well in materials as workmanship; nor can a more lively apprehension of the unbounded wealth of this monarch be furnished, than by regarding the golden shields, and the splendid furniture of a temple literally overlaid internally with the most precious of all the metals.

The dedication of the temple took place in the year of the ninth Jubilee, celebrated by the Jews; and a little delay seems to have occurred after the completion of the work, that its consecration might, by this circumstance, acquire additional splendour. No sooner was the ark deposited in its sacred receptacle, than the luminous cloud, the visible symbol of the Divine Presence, filled the temple, the brightness of which was so insufferable, that the priests were compelled to suspend their ministerial functions. It was then that Solomon, who had been standing upon a brass scaffold, before the altar, kneeled down, in the presence of his assembled subjects, and offered up a prayer of consecration, so solemn, so sublime, and so comprehensive, that it is difficult to say what quality was pre-eminent in a devotional effusion which excelled in all. The sacrifices offered were immense; that of the first day of a feast which lasted seven, consisted of 22,000 oxen, and 120,000 sheep. To this august ceremony succeeded the feast of tabernacles, which

also lasted seven days; so that the public rejoicings continued uninterruptedly an entire fortnight. At the close of these, a second *vianna* was vouchsafed to Solomon, assuring him of the divine favour, if he held fast his fidelity to God; and warning him, at the same time, that if he forsook the God of his fathers, it was not the magnificence of the house which he had consecrated that should secure it from desolation; but that, in such an event, it should assuredly be laid waste, and his people, carried into captivity, be scattered among all nations.

Solomon's palaces.

This superb structure was followed by other embellishments of Jerusalem, suitable to the splendour of his own mind, and according with the prosperity of his reign. He built a palace for himself, which consumed thirteen years in its erection; a second, which he called "the house of the forest of Lebanon;" and a third for his queen, "the daughter of Pharaoh." These were all constructed on plans of the utmost magnificence. His wealth was prodigious—all his establishments of surpassing grandeur—his wisdom unrivalled in Egypt, and throughout the east—his writings, of which only a few remain, innumerable—his power equal to his prosperity—since he rendered the whole of the remaining Canaanites tributary—and his empire extended over the Philistines, the ancient enemies of Israel, "even to the border of Egypt." Two things which added to his princely magnificence and amazing riches, have been considered as a departure from the prescriptions of Deity, relative to the government of the Jews; the one, the multiplication of chariots and horsemen, as well for war, as for purposes of state; and the other, the commercial relations which he formed with other nations, stimulated probably by his very intimate connection with Tyre, but inconsistent, apparently, with the duties of a people, who were commanded, as the badge of their peculiar destination, to keep themselves separate from all other states.*

Hiram's discontent.

The mutual agreement between Solomon and the king of Tyre did not terminate so happily as it promised: for Hiram was displeased with the twenty cities in Galilee which the king of Israel had assigned to him in acknowledgment of his assistance in the stupendous works of Jerusalem, and marked his disapprobation as well by his expostulations, as by the name which he imposed upon them: nor would he retain them; and Solomon appointed them in consequence as the residence of certain colonies of his own subjects.

Jerusalem fortified.

Amidst the prosperity of his peaceful reign, this great monarch did not neglect whatever was essential to the security of his dominions, either in his own, or after-times. To him Jerusalem owed its almost impregnable walls; and various other towns, and positions of importance, in his vast empire, were fortified with great care and expence.

Queen of Sheba.

Among the illustrious visitors whom the fame of Solomon's wisdom and power drew to Jerusalem, the most distinguished was the queen of Sheba. And here a question arises, as to the country of this renowned princess. She is called "the queen of the south;" and our Lord says, "she came from the uttermost parts of

the earth, to hear the wisdom of Solomon." Our attention is naturally directed to countries south of Jerusalem, and an examination of those parts most distant from the seat of the Israelitish empire, from which an acknowledgment of the greatness and renown of Solomon was voluntarily offered. The point at issue appears to lie between Arabia and Ethiopia; both of which are south of Judea. But there is a very important circumstance, long agitated, and more lately illustrated by Mr. Bruce, which seems to point more distinctly to Ethiopia. He found that the Abyssinians (in other words, the Ethiopians) maintain to this hour, that this princess was of their country; that her posterity long reigned there; that she had a son by Solomon, from whom the regal stock is derived; and they hold various traditions respecting this monarch. It is not impossible, however, that the queen of Ethiopia might be sovereign of Arabia also—an empire divided only by the Red sea; and thus the differences of those accounts, which agree in many essential points, become reconciled. Whatever might be the precise spot of her empire, it is evident that she was governed by an ardent thirst of knowledge, which could attract her to Jerusalem, confessedly very remote from her country. She was overwhelmed by his magnificence, and still more by his matchless wisdom; which she proved, according to the practice of the times (which long after prevailed, and was recognized by the seven Grecian sages, at their meetings), by difficult questions and abstruse propositions; her satisfaction was so entire at his solution of her enquiries, and her admiration so unbounded at the splendour of his state, that she avowed fame had not done him justice; for "the half had not been told her." After an interchange of presents, they parted, mutually gratified; and this memorable interview was but one more tribute to a wisdom, to which all existing monarchs paid homage, and which all succeeding ages have consented to eulogize.

Her country.

Her admission of Solomon.

It may be proper to pause here, and mark more particularly those principal occurrences in the Scripture narrative of the reign of Solomon, which have that collateral and foreign confirmation we should expect to find. About this time, or rather later, the earliest Grecian poetry has its origin; from which the first historians of antiquity gathered most of the materials of their records.

The temple of Solomon was a structure too celebrated not to be referred to as an actually existing monument of the power and wealth of the Hebrews at that time; and the temple of Vulcan in Egypt, and other magnificent sanctuaries in the heathen world, borrowed their grand outline from this stupendous edifice. To affirm the existence of such a building, supposing it never to have existed, must have subjected the records of the country boasting of it to derision and contempt. To admit its existence, and in the splendour assumed, must afford sufficient evidence of the prosperity of the Israelitish empire at that time, and of the power, magnificence, and wealth, of the reigning monarch. The facts, whatever they were, must have been known to the Tyrians, who assisted in the execution of the design; and to the Babylonians, who were the instruments of its destruction; and had any thing been affirmed in the Jewish writings contrary to truth on those points, their testimony must have been arraigned and exposed by the records of

Collateral evidences of Solomon's history.

* The nature and extent of his commercial pursuits appear to us, at least, questionable; while the multiplication of chariots, the accumulation of great wealth, and especially the multitude of wives, are expressly prohibited. See Deut. xvii. 14—20.

History. these countries. The wisdom of Solomon also was not confined within the limits of his empire, extensive as that was, but the earth is filled with his fame.—His penetration—his knowledge—his majesty and might, were recorded by nations the most remote from each other, in point of position; the most opposed in political interests; and the most unlike as to habits and circumstances.

A. M. We are now to notice a melancholy reverse of all this wisdom and glory—to see the sun darkening as it declined, and finally setting behind an impenetrable cloud. An awful lesson is afforded to the world when such an understanding as that of Solomon was capable of being seduced; and the desolating power of sin is affecting shown, contrasted with so much moral and intellectual beauty. As he advanced in life he multiplied his wives and his concubines to an enormous extent, having seven hundred of the former, and three hundred of the latter; and these, in violation of an express law, were indiscriminately taken from foreign and idolatrous nations. Their ascendancy over the king induced him to adopt their various superstitions; and he filled his country with altars and groves dedicated to their respective idols; which, abounding in Jerusalem, polluted the very fane that he had himself reared at such immense cost, and consecrated to Jehovah. Among these were the objects of the worship of the Ammonites and of the Moabites, distinguished for the foul and cruel rites practised by their adorers; and “*Astarteth*, the goddess of the Sidonians,” a popular deity in that and subsequent ages; called also *Astarte* by the Phenicians, and *Astartar* by the Saxons, whence our term *Easter* is said to be derived, sacrifices being offered to this idol in the month of April. These idols had temples erected to them on the Mount of Olives, directly over against the temple of Jerusalem. The divine displeasure was now marked in another communication to the anxious monarch, far different from his two former dreams; and it was distinctly told him, that his kingdom should be divided, and the largest portion pass away from his family, a remnant only remaining, in reward of the piety of his father David. In compassion also to one whose youth was so full of promise, it was added, that the threatened separation should not take place in his day. While this communication was made to Solomon, the means of carrying into effect its substance were actually adopting, and the last days of Solomon were disturbed by incipient troubles which fell heavily upon his successors. Hadad, the king of Edom, cherished an irreconcilable hostility against the family of David, by whom his country had been laid waste; and although he was compelled to shelter himself in Egypt, during the reign of that monarch, and a part of that of his illustrious successor, his inextinguishable hatred burnt with a fury over which time had no power. He strengthened himself by alliances in Egypt, and subsequently by preparations at home, to strike a decisive blow at his adversary, the first opportune moment that might present itself. Another enemy to Solomon and to Israel was found in the person of Rezon, who first revolted from the king of Zobah, and afterwards, at the head of a band of men, who joined his fortunes, established a kingdom at Damascus, and reigned over Syria. It appears, from the sacred historian, that each of these adversaries, so formidable afterwards,

harassed the Israelites during the close of Solomon's reign. The prophet Ahab had received the divine command to state to Jeroboam, an Ephraimite, of a quick judgment and a daring spirit, whom Solomon had patronized and employed, that ten of the tribes of Israel should, at the death of the king, come under his government (the remainder alone being spared to the royal heir), because of the idolatries of Solomon, yet that this division should not take place while the reigning monarch lived. The manner in which this prediction was conveyed, accorded with the symbolical usages of the age and country. Jeroboam, being clothed in a new garment, met the prophet alone in a field, by whom his robe was taken off, and rent into twelve pieces, of which he gave Jeroboam ten, signifying thereby not only the division of the empire, but the proportionate share which he should have in it. This extraordinary rencounter, with all its circumstances, coming to the ear of the king, Jeroboam was compelled to flee to Shishak, king of Egypt, under whose protection he lived until the death of Solomon.

Whether these conspiring events, attended by the express admonition which he had received, wrought repentance in the heart of the aged monarch is not said, nor does it become us to attempt to decide upon the great question of his final state. This has been frequently agitated, and often with little decorum. If we were to venture an opinion, it would be a favourable one; for he who was honoured with the distinguished title, *the beloved of the Lord*, in his youth, one would fain conclude, would not be left wholly to perish in his age. Besides which, it has been thought, with a high degree of probability, that the book of Ecclesiastes was the production of his old age, and the depository of his better thoughts, when the delusions of life were fast fading from his eyes. This is a point, however, upon which we have no evidence; and it appears to us to comport with the justice and purity of the divine character, that the state of even such a man as Solomon should be left doubtful, as a punishment of his apostasy, and an alarming instance of the malignity of sin; he died after a reign of forty years; precisely the date of his father David's sovereignty; and so far as we can judge, upon the reasonable supposition that he came to the throne in his eighteenth year, about fifty-eight years old. Thus the riches and glory which were promised him, as annexed to his wisdom, because he made so judicious a choice, were granted; but the length of days, which was conditionally held out to him, if he adhered to the divine statutes, was denied; for the statement of Josephus, who assigns to him eighty years of reign, and ninety-four of life, is not only without foundation, but will appear upon examination to be a palpable error.

Solomon, at sixteen years of age, when he came to the throne, began to astonish Israel with that wisdom which afterwards spread through the whole earth; Rehoboam, who succeeded him at the age of forty, afforded, at the commencement of his inauspicious reign, such an instance of his folly and tyranny, as revolted the hearts of his subjects, and alienated ten parts of his empire. How unlike to his illustrious predecessor! and how striking an exemplification of Solomon's own description of “a foolish son!” That eminent men should have weak children, is an occurrence not uncommon in the history of mankind—why it is so, is not

easily soluble on any philosophical principle. At forty, Rehoboam was old enough to have preferred the wise policy of his father's tried and aged counsellors—nor could the young men who "grew up with him" have been novices; but they seem to have had the same measure of understanding with himself; and it is the characteristic of a weak man to delight in the company of fools. Upon the death of the king of Israel, Jeroboam returned out of Egypt, and Shechem being the place at which the new monarch intended to receive the homage of his people, this adventurer presented himself at the head of a multitude, who thought themselves aggrieved by certain taxes imposed by Solomon, and required a relaxation of these burdens as the condition of their allegiance. Contrary to the advice of his father's ministers, Rehoboam, at the close of three days, which he had demanded to deliberate upon their petition, returned for answer, as he had been counselled by his rash companions, that so far from purposing to relax the severities of his predecessor, it was his fixed resolution to impose upon them a yoke incomparably heavier. This weak and wicked determination caused ten of the twelve tribes of Israel to separate from the house of David. Adoram, the collector of tribute, was slain; Jeroboam elected king of Israel; Judah and Benjamin, with a remnant of the other tribes, alone remaining faithful to the son of Solomon; and Rehoboam himself was compelled to seek his personal safety by flying to Jerusalem. In this emergency, he raised an army of 180,000 men to chastise the revolvers, and reduce them to obedience; but when this formidable force were upon the point of marching against their rebelling brethren, a message from God, by the prophet Shemaiah, forbade their expedition, and explained, that this defection had been permitted by him as a visitation for the idolatry of Solomon.

In the meanwhile Jeroboam sought to establish his newly-acquired empire, making Shechem the seat of government, until Samaria afterwards obtained that distinction (which, however, from local advantages, reverted again to Shechem after Samaria was destroyed). The policy of the new monarch of Israel suggested to him, that he would always be in danger of revolt while his subjects went up year by year to the metropolis of his rival to worship. He, therefore, erected two altars, the one at Dan, the other at Bethel, for the specious purpose of their convenience in remembering the God that brought them up out of Egypt, but in reality for idolatrous worship. According to the model furnished by Egypt, and familiar to Israel, two golden calves were set up, in imitation of the Apis of that country, to which the people had, in the wilderness, shown so fatal a preference; and, with their former ungrateful caprice, his subjects quickly complied with the suggestion of their monarch. But as he stood by the altar to offer incense, evidently for the further purpose of blending the priestly with the kingly dignity (a practice as strictly forbidden to the Jews, as it was prevalent among other nations, to the fall of the Roman empire), and approached to perform these usurped functions, a prophet, who is not named, drew near, and in a strain of vehement eloquence "cried against the altar, the name of the Lord." He predicted that the bones of these very priests, who were now officiating subordinately to the king, should be burned upon that altar,

by a future monarch, of the name of Josiah, descended from the house of David; a declaration actually fulfilled 351 years afterwards (and remarkable among the few cases in ancient prophecy, in which the instrument as well as his work was named); facts which, when well authenticated, must lead beyond dispute to the source of such predictions. As a sign of his mission, and of the certainty of the events foretold, this prophet also declared that the altar itself should immediately be rent, and the ashes poured out. Enraged at the interruption occasioned by this stranger, and still more at the import of his threatening, Jeroboam stretched forth his hand, commanding him to be seized, or perhaps as the executioner of his own haughty will. It was instantaneously withered and powerless; nor was it restored but at the intercession of the man of God: the altar also was divided as he had said. To give emphasis to his message, this nameless seer had received a strict command neither to eat at Bethel nor to return by the road by which he approached it; accordingly he refused the invitation of Jeroboam to refresh himself. But deceived by another prophet, who, for motives which are not stated, and cannot be assigned therefore by us, pretended to have received a contrary mandate, he violated the injunction of God and turned aside to the deceiver's house. Here, while the victim of his falsehood sat at his table, his seducer was seized with a prophetic spirit, and testified the punishment of his disobedience by a violent death; which occurred as he returned home, a lion killing him by the way. There is a mystery about this transaction upon which we cannot undertake to reason, but which is connected with too many acknowledged events, dependent upon it, and affecting a whole people, not to be received as an undoubted fact. The very sepulchre of this prophet, with some characteristic inscription, remained to the days of Josiah, and became the means of accomplishing the prediction in question.

Jeroboam, unaffected by this visitation, is chastised by another. His pious child, Abijah, was seized with a threatening sickness, and, anxious to ascertain the result, he sent his queen disguised to Abijah, who had predicted his sovereignty. The prophet, who was now blind with age, was inspired to know who his visitor was, and to foretell the death of her son, when she should approach her own house; not as an evil to the child, but as a punishment to his hardened parent; the ruin of whose family was also denounced. In the mean while Rehoboam had an opportunity given him of recovering his empire. The Levites, and a large body of the Israelites, disgusted at the idolatry of Jeroboam, returned to the house of David; and his forces became equal to those of his ambitious rival. But Rehoboam was the son of an Ammonite, and enslaved by his mother's idolatry and counsels. The opportunity was lost, and the corruption of Judah was not less than that of Israel. The punishment followed, in the invasion of Shishak, king of Egypt, foretold by the prophet Shemaiah; and the conqueror despoiled the temple of its golden shields and its treasures, together with the riches of the palaces. Thus, in the short interval between Solomon and Rehoboam, Jerusalem began to be impoverished, and the sanctuary profaned. Rehoboam substituted bucklers of brass, for those of gold; and for the present was spared further ruin. He seemed touched at length with his situ-

Having fixed upon the heir of his kingdom from among his sons, he had the prudence to make settlements for his other children suitable to their princely rank; and died at the age of fifty-eight, having sustained a weak and

Jeroboam's death.
Abijah.

Abijah, or Abijah, as the same is written indiscriminately, succeeded him. His reign was short, but not inglorious, if military exploits are to be the standard of distinction; if morals, then, alas! it is recorded of him, that he "walked in all the sins of his father." His first object was to attack Jeroboam, whom he reproached for his rebellion, and, in his expostulation, admitted the weakness of his father. The levy with which he advanced to meet his adversary, although large, was unequal in numerical force to the power opposed to him; the army of Abijah, consisting of no less than 400,000 men, being still doubled by that of Jeroboam. The king of Judah had the victory, and so completely defeated his antagonist, that Jeroboam never "recovered his strength."

A. M. — After a reign of not more than three years Abijah died, and was succeeded by his son Asa, whose attachment to religion formed the best pledge of the security of his empire. Two years after he came to the throne Jeroboam died, after a reign of 22 years, it should seem, by some sudden or unusual stroke of mortality, "since it is said, "The Lord struck him with death." Thence it is said of Jeroboam, "He was buried in Samaria."

Am's piety, action, the real life king of Judah was so ardent and sincere, that he deposed his own mother on account of her idolatry, and destroyed all the monuments of her superstition. In the mean while, Nadab, the son of Jeroboam, had succeeded to the throne of Israel; which he held only two years; for the siege of Gibbethon, belonging to the Philistines, Baasha, of the tribe of Issachar, conspired against him and slew him; and not satisfied with seizing upon his kingdom, the usurper extirpated the whole family of Jeroboam, as had been predicted. It is necessary to trace, with a rapid hand, a succession of reigns, in both kingdoms, distinguished by no features of particular interest, that circumstances more deeply important may occupy a due proportion of our attention.

an attack of Banashah, in conjunction with Benhadad, king of Syria; the latter of whom he bought off with presents, which stripped the sanctuary of its wealth, as well as emptied his own treasury. This distrust of providence, and alliance with an idolatrous monarch, called forth a severe reproof from the prophet Hanani, which enraged the king, who was now suffering with some disease in his feet, and the teen paid the penalty of incarceration for his fidelity. Several acts of perverseness, which are glanced at, but not specified by the sacred historian, disgraced the close of this otherwise distinguished reign, which lasted forty-one years.

Before the death of Asa, several important revolutions had taken place in the rival kingdom of Israel. Jehu, the son of Hanani, had been commissioned to apprise Baasha, that as he practised the sins, he should share the punishment of his predecessor, not only in his own person, but in his posterity; and these calamities respected also the violence by which he had usurped the throne. When man becomes the instrument of executing judgment upon his fellow-man, swayed only by his own ambition, and unconscious of the high behest he is accomplishing, the sentence inflicted is just; but the administrator of it is no less amenable for his own motives. Baasha died, and was succeeded by his son Elah, in the 26th year of Asa's reign. The cup which his father had administered to his master, was put to the lips of his son, by his own servant. Zimri conspired against him, and slew him, nor did he deem himself secure upon his usurped throne, until he had cut off all the house of Baasha.

Seven days only was the inglorious reign of Zimri, a Zimri's space, however, sufficient to enable him, by the expedient of a short usurpation, to fulfil the destiny of his master's family.

The usurpation of Zimri was never ratified by the Israelites; who so soon as they heard of his conspiracy and murder, chose Omer, "the captain of the host," as their monarch; he besieged Zimri in Tirzah; who, finding that the city was taken, and his cause hopeless, shut himself up in the palace, which he fired, and perished in the flames.

For as yet Omri was not firmly seated on the throne; **Tibni's rivalry and death**
 On another rival appeared in the person of Tibni, who had found means to divide the Israelites on the great frayed question of the successor to the monarchy. But the contest terminated fatally to Tibni; and in the 31st year of Aśa's reign, Omri was quietly established in the royal authority of Israel. His whole reign was about twelve years; on the first half of which he was occupied in supporting his pretensions to the diadem; the last presented him, confirmed indeed, in his authority, but immersed in the criminality of his predecessors. One circumstance is worthy attention, because it subsequently furnished a metropolis to Israel, he bought of Shemer the hill which was called after the name of its possessor, and built upon it a city, which he called Samaria: not **Omri build Samaria** however its original title.

In the 38th year of Asa, king of Judah, Omri, king of Israel died; and was succeeded by Ahab his son, who exceeded his predecessors in evil, and added to his offences in his alliance with Jezebel, daughter of the king of Zidon, but whose reign was distinguished by many important and miraculous occurrences. Among others, in his days, Hiel, the Bethelite, braving the curse of Joshua against those who should rebuild

Jezebel.

Obadiah's piety.

Sent to Ahab.

The continuance of the drought having exhausted the brook, he was directed to go to Zarephath, a city of Zidon, and to take up his abode with a widow, whom he found so impoverished, and so hopeless because of the severity of the famine, that she was gathering a few sticks to bake the cake which she had made from the last handful of meal, and the little oil in her possession, for herself and her child; having no prospect before them afterwards but that of a miserable death by hunger. Elijah predicted that these scanty resources should prove inexhaustible, until the fruitfulness of the seasons should be restored: and, accordingly, with her he lived until that period; the barrel of meal, and the cruse of oil, having been miraculously supplied. While this lowly roof sheltered the prophet, her child died; and in the paroxysm of her anguish, she seemed disposed to impute this calamity in some way to her guest, supposing that his purity had occasioned a visitation for her sins. Elijah, who appears to have feebly sustained his patience, in this trying scene, took the body into his own chamber, and having stretched himself upon the child and prayed over him, it pleased God to restore him again to life.

In the mean while, Ahab, influenced by Jezebel, multiplied idols of every description in his empire, and gratified her cruel disposition by destroying so many of the prophets of the Lord as he could seize. In this sanguinary persecution he was secretly counteracted by Obadiah, the governor of his house; who found means to conceal, and, notwithstanding the severity of the famine, to support one hundred of the prophets of Jehovah. After the drought had continued more than three years, Elijah was commanded to visit Ahab; and as he went towards Samaria, he met Obadiah, who had been sent by the king to search the land in one direction, while he himself took another route, to discover what water-springs might remain, as the last hope of the country. Elijah commanded this officer to return

and acquaint Ahab that he awaited his arrival: a bold fellow him—to such a tyrant also as Ahab, who had, during the whole time of the prophet's concealment, earnestly sought after him to put him to death. Obadiah reluctantly undertook this commission, fearing that Elijah might be transported in the interval to some other spot, by that supernatural influence which frequently carried the prophets, by sudden transitions, from place to place; and that Ahab, disappointed in not finding him, would take the life of his messenger. Elijah assured him that he must have an interview with the king that day. Obadiah departed to apprise his sovereign, and Ahab immediately returned to encounter the prophet. They met; and Elijah returned the re-
Jezebel and Ahab seat
proaches of Ahab with a firmness and authority which the monarch could not resist. At the direction of the prophet, the king assembled the people of Israel and the prophets of Baal; and when they were convened, he proposed to put the claims of Jehovah and the pretensions of their idols to the issue of a miracle. Bullocks were prepared, and the wood laid on the altars; but no fire was put under. They were to address the objects of their respective worship, and "the God that answered by fire" was to be acknowledged as the true God. The experiment was first made by the priests of Baal; who mangled their flesh after the barbarous custom of his idolatrous worship, and cried in vain upon their deity, stimulated to persevere in their attempts to support his honour by the severe sarcasms of Elijah. It was in the evening of the day, when all the ceremonies of idolatry had been practised, and when all pretensions for further delay were exhausted, that the priests of Baal retired abashed and mortified, and Elijah drew near to repair the altar of Jehovah, which neglect, and time, and insult, had demolished. Having made ready the sacrifice, to remove all possible suspicion of concealed fire, he caused water to be poured upon the victim, the wood, and the altar, until the trench with which it was surrounded overflowed; and then calling upon that great and venerable name which had been so long dishonoured and disused, "the fire of the Lord fell, and consumed the burnt-sacrifice, and the wood, and the stones, and the dust, and licked up the water that was in the trench;" while "all the people fell on their faces," and shouted, "The Lord, he is the God! The Lord, he is the God!"

The historian Menander, in his acts of Ithobab, king of Tyre, records this death in the days of Ahab; and Julian, who, as Grotius justly observes, was "equally the enemy of Jews and Christians," admits the miracle of the fire falling from heaven to consume the sacrifice of Elijah.

The slaughter of the priests of Baal which followed, at the command of Elijah, was not the indulgence of personal revenge, but an act of retributive justice for the blood of the prophets which they had caused to be shed; and of righteous punishment for the guilt which they had incurred in seducing the Israelites from the worship of the true God; to whom also they owed allegiance as their special protector, having been by him separated from all other nations.

Neither the public miracle which had been wrought in attestation at once of the mission of the prophet, and of the true object of religious worship; nor the blessing of rain, which, at the prayer of Elijah, abun-

dantly followed, could convince or appease the queen, when Ahab told her of the slaughter of so many of her priests, and the prophet was once more compelled to flee for his life. Under these circumstances of repeated danger and difficulty, he began to desire a release from his labours and a dismissal from the world. He was favoured with a manifestation of Deity, at once sublime and affecting, preceded by the stormy elements, and speaking in "the small, still voice" of goodness and compassion. Elijah was encouraged by the prospect of an assistant in his arduous office; and enlightened as to the events of future time, which would severely punish the apostasy that he deplored, and "justify the ways of God to man." He was commanded to anoint Hazael to be king of Syria, Jehu to be king over Israel, and Elisha to be prophet in his stead. It is a remarkable circumstance, that the last only of these commissions was accomplished by the prophet. Jehu was not anointed until twenty-three years later than this event, by one of the sons of the prophets. Hazael had his greatness foretold by Elisha nine years earlier, upon his coming to inquire whether the *then* king of Syria should recover, and both events took place nearly ten years after the removal of Elijah. We must, therefore, suppose either that these events were only revealed to him for his instruction, and to teach him to wait with patience the issue of the divine dispensations, or that, in the appointment of Elisha, which was the act of this prophet, who succeeded him in his work and retained his spirit, what was done, probably, by his own direction, among the instructions he would leave with him, was recounted as done by himself; or, which is, perhaps, far better, we must leave the facts as circumstances which we ought to notice, but for which we cannot account in the silence of Sacred History itself, which offers no solution of them. His destined colleague and successor was found by him at plough, consistently with the simplicity of the times, when agriculture afforded wealth, and the rich disdained not to share in the pursuits whence they derived their abundance. The prophet "cast his mantle upon him," and he appears instantly to have understood the appointment signified by this expressive symbol. He took a yoke of oxen, which he could not have done had not the property been his own, and gave a parting feast to his friends; after which he immediately followed Elijah, and ministered to him as a servant. His service was afterwards described by a phrase truly oriental, "Elisha, who poured water upon the hands of Elijah," that being the duty of a servant when the tables are removed, in countries where ablutions are frequently used, and in which, the hands being chiefly employed at meals, the custom becomes necessary for cleanliness no less than for refreshment.

In this passage of the history of Elijah it is proper to observe, that about eight years before this period, and in the fourth year of the reign of Ahab, Aah, the king of Judah, died, after a reign of forty-one years, and was succeeded by his son Jehoahaphat, who was distinguished for his piety. The result accorded with the principle; at the same time that the neighbouring state, under the dominion of Ahab, was suffering every imaginable privation, Jehoahaphat was strengthening his fortresses, and enjoying, with his people, distin-

guished ease and prosperity. The Philistines and Israelites were tributary to him; and his empire, although so considerably retrenched by the separation of the ten tribes from his family, seemed to recover something of that ancient splendour which it had enjoyed in the days of Solomon; "and he had riches and honour in abundance."

In the eighteenth year of Ahab, and during the time that we lose sight of Elijah, Benhadad, king of Syria, at the head of an immense army, and supported by no less than thirty-two tributary monarchs, besieged Samaria. Without any pretext for the war, he sent to urge those demands which implied that the king of Israel was not only tributary to him, but his wealth and possessions wholly at his disposal. Ahab conceded even this stern requisition; but as it was followed by another yet more insolent and threatening, the king of Israel found it necessary to resist such unlimited impositions. A prophet, who is not named, predicted the entire defeat of the invading army, and prescribed the order of the battle. The victory on the part of the Israelites was complete, and the slaughter of the Syrians immense; but Ahab was warned by the same prophet, that Benhadad would renew the conflict the year succeeding.

The invasion was accordingly renewed, and the overthrow of the Syrians again predicted and achieved; and so great was the destruction of the invading army, that Benhadad was compelled to solicit the compassion of the king of Israel. Ahab exercised, in this instance, no imprudent and ill-timed clemency, for which he was severely reproved by one of the sons of the prophets, who, disguising himself, conveyed the disastrous tidings to the king, of the divine displeasure which he had incurred, in the prevailing parabolic form, a method which led the monarch unintentionally, as in the case of David, to pass sentence upon himself; and he was assured that his own life would be the forfeit of the rash and false generosity which he had exercised.

Soon after this event, Ahab wishing to obtain the vineyard of Naboth, which was near his palace, and not being able to prevail upon him to part with it (as it was contrary to the law for a man to sell his inheritance from his family), Jezebel caused Naboth to be slain upon a false accusation, and the king went down to take possession of this contested piece of ground. As he drew near he was met by Elijah, who here makes his final appearance to the king, and threatens him with the entire destruction of his queen and his family, in language so severe and awful, that even the heart of this proud tyrant was terrified, and he humbled himself, until it was promised that the evil denounced should not take place in his own reign; after which, he appears to have returned to his evil courses with unaltered effrontery.

Jehoahaphat had formed an alliance with Ahab; and at the end of three years from the treaty which the king of Israel had made with Benhadad (during which the transaction just recounted took place), the king of Judah went down to see him, and finding him about to attack Ramoth-Gilead, which the king of Syria withheld from him, offered to be his ally in the proposed war, but first wished the prophets to be consulted as to the issue. They were accordingly summoned before the two monarchs, and promised Ahab

* Grot. de Verit. lib. 1. sect. 16.

History. success in his enterprise. Jehoshaphat seems to have gathered, from some circumstance not explained, that these prophets were either deceived themselves, or disposed to flatter; for he earnestly inquired whether there did not remain some other *seer* who might be consulted. Ahab acknowledged that Micaiah was absent, who seems to have fallen under his displeasure for his blunt fidelity, and has by some been, therefore, conjectured to have been the prophet who predicted that the life of Ahab should go for the life of Benhadad. It is not unlikely that the prophets consulted were prophets of Baal, and that Jehoshaphat, perceiving this, was anxious to have called a prophet of the Lord; and if this conjecture, which is adopted, under a full persuasion of its correctness, by Calmet, be admitted, it will throw some light upon that spirit of delusion which was said, by divine permission, to rest upon them. However this may be, Micaiah predicted the overthrow and death of Ahab, who, highly incensed, ordered him to prison; and to turn aside the prophecy, persuaded Jehoshaphat to put on his royal robes, while he himself went into the battle disguised as a private man. In the course of the conflict, Jehoshaphat was so hardly pressed, the king of Syria having commanded his men to direct all their attacks against the person of the king of Israel, that he was compelled to discover himself, and with difficulty escaped with his life. Ahab, in the mean while, disguised as he was, was slain by an arrow drawn at a venture, but divinely directed, and thus perished, as was foretold.

Ahab slain.

Ahaziah succeeded his father Ahab in every sense, being as devoted to idolatry as his predecessor. Jehoshaphat returned to his kingdom after the late disastrous battle, and was so severely reproved by the prophet Jehu for his alliance with Ahab, that when Ahaziah wished to join him in a commercial enterprise, the king of Judah for some time refused all further connection with that family. Ahaziah, in the second year of his reign, was so injured by a fall that his recovery appeared extremely doubtful. He sent to inquire of Baalzebub, the idol of Ekron, what should be the issue of his sickness; and his messengers were met by Elijah, who sent them back with the information that he should never again rise from his bed. The king knew the prophet from their description of his person and dress, and sent three officers, successively, each commanding a company of fifty men, to apprehend him. Two of these parties were consumed by fire from heaven, at his word (a circumstance noted by the disciples of our Lord), and the third he spared, accompanying him to the king, and confirming his prediction in the royal presence. Ahaziah died accordingly, after a reign of two years.

His fall and sickness.

Elijah foretells his death.

A. M. 3108. The time now approached for the departure of Elijah, with all its miraculous circumstances. Accompanied by Elisha, who refused to leave him, he visited the schools of the prophets at Bethel and at Jericho; after which, he went to Jordan, and smiting the waters with his mantle, they divided, and the prophets passed over dry-shod. Having reached the opposite bank, Elijah apprized his companion that the hour of separation was come; and asked him to prefer his last request. He desired a double portion of the spirit of his master; and while he solicited this boon, an appearance as of a chariot and horses of fire parted them, and Elijah was taken up into heaven.

Elijah's translation.

His mantle fell from him as he ascended, and was regarded by Elisha as the grant of his petition. He took it up, and smiting with it the waters of Jordan, they again divided, and afforded him a passage. The sons of the prophets received him as the successor of Elijah; and his miraculous interference was solicited and exercised in cleansing the unwholesome waters, and rendering fruitful the barren lands of Jericho. Some young persons, the children probably of idolatrous parents, who insulted the religion of Jehovah in their mockery of his prophet, were punished at Bethel with a violent death.

Lowellish Monarchy. A. M. 3110. B. C. 894.

In the same year, Jehoram, the son of Ahab, and Jehoram, brother of Ahaziah, succeeded to the throne of Israel, stained with the same vices as those which dishonoured and ruined his predecessors, although not to the same idolatrous extent. Finding himself involved in a war with Moab, he sought the alliance of the governor of Edom, and of Jehoshaphat, who again shared the dangers of the rival kingdom, by a strange prepossession in favour of the family of Ahab. The confederate armies were on the point of perishing with thirst, and the king of Judah was immediately for consulting the Lord. Elisha was sent for, who, after severely reproving Jehoram, and expressing a high respect for Jehoshaphat, foretold a sudden and large supply by a land-flood, together with the defeat of the Moabites, which came to pass accordingly. Jehoshaphat himself, towards the close of his reign, was invaded by a confederacy of Ammonites, Moabites, and other nations; but whether a little before, or immediately after, the events just alluded to, it is not easy to determine. In this extremity the king of Judah proclaimed a fast, and received a message from the prophet Jehaziel, that this formidable army should fall self-destructed the next day. These allied powers turned their arms against each other, and so completely extinguished their forces, that it only remained for Jehoshaphat and his people to gather the spoil. With this miraculous transaction we close the life of this illustrious monarch, who died in peace after a prosperous reign of twenty-five years.

A. M. 3115. B. C. 889.

Jehoshaphat's victory and death.

In the meanwhile, throughout the reign of Jehoram, king of Israel, Elisha the prophet was filling up a brilliant career, of which our limits will only suffer us to give a hasty sketch. The widow of one of the prophets came to Elisha, and complained that her husband's creditor was about to sell her two sons as bondmen to liquidate a debt which she was unable to pay. This practice is prevalent through all the east, and under most despotic governments, the persons of the peasantry being considered as much the property of the master as their labour. Our Lord alludes to the circumstance more than once in his parables. A similar instance of the savage features of the age, which we passed over in the preceding narrative, was the conduct of the king of Moab, who, when he found himself pressed in the siege by the united arms of the sovereigns of Israel, Judah, and Edom, according to the superstitions of his day and country, took his own son, and sacrificed him upon the walls, to appease the offended deities; a practice afterwards notorious among the Carthaginians, and not unknown to the Israelites, who "caused their sons to pass through the fire," when they had resigned themselves to idolatry. In

Eastern despotism and superstitions.

Elisha's miracles.

History. this instance, the act of the Meablitish monarch raised such horror and indignation in the bosoms of the besiegers, that they raised the siege, and departed from him. To return to the narrative—Elisha, finding the prophet's widow possessed only a cruze of oil, ordered her to borrow as many vessels of her neighbours as she could procure, and to pour out into them, the oil multiplying miraculously until they were all filled; and by the sale of it she was enabled to discharge her debt.

Elisha multiplies the oil. A Shunamite of consideration in her city, perceiving that the prophet often passed that way, proposed to her husband to make some accommodation for him in their house.

To recompense this spontaneous benevolence, of which he availed himself, Elisha, finding she was childless, promised her a son, and his prediction was accomplished. The child grew up, and then died suddenly; probably by one of those sun-strokes which are not unusual in hot countries. She apprized Elisha of this sad event, and manifested under it a singular combination of grief and resignation. He raised the child from the dead, and in recording her speechless gratitude, the narrator produces one of those simple and affecting descriptions which so much abound in the sacred writings, and in which the whole scene passes again before us—"Then she went in, and fell at his feet, and bowed herself to the ground, and took up her son, and went out." No other language could have expressed emotions so powerful.

At Gilgal, during a severe famine, one of the sons of the prophets gathered wild gourds, and having prepared them, served them up to the people, not knowing that they were poisonous. By casting meal into the pot, Elisha miraculously rendered the food wholesome. About the same time, having received a present of twenty barley loaves, he multiplied them until one hundred men were satisfied, and left fragments of the provision.

The commander of the forces of the king of Syria, a man distinguished as well by his noble qualities as by the royal favour, was afflicted with a leprosy which appeared to be incurable. A young female slave, who had been taken away from the land of Israel in one of the invasions, mentioned Elisha as able to recover her lord; upon which, the king of Syria sent Naaman with a letter to the king of Israel, entreating his restoration to health, to the surprise and dismay of the latter monarch, who considered it intended as an occasion of war between them. Elisha required the attendance of Naaman, and recommended him to wash seven times in Jordan. Naaman, who did not consider himself as treated with sufficient respect, as the prophet did not see him, and who placed no confidence in the proposed remedy, at first refused to comply with the injunction of the prophet; but was afterwards persuaded to make trial of it, and recovered his health instantly. He now would have loaded the prophet with presents, by whom they were all peremptorily refused; but his servant, willing to enrich himself at the expence of the illustrious stranger, followed after him, and requested, in the name of his master, a talent of silver, and two changes of raiment; which were not only granted, but Naaman pressed upon his acceptance, two talents, amounting to nearly 700*l.* of English money, and the garments were probably costly. Upon his return, after concealing the articles thus fraudulently obtained, Gehazi was instantly charged with his crime by the prophet, who

sentenced him and his family to the penalty of that disease of which he had just cured Naaman. About the same period, the sons of the prophets requiring a larger dwelling, in making suitable arrangements for their accommodation, one of them dropped the head of his axe into the river, and, upon complaining to Elisha, the prophet caused the iron to swim.

At this time the king of Syria was engaged in hostilities against the king of Israel, but always defeated in his purposes, through the anticipation of his plans by his opponent. At first he suspected treachery among his own servants; but it afterwards appeared, that the inspiration of Elisha enabled him to discover the most secret councils of the Syrians to his own sovereign. The incensed monarch resolved to possess himself of his person, and sent accordingly a considerable body of troops to seize him. They encompassed the city, and the servant of the prophet was much alarmed; until, at the prayer of Elisha, his eyes were opened to discern the spiritual guardians which were planted round his master. The Syrian army was seized, in the sequel, either with an actual blindness, or a confusion of vision, which did not suffer them to distinguish objects; and in this state, as they were inquiring the road to the point of their destination, Elisha led them into the heart of Samaria, and there delivered them into the power of the king of Israel; at the same time stipulating for their safety, restoring them their sight, and after they had been refreshed with food, causing them to be sent back to Syria.

The war did not, however, so terminate. Benhadad besieged Samaria, and bitterly did the son of Ahab lament the ill-timed generosity of his father to this oppressor; for such was the extremity of the famine, that two women came to the horrible agreement to kill each of them her only child, and devour the unnatural food between them. Such an event had been predicted by Moses, when he foretold what would be the desperate circumstances of the Israelites if they forsook their God; and a similar occurrence is recorded by Josephus as having taken place in the final siege of Jerusalem by Titus. One of these mothers had actually thus destroyed her son; but her associate, who had shared the revolting provision, touched with maternal compunction, concealed her own child. On this dreadful business complaint was made to the king, who considered Elisha either as indifferent to these calamities, or as slow to remove them (presuming upon his ability, from what he had seen of his miraculous agency), and sent a messenger to command him to be beheld. The prophet detained him at the door until the king himself, who followed closely after, arrived. Elisha assured him that on the very next day, at the same hour, abundance should be enjoyed—a prediction so very unlikely in the calamitous state of the city, that it was repelled with derision by one of the attendant lords, who was threatened that he should himself see, but not partake of the plenty, which was introduced by the following circumstance. Four men, who were lepers, and, according to the law, thrust out of the city, were perishing with hunger at its gates, and wrought up to desperation, they resolved to throw themselves upon the mercy of the Syrians—satisfied that they could not die. They came accordingly to the camp, and found it deserted; the God of Israel having in the night caused the besieging army to hear a miraculous noise

as of chariots, horses, and a mighty army, they fled, with the utmost precipitation, from a force which they imagined Jehoram had found means to hire from Egypt and other nations superior to their own. When these lepers had made a report of these circumstances, the king of Israel suspected a stratagem of war; but upon further scrutiny, he found that the Syrians were actually departed. The quantity of provision they had left behind them afforded that plenty which Elisha had foretold; and the nobleman who had received the intimation with mockery, being appointed to keep one of the gates, was trampled upon by the people, in their eagerness to obtain supplies of food, and received so much injury that he died.

Another famine arose in the year succeeding, which Elisha predicted should last seven years, and he counselled the Shunamite, whose child he had restored, to leave the country until this dreadful visitation should have passed away. She accordingly departed, and at the close of the seven years, returning to petition the king of Israel for her land, she found him conversing with Gehazi respecting the miracles of Elisha, her own case being at that moment under consideration; a circumstance so propitious to her application, that she was not only reinstated in her property, but indemnified for the loss she had sustained during her absence.

At this time Elisha went down to Damascus. Benhadad being sick, sent Hazael, one of his chief ministers, to learn of the prophet if he should recover, who abruptly intimated to him his own designation to the Syrian throne;—depicting also the bloody crimes toward the Israelites that would stain his future reign. To this, Hazael replied, with that memorable indignation at his own existing dispositions, which was at once a proof of the blindness of his heart, and the correctness of his moral perceptions, "But what if thy servant a soo, that he should do this great thing?" Upon his return he murdered his sovereign, and seized upon his throne.

Jehoram had succeeded his father Jehoshaphat on the throne of Judah, and his first act was to destroy all the branches of the royal family, with several of his nobles. This barbarous custom of securing the throne by the extermination of those who might be supposed likely to advance any pretensions to it, is very prevalent in the east; and the seclusion, almost confinement, in which the princes of the family are kept, renders them an easy prey to the first jealous tyrant who assumes the reins of government. He had married the daughter of Ahab, and shared her idolatry. The Edomites revolted from his sway, and he lost also Libnah. A writing from Elijah was brought him, prepared, it should seem, some time before, as the prophet had been translated some years, foretelling the calamities which should fall upon his family, and his own mortal disease. These things happened accordingly, and he was not even buried in the royal sepulchre.

Ahaziah (or, as he is otherwise called, Jehoahaz) succeeded him, and joined Joram, king of Israel, in a second attempt to recover Ramoth-Gilead, which proved as disastrous as the former; for the king of Israel was severely wounded, and the king of Judah continued with him, on account of this indisposition; during which Elisha sent a young prophet secretly to anoint Jehu king over Israel, who was immediately acknowledged by his fellow-officers, and proceeded without delay to surprise the sick monarch at Jezreel. The

kings of Israel and Judah went out to meet him, and demand the occasion of his unexpected appearance; he slew them both, and entering the city, saw Jezebel, who was yet living, at one of the windows of the palace, from which he caused her to be precipitated, and she died. The body of Jehoram was east into the field of Naboth, whom his father Ahab had murdered; and when Jehu sent out to bury Jezebel, he found her almost devoured by dogs, according to the prophetic threatening delivered so long before.

Jehu followed these severe measures with the Jezebel slaughter of the seventy sons of Ahab and forty-two of the relations of Ahaziah. He then, with a mixture of fraud and unallowed zeal, proclaimed a solemn festival in honour of Baal; and thus assembling all the worshippers of that idol, caused them to be slain in the temple, and extirpated idolatry in general. But he afterwards fell into the practices of Jeroboam, and dishonoured his early career. Hazael at this time began to weaken the empire of Israel, and Jehu died Dies. after a reign of twenty-eight years.

Athaliah, in the meanwhile, had, at the death of her son Ahaziah, destroyed all the seed-royal, with the exception of Joash, then an infant, who was secretly conveyed beyond her malice, while she usurped the throne of Judah. At the close of six years, Jehoiaha the high-priest took such measures as terminated her tyranny, by proclaiming Joash king, and causing her to be put to death. During the life of Jehoiaha, he conducted himself uprightly, and showed his zeal for religion in repairing the temple; but when the high-priest died he turned to idolatry, and being reproved by Zechariah, the son and successor of his aged benefactor, he forgot his obligations, and commanded him to be stoned to death. This cruel act was followed by exemplary punishment. Hazael advanced upon Jerusalem with a small, but successful army, and Joash was obliged to purchase his forbearance at the expence of the treasures of the temple and of the palace. He then languished under a complication of diseases, and was soon after slain by a conspiracy of his own servants.

Jehu was succeeded by Jehoahaz in the government of Israel, who, adhering to the vices of his father, was punished by the oppressions exercised by Hazael, king of Syria, and the kingdom was greatly reduced. His reign lasted seventeen years, and he was succeeded by his son Jehoshaphat. In his reign Elisha was seized with his mortal sickness, and the king visited him with much affection. The dying prophet instructed Jehoahaz, him to "take bow and arrows," and open the windows of eastward, and shoot. He obeyed, and was told that he should smite the Syrians at Aphek. He then directed him to take the arrows and smite upon the ground; and the king smote thrice. The prophet was grieved that he had not struck it more repeatedly, and foretold that he should only prevail against Syria three times. Soon after Elisha died, and before the year closed, as and death they were proceeding to bury a man, they discerned a band of Moabites, and in their haste and terror cast the dead body into the sepulchre of the prophet; "and when the man was let down, and touched the bones of Elisha, he revived, and stood upon his feet." His bones Hazael dying, was succeeded by Benhadad his son, recover a from whom Jehoahaz recovered the cities which his dead man, father had seized, and thrice defeated him, according Benhadad. to the dying prediction of Elisha.

History. Amaziah succeeded his father Josiah on the throne of Judah, and reigned well for a season. He punished his father's murderers with death, but spared their children, according to the law of Moses. He raised a prodigious army of his own, and increased it by hiring 100,000 Israelites. This alliance being forbidden by a prophet, he incurred the loss of the money which he had given them, and their displeasure, when he separated himself from them. He defeated the Edomites; but, among the spoil which he took, brought home their idols, and suffered himself to be betrayed by them into idolatry. Then began his disasters. A prophet was sent to reprove him, and he resented his faithful admonition. He challenged the king of Israel, by whom he was defeated, taken prisoner, and brought to Jerusalem, his own metropolis, which the conqueror stripped of its treasures, as a ransom, and demolished a considerable part of its wall, before he departed to Samaria. A conspiracy was finally formed against Amaziah at Jerusalem, from which he fled to Lachish, whither he was followed and slain; the people of Judah choosing his son Azariah, otherwise called Uzziah, as his successor, at the age of sixteen.

Jeroboam, the second of the name, was the son of Jehoash, the king of Israel, and succeeded his father, in the fifteenth year of the reign of Amaziah, king of Judah. He is charged with the prevailing sins of his house; yet his reign was prosperous, and he was distinguished for his courage, and for his enterprising spirit. He followed up the advantages which his father had gained over the Syrians, and, encouraged by the prophet Jonah, pressed on until he had restored the entire coast of Israel, "from the entering of Hamath to the sea of the plain, or the dead sea." He captured also Damascus, the Syrian capital, and reigned forty-one years.

Azariah, the son of Josiah, better known by the name Uzziah, was at that time king of Judah. The early part of his sway, and so long as he was under the counsels of a prophet of the name of Zachariah (not the person who stands upon the list of the prophetic books), was distinguished by his personal piety, and the prosperity of his empire. He defeated the Arabians, Philistines, and Moabites, and received tribute from the Ammonites. His army consisted of more than three hundred thousand men; he fortified Jerusalem, invented instruments of war, built fortresses, founded magazines, and particularly applied himself to agriculture; an attachment not often felt to home interests by princes of military genius. Prosperity produced in him, however, as in other affecting instances which have presented themselves in this chain of history, that presumption which led to lamentable reverses. He invaded the sacerdotal office, which, however blended with the regal in other nations, was expressly and carefully kept separate in the Jewish economy; he entered the temple to burn incense, and, notwithstanding the expostulations of the high priest, he persisted in his transgression, until he was suddenly smitten with a leprosy, which not only drove him from the sanctuary, but from his throne, and devolved the regency upon his son Jotham. He quitted the city, and lived in a house by himself, the leprosy cleaving to him until his death, which happened about seven years afterwards, and in the fifty-second of his reign.

Zachariah, who had succeeded Jeroboam, followed the idolatries of his ancestors, and reigned but six

months, when he was slain by the conspiracy of Shallum. Thus the dynasty of Jehu terminated in the fourth generation, as had been foretold. As Zachariah did not come to the throne until the thirty-eighth year of Uzziah's reign, archbishop Usher supposes there must have been an inter-regnum of eleven years, a chronological difficulty which it is not easy to settle, and which this is not the place to determine. The ill-gotten crown of Shallum remained on his head only a month; for, at the expiration of that period, he was put to death by Menemhen, who held the sceptre which he had thus wrested ten years. Nothing is recorded of his stormy reign but acts of cruelty, briefly expressed, but full of horror. Israel was invaded by Pul, king of Assyria, and his tyrant was compelled to purchase his forbearance and assistance at an enormous expence, which led to further exactions upon his subjects, in order to raise the sum required. He died in the fiftieth year of the reign of Uzziah, and was succeeded by his son Pekahiah. The kingdom of Israel was now fast verging to ruin; it had been long declining, and from the reign of the last branch of the house of Jehu, had presented only a succession of conspiracies and bloodshed, to its utter desolation. Pekahiah reigned but two years, when the cup of blood of which his father had caused his predecessor to drink, was transferred to his own head. He died by the conspiracy of Pekah, the son of Remaliah, one of his captains, who seized his authority, and followed his transgressions. He reigned, however, twenty years; in the second of which commenced the reign of Jotham, over Judah.

The son of Uzziah walked uprightly, after the example of his father, in the earliest and happiest days of his sovereignty. During sixteen years he supported the regal dignity with distinction, and exercised its authority for the welfare of his people. In this, and the latter part of the preceding reign, Isaiah, the prophet, flourished, and held on his illustrious career until the days of Manasseh.—(See the article ISAAIAH.) Jotham repaired the sanctuary, and built cities and fortresses in Judah. He defeated the Ammonites and rendered them tributary; and found an honourable sepulchre with his fathers, in the 41st year of his age; a short, but not inglorious life!

He was succeeded by his son Ahaz, who, unhappily for his country, was of a far different character. He also reigned sixteen years; but they were years of vice and misery. Israel had formed an unnatural alliance with Syria against Judah; and Pekah and Rezin were confederates against Ahaz. His affliction on this occasion touched Isaiah, who was sent to announce to him the speedy destruction of the allied monarchs: the particulars of which prediction will be found in the life of that prophet. Notwithstanding this encouraging assurance (and it was eventually accomplished in all its particulars), he looked abroad for that assistance which he knew he had forfeited at home. He plunged into the grossest idolatries of the heathens, and practised, with their impure rites, their most cruel superstitions—causing one of his sons "to pass through the fire." As a punishment, his enemies were suffered cruelly to lay waste his dominions, although they were not permitted wholly to vanquish him. The king of Syria, who had not succeeded in his expedition against Syria, Jerusalem, stripped him of some of his remotest possessions, and particularly deprived him of Elath, a sea-

History. port on the Red sea, where, from the reigns of David and Solomon, a most important trade had been conducted with the East. Zichri, an Ephraimite, also slew one of his sons, the governor of his house, and his prime minister. And the king of Israel obtained still more considerable advantages over him: 120,000 men were killed in battle, and 200,000 of his people were made captive; but as these were being transported to Samaria, the prophet Obad met the triumphant array, and commanded them to restore the prisoners, and content themselves with the spoil. His remonstrances being seconded by some princes of Ephraim, they not only gave the prisoners their liberty, but clothed them from the booty, and safely conducted them so far as Jericho, in their own country. In this desperate condition of the affairs of Ahaz, he learned, to his further dismay, that the Edomites and Philistines were successfully invading his territories; and in his extremity he sent to Tiglath-pileser for assistance, in the most humble terms, at the same time plundering the temple to add to the present which he had drained from his own treasury for the king of Assyria. The present was accepted; but the aid was not so complete as the king of Judah had hoped. His ally, however, caused a diversion in his favour, by attacking the king of Syria, whom he slew, and captured Damascus, transporting its inhabitants to Kir. Upon this success, Ahaz went to Damascus to compliment Tiglath-pileser; and while he was there, his idolatrous propensities induced him to take the pattern of a heathen altar, which he sent to Jerusalem, commanding one to be constructed exactly like it. Upon his return, he was pleased with the execution of his orders—offering upon this altar—slutting up the temple, the sacred utensils of which he displaced; raising shrines to heathen deities every where, and resigning himself to the most vicious courses. He died unlamented in the 36th year of his age, but was not deposited in the royal sepulchres.

In the twelfth year of Ahaz, Hoshea, having conspired against Pekah, and slain him, reigned over Israel. This transaction is said to have taken place in the twentieth year of Jotham, king of Judah; but as Jotham only reigned sixteen years, the calculation made from the time when that monarch began to reign falls upon the fourth year of Ahaz, his successor. The tumults following Hoshea's usurpation not allowing him firmly to seat himself immediately upon the throne, it was not until eight years afterwards that he wholly established himself, and is, therefore, by a subsequent account, said to begin to reign in the twelfth year of Ahaz. Considerations of this nature are necessary to reconcile certain apparent differences between the books of Kings and Chronicles, but cannot be in every instance noted as we proceed in the narrative. Uninstructed by all the calamities of his predecessors, he followed their idolatrous practices, although not to the same extent with some of them; and in his days the captivity of Israel took place.

The ostensible cause of this captivity was, that Shalmaneser having invaded Israel in an early part of the reign of Hoshea, that monarch bought him off by presents, and declared himself tributary to the king of Assyria. But some years afterwards, the king of Israel secretly conspired against him; and having solicited the assistance of So, king of Egypt, withheld the an-

nuul tribute from Assyria. So is called Setho by Herodotus, and Sabacon by Diodorus Siculus, and is the celebrated potentate who deposed and murdered Bocchus, king of Egypt, and seized upon the empire. The revolt of Hoshea coming to the knowledge of Shalmaneser, he advanced against Samaria with a powerful army, besieged it, and led its monarch and his people into captivity. Thus terminated the Israelitish monarchy, according to Josephus, "947 years after the departure from Egypt; 800 years from the days of Joshua, and 240 years 7 months, after they had revolted from Rehoboam," to which we may add seven centuries before Christ. It commenced in the days of Pekah, and terminated with the reign of Hoshea.—The people were transported into Assyria, Media, and Persia; and other nations out of Cuthath, Ava, Hamath, and Sepharvaim, were planted in Samaria and the possessions of the Israelites. There are the Samaritans against whom the Jews bore particular hatred, and who did not fail to return it. They blended some of the observances of the Jews with the idolatrous rites of their own countries. When the Jews were in prosperity, they were willing to be thought allied to them, but in their adversity always disowned them. They thus availed themselves of the favour which Alexander showed to the Jews, when he visited them, and professed to spring from Ephraim and Manasseh, the sons of Joseph.† This mutual hatred burst with inextinguishable fury in the days of our Lord; so that 700 years had produced no reconciliation. Menander, the historian, when he wrote his chronology, and translated the Syrian chronicles into the Greek language, bore testimony to the existence, the power, and the enterprising disposition of Shalmaneser.‡

The most remarkable circumstance attending the captivity of Israel, is the loss of the ten tribes; we hear nothing more respecting them, excepting the remnant of whom they returned with Judah and Benjamin from Babylon. Josephus and St. Jerome suppose them to be absorbed in the nations among whom they were scattered. This appears also to be the prevailing opinion. Others have objected the positive terms in which a restoration of them is predicted by Amos and Hosea. It has been answered, that these prophecies were accomplished in the restoration of the remnant and the Levites with Judah. Some considerable modern writers have maintained their separate, and even their present existence; and pointed out different spots where traces of them are supposed to be found. We have probably yet to receive from the east much light on this subject, and cannot now pretend to decide, or even to discuss, the question; but we may remark, that the very obscurity into which they have dwindled, if they exist at all, is the result of their separation from the line of the Messiah, which took place when they voluntarily resigned their interest in the house of David. We have other memorable instances of a similar righteous retribution in the government of the world; and it is evident that much of the distinction of the Jews in particular depended upon this connexion.

FLOURISHED ABOUT A. M. 2484, B. C. 1520.

Biography. JOB, in Hebrew, *יוֹב*, or "THE PERSECUTED," is, in various respects, one of the most extraordinary books of the bible; and has, hence, more than any other, engaged the attention of the learned in all ages. The difficulty of assigning to this book an accurate date has induced us to follow the stream of sacred history with regard to all the other portions of the canon thus far, without interfering with the interesting questions connected with the chronology of the book of Job. We are now approaching the latest date which has any respectable advocates; and upon our plan of recording every considerable opinion upon controverted questions in literature, we shall present a brief sketch of the various hypotheses of learned men respecting this interesting poem.

Book of Job in all the canons. Of the sacred character of the book of Job there never has been any doubt, and hence, it stands, with universal consent, in the Jewish and Christian canons; and is equally appealed to by the eastern and western churches. Yet there are various circumstances that distinguish it from all the other books of holy writ. Its author is unknown, otherwise, at least, than by conjecture: in the midst of different narratives and poems, confined exclusively (with this exception) to Jewish customs and annals, it contains the history of foreigners, and, in the opinion of many critics, of pagans, widely differing in habits, in ritual, and in religious tenets: and it is written in a language equally distinct from the rest of the sacred text, having, indeed, pure Hebrew for its basis, but with perpetual tessellations of pure Arabic. Its style, arrangement, and general composition, are of the highest pretensions, and stand altogether unrivalled; disclosing a poem with which antiquity has nothing to compare, in copiousness, sublimity, magnificence, decoration, or pathos. "The whole book of Job," says Mr. Pope, "with regard both to sublimity of thought and morality, exceeds beyond all comparison, the most noble parts of Homer." The hero of the poem is incidentally alluded to on a few occasions by other writers, in both the Old and New Testaments; but it has been made another point of controversy whether Job were a real or imaginary character; and if the former, in what epoch he flourished; whether before the exodus, or migration, of the Israelites from Egypt, during the splendid reigns of David and Solomon, or subsequently to the Babylonish captivity?

Its high claims.

Opinion of Pope.

Disputed chronology of the book.

Supplement to the Greek and other versions.

Of the reality of the personage of Job no one can entertain a doubt who gives credit to the prophecy of Ezekiel, the epistle of St. James, or the apocryphal book of Tobit; for in all these he is alluded to as a real character; and as such he has been contemplated immemorially in Arabia as well as in Palestine. The most ancient monument we have concerning the genealogy of Job, and which has been received and allowed by Aristæus, Philo, Polyhistor, and several of the early fathers of the church, is contained in a supple-

ment to the canonical book, to be met with in the Greek, Arabic, and Vulgate versions, and is conjectured to have been copied from the old Syriac translation. It is hence, unquestionably, of very high antiquity, and runs as follows: "Job dwelt in the Ausitis (land of Uz or Uts), on the confines of Idumæa and Arabia. His name was at first Jobsh. He married an Arabian woman, by whom he had a son called Ennon. He himself was the son of Zerah, of the posterity of Esau, and a native of Bozrah; so that he was the fifth from Abraham. He reigned in Edom (Idumæa), and the kings before and after him reigned in the following order: Balak, the son of Boor, in the city of Dinhabah (often spelt Denabab); and next in succession Job, otherwise called Jobsh. To Job succeeded Husham, prince of Teman. After him reigned Hadad the son of Bedad, who defeated the Midianites in the field of Moab. The name of his city was Arith. The friends of Job, who came to visit him, were Eliphaz, of the line of Esau, and king of Teman; Baldad, king of the Shuhites; and Zophar, the king of the Namathites."

If this genealogy, which has the sanction of both the Greek and Latin fathers, be admitted, and the Job of the sublime poem which bears his name, be, as above asserted, the same with the Jobab of the books of Genesis and Chronicles, it will follow, as will be obvious from the annexed table, that he must have been contemporary, or nearly contemporary, with Moses, each being but four generations removed from Isaac.

It will likewise be plain, upon this view of the subject, that he reigned in the city of Denabab, or Dinhabab; for so the author of the first book of Chronicles expressly affirms. And it is an opinion embraced by the majority of biblical writers, and especially by M. Huet, that Moses, whom we know to have resided for a period of forty years with his father-in-law, Jethro, in the land of Midian, and consequently in a neighbouring region of Arabia, composed this elevated narrative shortly after the death of Job, with whom it is conceived that he was acquainted.

There are, nevertheless, various difficulties that accompany both these opinions. For, first, we are expressly told, in the opening of the book of Job, that the patriarch of this name resided in the land of Uz or Uts, which cannot easily be reconciled with his reigning in the city of Denabab; since Eschelus and St. Jerom concur in placing this city in the land of Moab, between Aroopolis and Hesbôn, while they affirm that the Ausitis, or land of Uts, according to the popular tradition of the east, embraced the city of Asiaroth Ker-

General opinion of critics.

Difficulties.

Biography. naim, on the farther side of the Jordan, upon the brook Janob, between Mithunaim and Edra. Next, the Arabian writers, with one accord, trace the descent of Job from Ishmael, instead of from Esau, and make him the first of their three great prophets; Jethro and Nahometh being the other two. This objection, however, may not be entitled to much attention. But it is more important to remark, thirdly, that the poem referred to closes with a passage which never could have been written by Moses, who lived but forty years in the land of Midian, and forty years more after his departure from it; for this passage informs us, that Job lived a hundred and forty years after his sufferings were completed, and that he saw his children's children to the fourth generation. And hence, it has been necessary for those who have contended that Moses was the writer of the narrative, to suppose, that the last three or four verses of the book are a supplement, added by some inspired, but later writer; in the same manner as Joshua, or some other person, must have added the account of the death and burial of Moses, at the end of his own work, the Pentateuch.

Variously
settled.

This last supposition, however, has by no means proved satisfactory to many learned men; who laying hold of the objection to which it relates, as well as of various others, have conceived the poem to have been written at a period subsequent to the facts narrated; by Elihu, who, though one of his associates, is represented as being far younger than the rest, or than Job himself; by Solomon, or by Ezra, during, or shortly after the Babylonish captivity; while others have conceived the whole to be fabulous, and that there never was such a person as Job, or such a history as that on which the poem is founded. To all which opinions we shall find it necessary to advert presently.

What is the
object of
the book?

But the most important question is, what is the object of the poem? and how comes it that a work composed partly in a foreign tongue, distinguished by an exotic theology, and wholly relating to a stranger, should be allowed an introduction into the Hebrew canon? And here it is chiefly that the critics and commentators upon the sacred writings have found themselves at a loss. The following is the opinion of the excellent man and consummate scholar Dr. Lowth, and we give it as that which, till very lately, has been the common conjecture of men of learning upon the subject. "The principal object," says he, "held forth to our contemplation in this production is the example of a good man, eminent for his piety, and of approved integrity, suddenly precipitated from the very summit of prosperity into the lowest depths of misery and ruin; who having first been bereaved of his wealth, his possessions, and his children, is afterwards afflicted with the most excruciating anguish of a loathsome disease, which entirely covers his body. He sustains all, however, with the mildest submission, and the most complete resignation to the will of Providence. "In all this," says the historian, "Job sinned not, nor charged God foolishly." And, after the second trial, "In all this did not Job sin with his lips." The author of the history remarks upon this circumstance, a second time, in order to excite the observation of the reader, and to render him more attentive to what follows, which properly constitutes the true subject of the poem: namely, the conduct of Job with respect to his reverence for the Almighty, and the changes which accumulating misery might produce in his temper and

Lowth's
opinion.

behaviour. Accordingly we find that another still more exquisite trial of his patience yet awaits him, a trial which, indeed, as the writer seems to intimate, he scarcely appears to have sustained with equal firmness, namely, the unjust suspicions, the bitter reproaches, and the violent altercations of his friends, who had visited him on the pretence of affording consolation. Here commences the plot or action of the poem; for when, after a long silence of all parties, the grief of Job breaks forth into passionate exclamations, and a vehement execration on the day of his birth, the minds of his friends are suddenly exasperated, their intentions are changed, and their consolation, if indeed, they originally intended any, is converted into contumely and reproaches. The argument seems chiefly to relate to the piety and integrity of Job, and turns upon this point, whether he who, by the divine providence and visitation, is so severely punished and afflicted, ought to be accounted pious and innocent. The antagonists of Job in this dispute, observing him exposed to such severe visitations, conceiving that this affliction has not fallen upon him unmeritedly, accuse him of hypocrisy, and falsely ascribe to him the guilt of some atrocious but concealed offence. Job, on the contrary, conscious of no crime, and wounded by their unjust suspicions, defends his own innocence before God with rather more confidence and ardour than is commendable; and so strenuously contends for his own integrity, that he seems virtually to charge God himself with some degree of injustice.

"On a due consideration of all these circumstances, the principal object of the poem seems to be this third and last trial of Job, from the injustice and unkindness of his accusing friends. The consequence of which is, in the first place, the anger, indignation, and contumacy of Job, and afterwards his composure, submission, and penitence. The design of the poem is, therefore, to teach men that having a due respect to the corruption, infirmity, and ignorance of human nature, as well as to the infinite wisdom and majesty of God, they are to reject all confidence in their own strength, in their own righteousness, and to preserve, on all occasions, an unwavering and unshaken faith, and to submit, with becoming reverence, to his decrees."

To this view of the subject there can be no objection: it does not but the great question before us is not touched by it; for it gives no answer to the inquiry whence comes it that a poem so completely isolated and exotic should have found its way into the sacred volume of the Jewish nation? That this people, who, in every other point, have shown the utmost degree of jealousy concerning whatever is strictly their own; who in all ages, and under all trials, adhered inflexibly to their own customs, their own manners, their own ritual, their own creed; who were in every respect a peculiar people, separate from the world around them, which they looked down upon with a feeling of superiority, should have consented to wander from the boundary of their own history, and the pale of their own church, for the instructive lesson which the book of Job is designed to teach? and to draw an example of the instability of all human happiness, and of the importance of placing an implicit trust in the great Arbiter of the Universe, and of submitting with a becoming reverence to his decrees, from the life of a stranger, rather than from one of their own tribes, who might easily have been selected for the purpose?

poses it
allegorical.

To this view of Dr. Lowth, respecting the subject of the poem, we will here stop to add, that he inclines to favour the opinion of those who suppose Job himself, or some contemporary, to be its author; that this distinguished character was a real personage, who flourished before Moses, and, from the length of his days, was probably contemporary with the patriarchs; that the poem itself, though not a regular drama, as being without regular plot or dialogue, is nevertheless of a dramatic cast, and approaches very near the form of the more perfect dramas of the Greek school; and that the exordium and the conclusion are distinct from the poem itself, and of a prosaic and lower style.

Professor Michaelis, in the notes he has added to Dr. Lowth's work, published at Gottingen, deduces a somewhat different moral, and forms a totally different opinion of the hero of the piece. "I feel very little doubt," says he, "that the subject of the poem is altogether fabulous, and designed to teach us that the rewards of virtue being in another state, it is very possible for the good to suffer afflictions in this life; but that, when it so happens, it is permitted by Providence for the wisest reasons, though they may not be obvious to human eyes.—For my own part, I cannot conceive that the sanctity, the dignity, or the utility of this book will be in the least affected, though we should suppose no such person as Job had ever existed. If moral precepts, conveyed in the garb of fabulous narrations, allure the hearers by the pleasure they afford; if they strike the mind more forcibly, are more easily understood, and better retained, than abstract sentiments, I see no reason why this mode of writing should be deemed unworthy of inspiration. On the contrary, indeed, we find it made use of by Christ himself; nor does it at all derogate from his force as a moral teacher, that the good Samaritan, the rich man and Lazarus, &c. were not real persons. It is surely more becoming to consider the exordium, in which Satan appears as the accuser of Job, rather in the light of a fable than of a true narrative. It is surely incredible that such a conversation ever took place between the Almighty and Satan, who is supposed to return with *awe* from the terrestrial regions. Indeed, the commentators who have undertaken to vindicate this part of the book, have done it with so much asperity, that they seem conscious of the difficulty under which it labours. Nor will it suffice to answer as some temperate and rational commentators, like Dr. Lowth, probably will, and, indeed, as he himself hints, that the great outline of the fact only is true; and that the exordium is set off with some poetical ornaments, among which is to be accounted the conversation between God and Satan. For on this very conversation, the whole plot is founded, and the whole story and catastrophe depend."

M. Michaelis, however, is not the only critic who has regarded the entire subject of this poem as more or less fabulous. Spinoza thought so formerly; and bishop Warburton, a biblical interpreter of very different pretensions, is more recent times: the last of whom contemplated the *entire* work, and hence the exordium and termination, as well as the body of the piece, as an allegorical drama, founded, however, on genuine history, and written by Ezra, or Esdra, for the consolation of the Jews, after their return from the Babylonian captivity into their own country; who were about

VOL. IX.

to experience various reverses of fortune from the hands of Providence.

Generally speaking, however, the learned have regarded the illustrious hero of this extraordinary poem in the light of a real character; though, as we have already hinted at, they have differed greatly concerning the writer to whom we are indebted for it. Schultze asserts it to be not incredible, that all the characters introduced into the poem are real, and that the controversy consists of the very words they made use of at the time; and, in support of this remark, refers to the wonderful facility the Arabians possess of composing extempore verses. Spanheim contends, that the whole book is genuine history, and that the words of which it consists were originally Arabic, and written down in Arabic characters, before the time of Moses, on private tablets, by Job himself, and his friends, after the joyful termination of his afflictions; each assisting the other in recalling to mind the words they had made use of, and thus furnishing an instructive lesson to future ages. This Arabic archetype he conceives to have been afterwards copied most faithfully into Hebrew by some later writer, who flourished a little before or about the time of Solomon, and who wrote his translation, under the influence of the Holy Spirit, giving it the form of the tragic drama in which it has descended to our own days. In consequence of which, Grotius has ventured to ascribe the production to Solonius himself.

In the year 1805, Dr. Stock, bishop of Killala, the learned translator of Isaiah, published an English version of this poem, with a preface, in which he inclines to a much later era than that of Solomon, and is more disposed to coincide with Bishop Warburton, in ascribing it to Ezra. To arrive at this opinion, however, he has found it necessary to abandon, as spurious, the two concluding verses of the common text, which seem to carry it to a much higher origin. His argument is as follows:—"The sacred critics in general," says he, "have been apt to ascribe to the book of Job an origin that loses itself in the shades of the remotest antiquity. The opinion, I believe, rested at first on the very sandy foundation of what is stated in the two concluding verses of the work, which ascribe to its hero a longevity that belonged only to the generations not far distant from the flood. Of the authenticity of those verses, I think I have shown in my note on them, that we have every reason to be suspicious. But if it were ever so difficult to ascertain the portion of time when the patriarch lived, it may not be impossible, from internal marks in the poem itself, to conjecture with tolerable certainty the era of its author. This is what I have attempted to execute.—Allusions to events recorded in the five books of Moses are to be found in this poem, ch. xx. 20, compared with Num. xi. 33, 34; ch. xxvi. 5, compared with Gen. vi. 4, 7, 11; ch. xxxiv. 20, compared with Exod. xii. 19; ch. xxxi. 33, compared with Gen. iii. 8, 12; and I shall hardly be expected to prove that the author of the poem derived his knowledge of those events from a history of so much notoriety as that of Moses, rather than from oral, or any other tradition. Facts are not usually referred to before the history recording them has had time to obtain currency. The inference is clear; the writer of Job was junior to the Hebrew legislator, and junior, it is likely, by some

time. A similar mode of reasoning, upon a comparison of ch. xxxiii. 23, with 2 Sam. xxiv. 16; 1 Chron. xxi. 15; will, if I mistake not greatly, bring down the date of our poem below the time of King David. Lastly, ch. xii. 17, to the end, seems to point to the circumstances preceding and attending the Babylonish captivity; and ch. xxxiv. 8, 12, has an appearance of alluding to the various fortunes of Jehoiakim, king of Judah, 2 Kings xxiv. 12; xxv. 27. Notes of time these, which, though not so manifest as the fore-mentioned, may deserve attention; since they add strength to the sentiment of those learned men, who have been inclined to give the honour of this celebrated composition to Ezra.

Contrary to the opinion of Schultens, Lowth, and the greater number of critics and translators, Dr. Stock considers the exordium and conclusion to be as much parts of the poem, and as clearly possessed of a metrical arrangement in the Hebrew, as any of the rest; and he concurs with Scott, who has favoured the world with an elegant rhyme version, but who rejects the exordium and conclusion from the poetical part of the original, although he has very singularly put them into rhyme in his own translation, in thinking that the moral may be best collected from the speech of the Almighty towards the close of the composition. "The design," says the learned prelate who adopts Mr. Scott's words, "of this appearance of the Almighty, is not to vindicate the injured character of his servant Job. Neither is the design of this speech to decide the controversy, in the dialogue, about the ways of providence; for the decision of that dispute was not intended by the poem, but was reserved for the subsequent history. The scope of the speech is to humble Job; and to teach others, by his example, to acquiesce implicitly in the disposal of God, from an unbounded confidence in his wisdom, equity, and goodness. This surely is an end worthy of the interposition of the Deity—*dignus vindice nodus*."

There can be no doubt that it is so; but we have still to ask, as in the preceding moral proposed by Dr. Lowth, how comes it that such a lesson, introduced into the Jewish canon, should be taken from foreign, rather than from Jewish history? and be exemplified by exotic scenery, characters, customs, and even religion? On what ground has the book of Job a claim to be admitted into the sacred books of the Old Testament?

Mr. Good's dissertation and important work on Job.

For the only answer with which we have been hitherto furnished to this important question we must turn to Mr. Mason Good's Introductory Dissertation, prefixed to his distinguished and popular version of this sublime effusion; which has thrown so new and clear a light, not only upon this point, but upon almost every other point connected with it, as to have dispersed, as we conceive, all the most formidable difficulties that have been supposed to attend the poem; the "*multa loca valde obscura*," of Dr. Lowth, "*multa que vereor ut quisquam mortuam anima intelligat*;"—and to concentrate the opinion of most men of learning in the present day, as well on the content as at home, in the truth and accuracy of his interpretation. On which account we feel ourselves enabled upon to give as full an analysis of Mr. Good's critical examination of the work as our limits will allow.

This celebrated poem, he observes, is, "in various respects, the most extraordinary composition of any age or country; and has an equal claim to the attention of the theologian, the scholar, the antiquary, and the zoologist; to the man of taste, of genius, and of religion. Amidst the books of the bible it stands alone; and though its sacred character is sufficiently attested, both by the Jewish and the Christian scriptures, it is isolated in its language, in its manner, and in its matter. Nothing can be purer than its morality, nothing sublimer than its philosophy, nothing simpler than its ritual, nothing more majestic than its creed. Its style is the most figurative imaginable: there is no classical poem of the east that can equal it; yet its plan is as regular, its argument as consecutive, as the most finished compositions of Greece or Rome; and its opening and its close are altogether unvaried in magnificence. It is full of elevation and grandeur; daring in its conceptions; splendid and forcible in its images; abrupt in its transitions; and, at the same time, occasionally interwoven with touches of the most exquisite and overwhelming tenderness. And, to sum up the whole, if the train of reasoning pursued throughout this dissertation be correct, it is the most ancient of all human records; the only book in existence from which we can derive any thing like a SYSTEMATIC KNOWLEDGE OF PURE PATRIARCHAL RELIGION; and hence that very book which gives completion to the Bible, by adding the dispensation of the earliest ages to those of the law and the gospel by which it was successively superseded."

The dissertation then proceeds to enquire, in five distinct sections, into the scene of the poem: its scope, object, and arrangement; its language, and the difficulties attending a translation of it; its author and era; and the doctrines which it incidentally develops.

THE SCENE is placed in Arabia; of the original peopling of which we are favoured with the following account.

Upon the expulsion of Hagar and Ishmael from the family of Abraham, who had long resided on the plains of Mamre, or Hebron, Hagar took the road towards her native country, which was Egypt; but her stock of water failing soon after she had entered the wilderness of Beersheba, it seemed impossible to avoid perishing. She resigned herself to despair, and placing her son under a bush, as she could not endure to be a witness of his death, took an affecting leave of him, and retired to a distance. At this moment "the angel of God called to Hagar out of heaven," and she beheld a well of water close at hand. Being thus miraculously preserved, she continued her journey to the wilderness of Paraisa, on the borders of the Red sea, and there took up her residence. Her son, in due time, acquired manhood, and greatly distinguished himself as an archer; and his mother chose for him a wife from among her own country-women, the Egyptians. Here the account of Ishmael, or Ismael, as the Arabians call him, breaks off abruptly in the sacred writings, which are chiefly intended as a history of the descendants of Abraham through the line of Isaac; and we are compelled, in order to fill up the chasm, to have recourse to the Arabian historians, in whose country Ismael was now residing, and of whose tribes he may be regarded as the head, and common father. The Arabian writers make no mention of his marriage

Scene.
Arabia.

Biography. with an Egyptian, but distinctly relate the miracle of the well, which they affirm, for obvious reasons, but with a palpable deviation from the truth, was performed on the very spot where Meccan, the birth-place of Mahomet, now stands. They assert that, at this time, the inhabitants of Arabia consisted of two classes: an elder, comprising those who had first taken possession of the country, immediately upon the confusion of tongues, and of whose origin they have no certain information, but who are supposed to have been descendants of Ham, comparatively few in number, and of but little consequence; and a class of later date, and much more powerful and numerous, descended from Kolthan, or Joktan, as he is called in the Hebrew scriptures, the son of Heber, and, consequently, fourth in a direct line from Shem or Sem. Kolthan, who had obtained the general sovereignty of Arabia, had two sons, Ysrah and Joram: to the former he allotted the province of Yaman, or Happy Arabia; and to the latter that of Haja, or Stony Arabia. The Joramites were by far the more powerful people of the two; and on the arrival of Ismael, on the coast of the Red sea, were governed by Modad, supposed to be the eighth in direct succession from Joram, and, of course, the thirteenth in direct succession from Sem. Ismael continued in this spot, where, as it has already been observed, the Arabian writers place Hagar's well, till the death of his mother; after which he proceeded, with a numerous retinue, to the northern parts of Arabia, probably to assist his brother Isaac in the interment of his father, as stated Gen. xxv. 9; and on his return to the south, found that the tribe of the Joramites had over-run the country he had so lately quitted, and had actually possessed themselves of the well to which his mother's name had been given. Ismael immediately put in his claim to it; and the dispute was settled by an alliance between the tribes: Ismael marrying Valah, the daughter of Modad, chief of the Joramites, and receiving with her, as a part of her dowry, the well and the territories adjoining; and by their marriage, according to the Arabian writers, and not by the Egyptian alliance, Ismael had the twelve sons which are ascribed to him in a succeeding part of the book of Genesis; and who are there called princes, and are placed each at the head of a distinct town and people, and possessed of a distinct castle. From the abruptness and brevity with which the Hebrew narrative returns to the history of Ismael, we have no information as to the immediate marriage from which the twelve sons proceeded. As polygamy was so common in his era, it is probable that he had more wives than one; and the very extensive authority which the Bible statement admits him to have possessed in Arabia, the concurrent testimony of the Arabian historians, and the minuteness with which the pedigrees of all Arabian families are preserved from generation to generation, and appealed to in their courts of law, leave little or no room to doubt as to the accuracy of the Arabian narrative upon this point. In reality, the success which had accompanied Hagar's journey with Ismael into the Arabian peninsula, seems to have induced all the sons of Abraham, excepting Isaac, to press forward in the same, or a somewhat similar direction; and hence, of his six sons by Keturah, we find, in the names given to different places in the south-eastern parts of this country, constituting Sandy Arabia, or the province of Nadj, as it

is now called (that which, in the period before us, was least inhabited), the radicals of their own names; as Midian, Sbaah, Sheba, Seba, or Saba, and Dedan. Hitler also advanced the two sons of Lot, the nephew of Abraham, Moab, and Ammon, and established themselves still further to the eastward of the same province: while Esau, his grandson, who was also called Edom, pursued a similar track; and, marrying a daughter of Ismael, at this time the head of the entire country, fixed himself on the south of the Dead sea, or lake Asphaltitis; driving away, or extirpating, the Horim, who had previously possessed this track; and giving to it his own name, or the land of Edom, which under the plastic hands of the Greek writers, was afterwards changed to Idumaea.

Such, observes Mr. Good, is the country which forms the scene of the present poem, and such is a very brief sketch of its history; a country whose religion, at the time we are now speaking of, must have been that of Abraham, to a very considerable extent; and whose language, from the first, not widely differing from that of Abraham, must have made a considerable approximation towards it, from the successive tides of the Abrahamic race, which, either directly or collaterally, were perpetually pouring into its different parts.

Well worthy of attention as to its origin and first establishment, the country of Arabia is equally worthy of attention in its present state. It offers a most extraordinary intermixture of barren sands and fruitful and flowery landscape, whose sweet exhilarating odours not unfrequently spread their fragrance along the whole line of the Arabian gulf, from Babelmandel to Suez. It was perhaps earliest in possession of the most important arts and sciences, and especially those which relate to manufactures and commerce. It first cultivated poetry and eloquence with critical attention, and taught these refinements to Persia, as Persia afterwards taught them to other parts of Asia. The general habits, language, and even political forms of government which it possessed in the time of Ismael, it possesses, with little variation, in the present day. Many of its tribes are capable of tracing their pedigree as high as to the beginning of the Christian era; and those of the Koreish, the most honourable and sacred of the whole, with unimpeachable accuracy, to Adnan, generally supposed to be the ninth in a direct line from Ismael, and, with some diversity of reckoning, to Ismael himself; from whom there seems little doubt, in consequence of the scrupulousity with which these pedigrees have been compared and handed down, both by tradition and written records, that Mahomet himself was descended, in the same direct line, from male to male, and from eldest son to eldest son. The natives, even to the present hour, are peculiarly sagacious, intelligent, and courageous. Without ever having been subdued by foreign invasion, they have themselves given religion and laws to half Asia and Africa, and to a great part of Europe; and when all the rest of the world was buried in a long night of barbarism, the Arabian caliphs protected and fostered the arts and sciences with almost unrivalled magnificence in the different courts of Bagdat, Spain, Africa, and Egypt.

The immediate district of Arabia, to which the poem, entitled Job, directs our attention, is the land of Uz, which Bochart, Sponheim, and the writers of the Universal History, have placed in Sandy Arabia, a position

How post-
pied.

Face of the
country:
learning and
customs.

Biography, which our author shows very distinctly, can by no means be reconciled with the geography of the Old Testament, which is uniform in placing the land of Uz, or the Ausitis (Αυσίτις) of the Septuagint, in Stony Arabia, on the south-western coast of the Lake Asphaltitis, or the Dead sea, in a line between Egypt and Philistia, surrounded by Kedar, Teman, and Midian, all of them districts of Stony Arabia; and, as though to set every remaining doubt completely at rest, situated in Idumæa, or the land of Edom or Esau (of whose position there can be no question), and comprising so large a part of it, that Idumæa, and Ausitis, or the land of Uz, and the land of Edom, were convertible terms, and equally employed to import the same region. In effect, nothing is clearer than that all the persons introduced into the poem in question, were Idumæans, dwelling in Idumæa; or, in other words, Edomite Arabs. These characters are Job himself, of the land of Uz; Eliphaz, of Teman, a district of as much repute as Uz; and, upon the joint testimony of Jeremiah, Ezekiel, Amos, and Obadiah, a part, and principal part of Idumæa. Bildad, of Shuh, always mentioned in conjunction with Sheba and Dedan, the first of which was probably named after one of the brothers of Joktan or Kohtan, and the two last from two of his sons, all of them being uniformly placed in the vicinity of Idumæa; Zophar, of Nanma, a city importing pleasantness, which is also stated by Joshuah to have been situated in Idumæa, and to have lain in a southern direction towards its coast, on the shores of the Red sea; and Elihu, of Buz, which, as the name of a place, occurs only once in sacred writ, but is there mentioned in conjunction with Teman and Dedan, and hence, necessarily, like themselves, a border city upon Ausitis, Uz, or Idumæa.

Scope and arrangement of the poem.

We cannot enter into the detail of the argument made use of by Mr. Good, in fixing the precise *SCENE* of the poem before us; but having successfully established his point, he next proceeds to give a very interesting account of its *SCOPE* AND *ARRANGEMENT*.

The subject proposed by the writer of the poem, he observes, is the trial and triumph of the integrity of Job; a character of whose origin no certain documents have descended to us, but who, at the period in question, was chief magistrate, or emir, as we should style him in the present day, of the city of Us, powerful and prosperous beyond all the sons of the east, and whose virtue and piety were as eminently distinguished as his rank. There are some critics, however, he continues, and of great distinction for learning and religion, who, in opposition to all the biographical works which impersonate and individualize the venerable patriarch and his companions, contend that the poem, as well in its characters as its structure, is fabulous. Such especially is the opinion of Professor Michaelis, whose chief arguments are derived from the nature of the exordium, in which Satan appears as the accuser of Job; from the temptations and sufferings permitted by the Great Governor of the World to befall an upright character; from the roundness of the numbers by which the patriarch's possessions are described, as seven thousand, three thousand, one thousand, and five hundred; and from the years he is said to have lived after his recovery from disease.

It may, perhaps be thought, says our author, to demand a more subjugating force than is lodged in these arguments, to transmute into fable what has uni-

formly been regarded as fact, both in Europe and Asia, for perhaps upwards of four thousand years; which appears to have descended as fact, in a regular stream of belief, in the very country which forms the scene of the history, from the supposed time of its occurrence to the present day; the chief character in which, is represented as having had an actual existence, and is often associated with real characters, as Noah, Abraham, Ismael, Isaac, Jacob, and Solomon, in various parts of the book which is there held most sacred, and which, so far as it is derived from national history, or tradition, is entitled to minute attention; and (which should seem long since to have settled the question definitively) a character which, precisely in the same manner, is associated with real characters in the authoritative pages of the Old and New Testaments.

In reply to M. Michaelis's remark, that "it is altogether incredible that such a conversation ever took place between the Almighty and Satan, who is supposed to return with *news* from the terrestrial regions," our author forcibly inquires, "but why should such a conversation be supposed incredible?" The attempt at wit in this passage is somewhat out of place; for the interrogation of the Almighty, "Hast thou fixed thy view upon my servant Job, a perfect and upright man?" instead of aiming at the acquisition of news, is intended as a severe and most appropriate sarcasm upon the fallen spirit. "Hast thou, who, with superior faculties, and a more comprehensive knowledge of my will, hast not continued perfect and upright, fixed thy view upon a subordinate being, far weaker, and less informed, than thyself, who has continued so?" The attendance of the apostate at the tribunal of the Almighty, is plainly designed to show us that good and evil angels are equally amenable to him, and equally subject to his authority; a doctrine common to every part of the Jewish and Christian scriptures, and, except in the mythology of the Parsees, recognised by, perhaps, every ancient system of religion whatever. The part assigned to Satan in the present poem, is that expressly assigned to him in the case of Adam and Eve, in the garden of Eden, and of our Saviour in the wilderness; and which is assigned to him generally, in regard to mankind at large, by all the evangelists and apostles whose writings have reached us, both in their strictest historical narratives, and closest argumentative inductions. And hence the argument which should induce us to regard the present passage as fabulous, should induce us to regard all others in the same light which are imbued with the same doctrine; a view of the subject which would sweep into nothingness a much larger portion of the Bible, than M. Michaelis would choose to part with.

The other arguments, continues our author, are comparatively of small moment. We want not fable to tell us that good and upright men may occasionally become the victims of unrighteous calamities; for it is a living fact which, in the mystery of Providence, is perpetually occurring in every country; while as to the roundness of the numbers by which the patriarch's possessions are described, nothing could have been more ungraceful or superfluous than for the poet to have descended to units, had even the literal enumeration demanded it: and although he is stated to have lived a hundred and forty years after his restoration to prosperity, and in an era in which the duration of man

Job

Proofs that it is founded on real history, in opposition to the opinions of Michaelis.

biography. did not perhaps, much exceed that of the present day, it should be recollected, that in his person, as well as in his property, he was specially gifted by the Almighty; that, from various passages, he seems to have been younger than all the interlocutors, except Elihu, and much younger than one or two of them; that his longevity is particularly remarked, as though of more than usual extent; and that, even in the present age of the world, we have well-authenticated instances of persons having lived, in different parts of the globe, to the age of a hundred and fifty, a hundred and sixty, and even a hundred and seventy years. It is not necessary for the historical truth of the book of Job, that its language should be a direct transcript of that actually employed by the different characters introduced into it: for in such case we should scarcely have a single book of real history in the world. The *Iliad*, the *Shah Namah*, and the *Lusind*, must at once drop all pretensions to such a description; and even the pages of *Sallust* and *Cæsar*, of *Rollin* and *Hume*, must stand upon very questionable authority. It is enough that the real sentiment be given, and the general style copied; and this, in truth, is all that is aimed at, not only in our reports of parliamentary speeches, but, in many instances (which indeed is much more to the purpose), by the writers of the New Testament, in their quotations from the Old.

The general scope and moral of this sublime production, namely, that the troubles and afflictions of the good man are, for the most part, designed as tests of his virtue and integrity, out of which he will at length emerge with additional splendor and happiness, are common to eastern poets, and not uncommon to those of Greece. The *Odyssey* is expressly constructed upon such a basis, and, like the poem before us, has every appearance of being founded upon real history, and calls to its aid the machinery of a sublime and supernatural agency. But, in various respects, the poem of Job stands alone and unrivalled. In addition to every corporeal suffering and privation which it is possible for man to endure, it carries forward the trial in a manner and to an extent which has never been attempted elsewhere, into the keenest faculties and sensations of the mind, and mixes the bitterest taunts and accusations of friendship with the agonies of family bereavement and despair. The body of other poems consists chiefly of incidents; that of the present poem, of colloquy, or argument, in which the general train of reasoning is so well sustained, its matter so important, its language so ornamented, the doctrines it develops so sublime, its transitions from passion to passion so varied and abrupt, that the want of incidents is not felt, and the attention is still rivetted as by enchantment. In other poems the supernatural agency is fictitious, and often incongruous; here the whole is solid reality, supported, in its grand outline, by the concurrent testimony of every other part of the scriptures: an agency not obtrusively introduced, but demanded by the magnitude of the occasion; and as much more exalted and magnificent than every other kind of similar interference, as it is more veritable and solemn. The suffering hero is sublimely called forth to the performance of his part, in the presence of men and angels; each becomes interested, and equally interested, in his conduct; the Almighty assents to the trial, and for a period withdraws his divine aid; the

malice of Satan is in its full career of activity; hell hopes, earth trembles, and every good spirit is suspended with awful anxiety. The wreck of his substance is in vain; the wreck of his family is in vain; the scalding sores of a corroding leprosy is in vain; the artillery of insults, reproaches, and railing, poured forth from the mouth of bosom friends, is in vain. Though at times put, in some degree, off his guard, the holy sufferer is never completely overpowered. He sustains the shock without yielding; he still holds fast his integrity. Thus terminates the trial of faith; Satan is confounded; fidelity triumphs; and the Almighty, with a magnificence well worthy of the occasion, unveils his resplendent tribunal, and crowns the afflicted champion with his applause.

The poem, as we have already observed, has generally been supposed to possess a dramatic character; but, in order to give it such a pretension, it has been uniformly found necessary to strip it of its magnificent exordium and close, which are unquestionably narrative; and even then, the dramatic cast is so singularly interrupted by the appearance of the historian himself, at the commencement of every speech, to inform us of the name of the person who is about to take up the argument, that many critics, and, among the rest, Bishop Lowth, are doubtful of the propriety of referring it to this department of poetry, though they do not know where else to give it a place. In Mr. Good's view of the subject, it is a regular *HEBREW EPIC*; and were it necessary, says he, to enter so minutely into the question, it might easily be proved to possess all the more prominent features of an epic, as collected and laid down by Aristotle himself; such as unity, completion, and grandeur in its action; loftiness in its sentiments and language; multitude and variety in the passions which it develops. Even the characters, though not numerous, are discriminated, and well supported; the milder and more modest temper of Eliphaz, is well contrasted with the forward and unrestrained violence of Bildad; the terseness and brevity of Zophar, with the pent-up and overflowing fulness of Elihu; while in Job himself, we perceive a dignity of mind that nothing can humiliate, a firmness that nothing can subdue, still habitually disclosing themselves amidst the mingled tumult of hope, fear, rage, tenderness, triumph, and despair, with which he is alternately distracted. "I throw out this hint, however," remarks Mr. Good, "not with a view of ascribing any additional merit to the poem itself, but merely to observe, so far as a single fact is possessed of authority, that mental taste, or the internal discernment of real beauty, is the same in all ages and nations; and that the rules of the Greek critic, are deduced from a principle of universal impulse and operation."

Nothing can have been more unfortunate for this most excellent composition, than its division into chapters, and especially such a division as that in common use; in which not only the unity of the general subject, but, in many instances, that of a single paragraph, or even of a single clause, is completely broken in upon and destroyed. The natural division, and that which was unquestionably intended by its author, observes Mr. Good, is into SIX PARTS or BOOKS; for in this order it still continues to run, notwithstanding all the confusion it has encountered by subarrangements. These six parts are, an opening or exordium, containing the

Job.

Not a drama but a Hebrew epic.

Injured by the ordinary division into chapters.

Biography. introductory history and decrees concerning Job; three distinct series of arguments, in each of which the speakers are regularly allotted their respective turns; the summing up of the controversy; and the close or catastrophe, consisting of the suffering hero's grand and glorious acquittal, and restoration to prosperity and happiness; the whole of which may be explained under the following analysis.

Natural division into six parts or books.

First part.

PART I. Constituting the opening or exordium, comprises the first two chapters in the ordinary division, and is full of incident and transition. It commences with a brief narration of the principal personage of the piece, his place of residence, rank in life, and inflexible integrity. It then suddenly changes to a scene so transcendently lofty and magnificent, that the grandest descriptions of the most daring poets sink before it; and nothing can be put in comparison with it but a few passages in *Paradise Lost*, derived from the same source. The tribunal of the Almighty is unveiled; the host of good and evil spirits, in obedience to his summons, present themselves before him to give an account of their conduct. The views of Satan are particularly inquired into; and the unswerving fidelity of Job, though a mortal, is pointedly held out to him, and extolled. The evil spirit insinuates that Job is only faithful because it is his interest to be faithful; that he serves his Creator because he has been peculiarly protected and prospered by him; and that he would abandon his integrity the moment such protection should be withdrawn. To confound him in so malicious an imputation, the Almighty delivers Job into his hands, only forbidding him to touch his person.

Satan departs from the celestial tribunal; and, collecting the fury of his vindictive power into one tremendous assault, strips the righteous patriarch, by the conjoint aid of hostile incursions, thunderstorms, and whirlwinds, in one and the same day, and that a day of domestic rejoicing, of the whole of his property and of his family; despatching messenger after messenger with a separate tale of woe, till the whole tragedy is completed. But the patriarch continues inflexible. He feels bitterly, but he sias not, even in his heart:—instead of murmuring against his Creator,

—*Job arose, and rent his mantle, and shaved his head, And fell on the ground, and worshipped; and said, "Naked came I forth from my mother's womb, And naked shall I return thither! Jehovah giveth, and Jehovah taketh away; Blessed be the name of Jehovah."*

The celestial session returns. The supreme Creator again assumes the judgment-seat; and the hosts of good and evil spirits are once more arranged before him for his commands. The unswerving fidelity of Job is again pointed out to Satan, and the futility of his malice exposed. The evil spirit, though foiled, still continues unabashed, and insinuates that he had no liberty to touch his person. The Almighty surrenders his person into his hands, and only commands him to spare his life. Satan departs from the presence of Jehovah; and in the same moment Job is smote with a burning leprosy; and while agonized with this fresh affliction, is tauntingly upbraided by his wife with the ineutility of all his religious services. The good passes into his soul, but it does not poison it. He resists this additional attack with a dignity as well as a firmness of faith that does honour to human nature:

As the talk of one of the foolish is thy talk, Shall we then accept good from God, And shall we not accept evil?

The part closes with what is designed to introduce the main subject of the poem, a preconcerted visit to the suffering patriarch of three of his most intimate friends. And in the simple narrative of their first seeing him, there is a pathos that beggars all description, and which cannot fail to strike home to every bosom that is capable of feeling:

For they had appointed together to come, To mourn with him, and to comfort him; And they lift up their voices from afar, and knew him not: And they raised their eyes and wept; And rent every one his mantle, And cast dust upon their heads towards heaven. And they sat down with him on the ground, seven days and seven nights: And no one spake unto him a word, For they saw that the affliction rag'd sorely.

This part is peculiarly distinguished by simplicity, Character sublimity, and fine feeling. In its diction it exhibits a perfect contrast to that of the great body of the poem; and, in conjunction with the diction that follows, affords proof of a complete mastery of style and language; a mastery unequalled perhaps in any other part of the Hebrew scriptures, and altogether unknown to every other kind of oriental composition. It is characteristic, however, of the writer of this transcendent poem—a fact well worthy of being remembered in determining who he was—that he uniformly suits his ornaments to the occasion; that, as though influenced by the rules of the best Greek critics, he seldom employs a figurative style where the incident or the passion is capable of supporting itself, and reserves his boldest images and illustrations for cases that seem most to require them. And for want of attending to this distinction, Schultens, Lowth, Grey, and a few other translators of the book of Job, have regarded this first part of the poem as a mere prosaic preface to the rest, meant to be detached from it, and utterly destitute of metrical arrangement; an error from which Dr. Stock is altogether free, but which has been unfortunately caught by Miss Smith in her posthumous version.

PART II. Extends from the beginning of the third to the end of the fourteenth chapter, and comprises the first colloquy, or series of argument. Job, completely overwhelmed, and believing himself abandoned by his Maker, gives a loose to all the wildness of despondency; and, in an address of exquisite force and feeling, laments that he ever beheld the light, and calls earnestly for death, as the only refuge of the miserable. This burst of agony is filled with the holdest images and imprecations; and almost, perhaps, he thought, in some parts of it, too daring, but that it appears to have been regarded as a master-piece by the best poets of Judea, and is imitated, in its boldest flights, by King David, Isaiah, Jeremiah, and Ezekiel.

To this cry of despondency Elihu ventures upon the first reply; and the little that was wanting to make the cup of agony brim-full, is now added to it. The patriarch's friends, stimulated, unquestionably, by the secret impulse of Satan, have agreed upon the false principle, that, in the uniform dealings of Providence, happiness and prosperity are the necessary marks and consequences of integrity, and pain and misery of wickedness; and hence the grand argument on their part consists, first, in charging the sufferer with the

commission of sins, which he ought to confess and repent of; and, next, in accusing him of pride and hypocrisy, because he will not consent to such confession. Eliphaz, however, is, from natural habit, the mildest of the accusers; and his speech begins with delicacy, and is conducted with the most arduous address. After duly apologizing for breaking in upon the sufferings of his friend, he proceeds to point out the inconsistency of a good man's repining under a state of discipline, and the absurdity of his not bearing up who had so often exhorted others to fortitude. He remarks, that the truly good are never utterly overthrown; but that the ways of Providence are wrapped in inextricable mystery; and that nothing can be more arrogant than for so weak, so ephemeral, so insect-like a being as man is, to impetish them: a position which is illustrated by the most powerful picture of an apparition that ever was drawn by the pen of any writer, in any age or country; disclosed to the speaker for the express purpose of inculcating this solemn maxim. He concludes with observing, that as neither man nor angel, without the consent of the Almighty, can render Job any assistance, wrath and violence are folly; and that nothing remains for him but to seek unto God, and to commit the cause into his hands; whose correction will then be assuredly succeeded by a new series of happiness and prosperity.

Job's answer to Eliphaz.

Job replies to Eliphaz, but is overborne by the bitterness of his remonstrance; and under his accumulated trials, once more wishes to die. He reproaches his friends for their severity; and, in a most beautiful and appropriate simile, compares the consolation he expected from their soothing intercourse, and the cruel disappointment he had met with, to the promise of a plentiful supply of water held out to a parched up caravan, by the fall of floods of rain, snarved at a distance, but which, on arriving at the place of their descent, are found to have entirely evaporated, or to have branched out over the sands, and become lost.

What time they was warm they evaporated;
And, when it grows hot, they are dried up in their place:
The waters of these channel wind about,
They stretch into nothing and are lost.
The companies of Tema search earnestly,
The caravans of Sheba pass for them:
They are consumed—such is their longing;
They arrive at the place and sink away.
Behold! ye also are a nothing;
Ye see my downcasting, and shrink back.

Suddenly he feels he has been too acrimonious, apologizes, and intreats their further attention; but is instantly hurried away by a torrent of opposite passions; now once more longing for death, as the termination of his sufferings, and now urged on by the natural desire of life. He expostulates warmly, and, at length, unbecomingly, with the Almighty; and at once growing sensible of the irreverence, humbly confesses his offence, supplicates forgiveness, and implores that his affliction may cease.

Eliphaz's speech.

It is now Eliphaz's turn to speak; who commences with bitter and most provoking cruelty. He openly charges the whole family of Job with gross wickedness, on no other ground than their destruction by the whirlwind; and throws suspicions against the patriarch himself, in consequence of his being a sufferer in the calamity. Like Eliphaz, he also exhorts him to repent, and to look to God for a restoration to prosperity,

and never more to depend on himself; observing, in the language of an apt and exquisite proverbial saying of the long-lived, perhaps the mediæval ages, that the most succulent plants are soonest withered; and that the reliance of the hypocrite is a cobweb.

In the beginning of his reply to this speech, the suffering patriarch shows that he has once more recovered himself, and is superior to the serenity of its assault. He acknowledges that all power is with God, who alone has created whatever exists; but maintains that, as to his moral government, we are grossly ignorant, and can account for nothing that takes place; and that the good and the wicked suffer indiscriminately. At one moment, under the influence of acute agony, he longs earnestly to plead his cause with God, and to defend his habitual integrity; but awed suddenly by new ideas of the divine power and purity, and aware that from both causes he must be overwhelmed, he shrinks from so daring a task; and concludes with an affecting address to the Almighty, in which he ventures to expostulate with him, as his Creator and Preserver. He grows warmer as he proceeds; is roused to desperation at the thought that God is become his enemy and persecutor; and once more vehemently calls for a termination of his miseries by death.

Next in the progress of the argument, appears Zophar, who, like Bildad, commences with violent and rough invective. He condemns Job severely for continuing to assert his innocence before God. He contends that the ways of Providence are obvious, and that it is only his own iniquity that makes them appear dark and mysterious. Like the preceding speakers, he exhorts him, in fine and figurative language, to put away his iniquity, and lift up his hands to the Almighty; and promises that he shall then soon lose all trace of his present calamity.

As waters passed by shalt thou remember it,
and that his into prosperity and happiness shall be redoubled upon him. But if not, he denounces his utter and irremediable ruin.

Stimulated by this repetition of so unjust and opprobrious an accusation, Job, for the first time, vents a sarcasm on his part. In return for the proverbial sayings of his companions, he retorts upon them sayings of a similar kind, many of them possessed of far more force and appropriation. He then commences a direct attack upon their own conduct; and charges them with declaiming, on the part of God, from the ease and unworthy hope of propitiating him. He grows still warmer as he advances; and, under a consciousness of general innocence, demands to be put to the bar, and to stand his trial with the Almighty; he boldly summons his accusers, intreats the Supreme Judge not to overwhelm him with his power or awfulness; and, realizing the tribunal before him, at once commences his pleading, in an address, which, according to the feeling of the moment, is vehement, plaintive, argumentative, full of fear, of triumph, of expostulation, and, at last, of despondency; now representing the Creator in all his might and supremacy, as demolishing a driven leaf, and hunting down parched stubble; next exhibiting doubts of a future state; then exulting in the belief of it; and finally sinking into utter gloom and hopelessness.

PART III. Comprises the second series of controversy, and extends from the fifteenth to the close

1520.Reply of
Job to Eliphaz.Reply of
Job to
Zophar.

Biography.	of the twenty-first chapter. Eliphaz opens the discussion in his regular turn. He accuses Job of vehemence and vanity; asserts that no man is innocent; and pointedly observes to him that, in regard to himself, his own conduct is sufficient to condemn him; concluding with a train of highly forcible and figurative apophthegms, of great beauty and antiquity, calculated to prove the certain and irrecoverable misery of the wicked and unrepentant.	that dares attack their conduct to their face? who is there that does not fall prostrate before their power and overwhelming influence? even in death itself, they are publicly bemoaned, and every individual attends upon their obsequies. Thus concludes the third part of this poem, and it could not possibly conclude better.	Joh

Speech of Eliphaz.	Job replies to him, and once more complains bitterly of the reproaches and contumelies so unjustly heaped upon him, but consoles himself by again appealing to the Almighty upon the subject of his innocence. He accuses his companions of holding him up to public derision, and intreats them to leave him, and return home: he again pathetically bemoans his lot, and looks forward to the grave with scarcely a glimmering of hope, and an almost utter despair of a resurrection from its ruins.	PART IV. Comprises the third and last series of controversy, and reaches from the twenty-second, to the part close of the thirty-first chapter. Eliphaz, as usual, commences; and moved by the cogent and argumentative eloquence of the preceding speech, is himself incited to a stricter and closer discussion of the subject than he had hitherto aimed at; and pours forth his whole spirit into one grand effort of confutation. His argument is full of art, but it is, in a great degree, the art of the sophist. He charges Job, in spite of his own guarded declarations to the contrary, with being an advocate for the wicked, by connecting wickedness and prosperity in the manner of cause and effect; and, of course, as being, in his heart and propensities, a party to all the iniquities of the antediluvians that brought the deluge upon the world. With the most accomplished subtlety, he dwells upon this signal judgment for the purpose of adverting to the single delivery of the family of righteous Noah, their great progenitor, as a proof that God neither does, nor will, suffer the wicked to escape punishment, nor the righteous to pass without reward. In addition to which, he proceeds to instance the striking rescue of Lot and his family from the conflagration that devoured the cities on the plain; thus sophistically opposing two special and miraculous interpositions to the general course of divine providence. He concludes, as on various former occasions, with exhorting Job to confess and abandon his iniquities; and beautifully depicts, in new and forcible imagery, the happiness that he will then find in reserve for him.	Speech of Eliphaz.
Speech of Balaad.	Balaad next enters into the debate with his characteristic virulence and violence, at the same time exhorting Job to be temperate. The whole speech is a string of generalities, and parabolic traditions of the first ages, concerning the fearful punishments in reserve for the wicked; all exquisitely sublime and beautiful in themselves, but possessing no other relevancy to the present case than that which results from the false argument that Job must be a great sinner, because he is a great sufferer.		
Reply of Job to Balaad.	The reply of the patriarch to this contumelious tirade, contained in the nineteenth chapter of the common division, is one of the most brilliant parts of the whole poem, and exhibits a wonderful intermixture of tenderness and triumph. It commences with a fresh complaint of the cruelty of his assailants: the meek sufferer still calls them his friends; and, in a most touching apostrophy, implores their pity in his deep affliction. He takes an affecting survey of his hopeless situation, as assaulted and broken down by the Almighty, for purposes altogether mysterious and unknown to him; and then suddenly, as though a ray of divine light and comfort had darted across his soul, rises into the full hope of a future resurrection, and vindication of his innocence; and, in the triumph of so glorious an expectation, appears to forget his present wretchedness and misery.		Reply of Job to Eliphaz.
Speech of Zophar.	The lend is next assumed by Zophar, but merely to recapitulate the old argument under a new form. Job has not yet confessed the heinous sins for which he is suffering; and hence, in bold and terrific pictures, chiefly, as on many preceding occasions, derived from the lofty sayings of ancient times, he alarms him with the various punishments reserved for the impenitent.		
Reply of Job to Zophar.	In reply to Zophar, Job appears to collect his whole strength of argument, as though resolved at one and the same time, to answer all that has been advanced upon the subject, by each of his opponents. He boldly controverts their principle, that present prosperity is the lot of the good, and present misery that of the wicked. He asserts, even while trembling at the thought of so mysterious a providence, that here the reprobate, instead of the righteous, are chiefly triumphant,—that this is their world,—that they riot in it unrestrained, and take their full of enjoyment. They may, perhaps, continue to be reserved against a day of future judgment and retribution; but where is the man

of Bildad.Reply of
Job to
Bildad.

are overthrown in a moment, and reduced from the utmost height of splendour, to the lowest abyss of beggary and ruin.

Bildad, to whom it belongs next to reply, is completely confounded. He is compelled to admit that the present state of things proves the Deity to work with absolute sway, and in an incomprehensible manner. But, though driven from his former position, he still maintains that Job must be wicked, since every man is wicked, and altogether worthless in the sight of God; all which, in order to give the greater weight to his observations, he confirms by delivering them in the words of ancient and proverbial maxims.

Job, in reply to Bildad, is indignant at his not openly retracting an opinion which, it was obvious, he could no longer maintain. He is particularly irritated at his pretending, once more, to quote the proverbial maxims of past times, as though to enlist the wisdom of the ancients against him; and sarcastically follows him up by a string of other traditions of a similar kind, possessing still more magnificence, and, at least, as much general connexion. And having thus severely reproofed him, he returns to the argument in ch. xxvii. and asserts that, distressed as he is, and forsaken of God, habitual innocence has ever belonged to him, and ever shall; and, on this very account, he secretly encourages a hope that he shall not be ultimately forsaken; and forcibly points out the very different situation of the wicked, when they also are overtaken by calamity; their ruin being, on the contrary, utter and irreversible, and even entailed on their posterity. Under the disappointment their visit had produced, and the proofs of feebleness and folly it had exhibited, where wisdom and consolation were to have been expected, he proceeds to a highly figurative and exquisite description of the value of genuine wisdom, and the difficulty of searching out its habitation, concluding, as the result of his enquiry, that it alone resides in, and issues from the Creator, and is only bestowed upon those who sincerely fear him, and depart from evil. He closes with a detailed and deeply interesting examination into every department of his life—an examination that ought to be studied and copied by every one. He investigates his conduct in the full sunshine of prosperity, as a magistrate, as a husband, as a father, as a master; and in all these characters he feels capable of conscientiously justifying himself. In the course of this historical scrutiny, he draws a very affecting contrast between his past and his present situation; the period in which all was happiness and splendour, and that in which all is trouble and humiliation. He challenges his companions, and the world at large, to accuse him publicly and expressly of a single act of injustice or oppression; declares that, so far from shrinking from such an accusation, he would wear it as a frontlet upon his shoulder and his turban; that, like a witness on the side of his accuser, he would furnish him with all the evidence in his power; and pants earnestly to be put to the bar, and abide the decision of his country.

Zophar should now have replied in rotation; but he has already exhausted himself, and the argument closes.

PART V. Contains the summing up of the controversy, which is allotted to Elihu, a new character in the poem; but who, though unnoticed, appears to have VOL. IX.

entered before the commencement of the debate, and to have impartially studied its progress. The speech of Elihu commences with the thirty-second chapter of the common arrangement, which constitutes its peroration, and offers a fine specimen of the art of bespeaking and fixing attention. He first adverts to the general irrelevancy of the matter that has been advanced against Job, from every quarter by which he has been attacked, and then proceeds to comment upon the patriarch himself. Tactfully admitting the general force of the reasoning by which he had confounded his opponents, Elihu now where charges him with former wickedness, because of his present affliction, but confines himself to his actual conduct, and the tendency of his replies on the existing occasion; both of which he reprehends with considerable warmth. In various instances he repeats his words literally, and animadverts upon them as highly irreverent; and observes, that the dispensations of Providence, dark and mysterious as they commonly appear to us, are always full of wisdom and mercy; and that, in many cases, we are made sensible of this even at the moment, being frequently, by such means, warned and reclaimed, sometimes publicly, but still oftener in secret, through the medium of dreams, diseases, or other providential interferences.

He attacks the position of Job, that the present world is the portion of the wicked, and that here prosperity is more frequently their lot than that of the righteous; and, with some degree of sobriety and disingenuity, turns, like Eliphaz, this position of the patriarch into a declaration, that he approves of the ways of wickedness as a mean of prosperity, and has no desire to be righteous, unless when righteousness has a like chance of advancing his worldly views. Upon this point he attacks him with great severity, and in general terms; and in general, but beautiful and highly figurative descriptions; adverts to the frequent and visible interferences of the Almighty to relieve the poor and the oppressed, and to hurl down the tyrant and the reprobate. He next exhorts Job to relinquish his present sentiments, and to confess his transgressions, in full confidence of a return of the divine favour. Submission he asserts (ch. xxxv.) to be the only duty of man, and the wisest course he can pursue; that God can derive neither advantage from his obedience, nor disadvantage from his rebellion; that man alone can profit from the one, and suffer from the other; and that had Job suffered more, he would have disputed less. The remainder of this expositive oration points out consecutively, in strong and glowing language, full of sublimity and the finest painting, that God is supreme; that he is all in all; and that every thing is subject to him, and regulated by him, and regulated in wisdom, goodness, and justice; that hence, instead of resisting, it becomes us to submit; that the worst of iniquities is to wish for death, in order to escape from a chastisement we are enduring and have deserved; and that, living or dying, it is in vain to fly from the Creator, since all nature was formed by him, and is the theatre of his power. The speaker closes with a lofty and transcendent description of the might and wisdom of the great Maker, in the works and wonders of the creation; the formation of rain, thunder, lightning, snow, clouds, clear sky, the return of spring, and the general revolution of the seasons; concerning

all which we know nothing; yet the whole of which is but a faint and reflected light from him who ordained and commands them; concluding as follows: (ch. xxxvii. 22—24.)

Styendro itself is with God!
Ineffable majesty!
Almighty!—we cannot comprehend him—
Surpassing in power and judgment!
Yet doth not the might of his justice oppress.
Let mankind, therefore, stand in awe of him:
He looketh all the wise of heart to nothing.

PART VI. The trial of faith, resignation, and integrity, is now drawing to an end. The opponents of Job, and, through them, the arch-demon by whom they were existed, have been baffled in their utmost exertions; yet, though silenced, they still sullenly refuse to retract. The Almighty now visibly appears to pronounce judgment, and "speaks to Job out of the whirlwind;" and the address ascribed to him is a most astonishing combination of dignity, sublimity, grandeur, and condescension; and is as worthy of the magnificent occasion as any thing can be, delivered in human language.

The line of argument pursued in the course of this inimitable address is, that the mighty speaker is Lord of all, the creator of the heavens and the earth, and that every thing must bow down before him; that he is the God of providence; and that every thing is formed by him in wisdom, and bespeaks a mean to an end, and that end the happiness and enjoyment of his creatures. In the development of this reasoning, the formation of the world is first brought before us, and described in language that has never been equalled; the revolution of the heavenly bodies; and the regular return of the seasons. The argument then descends from so overwhelming a magnificence, and confines itself to phenomena that are more immediately within the scope and feeling of the sons of earth. It is God who supplies the wants of every living creature: it is he who finds them food in rocks and wildernesses: it is his wisdom that has adapted every kind to its own habits and mode of being; that has given cunning where cunning is necessary; and, where unnecessary, has withheld it; that has endowed with rapidity of foot or of wing, where such qualities are found needful; and, where nothing is demanded, has afforded proofs of a might the most terrible and irresistible. The whole of which is exquisitely illustrated by a variety of distinct instances, drawn from natural history, and painted to the very life; the following impressive corollary forming the general close. God is supreme, and must be bowed to, and adored: his wisdom is incomprehensible, how vain then to arraign it: his power omnipotent, how absurd then to resist it: his goodness universal, how blind then to deny it.

This awful address is listened to with fearful conviction. The humiliated sufferer confesses the folly of his arrogance and presumption, and abhors himself for his conduct.

The peripatza, or revolution, immediately succeeds. The self-abasement of Job is accepted: his three friends are severely reprimanded for having formed a dishonourable judgment concerning him, and for having taken a false and narrow view of the providence of the Almighty, in contending that he never does or can permit trouble but in cases of wickedness: a sacrifice is demanded of them, and Job is appointed to be their intercessor;

upon the accomplishment of which the severely tried patriarch is restored to his former state of enjoyment, and his prosperity is in every instance doubled.

In his THIRTIETH SECTION, Mr. Good enquires into and explains the difficulties attending a translation of the book of Job; into which we need not follow him: and in his FORTYTH, examines the disputed point concerning the author and era of the poem: upon which we have the following remarks.

If the preceding observations be correctly founded, they may make some progress towards determining the real author of this sublime composition. In his style he appears to have been equally master of the simple and the sublime; to have been minutely and elaborately acquainted with the astronomy, natural history, and general science of his age; to have been a Hebrew by birth and native language, and an Arabian by long residence and local study. To these peculiar features, thus incidentally gleaned from a critical survey of the poem, may be added, there is intrinsic evidence that, as a Hebrew, he must have flourished and have written antecedently to the Egyptian exodus. The annals of the world do not present to us a single nation so completely wrapped up in their own history as the Hebrews. Throughout every book, both in the Old and the New Testament, in which it could possibly be adverted to, the eye of the writer turns to different parts of it, and dwells upon it with inextinguishable fondness. The call of Abraham, the bondage and miracles in Egypt, the journeyings through the wilderness, the delivery of the law, the establishment of the priesthood, the passage of the Red sea, and of the Jordan, the destruction of the Canaanites, Ammonites, and Moabites; Aaron, Joshua, Manasses, and Gideon; Sinai, Carmel, and Sion; Gilead and Gass; Ashdod, Ekron, and Askelon, are perpetually brought before us, as ornaments, or illustrations of the subject discussed. To none of these, however, does the book of Job make the smallest reference: but the existence of Adam, and his concealment from the Almighty in the garden of Eden;* the voice of the blood of Abel crying from the ground;† the destruction of the world by the deluge;‡ the token of the rain-bow in the clouds;§ and the conflagration of Sodom and Gomorrah|| are, in the same love of national history, incidentally glanced at, or directly brought forward. With this last fact, however, the poet stops: he descends no lower than to the overthrow of the cities on the plain, and consequently to the era of Abraham and Lot; not a single incident appertaining either to the family of Isaac or of Ishmael, of Edom or of Jacob, being adverted to below this period. And hence we have the strongest circumstantial evidence for concluding that the poem, as written in Hebrew, must have been composed between the periods of Abraham's residence at Manure, and the miracles wrought by Moses in Egypt.

The opinions of those writers who have contended that the poem contains a few allusions to historical facts posterior to the commencement of the Egyptian bondage, or even below the Mosaic age, are next minutely examined by our author, who seems to show very satisfactorily, that the passages in different parts of the sacred text, adverted to in support of such

Biography. opinions, are too loose to draw the conclusion contended for, or have no application to the subject whatever. He then proceeds as follows :

A. M. 2484
B. C. 1520.
The remaining characters that have been pitched upon as authors of this poem, are Elihu; Job himself, or in conjunction with the other dialogists; and Moses.

Elihu has been advanced, chiefly by Lightfoot, from an erroneous rendering of v. 16 and 17, in chap. xxxii, and the correction of which puts to flight all Elihu's pretensions in a moment. Concerning Job, as himself the author of the poem, or as the author of it in conjunction with his friends, we have already spoken. "All such opinion, however modified, equally suppose," observes Mr. Good, "the introduction of a foreign story, drawn up by a foreigner himself, into the sacred canon of the Jewish scripture; a supposition which is not countenanced by any other part of the scriptures, and to which the national jealousy of the Jews appears to have formed an insuperable barrier."

Strong claim of Moses.

It only remains then, continues this critic, to examine into the claim of Moses, as the author of the book of Job. To Moses, in truth, more than to any one, it has been generally ascribed in all nations, and perhaps in all ages; and if we apply to him the tests advanced above, and which are fatal to all the preceding characters, we shall find that there is not a single one to which his history will not adapt itself. It has been already asserted, that the writer of this poem must, in his style, have been equally master of the simple and of the sublime; that he must have been minutely and elaborately acquainted with the astronomy, natural history, and general science of his age; that he must have been a Hebrew by birth, and native language, and an Arabian by long residence and local study; and finally, that he must have flourished, and composed the work before the Egyptian exodus. Now it is obvious, that every one of these features is consummated in Moses, and in Moses alone; and that the whole of them gives us his complete lineaments and portraiture—whence there can be no longer any difficulty in determining as to the real author of the poem. Instructed in all the learning of Egypt, it appears little doubtful that he composed it during some part of his forty years' residence with the hospitable Jethro, in that district of Idumea which was named Midian.

In addition to these external proofs of identity, continues our author, a little attention will, perhaps, disclose to us an internal proof of peculiar force, in the close and striking similarity of diction and idiom which exists between the book of Job, and those pieces of poetry which Moses is usually admitted to have composed. The examples and parallelisms offered by Mr. Good, are numerous and striking, but we have not space to copy them, and must refer to the work itself.

Design of the book, creed, doctrines, and ritual.

The most important part of the inquiry, concerning this extraordinary production, however, remains yet to be noticed, and is given by our author in his FIFTH SECTION, ON THE CREED, DOCTRINES, AND RITUAL of the poem; in which he fully, and as we think, satisfactorily explains the express object of the work, and the expediency of its introduction into the Hebrew canon. The preceding inquiry concerning the origin and era of the book of Job, will be found, observes Mr. Good, of no small moment or importance. For if it has succeeded in fixing the date of the book of Job, at a period antecedent to the Egyptian exodus, and of

course to the Mosaic institution, and in bringing home the composition to Moses himself—then does this book immediately become a REPOSITORY OF PATRIARCHAL RELIGION, the best and fullest depository in the world, and drawn up by that very pen which was most competent to do justice to it. Then also do we obtain a clear and decisive answer to the question which has so often been proposed. What is the ultimate intention of the book of Job? and for what purpose is it introduced into the Hebrew and Christian canons? It will then appear that it is for the purpose of making those canons complete, by uniting as full an account as is necessary, of the dispensation of the patriarchs, with the two dispensations by which it was progressively succeeded. It will then appear that the chief doctrines of the patriarchal religion, as collected from different parts of the poem, were as follow:

I. The creation of the world by one supreme and eternal intelligence.*

Doctrines of patriarchal religion.

II. Its regulation by his perpetual and superintending providence.†

III. The intentions of his providence carried into effect by the ministration of a heavenly hierarchy.‡

IV. The heavenly hierarchy, composed of various ranks and orders, possessing different names, dignities, and offices.§

V. An apostasy or defection in some rank or order of these powers;|| of which Satan seems to have been one, and perhaps chief.¶

VI. The good and evil powers or principles, equally formed by the Creator, and hence equally denominated "sons of God;" both of them employed by him in the administration of his providence; and both amenable to him at stated courts, held for the purpose of receiving an account of their respective missions.**

VII. A day of future resurrection, judgment, and retribution, to all mankind.††

VIII. The propitiation of the Creator, in the case of human transgressions, by sacrifices;‡‡ and the mediation and intercession of a righteous person.§§

Several of these doctrines are more clearly developed in what than others: yet I think, says our author, there are sufficient grounds for deducing the whole of them. Some critics may, perhaps, conceive that the different names by which the heavenly host are characterised may be mere synonyms, and not designed to impart any variety of rank or order. Yet the names themselves, in most instances, imply distinctions, though we are not informed of their nature. *—* *SEVEN (semitim)*, destinies, or destroyers, ministers of death, cannot possibly apply to all of them, and appear to be nearly synonymous with the *Misai, Aisai, or Parai*, of the Greek and Roman writers. The term itself, indeed, is obvi-

A. M. 2484.
B. C. 1520.
As his soul dwells near to the grave,
And his life to the DEATH;—
Surely will there be over him an ANGEL,
An INTERCESSOR,—ONE OF THE THOUSAND.

Heavenly hierarchy.

The general term for the whole of these different ranks appears to be מְשִׁמִּים (*mesimim*), SANCTI, or HOLY ONES; מְשִׁמִּים (*mesimim*), "ministers or servants," seems to convey in every instance in which it occurs, a subordinate idea, in office as well as in name, to מַלְאֲכִים (*malucim*), "angels, thrones, or principdoms." מְלֵאךְ (*alep*), "the chailal, or thousand," distinctly imports a particular corps or class; and is probably denominated by a rule common to most countries and languages, from the number of which it consisted,—as militia, centurion, decemvir, heptarch, tithegman.

Mr. Good proceeds to inform us that the same general belief has descended in Arabia, to the present day; and forms a distinct and prominent doctrine of the Alcoran; which he exemplifies at considerable length; and then shows that a similar belief was common to all the nations of the east, from whom it descended to the Greeks, and is especially adverted to by Hesiod, who calculates the whole number of heavenly guards, or deputies, appointed to watch over the earth, at thirty thousand: Op. et Dies, i. 246. With this passage he compares the strikingly similar and well-known description of Milton, Par. Lost, iv. 477, but derived from a superior authority.

Millions of spiritual creatures walk the earth
Unseen, both when we wake and when we sleep, &c.

The source, says our author, from which these lines of Milton are derived is the Bible; and it is of far more consequence to us that the doctrine they develop pervades the Bible, than that it prevails in any other work; and especially that it runs through the whole of the Scriptures, both Jewish and Christian, from Genesis to the Revelations—there being scarcely a book which has not a reference to it—and without a single caution or hint that the language employed is merely figurative, or designed to convey any other than the obvious and popular idea which must necessarily have been attached to it, by those to whom it was delivered. Thus especially, Coloss. i. 16, in which we have, in few words, a description of *invisible*, as well as of *visible* beings, inhabiting the earth, and the different orders of which the hierarchy consists: "For by him were all things created that are in heaven, and that are in EARTH, VISIBLE and INVISIBLE, whether THRONES, or DOMINIONS, or PRINCIPALITIES, or POWERS." Whence Milton again, Par. Lost, v. 600:

Hear all ye angels, progeny of light,
Thrones, dominations, principdoms, virtues, powers.

Agency in heaven.

The doctrine of an apostasy among the celestial orders, as ascribed to the patriarchal religion from the poem before us, is derived from two or three passages, to which a different explanation has been given, but one that seems to afford no obvious sense. In ch. i. and ii. Satan is abruptly, and without ceremony, introduced as an evil spirit, as though the writer of the poem felt it unnecessary to offer a syllable upon the subject, from the general notoriety of the fact. In ch. iv. 18, the passage runs as follows:

Behold! he cannot confide in his servants,
And charges his angels with default.
What, then, are the doers in houses of clay?

In ch. xv. 15, the same fact is again alluded to, and in terms equally strong, and equally general, as though of universal publicity:

Behold! he cannot confide in his ministers,
And the heavens are not clear in his sight,
How much less men, a mortal man, &c.

Where, observes Tyndal, "under the name of the heavens, understandeth he the angels;" on which account the Alexandrine version gives Αἱτῆρ ἄνε ἀπύρτα—"the stars are not clean,"—i. e. "the MORNING STARS." It is, in truth, under this precise image that the same fact is a third time referred to in the speech of Baldad, ch. xxv. 5; though, for want of due attention, it has seldom been understood to have this reference:

Behold! even the moon—and it sheddeth not,
And the stars are not pure in his sight:
How much less man, a worm! &c.

The common close, or burden, drawn from the greater impurity of man, shows obviously that this is the sense in which it ought to be understood. And the different passages taken collectively lead to a clear proof that the defection among the heavenly hosts was generally known at the time the poem was composed, and is, in all of them, generally referred to.

Concerning the doctrine of an universal resurrection and retribution, the poem, upon a cursory view, may in many places appear to be at variance with itself; for there are several passages which at first sight seem to point to an opposite conclusion; and hence a cloud of learned and excellent men in all ages, from St. Chrysostom and St. Ambrose, among the fathers, to Le Clerc, Reiske, Vorge, Michælis, Warburton, Geddes, and Stock among modern commentators, have denied that any such doctrine is fairly to be collected from the poem as a whole. The question is, therefore, entitled to be examined with minute attention.

It must be admitted that the only person amidst all the interlocutors who distinctly alludes to the subject, either on the one side or the other, is Job himself; and it certainly appears not a little extraordinary that none of his companions when reminding him, in succession, of the advantages of real contrition, and a restoration to the favour of the Almighty, should, even in the remotest manner, direct his attention to a future as well as to a present reward; and it is hence, perhaps, but fair to conceive that the doctrine of an after-state was no more in universal reception in the *last* of what may be denominated the patriarchal ages than it was among the Jews at the advent of our Saviour, and that the friends of Job did not themselves accede to it. Yet, in opposition to such a conclusion, there are two or three passages in the different speeches of Job which distinctly refer to it as a doctrine in general acceptance, and admitted by his companions themselves. But let us trace the principal passages which have any relation to the subject, in the succession in which they occur; and, in order to our reconciling the wide difference they exhibit, it should be constantly borne in mind that they are only brought forward by a man who, in the midst of extreme bodily pain, and the most complicated mental affliction that ever fell to the lot of any one, is perpetually agitated by every change of contending emotions; hope, fear, confidence, despondency,

Job.

A. M. 2484.
B. C. 1520.

Resurrection of the body.

Biography, indignation, tenderness, submission, and triumph; each abruptly breaking upon the other, and frequently hurrying him away from his habitual principles to an utterance of transitory thoughts, urged by transitory feelings.

The following are the chief passages against the existence of a future life:

CHAP. xiv. 13-22.

And for ever at the crumbling mountain dissolved,
And the rock moulder away from his place,
As the waters wear to pieces the stones,
As their overflows sweep the soil from the land—
No consumption thou the bones of man;
Thou hastenest him continually till he perish:
Thou wastest out his frame and despatchest him.
His sons may come to honour, but he shall know it not;
Or they may be impoverished, but he shall perceive nothing
of them;

For his flesh shall drop away from him,
And his soul shall become a waste from him.

CHAP. xvi. 22.—CHAP. xvii. 1.

But the years numbered to me are come,
And I must go the way whence I shall not return:
My spirit is wasted hell; my days are extinct;
Mine are the sepulchres.

CHAP. xvii. 11.

My days, my projects are all over;
The resolves of my heart are cut asunder.
Night is assigned me for day,
A night bordering on the regions of darkness,
While I bary, the grave is my home;
I am making my bed in the darkness;
I exclaim to CONSCIENCE "Thou art my father!"
To the woman, "my mother!" and "my sister!"
And where, in such a state, are my hopes?
Yea—my hopes!—who shall point them out?
To the group of the grave must they fall a prey,
Altogether are they below in the dust.

CHAP. xix. 24, 25.

But not into the sepulchre will he thrust his hand;
Surely there, in its ruin, is freedom.
Should I not then weep for the ruthless day?
My soul lament for the rock!

Upon all these passages it may be observed, that they rather refer to an insensibility or dissipation of the soul upon death, than to the question of a re-existence or resurrection at some future period: and hence they cannot strictly be said to annihilate this latter doctrine. In the midst of his deepest despondency, as expressed in these extracts, the speaker still alludes to his *hopes*, though to hopes which, at the immediate moment, he felt incapable of cherishing; still proving, however, that, even on such occasions, the *DOCTRINE* itself was known to him, and existed before him, and had been agitated by him, although his fears or his sufferings impelled him at the time to relinquish it. It should also be observed, that, except the last of these passages, they are all uttered in the earliest part of his affliction, when the disease itself appears to have raged most violently, and the reproaches of his companions to have been most bitter. From chap. xix. he seems, in a considerable degree, to have recovered possession of himself: he is conscious of his superiority over the speeches urged against him; and, for the most part, exchanges his exclamations and complaints for sound logical reasoning; and from this period, the only relapse into a state of despondency and disbelief, in any way discoverable, is contained in the last quotation.

The following are the chief passages in favour of a future existence:

CHAP. xiv. 10-15.

Between death and mouldereth:
But the mortal exhalé—and where is he?
As the billows pass away with the tides,
No man lieth down, and riseth not:
Thus two heavens are dissolved they shall not awake;
No—they shall not rouse up from their sleep.
O! that thou wouldst hide me in the grave,
That thou wouldst conceal me—TILL THY WRATH BE PAST;
THAT THOU WOULDST APPOINT ME A FIRST TIME, AND BE—

REVEREND ME.

But if a man die—shall he, indeed, live again?
All the days of my appointment will I wait
Till my REDEMPTION COME.
Thou shalt call—and I will answer thee;
Thou shalt yearn towards the work of thy hands.

This is a very important passage in relation to the general question, and is, at the same time, full of poetic beauty of every kind. It proves the tumult of the speaker's mind, and the abruptness and transition of his feelings. It is demonstrative of the existence of the *DOCTRINE* of a future state, because it is here fully brought forward, and reasoned upon: but it shows also, that though the doctrine was at that time in existence, it admitted of debate; and that the speaker himself, under the immediate pressure of suffering, at one moment doubted, and at another was thoroughly convinced.

CHAP. xiv. 23-29.

O! that thy words were even now written down;
O! that they were engraven on a table;
With a pen of iron upon lead!
That they were sculptured in a rock for ever!
For "I KNOW that my REDEEMER LIVETH,
And will ascend at last upon the earth;
And after the DISASTER hath destroyed my skin,
That, in my flesh, I shall see God;
Whom I shall see for myself,
And my own eyes shall behold, and not another's,
Though my reins be consumed within me."
Then shall ye say, "How did we persecute him!"
When the root of the matter is disclosed concerning me.
O trouble for yourselves before the sword;
For fierce is the vengeance of the sword;
Therefore beware of his judgment.

For the different senses which have been given to this sublime passage, and our author's happy and simple extrication of it from the difficulties by which it has hitherto been involved, we must refer to his translation itself. Taken in connection with the preceding and succeeding passages it appears decisive, not only as to the existence of the doctrine at the time in which the work was composed, but as to the speaker's complete and triumphant persuasion of it at the moment of its being uttered. The word "STAND upon the earth," as given in our common version, is a very feeble and inadequate rendering: the Hebrew *עָמַד* signifies, indeed, "to stand," but more correctly, "to stand up," "mount," "rise up," "ascend." It is here, and in various other places, a forensic term, and, in such instances, should be always rendered "ascend," i. e. to the judgment-seat. It is used in the very same sense in chap. xxxi. 14, where our common version, instead of *stand*, translates it *rise up*: "when God riseth up;" which is a better signification than the former, but still remote and inadequate. The bold and severe apostrophe of the speaker to his companions, in the lines that immediately follow, proves obviously that the whole refers to the solemn judgment of the Almighty.

CHAP. XXXI. 26, 30.

For, "where, say ye, is the house of this mighty one?
Yea, where the first mansion of the wicked?"
Lo! against the day of destruction are the wicked reared;
In the day of vengeance shall they be brought forth."

CHAP. XXXI. 13, 14.

If I have squired the cause of my man-servant, or my maid-
in their controversies with me, [servant,
What shall I do when God avengeth; [servant,
And when he visiteth, what shall I answer him?

In the last passage, עַבְדִּי, as already observed, is doubtless used forensically, *accusatively*, i. e. "to the tribunal or judgment-seat;" and not "in the way of," as in our established lection. The speaker is immediately advertising to the manner in which he had conducted himself as emir or chief magistrate of Uz, and the strict justice he had uniformly endeavoured to administer at the tribunal of the gate. The passage cannot be misunderstood, and seems decisive not only of the existence of the doctrine of a future judgment at the era before us, but of the speaker's habitual belief of it, considering that he was now debating coolly and argumentatively, and free from the influence of passion. The quotation immediately preceding it may, perhaps, admit of a different interpretation, if considered by itself; yet, as it ought not to be considered by itself, but in conjunction with collateral passages, the proper and intended sense is fixed at once. This quotation is of consequence, not only as leading to a proof of the existence of the doctrine, and the speaker's assent to it, when dispassionately arguing upon the subject, but as ascribing the same assent, as a known and admitted fact, to his companions; for he puts the words into their mouths in their own presence.

Heresy and idolatry adverted to in the poem.

The only existing heresy that occurs to us in the course of the poem is that of magic or incantation; and the only idolatry that of Sabæism, or the worship of the heavenly bodies. The first is glanced at in chap. iii. 8, and the second in chap. xxxi. 26; and both, were additional proofs wanting, would concur in corroborating its high antiquity; for they are among the oldest subjects to be met with in history or tradition; the first being known to have been professed and practised by collegiate bodies in Egypt before the Mosiac era; and the second being commonly referred for its origin to a date antecedent to that of Abraham; and by Maimonides to a period nearly as early as that of Seth; his son, Sabius, according to the Sabæans themselves, having invented and propagated it. Be this as it may, there can be no doubt that it is of much earlier birth than either image-worship, or the dedication of heroes, which have usually, and perhaps correctly, been regarded as its abominable progeny.

Argument drawn from the antiquity of the worship.

The form of the poem before us, contemplated as a depository of patriarchal faith, is also entitled to attention, and is almost as much in favour of a very early origin, as any circumstance that has yet been noticed. All the institutes of the highest antiquity, of which we have any account, were delivered in poetry, and under the shape of history, real or fictitious. Such is probably the Zend-avesta (though its actual rhythm, like that of Hebrew poetry, seems no longer to be known), if we may judge from the *Saïder*, a book used by the Magi, containing an account of the laws and precepts of the Parsees, avowedly drawn up from the Zend-avesta, and written in Persian verse. Such unquestionably

are the Veda, being composed in *ashûks*, or rather *shûks*, or stanzas of four lines each, the two first books of which affect an antiquity superior to that of the Mosiac era; though their high pretensions have been greatly disturbed and controverted by various writers of the present age. Such is also the *Shu King*, compiled by Confucius, and perhaps the three other Kings, constituting collectively the theology of the Chinese; and such are the Orphic fragments of Greece, and the Edda of Iceland. It is, however, peculiarly worthy of remark, that Arabia has more pretensions, and especially more pretensions of very high antiquity, to such a mode of communication than any other country whatever. Its customs and manners, the agreeableness of its climate, the beauty and variety of its prospects, and, above all, the force, and richness, and elegance of its language, concurred, at a very early period, to render poetry an object of universal attraction; so that the rise of a poet in an Arabian tribe was one of the principal sources of public rejoicing; and hence, as far as almost any nation can look back through the medium of profane history, we find a sort of poetical academy instituted in this country, which, with a view of maintaining a due spirit of emulation, used annually to assemble at Osdh, where every poet produced his best composition; and where the different tribes to which the poets belonged, waited for the award of the judges, who were appointed to decide on their respective merits, with as much anxiety as the writers of the poems themselves. This assembly was suppressed by Mahomet, partly as interfering with his very opposite views of warfare, but chiefly because many of the poems recited on such occasions were filled with severe and appropriate sarcasms upon himself; among the principal of which were those recited by Canb Ben Zohrah, whose destruction was consequently panted for by Mahomet with long and unmitigated eagerness.

There is no book in the Bible which has tempted so many critics to try their strength, and exercise their skill, as the poem before us; and hence there is none that can boast so numerous a catalogue of monographers.

One of the earliest translators into a modern tongue, was the justly celebrated Padre Maestro Fr. Luis de Leon, of the order of St. Augustine; who rendered it into very excellent Spanish; he flourished in the sixteenth century, and composed his version between the years 1578 and 1591; the last chapter was finished in March, and in the August of the same year the learned father died, in the sixty-fourth year of his age. It was published in the year ensuing, by the unanimous consent of the university of Salamanca, with a due sense of its very great merit, and a declaration that it was written in heaven, "*cûl en el cielo escribiò*." It is, however, a very excellent and valuable performance: the prose and literal version is followed by an elegant rhyme translation, and accompanied with a very full and extensive exposition. It is not often that Roman Catholic universities have made so valuable a present of any part of the scriptures in their mother tongue. The learned father does not, however, appear to have been versed in the Arabic, and other cognate dialects of the east, and hence, though he has been successful in many points, he has still left the most perplexing difficulties untouched. For the first application of the

Arabic key to an illustration of the book of Job, we are indebted to the critics of Germany and Holland, and especially to the two Schultenses, Reiske, and Michaelis. In the two first, there is too large an indulgence of the imagination; in the third, too bold and dangerous an inclination to alter the sacred text. Our own country has been peculiarly rich in translators and expositors. In the foremost train of these stands the elegant and venerable Bishop Lowth, whose Prolegomena are an inexhaustible treasure of classical beauties. The translation of Dr. Stock, bishop of Killaloe, is of far inferior value; but it was composed in a season of great mental distress, and with too hurried a pen. A posthumous translation of Miss Smith, has lately been given to the public: it is a wonderful production, considering her age, and the want of proper assistance under which it was produced; but as it never received the benefit of her finishing hand, it is marred by errors which otherwise would not probably have existed. Of the version and annotations of Mr. Good, we need not speak any further, as we have already quoted from them so largely. The English language boasts also two very excellent rhyme translations of this poem, one by Sandys, son of the archbishop of the same name, whom Dryden styles the best versifier of his age, and from whom Dr. Johnson has largely copied in his dictionary; and the other by Scott, who has also accompanied it with a very valuable running commentary.

Brief specimens of excellence.

Having thus copiously dwelt on the origin, subject-matter, and poetical beauties of this extraordinary composition, we feel that we ought not to close our account without offering to the reader a few examples of its high pretensions to excellence of every kind, when rendered with some portion of that taste and feeling which belong to itself; and for this purpose we must again recur to Mr. Good's execution.

There has always been supposed a great difficulty in understanding the real meaning of the last verse in chap. xiii. and in connecting it with the verse which immediately precedes. In our common version, which is a pretty fair transcript of the Greek and Latin interpretations, the passage runs thus:

"Thou hast put my feet also in the stocks, and lookest narrowly into all my paths; thou settest a print upon the heels of my feet, And be as a rotten thing cometh, as a garment that is moth-eaten."

Reiske, Schultens, Grey, and Stock, have tried in various ways to make sense of this passage, but none of them have succeeded to the satisfaction of the critical world, and few of them to the satisfaction of themselves. Mr. Good seems to show very clearly that the last verse in chap. xiii. should be the first verse in chap. xiv. and that the former chapter should close with v. 27, instead of v. 28; and we have then, according to his interpretation, the following fearful description of the vanity and nothingness of man.

CHAP. xiii.

88 Well may he dissolve as corruption,
The moth-worm feeding upon him as a garment—

CHAP. xiv.

1 MAN—the produce of woman,
Few of days, and full of trouble—
2 He springeth up as a flower, and is cut down,
Yea, he leaveth as a shadow, and endureth not.
3 And dost thou cast thine eyes upon such a one?
And wouldst thou bring me into judgment with thyself?
Who can become pure—free from pollution?
No one.—Seeing that his days are determined,
And the number of his months with thee:
That thou hast fast his bounds, and he cannot go beyond—

6 Or turn from him, and leave him alone,
That he may fill up his day like the hireling.
7 There is, indeed, hope for the plant,
When it is cut down, that it will sprout again,
And that its tender branches will not fall:
8 Though its root have grown old in the earth,
And its trunk become dead over the soil,
9 Through the fragrant of water it may revive,
And put forth young shoots, as when planted;
But man dieth, and mouldereth:—
10 But the mortal expiereth—and where is he?
11 As the flowers pass away with the tides:
And the floods are raised and dried up,
12 So man leaveth, and dieth not;
Till the heavens be dissolved they will not awake.

The following picture of the wicked man, as to the fate that awaits him, is strongly and awfully painted, in chap. xvii. and in its personifications, as they occur in Mr. Good's spirited version, may vie with the host of attempts of Grecian poetry.

5 ——— The light of the wicked shall be put out,
And the stream of his fire shall not shine:
6 Day-light shall be darkness in his tent,
And his lamp shall be extinguished over him.
7 The steps of his strength shall be straitened,
And his own counsel shall cast him away.
8 Lo! he shall plunge by his feet into a pit-fall,
Or wither silent amidst toils.
9 The springer shall be hold of him by the heel,
And rigidly fasten upon him.
10 Its cordage lieth hid in the ground,
And its snare in the path-way.
11 Devastation shall terrify him all around,
And shall snatch him from his feet.
12 Hunger-haten shall be his strangers,
And destruction be present at his side.
13 Gluttenously shall he feed on his skin—
The FIERY-ANUS or DRAGON shall feed on him gluttenously.
14 His Horse shall be uprooted from his tent,
And DISORDER shall invade him as a monarch;
15 On his tent shall be as for its extinction.
Brimstone shall be rained down upon his dwelling.
16 Below shall his roots be burnt up,
And above shall his branch be cut off.
17 His memory shall perish in the land,
And no trace of him be in the public streets.
18 From day-light shall he be driven into darkness,
And banished out of the world.
19 No son of his, no kinsman of his
Shall be among his people;
Yea no posterity among his sojournings.
20 At his day shall the young be astonished,
And the aged be panic-struck.
21 Surely such is the allotment of the wicked,
And this the state of the unacquainted with God.

Bold description of the wicked man.

The Deity has never, perhaps, been so magnificently described in the character of the God of the tempest and the thunder storm, as in the following terrific declaration, from chap. xxxvii. 24, to chap. xxxviii. 5, in which we have to remark a similar error in the common division of two chapters, to that we pointed out in the last quotation but one. The first verse of chap. xxxviii. is a direct continuation, not only of the same subject, but of the same paragraph as that with which chap. xxxvii. concludes; and Mr. Good has, with equal force and correctness, given the sense of *avath* to the Hebrew, *pa*, in both verses, and in our common edition, is sunk into a mere particle, and rendered *also*. From not having attended to this error in the division of the chapter, as well as from not having hit upon the real meaning of one or two of the Hebrew terms, this passage has been found by all the commentators peculiarly doubtful and obscure, instead of peculiarly perspicuous and sublime.

CHAP. XXXI.

- 21 O! reflect, that thou may'st honour his dealings
When unkind jointly celebrate.
22 Every mortal looketh towards him;
Man queth afar off.
23 Behold! God is great—surpassing knowledge:
The number of his years!—surpassing research.
24 Lo! he exalteth the drops of the waters;
They throw off the raim for his tempest.
25 Then down flow the heavens;
They pour upon man impetuously.
26 But if he heap up the spreadings of the cloudy-woof,
The tenuity of his pavilion.
27 Behold! he throweth forth from it his flash,
And lanceth the roots of the very ocean.
28 Lo! thus judgeth he the nations;
He passeth sentence amon.
29 He brandisheth the blade against the conceits,
And lanceth his penetrating bolt:
30 Along with it smiteth his root,
The fierceness of wrath, because of wickedness.

CHAP. XXXII.

- 1 Wrath—at which my heart trembleth,
And staggereth in his post.
2 Hear! O hear ye, the clangour of his voice,
And the peal that issueth from his mouth.
3 Under the whole heavens in his flash,
And his lightning unto the ends of the earth.
4 After it peareth the voice;
He thundereth with the voice of his majesty;
And there is no limit to them when his voice soundeth.
5 God thundereth marvellously with his voice.

The original of this passage has other difficulties than what we have noticed above; and hence the translators have various differences in their rendering. But we have not space for verbal criticism, and must refer, in the present instance, to the author from whom we have quoted.

The name of Job occurs in the ancient martyrologies with the title of prophet, saint, and martyr. The worship of him, under the one or other of these characters, is of high antiquity, and was at one time very extensive, both in the Greek and Latin churches. The Greeks made choice of May 6, for his festival, and have been followed in this arrangement by the Christians of Arabia, Egypt, Ethiopia, and the Russian empire. The Latins hold his festival on May 10. Next to the Macrahees, who were brothers as well as martyrs, Job is the first saint to whom the western church decreed public and religious honours.

Among the patriarchs and prophets there is no character to whom more churches have been consecrated, or chapels dedicated, than to Job. A pretended tomb of him has been shown in many places. The most celebrated is that of the Truchonitis, towards the springs of the Jordan. It is situate between the cities still bearing the names of Teman, Shuah, and Naama. There is another tomb publicly shown for that of the patriarch in Armenia, where Cock, the Chaldee paraphrast, contended that he had lived. And as another Chaldee interpreter placed his residence in the vicinity of Constantinople, we have also a third tomb of Job exhibited near the walls of this city; but which, by soberer historians, has been referred to an Arabian warrior of the same name, who fell at the siege of Constantinople in the year 672. In this city, however, was a monastery in the sixth century, dedicated to the patriarch himself; yet the ecclesiastics did not venture to affirm that it was erected in consequence of their being in possession of his remains, as is usually done on the foundation of monasteries.

SEMI RAM IS.

FLOURISHED, ACCORDING TO ARCHAISHOP USHER, ABOUT A. M. 2789. B. C. 1215.

Biography. Extensive and powerful as was once the empire of Assyria, we can obtain no certain information with regard to its early history, its first annalists being so deeply infected with the love of fable. Their records, if, as is supposed, they ever had any that possessed the character of authenticity, have long since perished amidst the wrecks of time; and the preposterous vanity of the Greeks, in neglecting the history of other nations, or relying upon their own fanciful historians in preference to better attested documents, has involved this subject in hopeless obscurity. We cannot, however, err essentially in attributing its origin to the migration of Asbur, from whom the name is evidently derived; an event which may be assigned to the period of the dispersion at Babel, upwards of two thousand two hundred and forty years before the Christian era. The dominion of the first founder was but transient; and after him, according to Scripture Chronology, Nimrod assumed the reins of power, a person of great ambition, daring enterprise, and unsleeping activity. He is said to have been "a mighty hunter before the Lord;" an expression which most probably has reference to his adoption of the mode of training his followers to military achievements, and the love of conquest and of rule, by carrying on the sports of the field upon an extensive scale. Habituated to danger, they thus became prepared to execute his purposes of domination; and accordingly, after having founded the Babylonish empire, he passed over into Assyria, and built Nineveh as the metropolis. Nimrod is the same with Belus, or Baal, afterwards worshipped as a god.

Ninus. Ninus, the son of Nimrod, appears to have inherited the ambitious spirit of his paternal predecessor; and not satisfied with the kingdom he had received, he soon began to raise troops for the purpose of subduing other nations and subjecting them to his authority. One of his first measures was to enter into a league with the sovereign of Arabia, by whose assistance his magnificent plans of conquest were in a great degree accomplished. Their united forces overran a vast extent of country from Egypt to India and Bactriana. Having carried into captivity the king of Babylon, he put him to the sword, together with his children; to the king

of Armenia, Barzanes, he secured the nominal sovereignty of his own dominions as a boon for unconditional and ignominious submission; and still resolved to signalize his triumphs by fresh enormities, he no sooner conquered Pharus, the king of Media, than he led forth his wife with her seven children to the cruel death of crucifixion, filling the vacant throne with one of his own dependents. After his return, he established Nineveh on the banks of the Tigris, or, at least, enlarged and adorned it with magnificent buildings, with a view of giving permanency to his fame. In this, indeed, he succeeded, for both profane and sacred history concur in representing this city as of wonderful magnitude and extent. Thus innocent and peaceful species of labour, however, did not suit the restlessness of his spirit, and, as soon as he could make the requisite arrangements, he set forth upon a new expedition against the Bactrians. They had resisted his invasion, and excited his utmost resentment; and, although he suffered a defeat on one occasion, in consequence of the heroism of Oxyartes the king, he eventually subdued the country and besieged the capital. In this latter enterprise, however, it is believed he would not have succeeded but for the effectual aid he received from Semiramis, to whose history, and to this achievement in particular, we shall now more distinctly point the reader's attention.

Previously, however, to the detail of the actions of Semiramis, we take leave to insert tables of the Assyrian Chronology, given by Eusebius and Syncellus, which, notwithstanding their variations, were derived from one source, namely, that formed by Ctesias; premising, however, that although this statement is inserted, chiefly for the purpose of affording the means of comparison and inquiry, it is by no means to be relied upon as authentic. The succession, as it stands in Scripture, and to which only we can look with confidence, is simply as follows:

Pul,
Tiglath-pileser,
Shalmaneser,
Sennacherib,
Assarhaddon.

Semiramis.

All the early history of this remarkable woman is wrapped in such impalpable obscurity, that, as in most similar cases, tradition has furnished an entertaining fiction, instead of communicating substantial truth. It is our duty, however, to endeavour to find the earliest traces of truth in the history of all nations; and to present to the reader certain *alleged* facts in those obscure periods as we find them, though our own opinion of their authenticity may be slight indeed. The outline of the history of Semiramis may be perfectly mythological, and yet the story itself contain some unquestionable facts.

Fabled descent of Semiramis.

We are accordingly told that she was descended from the celebrated goddess Derceto, to whom a temple was erected in the vicinity of Ascalon, in Syria. Derceto, it is reported, having incurred the displeasure of Venus, was punished by the offended goddess causing her to indulge a violent passion for a youth who was presenting a sacrifice to her, in company with many others; the consequence of which was, that she ultimately had a daughter by him; but feeling the deepest shame on account of the crime she had committed, she had recourse to the still more criminal expedient of attempting concealment, by murdering her paramour and exposing the infant in a desert. Driven to distraction by

the consciousness of what she had done, she attempted to get rid for ever of the remorseful feeling by throwing herself into the lake, when she was instantly transformed into a fish. The child is said to have been miraculously preserved alive by a flock of doves or pigeons, by whom it was fed with milk, and whose downy wings afforded shelter from inclement skies. The birds were observed to procure cheese, as a more substantial food, when their little protégé seemed to require it, till the neighbouring shepherds having taken the child under their protection, the king's principal shepherd, Simma, having no family, at length adopted her under the name of Semiramis, a Syriac term signifying *doves* or *pigeons*, in allusion to the circumstances of her preservation. Mr. Bryant has remarked that the name is compounded of Sama and Ramas or Ramis, implying a divine token, the type of providence; and that, as a military ensign, it consisted of the figure of a dove, probably encircled with the iris, these emblems being frequently represented together. Those who marched under that standard, or paid deference to the emblem, were styled Semarim and Semorim. One of the gates of Babylon was called the gate of Semiramis, from having, as he believes, the sacred emblem of Sama-ramis, or the dove, engraven over it by way of distinction: and most likely

Biography. the lofty obelisk of Semiramis, mentioned by Diodorus, derived its name from the same hieroglyphic. We may, at least, ascertain thus much, in point of fact, that Semiramis was born at or near Assolou.

Time when Semiramis lived. According to Mr. Bryant, the diversity of opinion that prevails among authors with regard to the time when Semiramis lived, is such as must necessarily discredit her entire history; but without admitting so large a conclusion, the following list will exhibit a very extraordinary variation; at the same time we have already intimated that the widest chronological donations do not by any means disprove the existence or the alleged actions of great characters. The course of our history assigns her to the age of Ninus, and the record of her achievements bring her into contact with certain remarkable events of indubitable occurrence.

Tradition has given to Semiramis surpassing beauty and captivating talents, which we must of course expect to find after reading the account of her romantic infancy. It would be a sad defect in the story to describe the heroine of such adventures as any thing less than a demi-goddess. It will be sufficient to admit that she did possess certain interesting and great qualities of mind. Be this as it may, Menon, a principal person in the king's council, and governor of Assyria, having been commissioned to inspect the cattle, saw Semiramis at the house of Simma, and falling deeply in love, persuaded her to accompany him to Nineveh, where his attachment was rewarded in marriage, and from which propitious union proceeded two sons. She possessed an uncontrolled influence over her admiring husband, whose own celebrity was enhanced by the suggestions of her wisdom, and who, consequently, on every occasion, paid an implicit deference to her judgment.

Her marriage.

Visit to the camp before Bactria.

In the progress of his conquests in Bactria, after subduing all the cities and strong holds, when Ninus besieged Bactria, the capital of the empire, Semiramis resorted to the camp, at the call, as it is said, of her impatient husband, who was a close attendant upon the king. Having acquired that ascendancy which superior understandings soon obtain over those of less penetration and sagacity, she ventured to express herself freely upon the methods which were adopted in conducting the siege, pointing out what she deemed to be errors, and suggesting especially the advantage likely to ensue from attacking the citadel, one of the chief places of strength, instead of confining their efforts to more vulnerable, indeed, but less important parts of the defence. She prevailed so far as to be appointed to lead a division of picked men, who were particularly skilled in climbing, and with these she completely succeeded in scaling on the citadel, and opening a passage for the Assyrians.

Ninus marries her.

The extraordinary danger displayed in this action, and the success of her spirited efforts, soon met with an appropriate reward, and, together with her beauty, occasioned Ninus ultimately to cherish so ardent and

irresistible a passion for her, that he used every means to induce her husband to relinquish her to him. In vain, however, did he solicit; in vain did he even promise Menon his own daughter Sosana in marriage; till at last, proceeding from euntes to thence, and particularly the cruel one of putting out his eyes, her husband committed suicide in despair, and the infamous conqueror possessed himself of Semiramis, and exalted her to an ill-acquired sovereignty.

After the return of Ninus from this war, in which he Ninus had accumulated immense treasures, Semiramis brought him a son, who was called Ninias. Soon after Ninus died, leaving the government in the hands of his bride. Some have attributed his death to assassination, and that by her who was indebted for her honors solely to his partiality. They represent Semiramis as requesting the king to entrust her with the sovereign power for five days, with which his ardent affection induced him to comply. No sooner was she in this situation, than having already secured the interest of the principal persons of the state by her unbounded liberality, she put Ninus to death, or, at least, immured him in prison for the remainder of his days. This act of perfidy can Ninus, scarcely, however, with any probability, be imputed to her, especially as she paid her husband extraordinary sepulchral honours, rearing over him a mound of earth, nine stadia in height and ten in breadth, which was visible from every quarter, to a considerable distance in the surrounding country, and continued for many ages.

Ambitious and aspiring to the last degree, Semiramis now determined to commence some mighty undertaking, that should transmit her name to succeeding generations; and, as it regarded her contemporaries in particular, effectually conceal the meanness of her birth. Collecting, therefore, out of all the numerous provinces of her empire, no fewer than two millions of men, she set about the building of Babylon, a city whose magnitude and magnificence have excited the astonishment of all subsequent times. The natural propensity of mankind, however, to exaggeration, ought, perhaps, to induce us to receive, with some abatements, the wonderful descriptions of the ancient writers. By some this work is ascribed to Belus, and Nebuchadnezzar is admitted to have completed the labour. A minute description of the city would by no means be proper in this place; nevertheless it is due to Semiramis, as the alleged original projector,* to give the reader some general idea of its most striking peculiarities and the magnificence of its design.

Babylon was erected on either side the river Euphrates, in the midst of an extensive plain, and surrounded with walls, which, according to the dimensions given by Herodotus, who had visited this famous city, were eighty-seven feet in thickness, three hundred and fifty feet in height, and four hundred and eighty furlongs, or sixty miles, in circuit. These walls encompassed the city in the form of a square, each side of which was fifteen miles in length, and built of

* Grotius (de Ver. Bel. Christ. § xvi. in not. 63.) opposes this representation. He says, "It is a false tradition of the Greeks that Babylon was built by Semiramis; and this error is refuted by Berosus in his Chaldeas; Josephus in his first book against Apion and others." False enim a Grecis traditio creditur a Beroso Chaldeis, etiam Berosus in Chaldeas prodidit, ut non Josephus docet contra Apionem primo; eundemque errorum tunc ex Philo Bilibi, tunc ex Dorotheo Sidonio retellit Julius Firmicus.

of Babylon.

bricks cemented with bitumen. On the outside was a vast ditch, filled with water and lined with bricks. Twenty-five gates were in every side of this square, amounting in the whole to one hundred; all of solid brass. Between every two were four towers, and four additional ones at the four corners. From all the gates proceeded streets in straight lines, each street being fifteen miles in length, fifty in number, and crossing each other at right angles. Other minor divisions also occurred, and the whole city contained six hundred and seventy-six squares, each two miles and a quarter in circumference. The river ran through the city from north to south, and on each side was a quay, of the same thickness with the walls of the city, and a hundred stadia in length. In these walls were gates of brass, and from each of them steps descending into the river. A bridge was thrown across the river, of great beauty and admirable contrivance, a furlong in length and thirty feet in breadth. The arches were constructed with large stones fastened together with chains of iron and lead. As the Euphrates overflows during the summer months, through the melting of the snow on the mountains of Armenia, two canals were cut to turn the course of the waters into the Tigris, and vast artificial embankments were raised on each side of the river. On the western side of the city an immense lake, forty miles square, was excavated to the depth, according to Herodotus, of thirty-five feet, and into this lake the river was turned till the work was completed.

The ancient
palace.

At each end of the bridge was a palace, and these had a subterraneous communication. The ancient palace, on the eastern side of the river, was thirty furlongs, or three miles and three quarters, in the circuit of its walls; and the one at the opposite, or western side, was sixty furlongs, or seven miles and a half. It was encompassed by three walls, one within the other, all of which were adorned with curious sculpture, representing, in the most accurate and striking manner, different species of animals. Among these was a hunting-piece, exhibiting wild beasts, each four cubits in height, and in the centre a portrait of Semiramis on horseback, in the act of throwing her javelin at a leopard; while her husband, Ninus, appeared in close contest with a lion which he had pierced. This palace contained, among other specimens of magnificence, three rooms of brass, one under each gate, where certain festivals were celebrated, and which were opened by a mechanical contrivance. To this palace, the hanging gardens, so often mentioned by the Greeks, and with such admiration, were afterwards attached.

Temple of
Belus.

Semiramis erected a temple to Belus, in the midst of the city, which stood in the immediate vicinity of the ancient palace. It was remarkable for the height of one of its towers, of which there were eight in the whole, built one above the other. According to Herodotus, it was a square at the foundation, of a furlong on each side, or half a mile in the whole circuit, and a furlong in height. The writers of the Universal History have observed, that "the words of Herodotus are *Ex πύργῳ δὲ τῶν ἑπτὰ πύργων ἀνέβαινον, ἀπὸ τοῦ πύργου αὐτοῦ εἰς τὸν πύργον, καὶ ἐκ τούτου τὸ πύργον αὐτὸς πύργος ἐπὶ τοῦ πύργου, καὶ ἐκ τούτου πάλιν εἰς τὸν πύργον, καὶ ἐκ τούτου πάλιν εἰς τὸν πύργον*." In the midst of the temple a solid tower is built, of a furlong in length, and

as much in breadth; and upon this tower another tower is erected, and another again upon that, and so on to the number of eight towers. It is true, the word *πύργος* which we here translate *tower*, may also signify *height*; but some authors having thence supposed, as the construction seems to require, that the first tower was a furlong high, and concluding the other seven to be of equal height, have made the whole a mile high; to avoid which extravagant consequence, it seems more reasonable to understand Herodotus as we have rendered the passage, unless the furlong be taken for the height of all the eight towers." (*Ant. Univ. Hist. vol. i. b. i. c. 2.*) It appears to us, that the construction of the passage will not allow this last conclusion; for whether the word *πύργος* be rendered *height* or *length*, it evidently refers to the first tower; and it is expressly said, that "another was built upon this," and so on. We conclude, therefore, that these words of Herodotus refer to its length and its breadth, without adverting at all to its height, which Strabo says was also a furlong, or 660 feet. According to this last-mentioned author, it was exactly a furlong every way. As this erection must have exceeded the elevation of the largest of the Egyptian pyramids, Bochart considers it as the identical tower which was built there at the confusion of tongues. The ascent to the top was by stairs on the outside round it. In the different stories were rooms of great extent, having arched roofs supported by pillars; and over the whole was an observatory, which suited the astronomical turn of the Babylonians. The chief purpose, however, to which this temple was devoted was that of the worship of the god Belus, or Bael, as well as several other gods, to whom chapels were appropriated in different parts of the tower, which contained immense riches in statues, censers, cups, and sacred vessels of massy gold. On the top Semiramis placed three golden statues, of Jupiter, Juno, and Rhea. That of Jupiter was forty feet high, and weighed a thousand Babylonian talents, each talent being equal to seven thousand Attic drachmas. The statue of Rhea was of the same weight, and sitting on a golden throne, with lions at each knee, and two serpents of silver, weighing thirty talents each. The statue of Juno was erect, like that of Jupiter, and weighed eight hundred talents, grasping a serpent by the head with her right hand, and in her left holding a sceptre enriched with gems. A table of beaten gold was common to these three divinities, forty feet in length and fifteen in breadth, of the weight of five hundred talents. On the table were two globes, of thirty talents, and two censers of five hundred talents each, and three vases, or bowls, of prodigious magnitude and value: the one appropriated to Jupiter is said to have been twelve hundred Babylonian talents in weight. The calculation of Diodorus makes the riches contained in this temple to amount to six thousand three hundred Babylonian talents of gold. Kollin observes the sixth part of six thousand three hundred is one thousand and fifty; consequently, six thousand three hundred Babylonian talents of gold are equivalent to seven thousand three hundred and fifty Attic talents of gold. Now seven thousand three hundred and fifty Attic talents of silver are worth upwards of two millions and one hundred thousand pounds sterling. The proportion between gold and silver, among the ancients, we reckon as ten to

Oiticik.

Semiramis further adorned her capital with a remarkable obelisk, which was hewn out of the mountains of Armenia, and which, having been conveyed to the river by an immense number of oxen and asses employed for the purpose, was transported to the city, and made to occupy a conspicuous place in the vicinity. Its dimensions were a hundred and twenty-five feet in height, five in breadth, and five in thickness.

Although the construction of so stupendous a place as Babylon might seem, to all ordinary calculators, amply sufficient to occupy the time and attention of one reign, however distinguished, and however prolonged, yet this extraordinary woman built several other cities along the banks of the Tigris, for the purposes both of magnificence and utility, as they afforded facilities of intercourse with the different parts of her empire.

Passage

through

Media.

Peaceful and laborious occupations did not long furnish scope enough for the coterprising ambition of that mind which now ruled the Babylonish empire. Assembling a numerous army, Semiramis marched at the head of it into Media, and at her first considerable encampment, near a mountain called Bagistan, she arranged a beautiful garden twelve stadia in circumference. At the base of the mountain she had a statue erected representing herself attended with a hundred of her guards. It is reported of her, that she ascended from the plain to the summit on the packs and loads carried by the beasts of burden in her train; a circumstance by no means unlikely, being quite in unison with her adventurous and heroic character, and eminently calculated to advance her reputation in such an age and country. Always intent upon whatever might conduce to throw a magnificence around her name and dominion, at the next encampment, which was at Chaon, a Median city, she formed another garden on the summit of a lofty hill or rock, and added several splendid edifices, from which she might command a view of her army and the widely-extended prospect that stretched before the eye in every direction. She is accused of having devoted much time at this place to voluptuousness; a voluptuousness, too, which was associated with wanton brutality; for whoever acquiesced in her criminal solicitations was immediately afterwards put to death, no doubt with the political design of preventing all possible chance of accession to influence and empire. Ecbatan, or Ecbatana, was the next halting place, in the way to which the queen cut a passage through a precipitous mountain, called Zarcusum, or, as some represent it, levelled it to the plain, though of considerable extent; and upon her arrival at the city, proceeded upon her usual magnificent plan of erecting something to perpetuate her name and glory. In the present instance, this was a palace of great extent and splendour; to which work she added others of more importance, as the formation of aqueducts to supply the city with water, of which it had hitherto been in extreme need.

Persia.

Semiramis proceeded hence into Persia, and traversed the rest of her Asiatic provinces, every where erecting palaces, towns, and cities, levelling hills that obstructed her course, or were calculated to impede the progress of the future traveller, and, in the more cham-

paign countries, raising up hills to diversify the scene, and to serve as memorials of her principal commanders. These were generally called the "Works of Semiramis," and long survived her.

Semiramis.

A. M.

2789.

B. C.

1215.

Egypt.

From Asia she passed into Egypt and the sandy tracts of Libya. Her curiosity induced her, while in these parts, to pay a visit to the celebrated temple of Jupiter Ammon, for the particular purpose of making inquiry of the oracle how long she had to live. The answer was little calculated to afford her satisfaction, unless her personal comforts were of inferior consideration to her posthumous reputation. She was told, as Diodorus Siculus reports, that she should die when her son Ninyas conspired against her life; and that, after her decease, some of the nations of Asia should render her divine honours.

At length she marched back again to Bactria, after settling the affairs of Ethiopia; but her restless spirit was unable to remain inactive and tranquil. New projects presented themselves to her imagination, which she hastened to carry into execution. India, of whose immense riches and boundless fertility she had been informed, attracted her first, and, as it proved, her last attention. She appointed Bactria as the place of rendezvous for an army of prodigious magnitude, which she assiduously collected out of every province of her empire. The choicest men were every where selected, and shipwrights from Phœnicia, Syria, Cyprus, and other places, were employed to frame vessels, which she proposed to transport over land in detached pieces, in order to cross the Indus. The reason of this measure seems to have been the information that the banks of that river, and the vicinity in general, were infertile in wood, which circumstance might have occasioned a considerable hindrance, if not a total frustration of her enterprise.

Having found that the Indians relied upon their elephants, in which their strength was considered as chiefly consisting, Semiramis devised a very singular expedient. To meet her adversary on equal terms, at least to impress him with that sentiment respecting her preparations, she determined to attempt an imitation of these elephants, since she had no means of procuring them, and accordingly caused three hundred thousand oxen to be slaughtered, distributing their flesh among her necessitous subjects. This being done, she ordered their hides to be stuffed, and so placed upon camels that these animals might resemble elephants in their size; and, to complete the delusion, each one was to be led by a man, according to the Indian method of advancing to battle. Perseus, long after, is said to have employed a similar stratagem against the Romans.

Imitation of the elephants.

Such preparations for war could not long remain concealed from the party against whom they were destined; and accordingly, the Indian king, by name Stabrobates, as soon as he obtained information of the projected invasion of his territory, diligently applied himself to every precautionary measure. He assembled an army which he thought might be competent to meet the sharp encounter with that of Semiramis, and, in fact, which greatly exceeded it in point of numbers; and having dispatched his hunters in every direction, procured a fresh and large supply of elephants. That nothing might be defective, he constructed four thousand boats of the banyans which the rivers of India furnish in abundance.

1215.The prepara-
tions of
StabrobatesVictory
over Sta-
brobates.Combat of
Semiramis
with the
Indian king.

Thus prepared for the attack, Stabrobates, however, did not neglect any proceeding which might tend to avert the threatened calamity and spare the fatal consequences that must necessarily attend upon the commencement of hostilities. He accordingly dispatched ambassadors to the invading army to demand the reason of the meditated attack, to inquire who she was, and to upbraid her for this unprovoked act of aggression. A private letter was communicated at the same time to the queen, in which her character was by no means spared, and in which, in case of victory, she was threatened with the most cruel death. This only excited a smile, and she desired the king's ambassador to return for answer, that she would, in a little time, let him know who she was, that her actions would soon make him better acquainted with her. Advancing to the river Indus, she immediately attempted the passage by means of boats prepared for the purpose, notwithstanding the show of resistance which the enemy made on the opposite shore. The two fleets encountered each other, and animated with an equal courage, the contest was long and sanguinary; the one party was fighting for glory, and stimulated by the recollection of a splendid succession of past achievements, the other, for hereditary empire, which an insatiable ambition was endeavouring to wrest from a just possession. Victory for a considerable time seemed to hover between each hostile armament, till at length she descended amongst the invaders, who sunk a thousand of the Indian boats, and captured an immense multitude of prisoners. Before quitting the vicinity of the river, the conqueror had taken from the various villages and towns no less, it is said, than a hundred thousand. Success stimulating her activity, Semiramis pressed forward into the country in pursuit of her fugitive enemies,—fugitive, as some report, by stratagem, and for the purpose of decoying the queen into circumstances from which she would not be able to extricate herself. It seems probable, however, had this been the real plan of the Indians, the passage of the river and the possession of the opposite banks would not have been so fiercely contested, and consequently, that necessity, rather than cunning, dictated a hasty withdrawal of the Indian forces. Be this as it may, the queen, having left a division of sixty thousand men to guard the bridge of boats which she had constructed to cross the river, marched into the heart of the country. Her array of counterfeit elephants at first struck terror into the Indian army; but their fears were soon dissipated by the treacherous information of certain deserters, who gave them an account of this stratagem, and re-inspired them with courage. Facing about, therefore, to meet their pursuers, a second battle ensued. Some advantage was at first obtained on the side of Semiramis; the horses of the enemy being thrown into confusion by the unusual scent of the hides, which the queen perceiving, commenced a furious attack, and drove them back upon the main body. The Indian infantry, however, under the immediate command of Stabrobates, and supported by their elephants, advanced to battle with great regularity and firmness. The counterfeit elephants of Semiramis soon proved not only useless, but obstructive, and contributed materially to a speedy and most disastrous defeat. The two chiefs of the respective armies now met in single combat, the Indian prince having advanced at the head of his right wing,

on a stately elephant, while Semiramis charged in front of her left. The king wounded her in two places, first in the arm with an arrow, then, as she was turning to retreat, finding the day irretrievably lost, in the shoulder. The swiftness of her horse, however, enabled her to escape the mortal wound, and she hurried back with her whole army to the river which she had so lately passed amidst shouts of triumph. She was indebted to two circumstances for her ultimate escape; the one, was the superstition of her pursuers (Stabrobates having been warned, as he gave out, against crossing the river, by an oracular interdiction); the other, by a judicious manoeuvre of her own; for so soon as the main body of the army had effected the passage, and many of the Indians were rushing over in pursuit, the queen ordered the bridge to be destroyed, which instantly placed her in circumstances of security, while many of the enemy perished. She suffered a prodigious loss, not only in the battle, but on the brink of the Indus, in consequence of the excessive crowd of her fugitive army, who trampled each other to death, or forced multitudes of their companions into the river. An exchange of prisoners now took place, and the disappointed invader retreated, with only one-third of her original army, to console her ambition at Bactria.

Her death.

This ended the glory of Semiramis, and, soon after, her life. One of the eunuchs of her palace had inspired her own son with the desire of poisoning his mother. When she discovered the conspiracy, she did not proceed to punish the offenders, from her recollecting, as it is said, the oracular prediction of Jupiter Ammon, and deeming it the express appointment of heaven that at this time she should die. She accordingly relinquished the government in favour of her son, and issued proclamations to her subjects intimating her desire that he should be received as king. Her retirement seems to have been partly compulsory and partly ambitious, for she wished to have divine honours paid to her, in consequence, as the oracle had expressed it, of "vanishing from the sight of men." It was given out that she left this world in the form of a dove, attended by a flock of those birds which settled on her palace at the very crisis of her departure; in consequence of which the Assyrians worshipped the dove ever afterwards. She died at the age of sixty-two, after having reigned forty-two years over the greatest portion of Asia.

Justin gives a different account. He represents Justin's account of her death. Semiramis, after the decease of her husband, as being fearful of entrusting the government to her son because of his youth, and equally apprehensive of incurring danger should she venture openly to assume the reins for herself, ruled in the name of Ninyas, and at length falling violently in love with him, he slew her in consequence of her attempts to engage him in a compliance with her criminal intentions. There is something, however, both unnatural and improbable in this statement, although she must be allowed, by the corresponding testimony of all historians, to have been sufficiently addicted to all the guilty forms of pleasure.

The life of Semiramis seems attended with no inconsiderable difficulty, from the extraordinary actions attributed to her, and which appear to be incompatible with the general state of military science at the time; indeed, they rather assume the air of romance than comport with the sober realities of genuine history. It

She is wounded,
and escapes.

Biography. is not unlikely that the Greek writers may have blended into one the actions of many, and invested a single reign with the splendour and glory which, in point of fact, might to have been distributed over a much more extensive surface of history, partly from ignorance and misconception, and partly from the inveterate love of the marvellous. It is well known that they did this in reference to most of their distinguished characters; the achievements of many eminent men, even of different ages and centuries, being concentrated in one favourite hero. "That there was such a woman as Semiramis," observe the authors of the Universal History, in a note, "we doubt not in the least; but that there ever was a woman, of any name, that performed actions like what is here reported, is impossible to believe. Her birth, her elevation, her reign, and her death, are all extraordinary, unnatural, and impossible, as related by the bulk of historians; but above all, her antiquity, which is exaggerated so monstrously by Joseph Scaliger and Ruvembert, is a matter so easily disproved by the circumstances of her birth and country, that it were sufficient to destroy whatever other extravagance is advanced of her. Canon makes her to have been the same with the Atossa, or Semiramis, who reigned twelve years with her father Belochus, the eighteenth king of Assyria, according to Eusebius; and, in the same place, calls her the daughter, and not the wife of Ninus; though copies, it must be confessed, differ in the reading, and have sometimes *mother* instead of *daughter*. But this latter is to be preferred, because of its congruity with the author's meaning, who makes her the Atossa of Belochus, who were confessedly daughter and father. Belochus then must have been the Ninus of Ctesias; and he, instead of being the first or the second king of Assyria, is, according to Eusebius, the eighteenth king; this takes much from the antiquity of both; and we are ready to subscribe to the same; and the rather, as it may be observed hereafter, to quadruple with Herodotus, and is much more conformable to what we know of the true and more certain history of this monarchy."

Her character.

Whether the actions recorded of this remarkable woman be truly attributable to an individual, or form rather

a concentrated view of the achievements of several distinct sovereigns, enough may be gathered to prove the general spirit and character of Semiramis. Whatever be her precise chronology and history, it is evident she possessed a masculine mind, and that native force of character which gives to certain persons an unquestionable superiority over others by whom they are surrounded, and enables them, when elevated to commanding situations, in some degree, to direct the destinies of empires. It is said of Semiramis, by Valerius Maximus, that her very presence was sufficiently overawing at once to quell sedition among her people. One day, in particular, when she was engaged in dressing, she received information of a tumult in the city. Upon this she sallied forth with her head half-dressed, and in that condition addressed the populace, and completely tranquillized the crowd, and dispersed them. A statue was erected in commemoration of this singular achievement, representing her in the attitude and habit in which she is stated to have gone to the scene of riot and confusion.

Ambition was obviously the predominant feature of her character, and to the insatiable glory with which it adorns the career of conquest, she devoted the principal years of her life. Regardless of the welfare of others, her chief delight seemed to consist in conquering nations, and in sending her name to the remotest corners of the globe. Every thing was undominated to the gratification of her passions, but especially her love of fame. No risk was thought too considerable, no expense too extravagant, no trouble too prodigious, to secure empty distinctions, to impress her contemporaries with a sense of her greatness, and to leave the traces of her magnificence for the study and the wonder of an admiring posterity. Alas, how vain, how foolish, are the schemes of mortals! Her name is indeed recorded on the historic page, and mighty actions are attributed to her; but still they are involved in such obscurity and uncertainty, that they can scarcely be called her's; and the progress of light and knowledge has rather shown them to be worthy of contempt, than meriting our admiration and applause.

Anecdote of Semiramis.

N I N Y A S.

Biography. NINYAS was the successor of his mother Semiramis in the government of the Assyrian empire, and according to the concurrent testimonies of Diodorus Siculus, Athenæus, Justin, and other historians, abandoned himself to the most slothful inactivity, and most vicious self-indulgence; averse to martial exploits, and intent only upon the pursuit of every means that might be supposed capable of conducing to his own gratification; he withdrew from his subjects, with whom he only held occasional intercourse by messages, and shut himself up in his palace with his eunuchs and concubines, and cherished a perfect indifference with regard to the happiness of his subjects or the prosperity of his empire.

As a necessary measure of policy, however, he is represented as raising an army out of the different provinces of his empire by a conscription, which he placed under the direction of proper officers. This army was kept at Nineveh, and the vicinity, and was annually dissolved and renewed by the substitution of new troops, who were engaged only for a year's service. The design of this arrangement is sufficiently obvious; an army was requisite to his security in case of foreign invasion or civil commotion, and the periodical change provided for in its constitution was calculated to prevent the mischiefs that might otherwise have arisen from a regularly organized conspiracy against his person or

Sardanapalus.

Babylonian
of Arbaces.

power. To an inglorious life succeeded an unlamented death. His successors, however, during the long period of twelve hundred years, and thirty reigns, so closely imitated his example, that their history is buried in total obscurity, not even traceable by a single instance of honourable character or great achievement. All is a total blank and waste, till we reach the not less contemptible, though more known conduct of the last, perhaps the basest of them all.

SARDANAPALUS succeeded to the empire only to present a more perfect specimen of effeminacy, sloth, luxury, cowardice, crime, and elaborate folly, than was perhaps ever before exhibited to the detestation of mankind. Like his inglorious predecessor, the first of this effeminate dynasty, he secluded himself in his palace, assumed the dress of a woman, and imitated her voice, painted his face, spun, and in short utterly disgraced his nature by the most unbounded licentiousness and the most outrageous depravity.

Arbaces, the governor of Media, having been personally witness of his excesses in consequence of obtaining access to the palace, was inflamed with the resolution to put an end to his dominion, and instantly entered into a confederacy for the purpose with Belesis, viceroy of Babylon, who strengthened him by this assurance, which, as a priest and an astrologer he considered himself entitled to give, that he should be the instrument of dethroning the infamous Sardanapalus, and ascending his throne. Thus supported, as they both believed, by heaven itself, they began the revolt; the one by stirring up the Medes and Persians, the other by exciting dissatisfaction among the Babylonians. Having also gained over the king of Arabia, and secured his active co-operation, the conspirators secured the army, which was now newly raised at the expiration of the year, and which amounted to about four hundred thousand men. The king being apprised of these proceedings, was somewhat roused from his voluptuous dreams by a sense of personal and immediate danger, and contriving all the forces he could combine in this emergency, led them out to encounter his rebellious subjects. He was victorious in three successive battles, in the last of which, after using every effort in vain to prevent defeat, with all its consequent calamities, Arbaces was severely wounded. After the first victory, a reward was offered of two hundred talents of gold to any man who should kill him or Belesis, and twice that amount to any one who should bring either of them alive to the emperor. But from all the impending dangers with which they were threatened they effected their escape.

The discouragement which oppressed the mind of Arbaces would now have totally prevented any further attempt, and had, in fact, occasioned great hesitation, during the intervals of these successive victories on the part of Sardanapalus, had not the astrological predictions of his confidant saved him from despair. Belesis persisted every night in consulting the stars, and, after the last engagement, most solemnly assured the confederated troops, the next morning, that in five days they would be aided by a support which at present they were unable to imagine or anticipate, the gods having given to him a decided intimation of so desirable an interference. Whatever were the sources of

his information, the truth was, that in a short time the Bactrians, breaking the fetters of servitude, sprung into the field, and joined Arbaces and Belesis. It is stated that this assistance was procured, as indeed it is most likely, by the urgent and reiterated applications of the confederated princes. Of this transaction Sardanapalus remained ignorant, and occupied himself in the mean time in arranging a sacrifice, and a festival for the army with whom he had conquered his enemies. This account of his proceedings revived the hopes of Arbaces, who having taken his measures with a characteristic sagacity and prudence, surprised the camp of the emperor, and rushed forward almost to the very gates of the city.

Sardanapalus now escaping from immediate danger, entrusted the conduct of the army to his brother-in-law, shutting himself up within the fortifications. After being twice defeated, the army was nearly annihilated, and the emperor was, in consequence, closely besieged, while the conspirators received large accessions of strength from the revolt of other provinces; but he buoyed up his spirits by confiding in a prediction that "Nineveh could never be taken, till the river became her enemy."

The city being abundantly supplied with provisions, the confederate forces remained two whole years before it without producing any visible impression, till the Tigris, at length, being swollen by unusual quantities of rain, overflowed twenty stadia, or two miles and a half of the wall, and thus made a practicable breach, which their whole art before had been unable to accomplish. Sardanapalus at once comprehended his danger, and, his last hope being thus unexpectedly extinguished, he fled into his palace, and ordering a vast pile to be reared in the court, on which he accumulated all his treasures, amounting to a prodigious value,* and close to which he placed his eunuchs, his concubines, and, lastly, himself, he set fire to it, and perished amidst the splendid ruins. The conquerors destroyed the city, but treated the inhabitants with great moderation. Such was the termination of the Assyrian empire.

Sardanapalus is said to have ordered two lines to be put upon his tomb, which imply his having taken with him all he had eaten and all the pleasures he had enjoyed, leaving the rest behind; an epitaph, as Aristotle very justly observes, fit for a hog. These lines were as follow:

Hæc habeo quo edî, quoque exornata libido
Hæc ut illis jaceat moesta et præcæta relicta.

Plutarch, in his comparison of Semiramis and Sardanapalus, in his second treatise, written in praise of Alexander the Great, mentions a statue erected to the latter, after his death, representing him in the posture of a dancer, with an inscription, in which he addressed himself to the spectator in the following sentence:—*Εἴθε τὸν ἀποπνεύσαντα τὰν δὲ μέν, ἰ. e.* "Eat, drink, and be merry: every thing else is nothing."

* Athenæus represents these treasures as worth a thousand myriads of talents of gold, and ten times as many talents of silver; that is, fourteen hundred millions sterling. This is, however, utterly incredible; and we have before intimated our hesitation with regard to the whole story, particularly this last tragic adventure. See *Journ. Chap. on History*, page 67.

HOMER AND HESIOD;

WITH A GENERAL VIEW OF THE EARLY GREEK POETRY.

LINUS, WHO FLOURISHED ABOUT	A. M. 2724.	B. C. 1280.
ORPHŒUS,	A. M. 2744.	B. C. 1260.
MŒRUS,	A. M. 2824.	B. C. 1180.
HOMER AND HESIOD,	A. M. 3097.	B. C. 907.

Biography. If our judgment of the poetry of Greece were solely to be formed from the works which have reached us, we should believe that it arrived at once at a high degree of perfection. The poems of Homer are the most ancient of all the undisputed pieces of that poetry which time has spared; at least, if we suppose them older than those of Hesiod. It cannot, however, be doubted that verse existed in Greece long before the time when the Iliad and Odyssey were sung by the wandering rhapsodists: for poetry has always its birth in the infancy of the social state, and will be uniformly found, as the means of celebrating or transmitting events, to have a higher antiquity than prose. The reason is obvious. Before the art of writing became widely diffused, or generally practised, the recurring cadences and harmonious flow of numbers enabled those who heard, to retain them in memory. Thus whatever the historian desired to transmit, or the moralist to teach, was thrown into that form, by which alone it had any chance of surviving. The tales relating to the existence of the gods, were preserved by the art of the religious teacher; the old traditions relating to heroes and ages, by that of the patriot. But it does not follow that the verses thus dictated rather by necessity than a desire of excellence in the poetic art, displayed any of those qualities which we now admire in poetry. Many of them were harsh and rude from the very nature of their materials, of which abundant instances may be seen in the remaining works of Hesiod.

But the channel was thus prepared in which the stream of genius might flow. The opportunity was given to a mighty mind to pour forth the images and thoughts which crowded upon it in regular song. He who felt the principle of immortality within him, observing that verse made indifferent things perpetual, might seek to acquire for his own noble conceptions an immortality by the same medium. Thus the intuitive power of genius found a form for its reception, in which it could be rendered permanent, and secured from the injuries of time, for the admiration of more enlightened ages.

The early attempts of the poets in Greece have not reached us, probably on account of the great commotions which took place in that country soon after the Trojan war. In less than a century after that event, while Theseus, the son of Orestes, reigned in Mycenae, the Dorians, a half-barbarous race, invaded the Peloponnesus. They destroyed the civilisation just beginning to increase, drove many of the old inhabitants into exile, and brought back those who remained under their dominion, to the rude and barbarous state

from which they were emerging. Of the manner in which this important revolution was effected, we know little; but it is established beyond question, that it took place between the destruction of Troy and the empire of the Medes, in Asia. The inhabitants who were driven from their homes, passed over into Asia, and there occupied considerable regions along the shores. Some of the traditions, and even poems, which, in their time, were admired, might probably have been taken with them in their banishment; but the barbarism which afterwards overspread Greece, proved fatal to most of her former productions. By degrees, however, the Peloponnesus began to recover from the effects of this invasion, and the Grecians who had left their country, returned to it again, in order to seek refuge from the Persian arms. When Grecian civilization had advanced, much curiosity was excited respecting the poets who had flourished before the interruption of tranquillity, or who had promulgated their works in Ionia, and the islands, during the interval. It was perfectly accordant with the genius and character of the Greeks, that the want of authentic history relating to these persons, whose names were still held in reverence, should be supplied by the aid of fiction. The obscure traditions remaining of early bards, philosophers, and musicians, were modelled so as to gratify the national pride, and to advance the popular religion. Very little credit is to be given to the details of Grecian history, especially where the poets are concerned—before the era of the Olympiads. If so little was certainly known respecting Homer, who flourished in a comparatively recent period, how can we give very implicit belief to the tales respecting Linus, Orphæus, Mœrus, Eumolpus, and others, who are said to have adorned a much earlier æra? Incredulity was never the fault of the Greeks, nor historical research a very favourite pursuit with them. "*Quicquid Græcia mendax enudet in historia*," implies an accusation which the attentive enquirer will soon perceive is not unfounded. And though we may not entirely reject the accounts of early bards, on the ground of the manifest fictions with which they are mingled, it must be confessed that there is very great difficulty in selecting any single fact respecting one of them before the Trojan war, on which we can implicitly rely.

Fabrizius has, with indefatigable zeal, collected a number of fragments, and accounts of those authors, who have been supposed more ancient than Homer. Most of them have been generally regarded by the learned as forgeries, originating in the love of gain, and encouraged by the credulity of the Greeks. The compositions have, generally speaking, little intrinsic excellence to

recommend them. Perhaps, therefore, on the ground of mere poetical delight we have not much to regret in the effusions which are lost. In the works of Homer, which are now in our hands in a state of some apparent unity and completeness, we find a splendor of imagination to which there is not the least approach in the Orphic verses, or any other pieces of professed antiquity, excepting in the poems of Hesiod. The probability, then is, that all preceding or contemporary writers were far inferior to him. It is not, therefore, wonderful that they should have perished, and that he should endure. Real excellence, however first made known, is almost sure to be lasting. It appeals to natural beauty and truth, the taste for which is the same in every age, and depends not on the caprices of fashion. It sinks deeply into the hearts of those who are able to feel it, who are not very likely to allow it altogether to be forgotten. We may find some consolation in believing that the works of the oldest bards of Greece would have been preserved had they been worth preserving. Probably they were, for the most part, less the effusions of genius than the records of wise precepts, maxims of prudence, and inculcations of religious duties. In this case, they would naturally sink whenever the matter they contained could, from the advances of the arts of writing, be more effectually diffused in prose. At all events, no theory can reasonably be founded on data so uncertain as the vestiges of the ante-homeric writers afford us. We shall, therefore, do little more than allude to them; and hasten on to consider the great body of poetry—the “mighty orb of song”—from which a lustre has been reflected on all succeeding ages.

Linus.

LINUS is the first of that chain of bards to whom the blind reverence of Greece was directed. Some, indeed, represent him as the scholar and not the master of Orpheus; and this opinion seems countenanced by the declaration of Plutarch that the latter was not indebted to the instruction of any, but composed entirely from the feelings of his own mind. The traditions respecting Linus are so contradictory, that some have supposed there must have been three distinct persons of that name; one of them the son of Urania and Amphimarus, the son of Neptune; another the son of Apollo, and Psamathe daughter of Crotopus king of Argos; and a third the son of Ismenius a Theban. According to Diogenes, Linus the poet was the son of Mercury and Urania. All these accounts are evidently fabulous. The age of Linus is fixed by Archbishop Usher 1280 years before the Christian era. Eusebius speaks of him as having flourished before Moses. Herodotus represents him as being celebrated among the Egyptians from still more remote periods. He is mentioned by Homer in the eighteenth book of the Iliad, or, at least, is understood to be commemorated by a hard introduced among the pictures on the shield of Achilles; and is said to have added the string Lichanos to his Mercurian lyre. Diodorus Siculus represents him as being the inventor of music and of poetry, or, at least, as having first introduced these arts into Greece. He is said also to have written treatises on religious rites, and to have composed a work in honour of Bacchus. The most common report of his death is that he taught Hercules to play upon the lyre, and was so enraged at the dullness or inattention of his pupil that he struck him, which so incensed the youthful hero that he seized the lyre and beat out the brains of his master.

According to Diogenes Laertius, however, he was killed by Apollo for presuming to boast of equal merit with that deity. It is not for us to decide these nice and unimportant controversies.

Festivals called Linia were observed in many parts of Greece, in honour of this early musician and bard. Plutarch speaks of dirges as having been performed to his memory, but no authentic account of them remains. It is, indeed, as we have seen, a matter of considerable doubt whether the name Linus designates one individual or several;—and in the latter case, which seems most probable, it is impossible to distinguish between the incidents to be ascribed to each person to whom the appellation belongs.

ORPHEUS, the next in chronological order, is the most celebrated of all the names in Greek poetry, before the age of Hesiod and Homer. To him have been ascribed not only the highest honours of a poet, but the fame of a musician, of a moral teacher, and of a founder of religious rites: he is said to have moved the rocks and trees, and to have charmed away the ferocities of wild beasts, by the sweet magic of his song. He brought Wisdom into Greece, and “married her to immortal verse.” He is said to have incited the Argonauts to row by the sound of his lyre, and even to have allured the sirens by the melody of his numbers: in short, he is represented as the parent of all that was afterwards held most sacred in Greece; to have taught civilization and the arts; to have gently beguiled men from the savage to the social state; and to have harmonized at once the language and the morals of the people among whom he sung.

All the accounts, however, respecting him are evidently mixed with fable; and Cicero, in one of his dialogues, quotes the third book of Aristotle's Poetics, which has not descended to us, expressing the opinion of that philosopher, that no such person ever existed. Herodotus, too, seems to imply that no poets existed before Homer and Hesiod, and that those who were commonly regarded as earlier, came in reality after them. The general consent of antiquity seems, however, to be decidedly favourable both to the existence of Orpheus and the antiquity of the period in which he flourished. Plato and Isocrates speak of him as a real and historical person, and not as a mere hero of fable. Diodorus Siculus was evidently of the same opinion. The Christian fathers, when Celsus represented him as superior, to Christ, did not treat his being as fabulous. On the whole, therefore, it seems reasonable to believe that such a poet did exist in the earlier times of Greece, though very little reliance can be placed on any of the tales respecting him.

It is scarcely possible to fix the age in which Orpheus lived, with any degree of certainty. According to Apollonius Rhodius he engaged in the expedition of Jason to bring the golden fleece from Colchis. It has been usual to place him at the Trojan war, about the year before Christ 1260, a period of which we have no certain records, and scarcely any probable intimations, excepting such as the incidents connected with his name may afford us.

It is universally believed, that the poet was by birth Thracian. Sir Isaac Newton thus traces his family: “Rescued passing over the Hellespont, conquers Thrace; kills Lycurgus, king of that country, and gives his kingdom, and one of his singing women to Egeus, the son of Tharops, and father of Orpheus; hence Orpheus

Doubts of
his exist-
ence.

opinion.

Biography. is said to have had the muse Calliope for his mother.* It is generally believed, that he was the son of Cægus, or Egeus, a Thracian. It seems, according to Diodorus Siculus, that he learned from his father the first principles of the religion which he afterwards taught, and that he was instructed by him in the Bacchic mysteries. Linus is said to have been his master in poetry and music. His opinions on religious subjects, were modified among the Idoi Daetyli, in Crete, of whom he became a disciple. All writers agree, however, that it was in Egypt, the land of superstition and of science, that he learned the chief of those doctrines which he afterwards taught, and of those ceremonies which he instituted in Greece. At length, having completed his researches into religion and morals, he returned to his own country, and began to inculcate the opinions he had finally adopted.

What these were, by no means clearly appears. As far as we can trace them, they seem to have been mystical; and probably, his purer notions respecting the Deity and the soul were embodied and hidden in ceremonies and personifications, which soon became the sole relics of his exertions. It is far from improbable, that in Egypt, some traces of the Mosiac History had reached him, as well as the doctrine of the unity of God, of which the Jewish people were the guardians. These he probably regarded as too subtle and refined to be conceived by the people, or too æthereal and unearthly to obtain their assent; and, therefore, he shadowed them both in mysterious and mythological tales, which were believed in their literal sense, after their spiritual meaning was forgotten. Certain it is, that the Platonists and Pythagoreans, who had far more rational and sublime ideas of the Deity than the common people of Greece, spoke with reverence of him, and even attributed their own views of truth to the principles which he had last taught. In some respects there is a remarkable coincidence between the superstitions attributed to Orpheus, and those which Pythagoras so long afterwards adopted. He rejected altogether the flesh of animals as food. He particularly refused eggs with abhorrence, as containing the principle of life. Various hypotheses, sufficiently fanciful, have been started, to explain the grounds on which he refused these aliments. Some have supposed, that as the Eleusinian mysteries were instituted in honour of Ceres, the goddess of agriculture, he abstained from eating the flesh of oxen, on account of their high utility in the culture of the soil. This supposition explains, at most, only an abstinence from one particular species of flesh. Some have said, that as these mysteries were derived from those instituted in Egypt, in honour of Isis and Osiris, this refusal of animal food was in reverence of Aps. While others, again, have imagined that the Thracians at that time were cannibals, and that their great civilization could only prevent them from devouring human victims, by a general prohibition of every kind of animal subsistence. The ceremonies afterwards adopted for raising the shades of the departed, called *ecstasies*, of which there is so singular an instance in the *Odyssey*, have been ascribed to him; but if he were really their author, the circumstance would rather tend to weaken the suppositions of those who believe him to have taught purer doctrines, than those afterwards popular in Greece, and must cast a strong suspicion either on his honesty or his wisdom.

There is scarcely an art or accomplishment which

had any existence in rude times which the Greeks do not attribute to Orpheus. He was not only a great poet, musician, and divine, but an excellent physician. According to Pausanias, he could cleanse the guilty from their crimes, heal the sick of their diseases, and assuage the anger of heaven. His philosophy was "musical as is Apollo's lute." While he taught the most severe morals, he adapted them to the most enchanting strains. He, at once, rendered his country more virtuous, and embellished it with the liberal arts. Aristophanes says of him, "Ὀρφεὺς ἦν γὰρ ῥητορὰς ὁ ἡμῶν κατὰ τὴν ὁδοῦ."—Orpheus prescribed to us our prayers and holy rites, and abstinence from slaughter. Plutarch informs us that he was author of all music, except a few notes for the flute, which existed before him. He is also said to have added a string or strings to the lyre, before unknown; to have had the greatest skill in playing on that instrument; and to have first conceived the idea of the plurality of worlds. The invention of hexameter verse, and the introduction of letters to Greece have been ascribed to him. And he had time not only for these arts, sciences, morals, and rites of religion, but also for personal adventure; for, as we have already seen, he is alleged to have been one of the greatest of the Argonauts, and to have assisted in the progress of the ship by his melody.

The closing scenes of the life of this celebrated man are related in a manner which has given occasion to some of the most beautiful encomiums on the musical and poetical arts. The tale given in the fourth *Georgic* of Virgil, forms one of the most exquisite passages in all the works of that poet. There we are informed that Eurydice flying from the attempts of Aristæus on her chastity, was bitten by a serpent, and died in consequence of the poison. Her lover, disconsolate for her loss, resolved to seek her in the regions of the dead. He entered the kingdom of Pluto with his lyre, and melted by his strains those whom human entreaties had never moved before. The shades came flocking round him, enchanted by his music. All hell was ravished by his melodies; the furies were relenting and delighted, Cerberus was charmed into admiration, and the wheel of Ixion stood still. Pluto and Proserpine consented to allow his wife to return with him to earth, on condition that he would not look back on her till he had arrived again in the regions of the living. He willingly promised to perform the condition; but, unable to restrain the eagerness of his love, looked back—and saw Eurydice melt away from him never more to be granted to his prayers. Peretrated with a deeper sorrow, he returned to the earth, and found consolation only in wandering with his lyre amidst the caves and desolate places, and calling on her whom he had lost for ever. In vain the Thracian women tried to engage his affections; his heart was with her whom the grave hid from him. Enraged at his coldness, they tore him in pieces, while they celebrated the rites of Bacchus, and threw his head into the Hebrus, which, as it floated down the stream, still called on Eurydice. There are, however, other accounts of the manner of his death. According to some he was killed by a thunderbolt. The place of his interment is said to have been at Pieria in Macedonia, but the citizens of Dion and the inhabitants of Mount Libethrus in Thracæ both contended for the honour of burying his remains deposited among them. The last

Opinions of
this story.

of these claimants further declared that nightingales, more melodious than all others, built their nests about his tomb. Divine honours are said to have been paid to Orpheus, and one of the constellations to have been named after his lyre.

The great mixture of the supernatural in these accounts is, perhaps, no reason why we should suppose them totally without foundation. It is exceedingly easy to trace the way in which some of the pleasant exaggerations respecting Orpheus arose from natural events. The account of his having charmed away the ferocity of wild beasts; stopped rivers in their course; and drawn rocks and hills to listen to his songs, is little more than a figurative mode of representing the ameliorating and softening effects of his poetry on the savage tribes among whom he wandered, leading them from barbarism to civilization; from the woods to settled habitations; and from a state of dispersion to regular life. Various conjectures have been formed respecting his descent into hell, or rather into the regions appointed for the spirits of the departed. Dr. Warburton contends, with great ingenuity, that nothing more is meant by this allegory than the initiation of the poet into the Eleusinian mysteries. He supposes that while these ceremonies were confined to Egypt, the Grecian law-givers went thither to be initiated, as a kind of designation to their office, and that the ceremony would be naturally described in terms highly allegorical. He observes that this mode of speaking was used by Orpheus, Bacchus, and others, and continued even after the mysteries were introduced into Greece; as appears from the fables of Hercules, Castor, Pollux, and Theseus' descent into hell; but the allegory was so contrived as to reveal the truth concealed under it. Thus Orpheus is said to have obtained entrance into hell by the power of his harp, that is in the quality of a law-giver, the harp being the known symbol of his laws, by which he humanized a rude and barbarous people. But this theory leaves the introduction of Eurydice, who is represented as the cause of the enterprise, entirely unaccounted for, and completely alters, even as an allegory, all the circumstances of the tale. Tzetzes, on the other hand, throws out of the narrative the descent to hell, and preserves the part of Eurydice. He supposes the whole to mean no more than that Orpheus, by his great skill in physic, snatched his wife from the grave, when her life was in extreme danger. There is no occasion, however, to resort to either of these fanciful interpretations, which, while they suppose an original allegory, imply a subsequent fiction grounded upon it, since nothing can be conceived more natural than the entire invention of the incident. It was not only, in itself, of a highly poetical kind, as showing love triumphant over death, but it was in the highest degree complimentary to the poetical art. Supposing, then, Orpheus to have grieved exceedingly for the loss of his wife, to have secluded himself from society, and have sought the retirement of grots and caverns, the story of his having, in these times of seclusion, descended to meet the spirit of her he loved so well, might easily be framed, and obtain credence from the people, who regarded him, doubtless, as a being superior to the race of ordinary mortals. Hence, the poets would readily weave a fiction so beautiful in itself, and so honourable to their art. The account which represents him as drawing the inanimate objects and wild beasts after him, by his music,

is only brought to a climax by showing his power as Homer, &c. capable of moving hell itself, and creating "a soul under the ribs of death."

There are works still subsisting, which are ascribed to Orpheus. These consist of the *Argonautics*, an epic poem, giving an account of the expedition to Colchis; eighty-six religious or magical hymns; a treatise on precious stones; and fragments, collected by H. Stephens. It is, however, quite incredible that he left these poems in the condition in which we now read them. He cannot be supposed to have committed any thing to writing, in an age before the Trojan war; and the internal evidence of the poems shows, that, at least, the greater part of them, are works of a much later period. The *Argonautics* is a bold and rough sketch of the transactions it professes to describe, without artificial arrangement, embellishment, or order; but containing some pieces of vivid description. Orpheus, who tells the story in his own person, is there made to speak of his descent into hell for the sake of Eurydice. Now, independently of this circumstance of his having lived long after the adventure, which would contradict the story, but which, nevertheless, the poem requires, it cannot be conceived that he would relate his own death, as wishing or expecting any one to believe it. Besides, the story is manifestly the result of traditions, enlarged and heightened by time; so that the *Argonautics* could not have been written till long after the death of the supposed author. Many of the verses which bear the name of Orpheus have been ascribed to Onomacritus, a priest and soothsayer at Athens, in the year 518 before the Christian era. He was a favourite of Hipparchus, and professed to be in possession of oracular verses of Musæus, which he sold to the people. These being regarded as forgeries, he was compelled to fly from Attica, and afterwards joined in the deputation from the princes of Thessaly to Xerxes, exhorting him to the invasion of Greece. The hymns have the air of the highest antiquity of all the Orphic poems. Dr. Cudworth thinks that they are genuine, or at least contain the doctrines of the poet, transmitted through the medium of some of his disciples. It is not improbable that Onomacritus actually possessed some Orphic fragments, or verses by the scholars of the poet, which he expanded into such large portions as suited his design. Some of the alleged compositions of Orpheus seem to point to a great First Cause, in the midst of the superstitions introduced among them; and, indeed, many of them are thought to be pious frauds composed by Jewish or Christian believers. The poems on stones attribute to gems virtues and healing qualities, which, in the elder times of Grecian superstition, they were supposed to possess. The Orphic verses were collected and published by Eschenbach, at Nuremberg, a. d. 1702, and were reprinted at Leipzig, under the title of *Opuscula Orphica*, in 1764. The antiquity of the Orphic poems was called in question by Valckenær and Schneider, and maintained by Ruhnken, Heyne, and Wolf. Hermann thinks the Hymns more ancient than the *Argonautics* and *Ithica*, which last he refers to the age of Domitian. Beck's opinion is, that the *Argonautics* belong to an age posterior to Alexander the Great. They have seldom been the objects of much attention except to philosophical enquirers into the religion and history of the earliest periods of Greece.

Musæus is generally represented as the son of Mantus.

Orpheus. It is, however, very probable that he was

his works.

Biography. only his disciple. According to the Arundelian marbles, he flourished about 1426 years before the Christian era; but by more probable accounts not earlier than from 1180 to 1200 years a. c. He seems to have been much less celebrated among the Greeks than his father or preceptor; but Virgil gives him a very high rank among the poets. He places him in a conspicuous situation in his Elysium, at the head of a sacred band, and in the character of the priest of Ceres. Very little is recorded respecting his personal adventures. He seems to have led a retired and religious life, officiating most probably as a priest of some of those mysteries which Orpheus had introduced before him. Plutarch does not mention him among the ancient musicians, and he does not seem to have been much celebrated for his performances on the lyre. As his hymns were set to music, it is probable, however, that he sung them himself at the ceremonies in which he presided. Pausanias asserts that the eminence in the neighbourhood of Athens, called the Museum, was so denominated from the circumstance of his having been accustomed to retire thither for contemplation and poetical musing. He is said to have composed his hymns there, and to have been interred beneath it. He wrote hymns and prophecies, and left precepts in verse addressed to his son. He is said also to have sung the wars of the Titans. But his principal work was a poetical account of the creation, in which he seems to have embodied some ideas of religion and philosophy more refined than were commonly entertained by the Grecian theologians of after days. Diogenes Laertius has preserved a principle of the philosophy of Musæus in the words, "Ἐξ ἰσος τα πάντα γινέσθαι, καὶ τίς τ' αὐτὸν ἀναλίσκεται." It seems that he was also an astronomer, and composed or enlarged a sphere; though, as Chiron is generally supposed to have invented the sphere, it is probable that Musæus only improved it. The work itself is evidently subsequent to the voyage of Jason, as that expedition is described upon it, and as the Argo was the first vessel constructed on any other than the circular form. The life of Musæus seems to have been calm and tranquil; and was probably spent in philosophic ease. Of his works nothing remains. Even in the time of Pausanias, as we are informed by that writer, a hymn to Ceres was his only genuine composition then in existence.

Works. Musæus is said to have left a son named Eumolpus, and a daughter Helena, who inherited the poetical genius of their father. Both of them are stated to have written epic poems, and the subject chosen by Helena is stated to have been the Trojan war. She is by some regarded as having had the honour of first celebrating that mighty contest. Her brother probably became a priest of Ceres; since he wrote on the mysteries of that goddess. We have no authentic relic of his genius left us.

His children. From these dark and obscure memorials of ancient Greek poets, we turn with pleasure to him whose name has been celebrated in every age in which poetry has been held in reverence.

Homer. But here a preliminary question arises, on an hypothesis which, however, startling it might have appeared in former times, is not now to be treated with neglect or disdain. It is, that neither the Iliad nor the Odyssey is the work of a single mind; that they are two collections of the songs of wandering rhapsodists, arranged

for the first time at Athens, under the direction of Homer, or of his son. This theory reduces HOMER from a person to a name; or, at most, leaves him the fame only of a more celebrated bard among many others, or perhaps only of a more successful reciter. This opinion may be traced as high as Ælian, who speaks of Pisistratus as the compiler of the Odyssey and the Iliad. It was maintained, about the close of the seventeenth century, by Hedlin and Perrault, two French writers, but received only with derision. More recently, however, it has been advocated with great learning, by Heyne, in his edition of the Iliad; and with wonderful acuteness, research, and zeal, by professor Wolf of Halle, in Saxony (and now royal librarian at Berlin), in his *Prolegomena ad Homerum*. Since the adoption of the theory, hitherto so little noticed, by these celebrated scholars, it cannot be dismissed as an instance of perverted ingenuity or of rash conjecture. Indeed, the arguments themselves adduced in its favour, have at least, so much apparent weight in them as to entitle them to serious examination, independently of the fame of their authors. We shall proceed, therefore, to give the fullest review of the controversy of which our limits will allow.

The first object, in a case of this kind, should be to ascertain those facts in which all parties coincide. The light which external history affords us, is rather feeble and dubious. It must be admitted, that there is no fact well authenticated respecting the existence of the poems in a connected form, until we are told that they were brought into Greece by Lycurgus. Plutarch, in his life of that legislator, informs us, that in his journey in Asia, "he first had sight of Homer's poems, which were probably preserved by Creophylus, and having observed that the delightful fictions thrown over them, did not prevent the author from abounding in maxims of state policy and rules of moral action, transcribed them, and carried with him into Greece that entire collection which we have now among us. For at that time, there was only an obscure rumour in Greece of the fame of these poems, and only a few scattered fragments in circulation, until Lycurgus published them entire." Hence Cleomenes called Homer the poet of the Spartans. Besides Plutarch, Dio Chrysostom, Heracleides Pontus, and Ælian, bear testimony to the fact of the poems having, in some state or other, been introduced into Greece by Lycurgus. Heyne, indeed, contends that nothing more is to be gathered from these authorities than that the poems were preserved among the Chians by means of the recitations of the rhapsodists; and that the knowledge of their merit was brought to Sparta by her lawgiver on his return from his travels.

It seems that whatever was done by Lycurgus fell very short of exhibiting the poems in that state in which even the Greeks afterwards possessed them. For a number of writers agree in declaring that the honour of this noble work belongs to Pisistratus, or to some of his family. Very shortly before Pisistratus was invested with the supreme power, Solon made a law for the recital of the poems; and is even said to have directed that this office should be performed, not by repeating them in fragments, without regard to the progress of the story, but in some order of regular succession. How far this order corresponded with that in which the works of the Iliad and Odyssey are now arranged, does not appear. Cicero decidedly gives the honour of

Collection of Homer's works.

Biography. the arrangement to Pisiastatus, when he asks "Quis doctor namque temporibus aut ejus eloquentia literis instructor quam Pisiastatus? Qui primus Homeri libros, confusus antea, sic disposuisse dicitur ut nunc habemus."—(Cic. de Orat. l. iii.) In one of the Socratic dialogues attributed to Plato, Hipparchus, the son of Pisiastatus, is said to have performed this work, instead of his father, and is also alleged to have directed the recital of the poems at the feast called Panathæna. Leo Allatius suggests, in order to reconcile the testimony of Plato to that borne by so many witnesses, that the son completed his father's design, by publishing a more correct copy in another edition. The dialogue, however, which is thus attempted to be reconciled to other authors, has been by many regarded as spurious. This point is of little importance. Whether Solon, Pisiastatus, or Hipparchus, arranged the Iliad and the Odyssey; or whether each of them improved on the labours of his immediate predecessor, makes little difference in the state of the question. It is agreed by all, that before the time of Solon, the works were in a very different condition from that in which they now appear; and that between the commencement of his public life and the death of Hipparchus, being a comparatively small interval, some great change took place in the order of the poems, and in the mode by which they were circulated and preserved from the injuries of time.

The questions then in dispute are,—what were the materials which the editor found, and on which he worked—what were the change he effected—and whether that change were the restoration of an order and a purity which had been disarranged and corrupted, or a completely new creation from existing materials—whether, in short, the jewels were only reset in a frame from which time and barbarism had separated them, or were now first collected from a number of places in which they had been scattered by different hands?

It must be allowed that the expression of Cicero, that Pisiastatus "primus Homeri libros confusus antea, disposuisse," will not prove much, even respecting the opinion of the orator, as to their original condition. For it does not follow because the books of Homer were confused or disarranged in the time of their first editor, that they had never been composed in a regular series. Indeed the expression, *works of Homer then in confusum*, seems to imply that Pisiastatus did not divide the poems into books for the first time, or first apply to them that denomination. The other external evidence on either side is but trivial. The works must be, for the most part, their own witnesses.

The chief arguments by which the hypothesis adopted by Wolf and Heyne is supported, seem to be as follow:

1. It is exceedingly improbable that in any age to which Homer's personal existence can be referred, one man should have been capable of composing works of the extent, consistency, and poetical elevation, of the Iliad and the Odyssey. Poetry could not, like Minerva, have sprung into life in its fullest maturity, and its fairest proportions. It seems strange that in a dark age, a man of whose history nothing is certainly known, should have produced works which, in some qualities at least, no subsequent time has equalled. And it is altogether incredible that he should have enjoyed the leisure, the opportunity, and the compass

of information necessary to the completion of works of such consummate skill, as well as surpassing genius.

2. It seems impossible that poems of so great a length as the Iliad and the Odyssey should have been composed and preserved entire, without being committed to writing. Now it is certain that there is not the least trace, even in tradition, of any complete written or engraved copy of the works of Homer till the exertions of his Athenian editor, or at least till those of Lycurgus. This, supposing them ever to have been written, will appear surprising, when we consider the high veneration in which his name was held. In fact, the time when the art of writing was first introduced into Greece seems very uncertain. It has, indeed, been attributed to Palamedes and Cadmus; but every account of these persons is mixed with fable. In the Odyssey, Cadmus is spoken of as the son of Leucothea, a marine goddess, but nothing is said respecting his country or origin. Of the Cadmei, the founders of Thebes, we know as little. And the date assigned to the introduction of alphabetical characters into Greece seems altogether to defeat the tale of their origin. For, if a colony of Phœnicians under Cadmus, long before the Trojan war, had brought the use of letters to that country, it is scarcely to be believed that no trace of any literary productions, no relic of alphabetical characters, not even of any genuine inscriptions, should remain which can be referred to any but a much later period. And if the art of writing had been in common use in the time of Homer, it is strange that he should not have mentioned it. He has been thought to refer to it in the story of Bellerophon, in the sixth book of the Iliad, who is made by Prætus to bear *εγγραφα Λυγρον* with him to Iolobas, which conveyed to the latter the desire that he would bring about the death of the messenger. But these terms do not necessarily refer to *writings*. On the contrary, it is not probable that Prætus would have risked so much as to trust a letter in known characters to the party whose death he was contriving. They were, probably, symbols of a deadly and funereal import, conventionally understood by the family: a kind of hieroglyphic, the meaning of which no stranger could decipher. When the Grecian heroes are challenged by Hector, and lots are cast to decide which of those who offered themselves for the combat should be chosen, each puts a mark on his lot which is known only to him to whom it belongs. The same expression is used here as on the former occasion. It is singular that there should be no epitaphical correspondence in the Odyssey, where so many opportunities for it occur, if the means of committing intelligence to writing were generally known in the time of the author. The verb *γραφω*, properly signifies rather digging out or engraving than *writing*, as employed in modern usage. Supposing the letters to have been produced in Greece before the time of Homer, it is far from following that the art of writing was brought to a degree of perfection sufficient for the committing to some palpable tablet, works of so great a length. A long interval must have elapsed before a progress of this kind could have been effected. At first only eleven, or at most, sixteen letters, were introduced into Greece, according to the testimony of those who give the importation to early a date as that of Cadmus, and the rest were added in subsequent times. The Greek alphabet, as it was finally settled, was not received at Athens till the

Introduc-
tion of
Greek let-
ters.

Biography. ninety-fourth Olympiad, only 403 years before Christ. The adaptation, too, of foreign letters to new sounds must have been gradual, especially among a rude and barbarous people, who could be expected to bestow little or no direct attention on literature, but must have slowly learned the meaning of the characters. When the laws of Draco were committed to writing, all the letters since received were not employed in the work, though it took place as late as the thirty-ninth Olympiad.

It is probable that the common use of writing, to publish and secure the compositions of authors, obtained about the time when they began to write in prose. For before this art became comparatively easy, the recurrence of metre was necessary to impress on the memory that which the author designed to convey. Thus the laws of the early legislators, and the moral maxims and religious precepts of people, were always embodied in verse; a mode which must have been recommended only by the facilities afforded to the recollection, in cases where the subject could so little require or admit the embellishments of song. Now, we have no record of any prose writing until three centuries after the age usually ascribed to Homer. The materials of writing too must have been exceedingly scanty, and quite inadequate to the preservation of a poem of fifteen thousand lines. Stone, metals, and other heavy and durable substances, were the only materials on which, in these early times, characters were imprinted. The papyrus and the skins of animals could not have been in common use till a much later era. It may indeed be alleged that supposing the art of writing grew easy before the time of the poet, it is not to be expected that we should discover any trace of it in his works, because, as he referred to a more distant period, he only avoided anacronism by omitting to mention an art then unknown, or in its infancy, and by his silence preserved the fidelity of his pictures. But the same scrupulous attention to the manners and costume of the age in which the actions he commemorated arose, does not appear to have been exerted in other respects. It is impossible to believe that, in the rude times of the Trojan war, all the arts to which he alludes had arrived to the state of perfection in which he describes them: that the contests of the freebooters were embellished with the "pride, pomp, and circumstance" which his martial arrangements display; or that even the barbarous magnificence he imputes to the infant cities of Greece was really to be found among them. In some instances, he seems, not merely to have shed a gorgeousness over the ages of his story which true history would deny them, but even to have forestalled the arts in his own day, and to have shadowed forth, by the singular felicities of his imagination, the improvements which subsequent generations alone could embody. It is, therefore, incredible that, in the course of so many thousand verses, relating to an immense variety of human affairs, there should be no notice whatever of books, of writings, of reading, or of letters; that no treaty or league should have been noticed as other than verbal, or as ratified by any other means than religious rites and superstitious observances; that the poet should refer to no inscriptions, even on the sepulchres which he describes; that he should make no mention of money stamped or engraved; and that, with all his desire to give an ap-

pearance of truth to his narratives, he should never refer to any old memorial, or ancient writing, but should speak of events as handed down by the poets, or gathered from tradition; if the art of writing was not only common in his time, but actually employed by himself in framing the Iliad and the Odyssey. The observations of Josephus, respecting the introduction of letters into Greece, in particular relation to the works of our poet, are singularly corroborative of these arguments. He contends that it was not until a late period that the use of letters was known to the Greeks. Those, he asserts, who trace their introduction to Cadmus and the Phœnicians, are unable to produce any specimen of writing from those early times. He represents it as having been the subject of much enquiry and dispute, whether they were known even at the time of the Trojan war, and that it was generally thought they were then unknown in Greece. He concludes by observing, that "no writing, the authenticity of which is acknowledged, is found among the Greeks earlier than the poetry of Homer; and it is said that even he did not commit his works to writing, but that having been preserved in the memory of men, the songs were afterwards connected."—(*Josephus Cont. Ap. l. 2 p. 439.*)

If it be thought that no such compositions as those which now pass under the name of Homer would have been given to the world without that hope of duration which writing alone could render secure, it may be replied,—not only that from the peculiar manners of the age, fame might be expected through the means of the rhapsodists, of whom a perpetual succession might have been anticipated,—but that there is every reason to believe it entered little into the desires of the early bards of Greece. There is no trace of this darling passion of genius, this "last infirmity of noble minds," in the Odyssey or the Iliad. Events are said to have been transmitted from age to age by song, but the individual reputation of the bard himself seems never to have entered into his calculations. He was satisfied with the reverence of his own age, with the immediate applause that attended his recitations, and with the crowns of laurel which he obtained as prizes in poetical contests with his fellows. Besides, supposing that he painfully felt the instability of those relics which he might leave behind him, is it to be supposed that this feeling alone would be sufficient to repress altogether the poetical faculty within him? He would almost involuntarily burst forth into a display of the powers which must be struggling in his mind. Would not the exercise of the poetical art be sufficiently its own recompense? Would not the joy of moving in a beautiful creation of his own, and tasting all the delights with which it was adorned, be enough in payment for the mere toil of composing? And would it be nothing to travel, currying the love and reverence of all hearts with him, and leaving the fondest memory of his genius behind him?

3. The profession of the rhapsodists, as is evident The rhapsodists from many Greek writers, flourished from the earliest dis- periods. Their name, compounded from *ῥαπτεῖν* *ῥάπτω*, to join together or compose verses, signified their occupation and character. They answered, in many respects, to the Celtic bards. They chanted, sung, or recited poems, chiefly, at least in the earliest times, of their own composition, at the tables of princes, and

Biography. is public assemblies, as well as in the houses of the great. They were held in high esteem and even veneration; more especially in the earliest periods. Then they were the sole depositories of the religion, the moral precepts, and the old and favourite legends of the people among whom they lived. Though there were few arts at that time distinctly marked out as cultivated by peculiar classes, the bard had a profession of his own, which was regarded as more venerable than any other. Whether he resided constantly in some principal city, or travelled through various states, he was looked up to as a superior being, welcomed and honoured at the feasts of kings, and revered as the favourite of heaven. His art was probably the parent, not only of the poetry of Greece, but of its grand and tragic spectacles: for it was his province to appear at once as an author and an actor; to embody his own conceptions, and to represent the passion he had conceived in the most vivid and striking manner. Plato has left us an admirable picture of the holy and delightful life of one of the most gifted of this profession. It naturally, however, declined as civilization advanced, and the art of writing became general. The necessity for the promulgation of the works of genius in this way ceased, and those who at first had been poets, sank into the mere reciters of the works of others who had preceded them. But this declension was not entirely accomplished even in the time of Cynæthus, who is much celebrated as a rhapsodist so late as the sixteenth Olympiad, and who recited both the poems of others and his own. In the earlier times, it is certain that the rhapsodist was a highly honourable character; he moved about as a recorder of the old and loved traditions of the people, which he rendered still more interesting, and must have been heard with delight by those in whom he called up again all the associations of childhood, and who renewed their happiest days in listening to his songs.

Arguments against the existence of Homer continued.

Recitations from memory.

It seems certain that those who followed this profession, did not recite from any writings or engravings, but from memory. In this all the traces to be found in ancient authors coincide. The ancients made their poets the votaries of the muses, *Μουσῶν Ἀοιδῶν*, *Μελῶν*; and memory was one circumstance by which they were distinguished, and from which they derived honour. It was from the songs recited by these men—those songs which had, from their merit, and deep interest, long been popular among them—that the works of Homer were compiled at Athens, in that age when the rhapsodists had long, in a great degree, sung the works of others. Probably the master taught his pupil to recite those of his own compositions which he thought most worthy of being thus transmitted, and thus they were handed down to a distant age. At all events, there is no reason to believe that the *Iliad* and *Odyssey* were set in order from manuscripts; though some have pretended that writings containing parts of Homer's works were collected from those cities which claimed him as their citizen.

If then the works which bear the name of Homer were not, at the time of their composition, or till long afterwards, committed to writing, could any one individual have been the author of either of them? It seems almost impossible that he could form the plan of works so extended, so connected, so continuous, with no

model before him, and no opportunity of sketching out the plan or skeleton of the work, except in his own mind. How could he also recollect distinctly all the previous parts of his poem, so that in composing the latter part he should keep the former in view, and render the whole consistent in the action, and in the characters? Even supposing this possible, how could he ever have formed the idea of submitting his complete epic to the public admiration, in all its episodes, unities, and machinery, with even a possibility of success? No power of voice could suffice to recite, no stretch of attention to hear, no capacity of memory to retain it. He could never procure a single audience to whom the work should be submitted. To what end, then, and with what hope should he compose it? His native genius would prompt him, without doubt, to sing of the heroic deeds of former days; but surely his love of poetry, and the enthusiasm of his spirit, would rather be indulged in short and rapid effusions, than in an extended poem. As, therefore, no motive can be assigned for his undertaking so great a labour, were it within the limit of human possibilities, it is fair to conclude that the work could never have come from the lips of a single author in that form in which we now possess it.

If we suppose the poems of Homer to have been transmitted to the times of Solon, through the medium of the rhapsodists, it is impossible not to believe that great alterations were made in them, by their numerous and successive reciters. This appears to have been the opinion even of the Alexandrian critics. Not only must every composition handed down through several generations be exposed to perpetual variation, but the very description of the men through whom the *Iliad* and *Odyssey* were transmitted, rendered alterations and corruptions peculiarly probable. They were themselves poets. They were accustomed, therefore, to exercise the faculty of invention as well as of memory; and what, in this case, was peculiarly unfortunate for the integrity of their original, to exert them both at the same time. Having some poetical talent, or, at least, imagining themselves so gifted, they would exercise the office of critics, and alter or omit that which appeared to them unworthy of the author. They would, perhaps, in a greater degree interpolate by the insertion of their own verses, or amplifications of the ideas expressed by the original bard. In the warmth of recitation, they would often make changes almost unconsciously, or would introduce them for greater immediate effect on their hearers. It has been asserted that many interpolations of an important kind were actually made by the family of Cynæthus. (Schol. Pind. and Eustath. ad Il. p. 6.) It seems, therefore, very difficult to place any reliance on the authenticity of compositions so necessarily exposed to every kind of corruption and change.

It appears from Elian, that anciently, at least, the Test-books of Homer were never recited by the rhapsodists in that order in which they are now collected. Indeed, had it been otherwise, the exertions of Solon, Pisistratus, and his son, would have been confined to commanding that the work, already complete, should be reduced into writing. And it seems, from Eustathius, that the portions of them usually chaunted, were not the divisions now called books, but separate pieces, as

Bibliography. the catalogue of the ships, the tale of Ulysses at the palace of Alcinoüs, the Dolonia, the Patroclus, and the slaughter of the Wooers. How, therefore, could the original position of these songs have been discovered in the age of Solon?

4. Aristotle, it is well known, framed a theory of epic poetry from the *Iliad* and *Odyssey*; and professed critics since his time, especially among the French, have thence drawn rules respecting the fable, the characters, the manners, the machinery, and the unities, on which compositions of this ambitious class ought to be modelled. Some there are who have gone further than this, and acquiesced in the last part of the sentence of Macrobius, that there are three things which can never be taken away with propriety—the thunder from Jupiter, the club from Hercules, and any one of his verses from Homer. The art of the poet has generally been admired in making every thing in the *Iliad* tend to illustrate the ire of Achilles, and every thing in the *Odyssey* to conduce to the return of Ulysses. Heyne contents himself with disputing particular parts, while he admits the general unity of the poems; and ascribes it not to the author, but to the first editor, who compiled them. Wolf, on the other hand, boldly controverts the system, and alleges that the unity of action in the *Iliad* is merely imaginary, though that of the *Odyssey* he admits to have been preserved with consummate skill. He contends that the subject proposed in the first seven lines of the *Iliad*—the anger of Achilles, and its direful consequences to the Greeks—is altogether closed at the end of the eighteenth book. The rest of the poem does not relate to the resentment of that hero against his countrymen or their leader, but to a new fury with which he is inspired in consequence of the death of his friend; and which is satiated at last in the death of Hector, and the indignities offered to his remains. If all the contests of the Greeks and Trojans, which chiefly occupy the *Iliad*, are to be referred to one subject, they tend rather, perhaps, to exalt the fame of Achilles than any other hero; but part only of them can be referred to his wrath. Wolf, therefore, expresses his surprise that the exordium of that work is not altered to the following lines, which he proposes as better expressing its argument:

κείνη δὲ δὴ, βῆ, Πηλεΐδης Ἀχιλλεύ,
τοῖς αἰὲς βασιλὴν ἀντιπρὸς ἐμὲ μοῖρ᾽
ἔβη, Ἀγαστέρω γὰρ αἰὲς ἔβη, Πηλεΐδης
ἀντιπρὸς ἀντιπρὸς Τρώεσσι καὶ Ἑλλήσιν.

If this should be esteemed a more correct view of the subject on which the *Iliad* is constructed, than the lines with which it actually opens, those who contend for the common opinion cannot ascribe this defect to the rudeness of Homer's age, when they impute to him the artificial structure of the *Odyssey*; since that would be to allege that he could not express what he was able so admirably to practice. It is, however, doubtful whether Homer particularly intended to mark out Achilles as the hero of his poem, above all others. For since he has been generally supposed not to have invented the ground-work of his plot, but to have taken it from history, the prominence of Achilles among the characters would arise naturally and without design. Thucydides or Xenophon, taking the last year of the Trojan war for the subject of an historical piece, must, in the same way, have represented the quarrel, its consequences, and the final triumph of the Greeks on

the return of their bravest champion. Why then is it that the relation of these circumstances in the *Iliad* should be regarded as the perfection of art? Why might not a poet relate the events he undertook to celebrate in their natural order? And if one poet, why might not several, taking up different parts of successive adventures, form a whole, when arranged according to the story, as complete as the *Iliad*?

It does not appear that any of the ancient grammarians or critics, who wrote respecting Homer, entertained any of these ideas with regard to certain epic rules observed in his poems, or derivable from them, which Aristotle has endeavoured to maintain. They uniformly speak of the *Iliad* and *Odyssey* as embracing the affairs of the Greeks and Trojans at Troy; or, if they speak more particularly, the valiant acts of Achilles. In this manner, the author of the life which bears the name of Plutarch, as well as Eustathius, always express themselves. And it does not appear that the poets who immediately followed Homer ever professed to write poems on the plan since laid down for epics. The few remnants of their works that have reached us contradict all suppositions of this kind. They take the names not of individuals, but of families, or of events, as the titles of their songs; and as far as we have any traces of their contents, they gave to these no unity of action, no observance of time, no relief of episode. On the contrary, they are said to have related events from the beginning of the Trojan war to the death of Ulysses, in the order of history. Now it is strange that these men should never have imitated the bard, to whom all assigned the first place in the gratitude and admiration of mankind, in these very points, in which he might have been followed with ease; in those matters of form and judgment, in which the dullest might by industry and care have attained an equal perfection.

5. It is further alleged that there are many parts of the *Iliad* and *Odyssey*, even as they now exist, which are either entirely spurious, or very much corrupted from the original. Of the former of these descriptions seems to be the passage in the eighteenth book of the *Iliad*, from v. 356 to v. 368, in which, from the mourning of the Greeks over the body of Patroclus, we are suddenly presented with a taunting speech of Jupiter to Juno, and her angry reply, neither of which bear the least relation to the immediate subject; and, at the close, we as suddenly return to Thetis, in her ascent to the palace of Vulcan. In the fourth book of the *Odyssey*, a passage occurs, at the 620th line, where a conversation with Menelaus is abruptly broken off, and four lines follow of which all explanation seems hopeless. Eustathius has recourse to the violent measure of changing the whole scene from the palace of Menelaus at Sparta to that of Ulysses at Ithaca. But the passage is now universally agreed to be either misplaced or spurious. Other and yet more important instances are brought forward by Heyne, in the notes to the different books of his edition of Homer, which we shall hereafter have occasion to allude to, when we speak of the works of the poet; at present, the argument derived from these circumstances is, that since the compilers of the poems and the early critics allowed such gross instances of corruption to remain, we can place little reliance on their correctness, and still less on their judgment in making their collections, which hence

Arguments

in favour of

the personal

existence of

Homer.

seem to have been brought from more than one author. On these grounds, it is contended that the works now extant, which bear the name of Homer, are a collection of scattered songs, which never were committed to writing by their authors; and that, for their arrangement, they are indebted not to the poets, but to their Athenian editor.

On the other side, the following arguments may be adduced, both to do away the above objection, and to establish the individuality of the author of the *Iliad*.

1. The genius which the *Iliad* exhibits is no proof that it is not the production of a single mind in a barbarous age. Those who speak of poetry as a progressive art, and liken it to the improvements of social life, and things which depend for their excellence on experience, seem to know little of its essence. It has no connexion with the progressions of time; it depends not on external circumstance; it follows not in the train of knowledge, nor improves as mathematical science is unfolded;—its origin is in the heart, and its objects are to be found in every part of the creation. Indeed, the age of Homer was far more favourable to its perfection than later times. Then the whole region of imagination lay unexplored, the themes of poetry were unexhausted, and must have appeared actually exhaustless. Then there were no models of great excellence which should discourage the poet from emulating their fame, or should tempt him to be satisfied with a dexterous imitation of their beauties. The very rudeness of the age afforded also the best opportunities for poetry. The minds of men were then alive to tales of superstition, and their belief in the prodigies related to them was unshaken. There were no critics to fear or to propitiate. Society, if in the inexperience, was also in the bloom and vigour of its youth. Virtues and vices were then gigantic; they had not been rendered puny, or melted down by the progress of civilization and art. Desperate revenge, fierce and uncontrollable anger, inextinguishable hate on the one hand, and heroic bravery, noble contempt of danger and death, and romantic friendship on the other, were to be seen in their utmost extremes of awful or of placid grandeur. Life was then full of adventures. The feuds of rival chieftains afforded a perpetual succession of incident to all, as well as a stimulus to the deepest emotions of their partizans. Friendship was cemented by the participation of hardship and of peril, and proved stronger than fortune, lasting as existence. In the breathing times of concord a wild and generous hospitality filled up the pause, and was rewarded grateful by the aid of song. The poet then found in every region the materials of his art; passion was every where of the most tremendous or exalted kind; tradition filled up the places of history, and gave ample ground for his song; while it left him verge enough for the exercise of his invention. The new religion, which was beginning to afford, even to the common people, a feeling of the grace of form and the harmony of the universe, had its altars on every shore; with its solemn rites and mysteries and "trivial records." Surely there needed not, to render this age poetical, the perfection of scholastic subtlety, the nice control of the police, or the common-place comforts and luxuries of modern times. The poet had then all "the world" of genius "before him where to choose." What education did he need? What formal introduction to the muses?

His infancy might have been delighted with wondrous tales of heroes and demi-gods; his youth passed by the shores of the ocean, amidst the chaste scenery of Greece; and his manhood occupied in wandering from country to country, admiring all that was beautiful, revering all that was grand, and rejoicing in all that was romantic. What had he to do with books, or with worldly knowledge? His school was the universe. The mountains, the streams, and the ocean, were his teachers. The wild traditions of his age afforded him the threads from which he was to weave a glorious composition, whose colours should be ever fresh as long as nature shall endure.

What, in fact, has been the individual knowledge of many who, in after times, have obtained the highest degree of poetical renown? We have no hesitation in believing that the ploughman of Scotland—he who "walked in glory and in joy, beside his plough upon the mountain side," breathed forth the tenderest notes of poetry without the aid of external culture. We hesitate not to think that a youth of sixteen at once fabricated an artful deception with wonderful industry and skill, and poured forth effusions worthy of the best age of English genius. Why then should we think it incredible that Homer should shine as the day-star of Grecian literature, in an age when the common incidents of life abounded with materials of song?

But, in truth, the hypothesis to which the antagonists of Homer's personality must resort, implies something far more wonderful than the theory which they impugn. They profess to have the deepest veneration for the genius displayed in the poems. They agree also in the antiquity usually assigned to them; and they make this genius and this antiquity the arguments why one man could never have composed them. They suppose, then, that in a barbarous age, instead of one being marvellously gifted, there were many; a complete race of bards, such as the world has never since seen—a number of miracles instead of one. All experience is against this opinion. In different periods of the world great men have arisen, under very different circumstances, to astonish and delight it; but that the intuitive power should be so strangely diffused, at any one period, among a great number who should leave no successors behind them, is quite unworthy of credit. And we are requested to believe this to have occurred in an age which those who maintain the theory regard as unfavourable to the poetic art! The common theory, independent of other proof, is *præsumitur* the most probable. Since the early existence of the works cannot be doubted, it is easier to believe in one than in twenty Homers.

But the champions of the new system will ask, how, supposing the genius displayed in these works to be not incredibly imputed to an individual, their artificial construction and arrangement can be explained? Here their arguments are expressly contradictory to each other. When they wish to represent it as impossible that, in a rude age, the *Iliad* and *Odyssey* should have been produced in a connected form, they enlarge on the art with which they are constructed; when they desire to take away the effect of the reasoning that their completeness shows them to have been the productions of one mind, they deny that there is any art at all, and laboriously endeavour to show that they only relate events in a natural order, and are not modelled on any

Biography. artificial rules. The truth, however, is, that no one ever supposes Homer to have written with a standard of epic poetry before him, like that which Aristotle has drawn from his works. He composed from the impulses of an harmonious mind, and his compositions were, therefore, harmonious. There is nothing wonderful, or even paradoxical, in this. Genius is the soul of art. The unities admired by the critic must originally take their rise from the heart, from the natural perception of loveliness, from the innate admiration of order, or they are worthless. Genius broods over the events it celebrates, and brings them into keeping and harmony. There is nothing really so methodical as the most daring invention, in so far as method is more than an empty form. If Homer conceived the plan of an epic in his mind, and strove to write "up to the height of his great argument," it was because he felt that within such a compass his mind would discover a fit and noble range. But there is no need of this, if we adopt Wolf's opinion, above stated, that the *Iliad* is a mere tale, without any particular design, of the events of a part of the Trojan war, in its natural order. Surely there is nothing incredible in the supposition, that he who had genius enough to compose any one of the parts, should have had art enough to give the whole tale in the simple course of time, and following exactly the traditions of his fathers.

2. The objection which arises from the ignorance of letters, or the want of the materials for writing, is certainly of a more formidable kind. But it is to be remembered, that the very uncertainty attending the introduction of letters into Greece proves that they must have been of high antiquity, and certainly before the first Olympiad, when a regular computation of time began. The testimony of Josephus, who speaks merely in a sceptical tone, and not at all in that of decided negative, is rendered of less importance by the circumstance that he was attempting to depreciate, as far as possible, the antiquities of Greece, and to throw discredit on its early history. But even, supposing the works of Homer not to have been originally transcribed, the very opponents of his personality have furnished us with the means by which they were probably transmitted. The rhapsodists, whom they suppose, and probably with justice, to have recited his poems, were no unworthy depositaries of so great a treasure, especially if we hold them in the veneration with which they would desire us to regard them. It is not necessary to suppose, that any individual was able to repeat the whole; several might take different parts, still remembering the original order and bonds of connection. Might not a play, consisting of infinitely more fragments than one of Homer's poems, be collected with tolerable accuracy from the lips of the actors, if the copy were lost, or if they had been instructed by the author? But there is nothing incredible even in supposing, were it necessary, that a single rhapsodist could retain the whole of the *Iliad*, and even of the *Odyssey* also, in his memory. In the times when the minds of men were not distracted by the attempt to attain a variety of knowledge, a single faculty, and one capable of great improvement by exercise, might easily be supposed to attain a great degree of perfection. In those periods, the memory was, in fact, the only vehicle by which the knowledge of things past could be retained; necessity, therefore, or at least that fondness for living over past

times, which is inseparable from the human heart, *Homer, &c.* prompted its cultivation to a peculiar degree of excellence. When this necessity ceased, it was natural that the skill it sharpened should lose its powers. Xenophon tells us (*Sympos.* iii. 5) that in his time, when the occasion of a great extent of recollection had, in a great degree, ceased, there were Athenians who could repeat the whole of the two great works ascribed to Homer. Surely then it was possible, that they, whose sole profession it was to recite, should attain to this eminence in times more favorable to the perfection of this particular faculty. The same observation will apply to Homer himself, and his remembrance of those things which were the productions of his own genius. It is worthy of observation, that the muses themselves were feigned to be the daughters not of Invention, but of Memory. Homer invokes their aid, not when he is about to relate prodigies, or to take the boldest flights into the regions of imagination, but when about to state the catalogue of the ships; a kind of assistance which they would not be supposed to render in modern times. It seems, therefore, probable, that as the wandering bards were the only historians, memory was peculiarly regarded as one of their requisites, and its faithfulness was that quality which they were most anxious to attain. Indeed, this, as we have seen, is expressly brought forward by Wolf, to obviate the supposition that the poems were originally written.

3. It is probable that most of the opinions advanced by the opponents of the theory usually received by the learned, respecting the dignity of the old rhapsodists, are well founded. In more than one respect they serve to strengthen the common hypothesis. They afford an additional light on the opportunities afforded to the genius of Homer; for they not only raise the character he has supposed to have chosen, but also show what excellent means he had of diffusing his works among the people. And if those to whom the works of Homer were committed were thus eminent and honourable, there is the less reason to suppose that they have materially suffered in their hands. The number of rhapsodists, among whom, many, no doubt, recited these poems, would, of itself, form an adequate check to any very material corruption. All would not agree in the alterations, even from that very cause which might cause alteration to be attempted—the poetical spirit of the reciters. They would agree, at least, as little among themselves as with their original; for him, as being past, they could no longer envy, while they may be supposed to have felt some uncharitable feelings towards each other as rivals. Different rhapsodists, doubtless, gave different versions of particular passages. These were the foundation of the various readings mentioned by the critics of Alexandria. When, therefore, Pisisstratus collected the poems, he had all the opportunity of comparing testimonies, and of selecting, by such an aid, that reading which appeared most correct from its own internal evidence, or was supported by the greatest number of witnesses. That portions of Homer should be chaunted separately, was necessary from the length of the whole, and can, therefore, be no proof that they were never connected. Virgil and Milton may be divided into portions as easily, at least, as Homer;—and the sacking of Troy, the loves of *Aeneas* and Dido, and the death of Nisus and Euryalus in the former; and the battle of the angels,

Biography. and the creation of the world, in the latter, might be separated from the context with as little violence as the parting of Hector and Andromache, or the description of the shield of Achilles.

4. Setting aside, for the sake of argument, all the technical rules of epic poetry, which have been sometimes said to have been observed in the works imputed to Homer, there is very strong internal evidence that they, or, at least, one of them, are the production of an individual genius. In the whole texture one pervading mind is clearly to be seen. Poets even of the same age, and when treating of nearly the same subject, can scarcely be supposed to have attained so complete a uniformity of style. If two leaves of the forest are never found exactly to correspond, how shall we believe that a number of minds, and these of the first and most original class, should so exactly agree? The same epithets recur—the same kind of similes prevail—the same mode of expression is used in the last as in the first book of the *Iliad*. But the most astonishing circumstance, on the new hypothesis, is the entire consistency of every one of the characters. The broader features, indeed, of these, might be handed down by traditions; whence a number of bards might derive the materials of their songs, though the accomplishments attributed to many of them seem to belong to a later age than that in which the poet has placed them. But their nicer shades and gradations could never have been thus transmitted; and the variety of these traits is endless. Ulysses and Nestor, for example, are both eloquent, and famed rather for council than for action, and thus much might have been commonly reported; but how does it happen that not a speech could be taken from the one and given to the other without depriving it of its dramatic propriety? How is it that the eloquence of the first is always swift, flowing, artful, and persuasive; and that of the last monitory narrative, and more adapted to display the speaker than convince his audience? Achilles, Ajax, Diomed, and Idomeneus are all valiant, but they are as really distinct from each other as Paris is from them. Is it credible that these consistencies could have been retained by a number of contemporary authors, each merely reciting his own portion? It is not, therefore, without some reason, that Wolf expresses an apprehension that his opinion may seem as false, though not so dangerous, as that of those philosophers who have thought that the universe was formed from a fortuitous assemblage of atoms. Indeed, he himself candidly declares, that when he reads the work itself he finds such unity of design, such harmony of colouring, and such consistency of character, that he is ready to give up his theories, and to be angry with himself for doubting the common faith in the personality of Homer.

5. That there are interpolations in the *Iliad* and *Odyssey* may be readily admitted, without affecting the authenticity of the whole. Some of these parts to which Heyne has objected, will be noticed hereafter. And it is to be observed, that some corruptions have been noticed as such by the most ancient critics—a circumstance which proves, that though their attention was directed to the question, they never doubted, as they have never expressed any doubt, of the genuineness of the great mass of his poems. The evidence in favour of the common hypothesis, from the testimony of every age, is exceedingly strong. Pindar, who lived

485 years before Christ, repeatedly mentions Homer as he would any other person, and not as a collection of verses. In his ode to Damophilus, he alludes to the 15th book of the *Iliad*, v. 270; thus:

Τὴν γ' Ὀδυσσεύς ἴδ' ἑσθλὸν ἄνθρωπον
Πρὸς ἑσέ' ἀγέτω λατὸν ἴσθ'·
Τίνας παρὶς ἡγήσεται μὲν ἄλλος.

Pyth. iv. v. 493.

"Consider attentively this saying of Homer; he says, that a wise messenger adds the greatest honour to every transaction." He speaks of the *Iliad* as having rendered Ajax immortal (Isthm. iv. 64); and he alludes to the perils of Ulysses as having been celebrated, adored, and rendered greater, by the delightful poetry of Homer, *Mem. vii. 29*. In the fragments collected by Brunck, Mimnermus and Simocritus both allude to Homer. The latter speaks of him as the man of Chios, and quotes the beautiful comparison made by Glaucus, of human life to the fall of leaves and their springing forth again into verdure. Herodotus repeatedly refers to our bard. He quotes the *Iliad* and *Odyssey*, and distinguishes between them. He even, which is stronger than all, denies the Cyprians to be his genuine productions, as they contradict the *Iliad*. Thucydides also frequently alludes to him, and always without any intimation that he is speaking of a number of songs by various authors. Aristotle flourished but a short interval from the time when the family of Pisistratus were in power, and yet nothing can be more clear than that he had no idea that they had, for the first time, collected together and arranged these poems which they edited; for he criticises at large that very arrangement; he gives it the highest praise; he makes it the basis of a system of epic poetry; and yet he never attributes this to any other than to the original author. He bestows no praise on Pisistratus, who, in this respect, deserved it all. And surely the ruler of Athens must have been little anxious about his reputation, to have taken no measures for claiming to himself this honour. The Athenians, too, must have become very singularly insensible to the glory of their own state and to the interests of literature, of which they were the guardians for the rest of the world, not to have perpetuated the memory of a work so noble even till the age of Alexander. All mankind have remained strangely ignorant of the service rendered them by the Athenian governor, since neither Horace nor any subsequent critic has attributed it to him; and all the innumerable admirers of Homer in every age have enjoyed "the tale of Troy divine," without at all suspecting to whom they were indebted for so large a share of their interest and pleasure in reading it. The French writers, who have extended the observations of Aristotle on epic poetry to a system, have adopted the same language; and, whatever doubts may have been hinted by Josephus or Elian, the common feeling and opinion of men has given a distinct personality to the poet, and very little credit to his editor. Every kind of possible honour has been done him as to a person, and us the author at least of the *Iliad*. Elian himself tells us, that the Argives used to invoke Homer and Apollo together. Temples were erected to him in the cities which claimed him as a native; statues were formed of him, though probably without resemblance to his person, as we are informed by Pausanias. "Quinimo quoniam sicut, finguntur, pariatque decedunt non traditi

vultus, sicut in Homero evenit." [l. xxv. c. 2.] And medals were struck of him at Chios and Smyrna, some of which are even now in existence.

Beside the arguments which have been adduced against the hypothesis of Wolf and Heyne, they have another powerful adversary to encounter in the common prejudice and fond admiration of mankind for one of their chief idols. It is in vain that they contend that the controversy shakes no faith that is of any consequence; or remind us that the intrinsic excellence of the poems would remain unaffected by a decision in favour of the cause they advocate. Men naturally look up for objects to admire. They delight to concentrate, rather than to divide, their emotions of respect and love. The name of Homer has long been to them as a charm, which they will not willingly suffer to be broken. They have rejoiced in believing that a being so gifted actually belonged to their nature, and had flesh and blood, passions and affections, like themselves. To divide, in this case, is to destroy. The high object of undivided reverence would have passed away. That fame which had so long resisted time, change, and mortal accident, would crumble into ruins. An immense blank would be left in the imagination, an aching void in the heart. The greatest light, save one, shining from the depth of time, would be extinguished, and "a glory passed away from the earth." It is little, therefore, to be expected, that the new hypothesis will soon become general among the mass of the admirers of Homer. We proceed now to collect those traces which remain, or are supposed to remain, of his life; and to consider those works which are, by the consent of the majority of the learned, attributed to his genius.

Facts relating to the personal history of Homer.

Very different opinions have been advanced respecting the *antiquity* of the life and writings of Homer. The Arundelina marble places him about 907 years before Christ, under the perpetual archonship of Diognetus, at Athens. Herodotus, who is generally supposed to have flourished about the eighty-fourth Olympiad, or 444 years before Christ, represents him as not more than 400 years before his time, and thus fixes him near to the year before Christ 844. This opinion differs from that expressed by the author of the life of Homer, ascribed, though it is usually thought without foundation, to Herodotus; for he conceives that the poet wrote more than 600 years before the invasion of the Persians, under Xerxes. The capture of Troy is usually regarded by those who believe in the veracity of Homer, as having taken place A. M. 2830, before the first Olympiad 408, A. C. 1184, though the Arundelina marble refers it to an earlier period by thirty years. Tatianus Assyrius, and Clement of Alexandria, tell us, that according to the opinion of the Cretans, Homer lived within eighty years after that event. Erastosthenes regarded him as flourishing a hundred; Aristarchus a hundred and forty; Cassius Heinsius, a hundred and sixty; and some, among whom are Ephorion and Theopompus, even more than five hundred years after it. [Clemens Alex. Strom. l. i. p. 388-9.] It seems most probable, that the events he celebrated took place at a considerable distance from his own time, because, as observed by Velleius Paterculus [l. i.], he represents men as only half as strong in his own age, as in that which his heroes adorned; and consequently some distance must be allowed for the gradual degeneracy of the

species. Some modern writers, however, are disposed to represent him as of a much later period than that to which he is usually given. Mr. Bryant, without expressing any particular opinion, regards him as comparatively modern. Dodwell attempts to bring his age below the Olympiads, and to make him contemporary with Lycurgus. But against this hypothesis, there is strong presumptive evidence to be found in the poems of Homer. Strabo [l. xv.] observes, that the poet was not acquainted either with the empire of the Syrians or the Medes; as otherwise, when he mentions Egyptian Thebes and its riches, and the wealth of I'bernia, he would scarcely have left unnoticed the opulence of Nineveh, Ecabata, and Babylon. According to Pausanias [in Attica, sect. xii.], the use of ivory was of remote antiquity; but the elephant was seen only by the Indian tribes, before the expedition of the Macedonians into Asia; and of this mighty animal we find no description in Homer. Whenever the Nile is mentioned in the Odyssey, it is called, not by that name, but by the denomination of the Egyptian, the river of Egypt, which is the description by which it is characterized by Moses and Joshua; from whence it may be inferred that it had not acquired the name of Nile at the time in which those works were composed. Plioy [Nat. Hist. xii. l.] remarks, that oargents, or mixed perfumes, were unknown at the time of the Trojan war, and accordingly we never find the term *myrror*, by which they are denominated, used by Homer; from whence we may gather that they were unknown, or little used, in his own age. It is also to be observed, that Homer and Hesiod are the only Greek poets whose works have reached us, who use the digamma, which was peculiar to the Æolic dialect, and seems to fix their era about the time when the Æolians emigrated to Italy, and imparted to the language of the regions in which they settled this singularity of their native tongue. These circumstances seem greatly to corroborate the opinion of those who adopt the chronology of the Arundelina marbles, in relation to Homer. With this computation, a fragment of Apollodorus, preserved by Clement of Alexandria, and Cornelius Nepos, in a fragment preserved by Aulus Gellius, nearly coincide. Cicero also speaks of Homer as flourishing before the foundation of Rome. It is highly improbable that he should have lived after the first Olympiad, from whence there is a series of writers, and a regular computation of time, and yet that so little should be known respecting him. On the whole, it seems most probable, that he was born almost 1000 years before Christ, and that his life was comprised in the ensuing century.

The place of Homer's birth, was the subject of great Place of controversy even among the Greeks. "Homerum," observes Cicero, "Colophonem civem esse dicunt suum, Chium suum vindicant, Salaminii repetunt, Smyrni verò suum esse confirmant; itaque etiam delubrum ejus in oppido dedicaverunt; perennis illi præterea pugnant inter se, atque contendunt." [Orat. pro Archia. Poët.] Several states are enumerated, as contending for this honour, in the verse, "Smyrna, Rhodus, Colophon, Salamis, Chius, Argos, Athens." To these names, Egypt, Phryia, and Ithaca, with several others, have been added. Most of these, have but very slender evidence to support their claim. An oracle informed Adrian that the poet was born in Ithaca. A school was shown as that in which he once taught at

Biography. Colophon, and a tomb as the place of his interment at Ig;—neither of them, even if genuine, a very clear indication of the place of his birth. The Athenians, according to the learned author of the Dissertation prefixed to Pope's translation of the *Iliad*, claimed him as born in one of their colonies; or rather "on behalf of Greece in general, as the metropolis of its learning, they made his name free of their city after the manner of that law by which all Italy became free of Rome." The proofs which might be adduced in favour of Egypt show, almost beyond a question, that the poet had visited that region; and countenance the hypothesis that he was of Egyptian extraction; but they throw very little light on the place of his nativity. Smyrna, Chios, and Ithaca, have been most generally the objects of controversy, and are the only states whose claims seem now to deserve attention.

If the writer of the life of Homer, who bears the name of Herodotus, be entitled to any credit, Smyrna was, beyond doubt, the scene of his earliest days. But this work is rarely regarded as genuine. It is evidently not written by the historian whose name it bears, because its assertions are directly contrary to his opinion respecting the antiquity of the poet. It is also altogether unworthy of him in point of style. It is so particular and minute in some respects as to wear all the appearance of fiction. It asserts that Homer travelled to Etruria and Spain; which seems incredible, as we find no trace of any accurate knowledge in his works of regions to the westward of Greece. On the whole, therefore, it has obtained but little credit. If the poet had been born at Smyrna, it is strange he should never have mentioned that place in his works, or alluded to the river Meles which ran beside it, especially as he mentions some neighbouring cities, and the rivers Cayster and Mæander, which flowed near them. It is scarcely to be believed that an observer so accurate, and so deeply imbued with strong feelings and deep sensibilities, should have communicated to us no impression of the scenes in which he spent his childhood, and of which his recollections may be presumed to have been peculiarly vivid. Indeed, there is considerable evidence, of a negative kind, that he was not a native of the shores of Asia. While he gives a most minute and lively description of the cities of Greece, he does little more than allude to any places in Asia, except those in the immediate vicinity of the Troad. And yet, at the earliest war to which he can be ascribed, Ephesus, Sardis, Mæna, Themiscira, Cams, and Pergamus, must have been in a flourishing condition. It seems, therefore, reasonable to conclude, that he had no personal knowledge respecting them, or the rivers by which the neighbouring countries were watered. The natives of Smyrna, however, preferred their claim with no small confidence in its truth. They cast medals of the bard, erected a temple to his honour, and burned Zolus in effigy for throwing reproach on their state, by reviling the works of its most illustrious citizen.

The claims of Chios have been advocated with great learning and zeal, by Leo Allatius, a native of that island. He brings forward the authorities of Simonides and Theocritus, in favour of his hypothesis. He affirms that his country had yet among them a race called the Homerides, whom they regarded as the poet's descendants; and that they had a temple erected to his honour.

He relies also on a passage in the hymn to Apollo, in which the poet calls himself "the blind man that inhabits Chios." This last authority, however, seems only, at most, to prove that he resided in that island; and the expressions of Simonides and Theocritus, when they denominated him a Chian, may be explained by the same circumstance.

Mr. Bryant has endeavoured to show that the birth-place of the poet, and the scene in which he composed his immortal works was Ithaca. He supports this opinion partly by its freedom from the objections advanced against other theories, and partly from the peculiar statistics of the poet. He contends with great enthusiasm, that Homer returned hither from his wanderings by sea and land to a genial repose; and that here, amidst his native scenery, be produced from the materials collected on his travels, the *Iliad* and the *Odyssey*. In the latter, Mr. Bryant supposes him to have told his own adventures, and to have expressed the personal feelings which he most fondly cherished; and to have even celebrated the constancy of his own wife, in the character of Penelope. Undoubtedly there are passages in which the emotion seems to have flowed immediately from the heart—a lingering and fond retrospect of departed joy—a mild and softened melancholy—and a constant and tender recollection of home, with all its sweet associations, rendered yet more sacred by time. Some particular scenes too are described with a vividness so striking, that they seem to have been remembered rather than invented. But all this falls very short of proving the identity of Ulysses and Homer, since it is easy to conceive that scenes of which the poet was actually a witness, were transferred to his works as seen by other spectators, and that he used a fictitious character to express sentiments, which, in their original intensity, glowed within his own bosom.

As the birth-place of Homer is thus uncertain, his family is equally dubious. Accounts respecting them differ; and none are entitled to much reliance. According to the writer of the life of Homer, attributed to Herodotus, his mother's name was Crytheis, who proving lawfully with child, was sent away from Cumæ by her uncle, with Ismenias, and found refuge in the city of Smyrna, which was then in progress; near to which place she was delivered of the poet, on the banks of the Meles, as she was celebrating a festival. In his life, attributed to Plutarch, the third part of Aristotle's Poetics, which has not come down to us, is quoted as giving a more wonderful account of his birth, to the following effect:—At the time when Neleus, the son of Codrus, led the colony which was sent into Ionia, a young woman had intercourse with a genius who delighted to associate with the muses, and to share in their joys. Filled with shame for this lawless amour, and finding herself pregnant, she removed from thence to a place called Egina. There she was taken by robbers, carried to Smyrna, then under the dominion of the Lydians, given to Menon, the king, and married by him on account of her beauty. But as she was walking on the banks of the river Meles, she was delivered of Homer, and expired. The infant was taken by the king, and educated by him till he died, and left him to endure the hardships of poverty. There are other accounts more marvellous even than this;—which can prove nothing

but the enthusiasm and reverence in which the works of Homer have ever been held, and the meagreness of all authentic information concerning him.

The name of *Homer* is supposed by many not to have been his original appellation, but given to him in consequence of some quality of his mind or incident of his life. Etymology has, therefore, been employed to develop its meaning, in the hope that some light might thus be thrown upon his history. In the life ascribed to Herodotus, it is derived from *Ὅ μὲν ὁπῶν*, and is supposed to denote blindness. By some it has been conjectured to come from *Ὅ μῦθος*, and to signify a *thigh*; and thence an hypothesis has been supported that he had some mark on that part, denoting him to be an illegitimate child: by others it is thought to be compounded of *Ὀπῆ* *ἰσῆν*, and to imply *speaking in counsel*; and thence *Suidas* represents him as inciting the people of Smyrna, by a divine inspiration, to make war on those of Colophon. According to others, *Ὀπῶς* signifies a *hostage*; and thence they agree with *Proclus* in supposing that he was delivered up in that character in a war between Smyrna and Chios. And, to crown these conjectures, it has been thought that the term signifies *following*; and was given to him, because, as stated in the life by *Plutarch*, he said he would follow the Lydians from Smyrna. The author of the *Certamen Homericum*, denominates him *Auletes*; and *Lucian*, *Tigræna*. But the name most usually ascribed to him, by those who regard *Homer* as only an epithet, is *Meleigenes*, which is commonly derived from the river Meles, on the banks of which he is said to have been born. Mr. Bryant, however, with considerable ingenuity, makes this denomination subservient to his theory, that the family of Homer was from Egypt; and that, from that country, he derived the principal materials of his poetry. He derives it from *Μῆλας*, *black*; which answers to the term *Nile*, and supposes it applied to Homer in consequence of his genealogy being traced to the neighbourhood of that celebrated river. But it is to be observed, that the Nile did not obtain that name till after the time of Homer—at least there is no trace of it in any of his poems which have reached us.

Personal history.

Of the life of Homer almost as little is certainly known as of his origin. The author of the biographical piece, under the name of Herodotus, gives in substance the following account of it. After stating his birth, he informs us that *Crytheis*, his mother, supported herself by her labour till *Phemius*, a school-master at Smyrna, fell in love with and married her. On the death of his father-in-law, Homer succeeded him in his school, and was much celebrated for his wisdom. Attracted by his fame, *Mentes*, who commanded a Leucadian ship, visited him, and induced him to leave his occupation and travel. In the company of this friend, he went to Italy and Spain; but, at last, was left at Ithaca in consequence of a delusion in his eyes. While in this island, he was entertained by a man of fortune named *Mentor*, who told him those circumstances upon which he afterwards framed the *Odyssey*. On the return of *Mentes* he accompanied him to Colophon, where he became totally blind. On this misfortune, he returned to his native place, Smyrna; but his hopes of support were disappointed by the apathy with which the productions of his genius were regarded by his countrymen. He, therefore, removed to Cumæ, where he received great

applause but no reward, the people alleging that they could never think of maintaining all the *Ὀπῶν*, blind men, and from this repulse he obtained the name of *Homer*. Thus again baffled, he travelled to Phœcia, where a schoolmaster, named *Thestorides*, offered to support him, on condition of being allowed to transcribe his poems; which being granted, this new friend took them away to Chios, and gained universal applause by producing them. Hearing of this treachery, Homer resolved to lay claim to his own compositions, and, for that purpose, set out for Chios. Before, however, he met with *Thestorides*, he was found by *Glaucus*, a shepherd, and introduced by him to his master at *Bellissus*, who employed him in the education of his children. As his fame increased while he remained in this situation, his piratical foe took flight, and left him in possession of the field. On this he left his employment and went to Chios, where he acquired considerable wealth by his poems, married, and had two daughters, one of whom died young, and the other was married to the person in whose family he had recently been a teacher. He determined, however, to proceed to Athens; but the vessel was detained during the winter at Samos, where he sang or recited his poems, often followed by a train of children. He attempted in the spring to prosecute his voyage, but was seized with sickness at Iô, died, and was buried on the seashore.

This account, as we have already observed, is but little to be relied on. And yet it is the only circumstantial relation which has reached us of the adventures and condition of him, whose name every civilized country has united in revering. According to *Diodorus Siculus*, he was educated under *Prompides*, a man of great genius, who taught the Pelagic letter, invented by *Linus*, [l. iii.]. In two respects, all the accounts concerning him agree—that he had been a great traveller, and that he was afflicted with blindness. From the first circumstance, it has been inferred, that he was either rich or enjoyed the patronage of the wealthy; but this will not appear necessary, when it is considered that, in his time, journeys were usually performed on foot, and that he probably travelled, with a view to his support, as an itinerant musician, or reciter. From most of the traditions respecting him, it appears that he was poor, and, it is to be feared, that necessity, rather than the mere desire of gratifying curiosity, prompted his wanderings. All that has been advanced respecting the occasion of his blindness is mere conjecture. Certain it is, that this misfortune arose from accident or disease, and not from the operation of nature at his birth; for the character of his compositions seems rather to suppose him all eye, than destitute of sight; and if they were even framed during his blindness, they form a glorious proof of the vivid power of the imagination more than supplying the want of the bodily organs, and not merely throwing a variety of its own tints over the objects of nature, but presenting them to the mind in a clearer light than could be shed over them by one whose powers of immediate vision were perfectly free from blemishes.

It is singular that so little information should be gathered respecting this poet, from the most accurate examination of his works. Throughout the whole of them we scarcely catch a glimpse of his personal character or adventures; unless Mr. Bryant's almost

unsupported hypothesis be adopted. We learn, indeed, beyond all controversy, that he was capable of conceiving the noblest sentiments; that he was penetrated with a deep reverence for sacred things; and that friendship, hospitality, and universal kindness, were themes on which he loved to dwell. Even in the midst of the feuds and battles which he celebrates, he seems to delight in finding some breathing places in which the brave of both hosts recognize each other as kindred, and unite in a brief interchange of the courtesies and socialities of life. He seems to join in all the rustic feasts of his heroes, and to enter into every generous feeling which they pour forth in the most genial seasons. He must have felt the softest touches of kindred and love, and brooded over the fond recollections of early home. But even these general indications are only incidentally and necessarily given us. Poets are usually tempted, by the very emotions which spring from their genius, to take an opposite course. They feel so intensely all that is peculiar to themselves; they are so conscious of their own divine faculty; and so sensible to the slights which they receive from those whom they despise, that they are eager to vent feelings almost too big for utterance in their poetry. Thus we learn much not only of the external events in their lives, but of the movements of feeling within them. Whatever his outward circumstances were, Homer must have lived happily, or he would have been an egotist. Had he been wretched, he would have informed us of the fact in his works. He was, no doubt, contented with his lot,—happy in the sunshine of his own mind. He has not even, like Milton, told us of his blindness. He was occupied with his own glorious fancies, and dwelt in a fairer creation than this material world. In the absence of all egotism, he more closely resembles Shakespeare than any of those hardy who are usually classed with him as epic. Like our great dramatist, he throws himself into a thousand characters, instead of philosophising or describing in his own; lives and breathes in the works of his own creation; and seems to exist in an immense variety of persons, rather than in one. He stops not to reflect on the events he celebrates. Noble sentiments and heart-stirring speeches are thickly strewn, but they come from the mouths of his heroes, and not from his own, with dramatic propriety and force. He was too much delighted with the visions and joys which poetry opened before him, for ever new and fresh, to think of the shell in which his genius had taken up its dwelling.

His travels.

It clearly, however, appears from the *Iliad* and *Odyssey*, that Homer, in his travels, had visited, and accurately observed, all the principal places in Greece. He uses all its various dialects with perfect ease. In his catalogue of the ships, he has given not merely a beautiful description, but an accurate geography of Greece. He defines the boundaries of a state in a line, and gives us a picture of its beauties in an epithet. He seems not only to have visited, but to have resided, for some time in Egypt; for he has transplanted these customs, rites, mysteries—according to Herodotus, a religion itself. If the hymn to Apollo be genuine, he settled at Chios in his old age. Strabo informs us (l. x.) that Lycurgus had an interview with him, to discuss the constitutions of Sparta, while he was collecting knowledge to frame them; though this seems contradicted by the usual hypothesis, that Lycurgus

brought his works from Asia, where he found them in fragments, after the decease of their author.

Of the death of Homer nothing is certainly known. The account given of it above from the supposititious work of Herodotus seems without foundation. In the life attributed to Plutarch, there is a tradition respecting this event, which only deserves quotation on account of its peculiar absurdity. It is gravely stated, that he had been warned, by an oracle, to beware of the young man's riddle, and that this prophetic warning proved true; for, as he sat in the island of Ios, describing some fishermen, they proposed a riddle in verse for his solution, which he was unable to explain, and was so much afflicted by his failure that he died of grief. It is probable that he lived long, from the length of his works which have reached us, and the immense variety of knowledge which they display. And, though we are ignorant of the manner of his death, we run little hazard in concluding that it took place when he had arrived at a good old age.

From these unsatisfactory speculations respecting the personal history of this great poet, it is with pleasure that we turn to his works, to which time has been less relentless. The *Iliad* and *Odyssey* are the only poems which have been most commonly attributed to him by those who believe in his existence. But a number of others have at different times been stated as his, which it is right to mention.

The *Battle of the Frogs and the Mice* has been generally regarded as Homer's. It has been attributed, however, to Pigras, a brother to Artemisia, who fought at Salamis, in the fleet of Xerxes. (Fabricii Biblioth. Græc. ed. Harles. lib. ii. c. 101.) Mr. Payne Knight, in his *Prolegomena ad Homerum* (Classical Journal, No. xiv, p. 324.), conjectures that it is the production of some Athenian writer; and suggests several points of internal evidence, which show that it is of a much later date than the *Iliad*. The crowing of the cock, for example, is mentioned (v. 191), as a known and familiar sound, though no trace of this bird is to be found in the other works of Homer, or the poets near to his time. This little piece is, however, at all events, one of the oldest specimens of the humorous, and the earliest instance of mock heroic which has reached us. Other works of a similar kind, which are now lost, as the *Arachnomachia*, *Geranomachia*, and the *Heptastection Goat*, have been ascribed to our poet with little reason; and as we are informed that the latter was written in iambic verse, there can be little doubt that it was the production of a later age. Another satirical poem, called *Margites*, consisting of a loose story, and written in ridicule of the female sex, is ascribed to Homer by Plato and Aristotle, and its argument is preserved in Eustathius's Comments on the *Odyssey*. The iambic verses it is said to have contained, are supposed by Mr. Knight to have been interpolations made by Pigras, who is said to have gone through the *Iliad*, introducing a pentameter after every hexameter verse, of which strange labour Suidas has preserved a specimen. Another satirical work, called the *Cerropæes*, probably founded on the old fable of a people of that name, having been changed for their impostures into monkeys, is also ascribed to Homer, but nothing further is known respecting it. The *Epigrams* are extracted from the biography which bears the name of Herodotus, and must stand or fall with it. The *Cypriæ*, or the

Works of
Homer.
attributed
to Homer.

Biography. Loves of the Females at the Siege of Troy, though certainly ancient, is not regarded as genuine. Of the *Anazonia*, the *Troilus*, the *Epigoni*, the *Phœcia*, the smaller *Iliad*, the *Deception of Æcuba*, and others, nothing is known; and it is scarcely possible that one man, however gifted, could have produced them in addition to those which have escaped the ravages of time. Probably many of them were the works of the Homeridae who contended for the honour of being the descendants of the poet, and were thus, in rude periods, confounded with compositions that they were intended to resemble. It is easy also to conceive them to have been literary frauds, which the uncertainty respecting Homer would make practicable, and which the enthusiasm of the wealthy Greeks would render lucrative.

His hymns.

The hymns ascribed to our bard, in number thirty-three, are of more importance, because they are yet in our hands. They are attributed to him by Thucydides, Pausanias, and Lucian, as to their undoubted author. The hymn to Venus is unquestionably ancient; and from the use of the digamma, is probably nearly coeval with Homer. The hymn to Ceres is alluded to by Pausanias, but was not discovered till a very recent time, when Matthæi found it almost entire, among a number of Greek manuscripts, preserved in the library of the synod at Moscow. As, however, this relic varies, in several instances, from the quotations made by Pausanias, it has been supposed to be a different work; though Hermann conjectures the two copies to be only different editions of the same poem. There is much internal evidence against the opinion that these little pieces are the genuine compositions of Homer. In the hymn to Apollo, the word *Niobe* occurs, which, according to the work of Pœsi Homerick, was not used at the time when he flourished. In the hymn to Mars, the word *Typhæus*, and in the first to Minerva, *Tryx*, are introduced, both of which are judged by the same authority to be words of a later invention. All of them, excepting the hymn to Venus, have great inequalities, and are evidently much corrupted. There are also considerable variations in all the manuscripts. Hermann has employed great labour and ingenuity in purifying the text, and in attempting to account for its mutilated condition. He contends that many connecting passages have been lost, whence great obscurity has arisen. He also supposes that the rhapsodists, who were accustomed to recite the works of Homer, sometimes amplified and altered the original, and even supplanted it by introducing their own paraphrase in its room;—that this is still the case with many parts of the *Iliad*; but that, in the hymns, the interpolations did not occupy the room of the original, but were blended with it. These he endeavours to discover and exclude in the larger hymns; and whatever opinion may be entertained of his success, he must be allowed to have executed his arduous plan with great ingenuity and toil. The scholars ascribe these works to a rhapsodist named Cymethus. And the opinion now most commonly entertained is, that though compositions of high antiquity, they are not the productions of Homer. To the *Iliad* and the *Odyssey*, therefore, we may henceforth confine our attention.

Of these, various parts have been suspected to be from other hands than those of the original author, even by those who believe in his personal existence. It is, indeed, by no means certain that the *Odyssey* VOL. IX.

and *Iliad* are not the works of two distinct poets. This is so far from being only a modern controversy, that Seneca informs us it was one of the useless questions upon which the Greeks wasted their time. Those who were of opinion that the poems are the works of different men are frequently mentioned in the Venetian Scholia, under the appellation of *ἡμετέριοι*. There seems to be some internal evidence for supposing the *Odyssey* to have been the work of a later age than the *Iliad*. The arts appear to have made more progress between the composition of the two works than can be probably supposed during the life of an individual. The lyre is for the first time mentioned in the *Odyssey* as made of the intestines of animals. Columns are mentioned, in this poem only, as adorning or supporting buildings, while in all the magnificent descriptions of Troy and the palaces of Priam, in the *Iliad*, no allusion is made to them. Those which are represented as standing in the palace of Ulysses at Ithaca, are almost exactly like the pillars of the Doric order, when architecture had arrived at its perfection. There is no mention of nets for fishing, or of several other instruments for providing food, and for domestic uses, in the *Iliad*, while they are familiarly spoken of in the *Odyssey*. The mythologies of the poems too, seem scarcely to coincide. In the former of them we do not find Mercury represented as the messenger of the gods; Neptune as armed with a trident; or the island of Delphi as sacred to Apollo—all of which are presented to us in the latter. The language also, in some respects, varies; bearing marks in the *Odyssey* of more cultivation and refinement, especially in the adoption of shorter forms of expression. There is more of Ionic openness in the *Iliad*, and more of Attic contraction and elegance in the *Odyssey*. In the latter the word written *εμπαρα*, *riches*, is always spelled *χρηματα*. Here, the term *λεσχ*, a public game, and the verb *δωρεω*, to serve for hire, from *δωρ*, indicating a race of men different from slaves, hired servants, occur, which we do not find in the *Iliad*. It has been generally supposed that the *Iliad* was the production of Homer's manhood, and the *Odyssey* of his declining years. But it is singular that, as he advanced in life, his fictions should have become more extravagant, and his excursions from probability more frequent and glaring. For it is manifest that wonders, prodigies, and strange adventures, are accumulated in the adventures of Ulysses with much greater boldness than in the tale of Troy. We can, for the most part, trace the places described in the latter, at the present day; but it is contended by Mr. Knight, that it would be as rational to look for Lilliput, Brobdingnag, and Laputa, on the earth, as to assign many of the scenes in which the action of the former is laid. Ithaca itself is almost a rock, and utterly incapable of having supported the court of Ulysses, or of having afforded room for the transactions said to have occurred within its shores. Certain, however, it is, that the *Odyssey*, with all its defects, is very far from being unworthy of the author of the *Iliad*. And the great difficulty in attributing it to another, arises from the improbability of there having been two such poets, of whom so little should have certainly been known, even in very early times.

The most zealous advocates for attributing either of the poems to an individual, will not hesitate to admit that they must have been left by him in a

What parts
of Homer's
works dis-
puted.

very different state from that in which we now read them. Four verses have been introduced into some later editions of the *Iliad*, on the authority of Plutarch, which are not found in any of the manuscripts, leaving, it is said, been expunged by Aristarchus, as mentioning the intention of periculis without sufficient horror. *Æchivus* speaks of Homer as repeatedly using the words *φαρμακὸν ἐπὶ σπέρματι*, which are not to be traced in any of the poems now in being. And a variety of various readings have been collected by the early editors and commentators of the poet, which probably arose from the errors or interpolations of the wandering reciters. See the *Classical Disquisitions*, by the late Mr. DEWINTER, in the *Athenæum* for 1807.

Many large passages and whole books have been suspected, especially by Heyne, to be spurious.

The third book of the *Iliad*, from v. 121 to v. 244, has been thought to deserve this epithet: because Helen, who, in this passage, points out the leaders of the Greeks from the wall of Troy to Priam, expresses herself doubtful as to the fate of her brothers, which she must have known; and because it is improbable that the king should not, in a ten years' war, have learned the characters and persons of his principal foes. But it must be remembered that the Greeks are usually represented as having till this period contented themselves with plundering the country; and as having made no attack on the capital, and that Priam, from his age, had never personally opposed them. At all events, it is not only useful to the conduct of the poem, as affording an opportunity of describing some of the characters, but it is itself exceedingly beautiful and refreshing to the reader, amidst so many scenes of carnage. A poet, in the time of Homer, would not resign an opportunity of delighting his audience, on the ground of such objections as these, which were not very likely to interrupt their pleasures.

The fifth book of the *Iliad*, containing a narrative of the exploits of Diomed, has been supposed to be a separate poem, written in honour of that hero, and introduced into its present situation at a subsequent period. But it will be found, on an attentive examination of the context, that this part is so closely interwoven with circumstances, both before and after it, that it forms a necessary link in the chain of events. It prepares the way, and gives the occasion for the beautiful interview of Hector and Andromache, for the return of Paris to the battle, for the deliverance of Nestor from imminent peril by the aid of those horses which Diomed had taken from *Æneas*, and for the introduction of the same horses in the funeral games for Patroclus. The speech of Diomed, when Agamemnon advises a return to Greece, manifestly refers to the exploits which are related in this book; and to that speech may be traced the embassy of Ulysses, Ajax, and Phoenix to Achilles, their success in overcoming his determination to retire, and all the subsequent events of the poem. Those who will follow Homer through the whole character of Diomed, as developed in the various parts of the *Iliad*, will perceive the admirable consistency throughout, from the time when he so gracefully receives the rebuke of Agamemnon in the fourth book, to the last time when his name occurs.

The single combat of Hector and Ajax—the nocturnal adventure of Ulysses and Diomed—the embassy of Ildas from the Trojans—and some minor passages,

have been impugned as spurious. But they will probably be found closely connected with the other parts of the work, and even, in many instances, necessary to enable the reader rightly to understand it. To the description of the shield of Achilles, in the eighteenth book, Heyne has advanced many ingenious objections; he contends that it is altogether unconnected with the story which it interrupts, and that although beautiful in itself, of a very different kind of excellence from the scenes which immediately surround it. The shield seems not to be formed of workmanship at all calculated for the purpose, or of a proper character with the design. It would not glitter in the sun, or strike awe in the midst of battle; its curious ornaments would rather require time and leisure to examine them. Instead of presenting to the view some single terrific object, as the head of Medusa, it contains a variety of minute parts, and those, many of them, having no reference to deeds of arms; such as the heavenly bodies, the sea, cities, fields, forensic contests, agricultural labours, dances, and pictures of quiet and repose. From the great number of objects comprised within the compass, each part must have been so exceedingly minute as to require almost a microscopic eye to discern it. The whole could never have been fashioned by the summary process by which Vulcan is said to have prepared it complete for *Thetis*. And, in the early times of Homer, the arts necessary to the formation of so elaborate a work were unknown; and consequently, the whole must have been the production of some other hand in some later period, and introduced to the *Iliad* by the Athenian editor.

In answer to their objections, it may be replied that there is no violation of character in the passage in question. The taste of *Thetis*, rather than of Achilles, would be consulted by the divine workman. Had the poet given to Ulysses the bold and fearless spirit of Achilles, or to Achilles the cunning of the Ithacan prince, the case would have been far different. It is evidently absurd to contend that proper tools and a sufficient time are not allowed in framing the shield, when a deity is represented as its author. There may be an incongruity in setting Vulcan to use the common apparatus at all, and not representing him as going through the requisite process; but this is no other than perpetually occurs in all tales of mythology, whether in Homer, or subsequent writers. It is true, that at the age when the *Iliad* is commonly supposed to have been produced, no such piece of workmanship could actually have been completed. But the poet was not bound to confine his descriptions of natural or artificial beauty to the objects actually before him. It is enough that the elements existed, which he could model at will, surpassing, in his imaginations, the coarse and unrefined realities of his age. Shields, and other pieces of armour, were unquestionably in common use, and were probably embellished with some rude but fanciful devices. It was easy then for him, when he would describe a shield, of which a god was to be represented as the framer, to depict on its surface any resemblances of external things which he might select for the occasion. Perhaps even his silence as to the tools with which these pictures could be fashioned, may show that he was speaking of things which, in his time, no earthly art could imitate; and the crowd of objects he has introduced

Biography. may prove that he drew after no existing model. It is true, that the passages which border on this episode, are of a very different character; as martial and bustling, as this is quiet and full of repose; but so far from this circumstance proving that it is not genuine, it affords a reason for its introduction, and even for the minuteness of its detail. "Direness" might otherwise have grown too familiar to the thoughts of the poet's audience. They might "have snuffed full of horrors." He might have felt the necessity of relieving himself and them, by introducing, through this artifice, bird's-eye views of calm and peaceful life, and even of elegant entertainments and joys. This is the true reason for the description given of the shield, and the multitude of objects which adorn it. If they do not grace the piece of armour, they at least grace the poem; if they prove not the taste of Vulcan, they exhibit that of Homer; and this was probably thought by him of the most consequence. If we examine all the episodes in the *Iliads* by a similar criterion, we shall find them admirably conducive to the main design; not of shewing forth the anger or the glory of his hero, which, at most, was but the secondary intention, but of delighting his hearers by calling into exercise the greatest variety of human affections. The description of the chiefs by Helen—the single combat of Paris and Menelaus, and of Ajax and Hector—the loves of Paris and Helen—the parting of Hector and Andromache—the meeting of Glaucus and Diomed between the armies, and the renewal of their old friendship—and the journey of Priam to recover the body of his best-beloved son—are not only in themselves exceedingly picturesque, and often pathetic, but delightfully relieve the bustle and sadness of the story, while they heighten its heroic grandeur by the contrast they afford to it. The last six books have been thought by some to be from another hand, especially the twenty-fourth, because they seem to relate to a new subject, not the original anger of Achilles, but the consequences of his grief for the loss of his friend, with the death and funeral of Hector. If this were the case, the author of them possessed a genius at least equal to that of him who composed the body of the poem. The battle in which the immortals join is superior to all the rest; perhaps to any battle ever depicted in verse, in breadth and richness of colouring, in picturesque confusion, in the grandeur of the machinery. Hence it will be remembered, Longinus has derived a favourite example of the sublime. The incidents attendant on the death of Hector, and subsequent to it, are represented with as lively a pencil as any thing in the earlier part of the work. Besides, Jupiter, in one of the preceding books foretells all the events to the end of the poem; and, of course, the mind of the poet must then have conceived them.

That part of the eleventh book of the *Odyssey*, which relates the avocation of the shades of the dead by Ulysses, is supposed to be spurious, even by Aristarchus and the old grammarians. It is very difficult to discover, taking the passage as it now stands, whether the hero actually descended to the shades, or called up the appearances described, as in a vision before him. Some, indeed, have thought the whole account of the invisible state to be fable to great suspicion. Certain it is that nothing can be more cheerless than the view here given of a future world. All is wretched, cold, shadowy, and appalling. The passage in which Achilles

represents the vilest condition on earth as preferable to the highest state in the unseen world, is only in accordance with the spirit of the whole description. But, perhaps, all this, though it shews the dreary opinion entertained respecting the immortality of the soul at that period, proves little against the authenticity of the greater portion. Plato alludes to this part of the *Odyssey*, as the work of Homer, in terms of severe censure; as giving a false view of religion, and discouraging men from the love and practice of virtue; and, on the ground of such fictitious representations, he excludes the poets from his ideal republic. Virgil's description of the Hades, as visited by Æneas, is not much more consistent than that of Homer. He represents those regions as within the earth, and yet as having their own sun and stars. It is to be observed that, in the *Iliad* and *Odyssey*, whenever the poet alludes to natural objects, all his descriptions are clear, perspicuous, and vivid; but when he refers to preternatural things, his consistency generally forsakes him. Sometimes he represents Olympus as a mountain of earth, at others as the habitation of the gods, full of golden thrones and immortal palaces. His inconsistencies respecting the fates, the powers of the gods, and the liability of the celestials to pain and mortal accident, it would be useless to point out, or to attempt to reconcile. He seems to have regarded only the immediate effect of his machinery; and to have taken little pains to render it consistent either with philosophy, or with itself. As he must have recited his poems in parts, incongruities would not be observed by the hearers; and the admiration excited by the sublimity of detached passages, would be a sufficient temptation for deviations which the impulse of the moment might suggest.

Aristarchus and Aristophanes both suppose that the *Odyssey*, as originally written, ended at the 296th verse of the 23d book; and in this opinion most of the commentators have subsequently agreed. In the concluding passages, there are many circumstances stated which must evidently be referred to a later age. According to the prophecies of Tiresias, Ulysses went into exile after the destruction of his wife's suitors, being driven again from his palace by the vengeance of his relatives. It were almost to be wished, that we could believe the miserable revenge taken by Ulysses on the women, after the slaughter of his more powerful foes, could be regarded as the addition of a later hand; for it disgraces us by the exhibition of a cool and unmanly barbarity, to which there is no similar instance in any other part of the poet's works.

Leaving the reader to draw whatever line he thinks most accurate between the authentic parts of the *Iliad* and *Odyssey*, and those interpolated or corrupted, we shall now proceed to consider the works themselves as they appear at present.

The question how far these poems are grounded on real events, and from what sources those parts of them which are manifestly fictitious, were drawn, not only possesses great intrinsic interest, but is of high importance to the elucidation of early Grecian history. The admirers of Homer have generally consented to believe, without examination, that the chief events and persons of the Trojan war had an actual existence. Nor can it be surprising, even to those who regard them as entirely fabulous, that the world should have been so

Question as
to the exist-
ence of the
heroes, and
events of the
Trojan war.

Biography. little inclined to scepticism. Never was there a tale in which the supernatural is so intimately interwoven, told with an air of reality so imposing. Impossibilities vanish, and all things become probable, before the magic of the poet's genius. He transports us to a new and ever fresh creation, in which, though much is calculated to astonish, all appears real, substantial, and unperishing. Olympus, with its deities on their golden seats, lies open to our view, "in form as palpable," as the glorious towers of Troy, the sacred Scamander, and Ida with its hundred springs. Prodiges become familiar to us. We feel that we are treading on enchanted ground, where the objects have no relation to the "ignorant present time," and are not subject to mathematical scrutiny. Their wonders too, are generally first unfolded to us in happy times when we desire no joy but that of believing; and the chief persons of the tale seem afterwards like old and dear acquaintance, who have delighted our childhood. With these feelings predominant, it is no wonder that the world should have been little solicitous to fix the boundaries of its historical and poetical faith, and have generally acquiesced in believing the most noble tale of antiquity, without scrupulously weighing the evidence on which its authenticity rests.

Homer
thought
allegorical.

Some of the Grecian philosophers, however, who were disposed to see in the mythologies of their country a spiritual meaning, seem to have regarded the narratives of Homer as allegories intended to convey moral and abstract truths. According to Diogenes Laertius, this was the opinion of Anaxagoras, the preceptor of Socrates. This opinion was never likely to be popular; and perhaps the question respecting the foundation of the Iliad and Odyssey was scarcely agitated, till it engaged the zeal, ingenuity, and learning of Mr. Bryant. In a pamphlet, and several subsequent publications, that celebrated scholar has maintained the daring positions that Helen was never carried from Sparta, and that all the chain of events built on that foundation is altogether fictitious, or rather is derived from circumstances which took place in very different scenes from those in which the action of Homer's poems is laid. His opinions, though controverted by able writers, have obtained no inconsiderable number of followers; and we shall, therefore, state the leading arguments on both sides of the question.

The whole story of the Grecian expedition, it is contended, originates in manifest fable. Helen, its original cause, is stated to have been born of an egg. The heroes are descended from gods, and hold familiar converse with immortals. The injury done by Paris to Menelaus, though atrocious, appears scarcely an adequate reason for an expedition which was ten years in preparation, and ten more in accomplishment; undertaken by chiefs to whom a romantic sense of honour was unknown, and directed against a distant and unoffending people. It appears, from the introduction to Thucydides, that at the latest period which can be fixed as the era of the Trojan war, the Grecian states had made very little advances from barbarism; that their wars were prompted for the most part by the love of plunder; and that there were no common feelings which could unite them in one perilous enterprise. An oath seems but a slender ground on which to build the concert between the leaders, especially at a time when the most sacred obligations were so little regarded. It is astonishing that all the petty chieftains of Greece

should consent to abandon the government of their own territories, forego all their animosities, and enlist themselves under a commander little superior to themselves in extent of territory, and inferior to some of them in personal qualities, in order to annihilate a city they could have known only by report, and in the conquest of which the best part of life was to be wasted. It is utterly incredible too, that Greece in her infant state should have furnished an army far more numerous than she was able to raise in the height of her prosperity and power, when her liberties were invaded by the Persians. The same objection applies, even with greater force, to the immense fleet of which so minute a catalogue is given by Homer. The number of vessels amounts to 1186, while 378 ships, with a few open vessels of fifty of cars, constituted the whole fleet engaged at Salamis. Besides, in those early times, the Greeks were entirely unaccustomed to distant expeditions, and seldom ventured to cross the Aegean sea. According to Libanius,* they thought it hazardous to proceed beyond Delos; and Herodotus† represents the Hellenians as unwilling to venture further, when requested by the Ionians, because they had little knowledge of the seas beyond it, and regarded an expedition to Samos as strange and romantic as a voyage to Gades or the Mediterranean straits.

The age of Helen, and of the principal heroes engaged on her behalf, is also urged, as evincing the falshood of the whole narration. Her brothers were men capable of bearing arms at the time of the enterprise of Jason. Scalliger and Petavius agree in making the interval between this event and the fall of Troy seventy-nine years; so that, allowing Helen to have been only twenty years of age at the former period, she will have been ninety-nine in the last year of the siege; older than Hecuba, who is represented as bent down by years. And yet, a little before this time, she is represented as sufficiently beautiful to charm away the resentment of the Trojan sages, and as a prize for whom worlds might reasonably contend. Nny, Telemachus is stated to have seen her ten years afterwards, at Sparta, when she was still "lovely as Diana." Her suitors, too, among whom we find not only Idomeneus, Ulysses, Menestheus, Philoctetes, and Agamemnon, but Antilochus, Meriones, Machaon, Patroclus, Diomed, Nireus, and Ajax Oileus, can scarcely be regarded as younger than the object of their devotion, and must, therefore, have been nearly a hundred years of age at the time when the action of the Iliad commences; and yet they are all represented as in the vigour of manhood, and some of them as possessing the rashness and the accomplishments of youth. Not only is the age of the champions against the authenticity of the history of their exploits, but the extraordinary preservation of their lives from the accidents of war, and of their ships from the inclemency of the seasons and the decays of time. The number of the chief persons in the Iliad is, at least, fifty-nine; and yet, in a nine year's siege, an exposure to the inclemencies of camps, and even to the ravages of pestilence, all of them survived, except Proteusilas, who was so called from having first stepped on shore upon their arrival, and having been immediately slain by

Hector. Though Agamemnon speaks of the loss of courage and the decay of shipping, Ulysses afterwards avenged the sea for three years in his own ship, and Menelaus used his fleet for eight years after the capture of Troy. Men and ships seem to have been preserved from time, accident, and war, without any explanation of the miracle by which this was effected.

It is also contended, that the alleged duration of the siege shews the whole to have been a fiction. Till the Peloponnesian war, there is no instance of a Grecian army carrying on a blockade in winter. Though the Romans were engaged in contentions from the foundation of their city, they never made a winter campaign till the siege of Veii. It is scarcely to be believed, that these petty princes could have kept their soldiers so long true to a cause which could so little interest them on a foreign soil. And how, it is asked, can it be accounted for, that the city was no sooner taken? The army of the Greeks, according to every intimation given by Homer, was twice as numerous as that of the Trojans. From Homer's own statement, it appears that, on a fierce attack being made, both Patroclus and Achilles could have stormed the town in a single day, had not their progress been stopped by the intervention of deities. The Grecian leaders are represented, not only as far more numerous, but more valiant than their enemies; the troops had no means of subsistence but by plunder, and yet nine years were allowed to elapse before any regular attack was made on the city! And during all this time, no intelligence arrived from Greece to inform the monarchs of the state of their kingdoms, though Diomed and his companions reached their home after four days' sail. Achilles is ignorant whether his father was dead, or sinking under the weight of years, though he says he could reach Pthia in three days; and is equally uncertain respecting the fate of his son Neoptolemus, whom he had left at Scyros, still nearer to the shores of the Troad.

Existence of Troy.

Arguments have also been deduced against the existence of Troy, in Phrygia, from the alleged impossibility of finding any vestiges of it remaining. This difficulty was felt in times much nearer the date of its supposed destruction than our own. Lucan informs us that the Romans, under Cæsar, examined the region of Troad, but no ruins could be found there—*etiam perire ruinae*. According to Strabo, Demetrius Scepsius, a native of the Troad, and Hestiasus Alexandrinus searched in vain for any indications of ancient Troy. When Alexander, in the height of his enthusiasm for his favourite poet, visited the region in which Homer has laid his scene, with the anxious desire of building a city on the site of the capital of Priam, he could find no vestiges to direct him. He found, indeed, a small town upon the sea shore called Ilium, which he rebuilt and adorned; but this could never have occupied the site of Homer's city, as that was manifestly situate at a considerable distance from the sea, beneath Mount Ida, leaving room for the Grecian camp, and all the battles which form the chief subject of the Iliad. Modern travellers, especially Chevalier Murrin, and Gell, have regarded themselves as more successful; but their theories differ perpetually from each other, and will perhaps be found not very consistent with themselves.

In opposition to these reasonings, a variety of arguments have been brought forward by the champions of

Homer's veracity. Many of the objections made to Homer, &c. from the existence of Troy, and the reality of the Grecian expedition, prove only that Homer must have greatly embellished those materials which history afforded him, and not that his narratives are altogether without foundation. Greece, though in many respects in a state of barbarism, was not unacquainted with the scene of war in the times referred to by the poet. Though the obligation of an oath might not have been in itself sufficient to unite all the suitors of Helen in undertaking to avenge the wrongs of her husband, a variety of motives, especially the love of enterprise and of plunder, may be conceived to have produced the union. Phrygia was regarded as affording a rich booty to a conqueror. Homer perpetually represents the Greeks as swayed by this inducement; and the very contest on which the Iliad depends arose from the contention of Achilles and Agamemnon respecting a captive. Some too, like Ulysses, might have been unwillingly forced to engage in the war, by the power of Menelaus and his brother, and the general desire of the Greeks. With respect to the number of the forces, it is alleged that there is nothing incredible, even taking Homer's account to have been literally true. Barbarous states have furnished armies more numerous in proportion to their extent; and it may well be considered as easier to raise large bodies of troops from states in a great degree uncivilized, than from regions where the pursuits of agriculture and commerce have given men a love of peace, and the enjoyment of a comfortable home. The ships which conveyed the heroes of Homer to Troy were used for purposes of commerce, piracy, and war, and were, on this occasion, employed merely as transports, furnished not by individuals, but by the state, and equipped at a time when the republics of Greece, excepting Attica, were almost destitute of a naval force for the public service. At all events, it may be allowed that Homer increased both the armament and the troops for poetical effect, without supposing that the Trojan war has no foundation in authentic history. It is scarcely possible to believe that the Greeks were unacquainted with maritime affairs at the era of Troy, however they might afterwards lose that information by their becoming more settled and domestic. They had themselves been imported into Greece and Asia by Egyptian and Tyrian fleets. Diodorus Siculus speaks of Minos, king of Crete, as having great forces, both military and naval, and possessing the empire of the seas. Thucydides also confirms this statement, and speaks of the Carian and Phœnician pirates, before the wars of Troy, in which he is corroborated by the testimonies of Hesiod and Homer.

The objections arising from the age of Helen and her suitors are weakened by the consideration that they are derived from chronologies admitted to be uncertain, and for which, at all events, Homer is not responsible. It is urged, that as the poet has given no account of the heroes who came from Greece, as distinct from that of those who were living in the tenth year of the war, it cannot be assumed that none of the former had perished in the interval; though, from his usual accuracy in referring to past events, some notice of eminent persons who had fallen might have been expected, when the bands of their country were the subject of enumeration or panegyric. Though the

Arguments
answered.

shipping might have been out of repair at the time its decay was alluded to by Agamemnon, it is not to be inferred that it was suffered to become useless during the whole duration of the siege, or that it was not refitted previous to the voyage home; especially as the sides of Mount Ida abounded with proper materials, and the Grecian troops must have had abundant leisure to use them. To the arguments drawn from the length of the war, and the supposed inactivity of the invaders during its first nine years, it is replied—that supposing, in the early times of Greece, no winter campaigns were known, the iden could never have suggested itself to the imagination of the poet; that if he could have conceived any thing so contrary to experience, he would not have dared to make it the subject of his poem; that the war was not merely an attack on Troy, but a devastation of the Phrygian dominions; that it is not to be taken for granted that no hostile movement was made against the city, because none is mentioned by Homer; that, as the capital was strongly fortified, it was scarcely possible, in the infancy of the science of war, to have taken it by storm; and that the real object of the chief part of the Grecian army was best answered by sacking the neighbouring towns, and subsisting on the spoils. With respect to the absence of intelligence from Greece, it is answered, that though, from various obstructions, the chiefs might be for some time ignorant of the state of their relatives or dominions, it does not follow that they received no tidings from home during the whole of their stay; and that the conduct of the wives of some of them might furnish a sufficient cause why any very particular information should have been withheld. The assertion that no vestiges can be traced of the Troad is denied; and the laborious exertions of many classical travellers have been employed in tracing, in the neighbourhood of Ida, the chief rivers, elevations, and sepulchral monuments, mentioned by Homer—with what degree of success, an attentive perusal of Chevalier, Morritt, Wood, Gell, Dr. Clarke, and others, can alone enable the reader to decide.

The chief argument for the truth of the main incidents in the Trojan story, arises from the general belief which has prevailed from early times. Its consequences are intimately blended with the foundation of numerous colonies, where traditions have been preserved, more or less distinct, tending to attest its truth. Thucydides, who is admitted by the opponents of Homer's veracity, to have been a lover of truth, gives it his sanction. Herodotus, while he supposes that Helen was never at Troy, implies the existence of the place in question. Alexander, though unsuccessful in discovering the exact site of the ancient town, proved, by his researches, that he, at least, believed in the common hypothesis that it actually stood in Phrygia. All the writers who speak of its ruins having perished, who lament the total extinction of all the material vestiges of its ancient glories, who mourn that woods and fields should now occupy the place where its palaces were raised, must have joined in this opinion. The state of the Troad has always been alluded to, not as a proof that the narration of Homer is false, but as a striking testimony of the perishable nature of the most venerable and grand of earthly things. "*Fuit Ilium et ingens gloriæ Teucorum*," seems to have been the fond and mournful belief of the lovers of poetry in every age. For they speak of Troy as no more; and

it is only in their sensible and material forms that the towers of that immortal city could perish. To the eye of the imagination, they stand as noble and as sacred as ever. We seem almost to remember them as though we had actually seen them in our youth, and been spectators of the glorious and heart-stirring scenes which took place beneath them. Of this delightful feeling even the determination of the controversy in favour of Mr. Bryant and his followers would have no power to deprive us.

The great antagonist of the common theory by which Troy is placed in Phrygia, does not suppose that the mighty fictions of Homer are altogether without foundation. He has, with all the learning and acuteness for the union of which he is so distinguished among scholars, endeavoured to attribute the whole to an Egyptian origin. All writers seem to agree that Homer in his travels had visited Egypt, and had derived from that superstitious country many of the embellishments with which his writings are adorned. He seems to have introduced the nine muses thence, who were formerly priestesses of the same number at Hermopolis, where they chanted hymns in honour of the deities who were the objects of their peculiar homage. (Plutarch, Isis and Osiris, p. 352.) To these priestesses the archives of state were entrusted; to them, consequently, all desirous of historical information applied; and thence the poet, who had probably shared in their assistance, and whom they had furnished with old traditions, celebrates them as knowing all things. (Odyssey, li. v. 60.) It is observable also that the poet denominates the princes *Thaïsque Aæn, Sæphers of the People*, which was a very ancient Egyptian title. He attributes to seamen, in the fleet of Menelaus and the crew of Ulysses, an abhorrence to fish, which was altogether borrowed from the Egyptians. Plato observes, that during the whole of the war, the Grecian heroes are never represented as using fish as a means of subsistence. Mr. Bryant further adduces evidence to show that the site of the Trojan war was actually in the territories of Egypt, a few miles below Memphis; where Strabo finds a place bearing the name of Troy, and supposes it to have been founded by the Trojan captives who accompanied Menelaus to Egypt.

In support of this hypothesis, Mr. Bryant brings forward traces of old traditions respecting a Trojan war in Egypt; he argues that upon this supposition alone the presence of Memnon and the Ethiopians at the siege can be accounted for; that the deities, superstitions, and rites, attributed to the Trojans, are manifestly different from any that prevailed at the time, in Asia Minor, and are either altogether Egyptian, or those which, having that origin, had been altered and adapted by the Greeks. The names given to the Trojan leaders and the chiefs of the auxiliaries are manifestly not Asiatic but Grecian; and many of them Greek compounds. Hence Mr. Bryant concludes that the poet having, from his family and from his travels in Egypt, derived certain traditions respecting a Trojan war in that place, took the ground-work of his *Iliad* and *Odyssey* entirely from thence, changed the scene to Phrygia, and, for the honour of his country, made the conquerors Greeks, and gave such names to his characters, as he derived from the stores of his native tongue.

Mr. Bryant goes a step further than this; he follows Ptolemy Hephestion, in the opinion, that a woman of the name of Phantasia—which he supposes to mean Phant' Isia, the priestess of Isia—had written a history of certain contentions and adventures on the subjects of the Iliad and Odyssey, which Homer, when in Egypt, obtained from Phantasia, a scribe, and from which he afterwards composed his two principal works. The termination of these names is, indeed, Greek, but this he supposes to have been altered to please the ears of the Grecians. To all this it is replied, that the use of Egyptian customs is easily accounted for by their previous introduction to Greece, and that all the rest is but ingenious and fanciful conjecture, to which the traditions and opinions of the Greeks, and of many colonies from them, furnish more than an adequate answer.

Criticisms
on Homer's
works.

Whatever opinion may be adopted respecting the ground-work of the Iliad and the Odyssey, or of the sources whence their stories were constructed, there can happily be no occasion to contend for their intrinsic excellence. Before, however, we give instances of their beauty and sublimity in detail, it may be curious to view them as having introduced a new kind of poetry into the world, a kind of poetry of which we have little previous trace, but of which the Greek lyrics and tragedies afterwards became the most perfect examples.

There are two great divisions of imaginative composition, we conceive, far more important than the technical distinctions of epic or tragic, because they relate only incidentally to the *form*, but immediately to the *tenor* and *essence* of poetry. These are, to attempt the expression of many ideas in a word, the *contemplative* and the *plastic*. The poet who adopts the latter style presents to us palpable forms; it may be more bright and glorious than the maternal world can furnish, but still definite; "distinguishable" to the intellectual eye "in member, joint, and limb;" while he, whose genius inclines him to the former, gives us only the sensations and feelings which objects have excited within his own bosom. Every kind of poetry belongs to one or other of these classes, or unites both of them. In the present day, and even from the commencement of the Augustan age, most poets have blended them together; but it was otherwise in earlier times. Then the distinctiveness of these modes of the manifestation of genius formed the main characteristic of national poetry; and the prevalence of one of them was generally to be traced to some deep and pervading emotion in the public mind. This principle, as peculiarly affecting the writings of Homer, and the subsequent literature of Greece, we shall endeavour further to develop.

The Hebrew poetry, as contained in the Bible, is the only great mass of surviving poetry more ancient than the Iliad. Some have supposed that there is a great resemblance between these two mighty works; but an attentive consideration will probably convince an unbiased mind, that the similarity exists, not in respect of their texture, but of the simple manners they portray, and the examples of unaffected greatness which they exhibit. The poetry of the Bible is the very reverse of the plastic. In its noblest passages it contains very few palpable images; no forms which we can clearly body out to ourselves, or which a painter could express. It touches, indeed, the finest chords about the heart of man with a sweet and inexpressible

charm; or oppresses him with a sense of his own littleness and of eternal grandeur. It admits us to the company of angels, it allows us to hear their everlasting music, but it does not describe them. We sympathize with the innocence and delightful simplicity of Joseph, but we know nothing of his features. We feel the beauty of Rachel, for which Jacob thought fourteen years of servitude a few days, but we do not see it. Our hearts seem blended in the youthful exile's, at the sacred spot where heaven is opened to him in solemn vision, and angels are ascending and descending on the ladder; but we neither see, nor desire to see, the linements of these celestial visitants. The reason of this peculiarity is obvious. The Old Testament is a partial revealing of things that are unseen. It points "with silent finger" to "temples not made with hands, eternal in the heavens." It teaches of brighter things to come, which shine dimly through prophetic symbols. Above all, its prevailing doctrine is, that One power, altogether beyond the feeble conceptions of men, presides in every part of the universe. How could the poetry of a system be plastic, in which God is every thing, and that God not to be embodied in earthly shape? The prevailing sentiment is reverence; a deep and awful sense of dependance in the midst of darkness; a faith and hope in things unseen. Men had not yet affected to draw aside the curtain which concealed the holy of holies; they heard the voice of their Maker in the deep silence of the night, and felt his gladdening presence in the serenity of an evening sky. This feeling of the vast and indistinct, which the religion of the patriarchs led them to cultivate, diffused itself over all their devotions, and decided the character of the imagination, as well as of the moral sense of their posterity. In the Bible, nature is presented to us only in her grand and elemental forms. Chaos and light, life and death, eternity and time, are the subjects on which it touches, and on which it hints rather than dwells. As faith is its leading principle, and faith either in realities beyond the grave, or in blessings to come in the richness of time, the very hopes it records, though stable in their foundation, are indistinct in their objects; they are built on a rock, but their top is above the clouds. All the solemnities of the Jewish people were shadowings forth of glory to come. The mind was not to rest on them. They were the foreground of an eternal perspective. The prophets carried on the same feelings, and tended rather to heighten than to decrease them. They had glimpses into the distance of years, but no particular or clear sight of the days of which they sung. They trembled with awe at the grandeur of their own conceptions; and referred only to visible objects as illustrations of glories far beyond them. In short, while one God was all to the mind, none but mighty stirrings could find a place there; hopes too vast to be defined, expectations too high to rest on earthly things.

But the mere belief in things unseen was too pure and refined to satisfy the mental appetites of mankind at large. They wanted something *visible* to reverse, and to repose their hopes on. They could not raise their thoughts to the heavens of heavens; and feeling the need, which the heart always feels, of objects to adore, they sought them in the glorious works of creation, which they peopled with the forms of their own imagination, or supplied with presiding deities from their food recollec-

Influence of
the ancient
mythologies
on poetry.

tions of departed excellence and glory. Hence, in a great degree, the idolatries of the ancient world. Egypt and the eastern nations seem to have been the first thus to create palpable objects of faith, or to raise visible things into the immediate dwellings of celestial spirits. From Egypt, these mythologies were conveyed by emigrants to Greece, where they were modelled into beautiful forms by the influence of a clatter and more varied scenery. Homer, who had certainly visited the parent country of superstition, deeply imbibed a poetical faith, at least, in its marvels. How far he has altered these it is not possible for us to decide; certain it is that he has given an imaginative life to glorious fictions; and has rendered earth-born deities immortal.

These fictions had as great an influence over the poetry, as over the conduct of those who embraced them. The dim, the remote, the indistinct, was, in a great measure, rejected; and sensible objects supplied its room. As religion is always a prevailing cause in moulding the national mind, the poets, as well as the priests, learned to shun at noble objects, without regarding them as the vestiges of a glory that had been, or the indications of a greatness yet to come. Every thing in poetry was cast in a set and definitive form. The objects of nature which at first had been merely described, soon became personified, and were rendered even more distinct to the mind than they appeared in their proper form. Brooks, and trees, and the ocean, no more gleamed in song as in a landscape, but were converted into nymphs, fauns, and a trident-bearing deity. Every quality too of the mind was invested with personal attributes. Nature and the human soul, in the hands of the poet, become mere quarries of exquisite marble, from which he might fashion statues of the most perfect grace and inimitable proportions. Generally speaking, all was sensual in the moral world, and sensible in that of poetry.

The works of Homer, however, though they seem to have begun, by no means completed this singular change. He gives us magnificent descriptions of the world without us, and sometimes throws a genial light on that within. He refers to the ocean, the moonlight and the stars, without calling to his aid a machinery which, in some instances, became almost too unwieldy even for him to control. He affords us glimpses too of a Great First Cause, and of the solemnities of life and immortality, in the midst of the wonderful creations which he has raised up, as if to hide them from us. And it is only on these occasions, when he seems to have caught a light from holier days, that he bears any resemblance to the sacred writers. In general, they make earthly things spiritual, while he makes spiritual things earthly. They raise us from earth to heaven, he brings down heaven to earth. He peoples every thing beautiful in the world with deities bodied forth to the mind in more decided forms than the objects over which they presided; they looked on material things as telling the glory of one who was invisible, and whom they dared not even to imagine. To them eternity revealed itself in things of time and sense; he conferred immortality on the objects of creation. In the Scriptures the universe appears the vestibule of a mighty temple, from whose inner shrine we catch faint echoes of divine music, and whose glories we sometimes dimly see; in Homer it is the

fane itself, adorned with exquisite skill, in which the materials afforded by earth are fashioned into a thousand admirable shapes, that, instead of revealing to us higher things, tend to hide them from us.

But the plastic style, introduced by Homer, though arising, in a great degree, from the Pagan mythology, has added largely to the capabilities of genius. It gave to poetry "a local habitation and a name." It taught men to see beauty and grace wherever they existed, and to create them where they were wanting. It tended to ameliorate and soften the mind, by making loveliness and fair proportion familiar to the thoughts. It spread the spirit of poetry and the admiration of genius among the people, who were little able to enjoy that which had no earthly foreground,—but who perceived the beauty of the glorious shapes which the hand could set before them. As religious feelings, when mis-directed, had produced it, it had, however, an unfortunate re-action on religion. It taught men yet further to multiply deities, and rites, and temples; and finally modified both the character and the genius of Greece. The tragic poets caught the sentiment of shape in all its grace and in all its coldness, and perpetually brought it to adorn those mythologies by which it had been created. They have one great moral which they constantly inculcate—submission to the decrees of heaven. They perpetually refer us to deities as the immediate causes of the events which they celebrate. Thus they exclude themselves from portraying the emotions of the human heart—the strength and the weaknesses of noble passions—the "torrent, tempest, and whirlwind of the passions." Their heroes act and suffer, become innocent or guilty, not from motives within them, but an influence above them. Virtue and vice, as well as happiness and despair, become the mere dispensations of the gods; and, if there is any contest, it is not in the bosoms of men, but between propitious or opposing deities. Their tragedy is a high and solemn sacrifice, in which the heroes are the victims. We see the fate of their persons from the beginning, for it is decreed on high. Theirs are the mere contests "of poor humanity's afflicted will, struggling in vain with ruthless destiny." The embellishments with which these compositions are adorned are all in character. They remind us of the cornice, the architrave, and the statues of an ancient temple. The images are all palpable, and addressed immolately to the senses, though in grace and vividness they are altogether unequalled. The very sentiments have a precision and accurate boundary which almost pictures them to us. The persons stand like the statue that enchants the world, as distinct, as pure in the conception, and as admirable in the finishing. Every idea is elaborated till it acquires a distinct shape: their works, in short, are like inimitable pictures without a perspective.

Descriptive poetry, as well as tragic, that which refers us to external nature as well as that which relates to the heart of man, was altogether changed by the exclusive cultivation of the plastic style. A river could no more water the flowery fields, or dash over opposing rocks in its own pure course, but it must become a spirit, a beautiful female, or a youth with golden hair. The mora was not represented as standing "tip-toe on the mountain's top," but was bodied forth as a lady with roscate fingers. When the sun sunk tranquilly down on the bosom of the ocean, Aurora was betaking

herself to the bed of Tithonus. The woods were vocal, not with the whisperings of the breeze, but with the breath of Zephyr. The crescent moon became a chaste lustress with a silver bow. Jupiter rolled the thunder, and winged the lightnings. The winds themselves had habitations assigned them; their invisible power was exchanged for a corporeal form; and the wide range of earth and sea for the cave of Æolus. In a word, instead of a description presenting us with an assemblage of objects comparatively indistinct, which every one's own imagination might mould to its more particular images, one palpable form was substituted, which even the dullest could not refrain from admiring.

Although this style of composition was carried to an excess in Greece, the world is most deeply indebted to Homer for its introduction; not only because the peculiar beauties of his successors are drawn from its stores, but because, in after times, when different principles were brought into action, this very style adorned contemplative and philosophical effusions, and, in some cases, most happily blended with its opposite in the same images and thoughts. The Roman poets, and especially Virgil, though they, for the most part, copied from the Greeks, did not cast their sentiments in a mould so definite and decided. There are some very fine indications in the Georgics of the return of unmodified nature, especially that noble exclamation—

"O qui per gelidus in silibus fluvius
Sistat, et ingenti rancore protegit umbra." ll. 407.

Effects of
Christian
religion on
poetry.

But the Christian religion was the great cause of the revolution of poetry. It banished the illusions of mythology from the world. For a time, it even caused the mighty fictions of Homer and his countrymen to be deprived of that poetical admiration to which they are entitled. It fixed men's hopes and affections on things unseen. It gave distant glimpses of an eternal world, instead of the sensible images with which the regions beyond the grave had been fantastically adorned; and restored the feeling of One great pervading Cause, which had so long been divided amidst a multitude of material deities. Hence the mingling of the classical with the contemplative class of poetry, which has ever since been blended with the greatest works of imagination. The poets of our own country, and especially Shakespeare and Milton, have thus eminently succeeded. And they have not merely given us, in some passages, clear and distinct images of graceful and elegant forms, and in others referred us to the elements, and to the vast and undefined in nature and in eternity, but they have frequently, by one effort of the imagination, united both the sources of the grand and delightful. While they have pictured forth distinctly sublime and beautiful forms, they have made those forms the representatives of whole classes; they have involved the universal in the individual. They have described to us, with a Grecian precision, the glorious objects of creation, and yet have made these objects the mere fore-ground of a far-reaching perspective. The most noble and deep feelings, and sentiments, and thoughts, are, in their works, expressed and embodied in the fairest of earthly shapes. Every feature has an expression which no colouring of this world could supply. Creation is covered with an imaginative lustre, a dream-like radiance emanating from the soul. And yet nothing of distinct-

tiveness is lost to the objects which we see through this pure and softening medium.

In reading those works which now unite the philosophical and the descriptive, we are most frequently placed in an intermediate state between the mere sight of external things, as in a picture, and of the personifications of the Grecian bards. The brooks, the fountains, and the woods, are no longer supplanted by nymphs and satyrs; but, while they are described as in the freshness of nature, the emotions of the heart are transferred to them, and even assist in the perfect representation of their actual appearance. Thus they are joyous, pensive, melancholy; yet lose not by these epithets their clearness, their gentleness, or their sober hue; but are seen more distinctly for the attributes with which sympathy has endowed them. The mind associates itself with mountains and hills as with old acquaintance and dear companions, without ever losing their waving woods and forked steeples in the image of a local deity. It loves nature for her own sake, and for the sake of those fond recollections of youthful joy, and those gleams of remembrance which in happy moods and contemplations she now recalls. It transfers its own brightness to the world around, and surveys it through this medium. The humblest flowers and bushes have power to stir and delight it. All creation becomes sacred, not as filled with a thousand deities in every part of it, but as echoing back tender sentiments and thoughts indulged amidst its beauties; as dimly showing forth a goodness that cannot fail, and a glory to come, which shall not pass away. As far as these feelings refer us to things we see not yet, we owe them to our religion, to the Bible, to our deep and innate sense of immortality; but in so far as they take their spring from the distinct perception of beauty and grace in material things, we are indebted for them to Homer and the bards of ancient Greece.

One of the most remarkable characteristics of the Air of truth is the absolute reality and air of truth which it in the blind wears. This arises partly from the vividness of the poet's pencil, and partly from the minuteness of detail in which he indulges. Those who complain of his descriptions of feasts, of ceremonies, and of armour, as tedious, should consider how much the effect of his brilliant passages is heightened by them. They persuade us that the poet himself believes what he is relating, from the apparent accuracy of his statement; just as we give credit to a circumstantial tale. We become acquainted with his heroes in their retirements, and are, therefore, fully prepared to sympathize with them, as with old friends, when they rush amidst the thickest battalions of their foes, and gain mighty victories, or a triumphant grave. The domestic parts of the tale not only relieve the heroic scenes, but prepare us to enjoy them. We see the chief buckling on his armour in the morning, snatching a hasty repast, and taking a hurried leave of his comrades; we follow him with breathless interest through the adventures of the field; and we feel the deepest tragic interest when he falls in the pride and glory of manhood. This art of Homer, by which not only all his narratives are made credible, but all his scenes are presented to the mind in a light so clear, and in colours so fresh and imposing, that the impression of them can never wear out, is copied by no subsequent author with so much success

Biography.

as by Richardson, who almost deserves the title of the Homer of prose. The superiority of the ancient over the modern writer consists, however, not merely in the poetical faculty superadded to the rest, nor in the greater dignity of the subject, but in the life, spirit, and freshness of the delineations. Richardson spreads his little filmy nets around us like a dream; we feel spell-bound; we try to escape from the company with which he surrounds us, but in vain; while the minutest detail of Homer is ever fresh and living; and we seem to breathe in a pure atmosphere throughout the whole of our progress.

Variety of characters.

Nothing can be more surprising than the immense number and variety of the characters which are brought together in the *Iliad*, without any one clashing with another, or bearing too near a resemblance. Achilles, Ulysses, Nestor, Ajax, Hector, and Diomed, are perhaps the best. They all talk, as well as act, in character. Of those which have the most similarity, scarcely a speech or an action could be transferred from one to another, without taking something from its force, grace, and dramatic propriety. There are nice shades of distinction, and those philosophically accounted for, even in the valour of the chieftains; a quality which would commonly seem to admit of few, and those very broad, diversities. The variety of wounds described by Homer, is not greater, and not so extraordinary, as the modes by which each warrior manifests the kind of prowess in which he excels in the midst of the combat. The character of Diomed, in particular, is admirably drawn; fiery, ingenuous, choleric, and yet yielding the most ready and graceful submission to those whom he regards as competent to check or direct him. Hector is the most unshaken and virtuous of all the heroes, and is rendered yet more interesting by his premature death. There is great life and spirit in the delineation of Achilles; though his quarrel with the Greeks, and revenge on the body of Hector, are utterly inconsistent with real greatness. He is a mere warrior, open-hearted, sincere, and detesting every mean and low vice, but little relieved by any touches of gentleness and pity. His unhappy Trojan foe is as superior to him in accomplishment and grace, as he is in moral worth. There are passages in the *Iliad* of great pathos, as well as of quiet beauty. The account of the impression made by Helen on the counsellors of Priam, and of the affectionate address of the venerable monarch, in which he tries to soothe her, is no less exquisite in its kind, than the most vivid picture of a battle, in which heroes and gods are the combatants. The melancholy journey of Priam to the tent of Achilles, is admirably conceived, and touchingly described; and the whole scene in the Grecian camp, forms an excellent dramatic picture. There is nothing in the poem more gently pathetic than the lamentation of Helen over the body of Hector, in which she declares, that while others have reviled her as the author of their calamities, he had never given her one unkind word, or upbraiding. It gives a finishing stroke to the almost perfect character of the unfortunate hero, and leaves on our minds the kindest impression respecting him.

The number of incidents brought together in the *Iliad*, is no less astonishing than the variety of the characters. In the space of less than fifty days, there are councils, contentions, reconciliations, battles, vic-

tories, and defeats, of infinite diversity, and without the least confusion. The heroes whom we see before us, at the dawn, vigorous in bodily strength, and burning with the enthusiasm of youth and the strong desire of fame, are, before evening, mingled with the slain. In no work of narration, fictitious or real, are we struck with equal force by the transition from the noon-tide of life to the coldness of death—from the full play of all the pulses of existence to their final pause—from the midst of bustle, enterprise, and vivacity, to the stillness of the grave. The fate of every chief with whom we seemed, on the preceding evening, to be reclining in his tent, or sharing a rustic meal, sinks deeply into the heart and makes an impression there which time cannot weaken. In breadth of colouring, as well as in interest of detail, the battles of Homer are quite unrivalled in verse or prose. They rise above each other in the magnificence of their confusion, to that amazing contest in which men and gods, fire and water, the elements themselves, and the powers that govern them, are so wonderfully mingled. Images are poured forth from the mind of the poet as though he were unable to restrain them, and yet they have all the distinctness and perfection which might have been expected from the most anxious thought and the most laborious finishing. If we are overwhelmed by the grandeur of the mass, we shall be yet more surprised, on minute examination, to find that the minutest of its component parts is, in itself, as complete as though the whole art of the poet had, with an almost microscopic eye, been exhausted upon it.

The smiles of Homer are another proof both of the copiousness of his genius and the accuracy of his perceptions. They frequently contain the most beautiful pictures of noble objects, and even landscapes in miniature. Sometimes they bear the poet too far from his immediate theme; but they more than compensate for this breaking in on the thread of the narration by their own intrinsic excellence. Even when most prolix, they show the intensity of his feeling, which would not allow him to touch, incidentally, on any thing grand or lovely, without waiting to revel in its charms. Occasionally too, they relieve the heart by diverting an interest which becomes oppressive; and by pouring delight on the fancy, take away the sting from a tragical catastrophe, while they render our pity gentler, and our sympathy of a tendrer description.

The language of Homer deserves indeed to be called Language. "the language of the gods." It is surprising that, in the infancy of Grecian literature, he should have been able to find expressions so exactly suited to the loftiest and most beautiful poetry. It seems certain that the Greek tongue, at the time when he composed his immortal works, had not arrived at that degree of perfection which it afterwards attained; that words had then fewer inflexions; that the nicer shades of meaning were less distinctly marked; and that many terms of considerable grace and power, which adorned the later compositions of the country, were then unknown. This, indeed, appears from his works themselves; but he has made every possible use of the materials before him. He has not been content with the use of a single dialect; but has blended and harmonized the stately Doric, the terse Attic, the comparatively feeble Æolic, and the soft, open, and flowing Iælian. He has formed

Biography. epithets and compounds which are almost pictures in themselves; often giving us, in the midst of turbulent battle-scenes, a little glimpse of some graceful object, like a small eddy reflecting a golden cloud in the midst of an impetuous and troubled stream. His *versification* is above all praise. He has made full use of that noble measure the hexameter, with its infinite variety of pause, cadence, and distribution of harmony. His thoughts, subject, images, and verse, all move together in one melodious course; the sound is more than an echo to the sense; it almost forms part of it. The sea roars, the arrow whizzes, the calm prospect smiles, the mountain-woods wave, and the river rushes into eddies, in his song. His battle-pieces sound with the tumult of war and the clang of arms. He perpetually lets drop those felicities of expression, which, though as perfect as if carefully sought for, seem to have flowed spontaneously from a mind attuned to the harmonies of nature, of sentiment, and of language. Almost all that he says, he says in the happiest manner.

Commentaries and editions of Homer. The works of Homer have naturally furnished abundant opportunities for commentaries and editions from the time of their first collection. Of the earliest writings of the critics respecting them, immediately after the work of Pistratus, we are unfortunately ignorant. The first commentators were probably those philosophers who endeavoured to remove prejudices against the representations made by the poet of supernatural things, by endeavouring to find in them a secret meaning, of which the fiction was but an allegorical veil. None of their works, however, now survive. Alexander the Great, being enthusiastically attached to the poems of Homer, is said not only to have encouraged a new and improved edition by Aristotle, his preceptor, but to have assisted himself, with Anaxarchus and Callisthenes, in its revision. When this work was completed, the conqueror of Asia laid it up in a casket of great value which he had taken among the spoils of Darius, as the most valuable thing which he could deposit in so precious a case; and thence it was called the edition of the casket. Aristotle also, in his Poetics, comments largely on the works which he thus edited; and drew from them the system of epic poetry which has since determined the laws of that species of composition.

It does not appear that the Greeks were either very skilful in tracing out the true readings of the poet, or very careful to preserve the text entire as corrected by its first editor. Their disposition and genius were little fit for verbal criticism; and there is every reason to believe that great errors were allowed to creep into the manuscripts, amidst the highest veneration for the author. At length the Ptolemies, in Egypt, began to show a great degree of zeal for the purification and general diffusion of the Iliad and Odyssey. A number of copies, especially the *Masilistic*, the *Chian*, the *Argive*, the *Sipontine*, the *Cyprian*, and the *Cretan*, so called from the cities in which they had been preserved, were sent to Alexandria. Hence Zenodotus framed his edition under the auspices of the first of the Ptolemies. But the great restorer of Homer to purity and correctness was Aristarchus, tutor to the son of Ptolemy Philometor, who entered critically into the examination of his author, and formed the basis of those copies which are now extant.

The commentaries of Eustathius are the most celebrated and useful of all the critical writings on Homer,

until very recent times. The author lived in the twelfth century, was a native of Constantinople, and Bishop of Thessalonica. The results of his critical labours were published at Rome in the years 1542 and 1550. A variety of collections of Scholia have, at different times, been given to the world. The *Scholia Bervia* were first published by John Lascaris, at Rome, in 1517. "*Scholia vetera in Iliadi librum ix. Græce edita e Curado Horææ*," were published in 1626. The Venetian Scholia were brought to light in 1740, by A. Bongiovanni. And in 1788, the most valuable of all the collections was taken from two manuscripts in the library of St. Mark, at Venice, and published there by Villouson.

In modern times, a great number of editions of the works of Homer have been published. The first printed edition was at Florence, in 1488, in two volumes, folio, at the cost of two brothers, named Nerius and John Acciajolii; and under the superintendence of Demetrius Chalcondylus, an Athenian, and Demetrius the Cretan. The second, was that of Aldus, in the year 1504, in octavo; but it is a mere copy of the Florentine edition. The same editor published two other editions, one in 1517, and the other in 1524. In 1519, Francisus superintended the first, and in 1537, the second *Justine* edition, of which the latter is in the greatest repute. Cephæus published four editions at Strasburg, between the years 1525 and 1550; and a fifth was added by his family, in 1563, after his decease; they contain the various readings of Homer from the earliest copies. In 1542 a splendid edition was published at Rome, containing all the commentaries of Eustathius. Various editions have been published at Paris; the first of which was that of Turbetus, in 1554, diligently collated with the preceding copies, especially that of Rome. The magnificent work of H. Stephens, entitled "*Poete Græci Principes Heroici Carminis*," containing the works of Homer, appeared in 1566, and is framed from the collation of a great number of manuscripts. Burnes, in 1711, published his edition at Cambridge, which has been the subject of very severe animadversion by Dr. Bentley, but is invaluable for its extensive collation of manuscripts and preceding editions. Clarke's splendid edition of the Iliad, in two volumes, quarto, appeared in 1729; and contains, in the notes, clear illustrations of the principles of grammar and prosody. The Odyssey, *Batrachomyomachia*, &c. in 1740. The Glasgow edition appeared in 1756, in four volumes, folio; it was superintended by Moor and Muirhead, and underwent a singularly careful revision. The edition of Ernesti, in 1759, takes Clarke's for its basis, but embraces many important additions by the editor. Villoson's excellent edition, appeared in 1788, accompanied by the Venetian Scholia. Three editions of Homer have been given to the world by the celebrated Wolf; the second of which, in 1794, contains the *Prolegomena*, which has excited so much attention among the learned. A magnificent edition of all the works of Homer, issued from the Clarendon press, in 1808, under the patronage of the Grenville family; the Odyssey was collated by Porson, with the Harleian MS. In 1802, Heyne's great edition of the Iliad made its appearance, enriched with an immense fund of critical observation on the works of Homer; but countenancing all the sceptical opinions respecting the unity and authenticity of the whole. It should not be omitted that an excellent introduction to the study of Homer was

Modern editions.

Biography. published by Dr. Burgess, the present bishop of St. David's, at Oxford, in 1788, entitled "*Iuilia Homerice; sive excerpta ex Iliade Homeri; cum locorum omnium Græcæ metaphrasi, ex Codd. Bodleianis et navi coll. MSS. &c.*" Clarke's Homer is commonly printed as a school book, without the notes.

Homer has been translated into most modern languages. The continental efforts of this kind have not, however, been much celebrated beyond the countries for the use of which they were intended, excepting perhaps those of *Voss*, in German. In England, the principal translations of the poems of Homer are those of *Chapman*, *Pope*, and *Cowper*. *Hobbes*, indeed, the celebrated philosopher of Malmesbury, made the attempt, but altogether without success. His work is entirely obsolete; nor has the fame of his political and metaphysical works been able to rescue it from oblivion. It is astonishing he should ever have made the trial. His mind was not only without poetry, but anti-poetical. His excellence in the argumentative style, in the clearness of his demonstrations, and the ingenious subtleties of his logic, could little entitle him to translate Homer. His brain was not on fire with glorious and mounting thoughts—it was "dry as the remainder biscuit after a voyage." *Chapman's* translation is the very reverse of that of *Hobbes*, as his mind was in perfect antithesis to that of the philosopher. He knew, indeed, little of the refinements and elegancies which have since prevailed; but his spirit was fiery, impetuous, and undaunted. He loved his author with a poet's love; he came to his work with a kindred spirit with his great original; but his production is not a translation, scarcely a paraphrase. His genius was too daring to be confined to the text even of Homer. To use the words of an excellent critic, "His Homer is not so much a translation as the stories of Achilles and Ulysses re-written. The earnestness and passion which he has put into every part of these poems, would be incredible to a reader of mere modern translations. His almost Greek zeal for the honour of his heroes, is only paralleled by that fierce spirit of Hebrew bigotry with which Milton, as if personating one of the zealots of the old law, clothed himself, when he sat down to paint the acts of Samson against the uncircumcised. The great obstacle to Chapman's translations being read is their unconquerable quaintness. He pours out, in the same breath, the most just and natural, and the most forced expressions. He seems to grasp whatever words come first to hand during the impetus of inspiration, as if all other must be inadequate to the divine meagrier. But passion (the all in all in poetry) is every where present, raising the low, dignifying the mean, and putting sense into the absurd. He makes his readers glow, weep, tremble, take any affection which he pleases, be moved by words, or in spite of them; he disgusts and overcomes their disgust." See *LAM's Specimens of early dramatic Poets*, p. 98. n. 41, where the reader will find, in addition to the above, an admirable character of Chapman's poetry in general, written with that depth of thought and intensity of feeling which pervade all the criticisms interspersed in the collection.

bles, and to exhibit more frequent instances of elision. It is observed by Dr. Clarke, that Homer has used the word *enake* above two hundred and seventy times in the course of the *Iliad* and *Odyssey*, and has, in every instance, made the first syllable long; while Hesiod often makes it short. Hence, as he supposes the liberty of making the first syllable short, not to have been allowed till a later period, he concludes that the works of Homer are considerably more ancient than those of Hesiod. It must, however, be observed, that the Ionic poets always made the first syllable in *enake* long; the Attic and Doric often short; and that, therefore, Homer might have used it in the Ionic form; and Hesiod, sometimes in one form, and sometimes in the other, though they lived nearly at the same period. Homer, in the *Odyssey*, whenever he names the Nile, calls it the *Ægyptus*; while Hesiod gives it that appellation which it now bears. Hence Mr. Bryant infers, that in the time of the former it had not acquired its present name, but was called, as in the works of Moses and Joshua, the river of *Ægypt*; and consequently, that Homer wrote at an earlier period than Hesiod. Both authors use the digamma, which appears in no other Greek poet whose works have reached us; it is certain, therefore, that both are ancient, and probable that they were either contemporaries or that no great interval of time elapsed between them. The opinions concerning the comparative antiquity of these poets are collected in Fabr. Bih. Gr. vol. i. p. 96, edit. Hales; and it appears that, on the whole, the testimony is in favour of the superior antiquity of Homer.

His own account of his life.

Happily for the biographers of Hesiod, that poet has not, like Homer, omitted to give in his works any traces of his personal history. From his *Works and Days* we learn, that he was the son of a man who had been an inhabitant of Cumæ, in one of the *Æolian* isles. Suidas, Fabricius, and others, hence represent the poet as a native of that place; but the contrary will appear from his own poems. He represents his father as having removed to *Ascræ*, a village in *Boeotia*, at the foot of Mount *Helicon*, and in the same book asserts, that he never crossed the seas, except in a voyage from *Aulis*, in *Boeotia*, to *Eubœa*. Hence it follows, that he never sailed with his father to *Ascræ*, and consequently that he was born after the settlement of his family in that village. From this place, he derived the name of *Ascræus*, by which he is often called in the classical writers. It appears from his own statement, that misfortunes, and chiefly poverty, occasioned the removal of his father. *Proclus*, however, on the authority of *Ephorus*, tells us that a murder was the cause of his exile. It appears from another part of the *Works and Days*, that the poet tended sheep on Mount *Helicon*. We also gather, that his father left some property, which his brother *Peres* obtained from him by means of fraud, and bribing the judges; but that, instead of resenting this injustice, he was able to look with compassion on its author, and to assist him, when he had fallen into poverty, out of his own substance. He also informs us, that he was the conqueror in a poetical contest at the games which *Amphidamas*, king of *Eubœa*, had instituted in honour of his own memory, and which his sons accordingly solemnised. By his success on this occasion, he obtained a tripod as the prize, which he consecrated to the *Muses*.

These are all the incidents in the life of Hesiod, which has enabled us to collect from his works which still survive. But other writers have professed to fill up the chasm, and have detailed circumstances respecting him which are not much deserving of credit. Of these the most remarkable is his contest with *Homer*, which has been probably invented from his own statement above-mentioned, that he had been the victor in some rivalry of song. *Plutarch*, in his *Banquet of the Seven Wise Men*, makes *Periander* give an account of the poetical contention, by stating that it was the custom of the ancient Greeks to propose to each other questions of difficult solution; that a contest arising from this practice took place at *Calais* among all the most celebrated poets of the age; that the performances of the poets themselves, and the feeling of their celebrity, which imposed a restraint on the judges, rendered the determination difficult; but that, at last, the first honour was given to Hesiod. There is a treatise also entitled, "The Contention of Homer and Hesiod," which enters far more into detail. It represents each of the candidates in turn, as putting questions and verses of imperfect sense, to be answered, or supplied by the other; and professes to give the substance of all that passed on the occasion. This work has been thought not to have been written till the time of the Emperor *Adrian*. It was first printed by *H. Stephens*, in 1573, and has been prefixed to some editions of the works of both poets, but it is universally regarded as a mere fancy of the unknown writer. The epigram in the *Anthologia*, professing to be the inscription on the tripod won,

"Ἡσίοδος Μοῦσας ἔδωκεν ἴνδ' ἑλθεῖν,
ἔπειτα νικῶντες ἐκ Χαλκίδος ἦσαν Ὀμήρου,"

is also considered as spurious. It is not very probable that Hesiod should come off victorious from a contest with *Homer*; and perhaps scarcely more so, that if such had been his good fortune, he should not have mentioned the name of his adversary when alluding to the contest.

Hesiod is generally thought to have lived to a good old age, but to have ended his days by a violent death. *Plutarch* in the piece already quoted, gives the following account of this catastrophe. In the latter part of his life he had removed to *Loeris*, a town near Mount *Parmanus*. There he resided with a man named *Troilus*, who ravished a young woman in the same house. The brothers of the girl, seeking revenge for the violence done to their sister, falsely suspected the poet of having been accessory to it, slew both him and the party actually criminal, and threw their bodies into the sea. The body of *Troilus* was cast upon a rock, which still bears his name from the circumstance. Hesiod, when dead, was taken by dolphins, and carried to the city of *Molicria*, near the promontory *Rhios*, where the *Locrians* were then holding a solemn festival. They saw the body of the poet, and on recognising it, proceeded to revenge the death of their favourite bard, by throwing the authors of the calamity alive into the sea, and destroying their houses. His remains were deposited in *Nemæa*, but his tomb was not generally known, having been concealed, lest the *Orchomenians*, who had been advised by an oracle to procure them, should steal them away. *Pausanias* tells us, that the oracle had directed the *Orchomenians* to bring the bones of Hesiod to their country, as the

only means by which they could stay the ravages of a pestilence. He states that they succeeded, and erected a tomb over them, on which they placed a suitable inscription. Hesiod is said, by Julius Gyrardus, to have left a son and a daughter, and that this son was Stesichorus, the poet; but this statement seems unsupported by any ancient authorities.

The works now extant which are commonly published under the name of Hesiod, consist of the *Works and Days*, the *Theogony*, and the *Shield of Hercules*. Various opinions have, however, been entertained respecting the authenticity of the two latter of these pieces. Wolf, indeed, applies his theory respecting Homer to Hesiod, and regards the works as collected from the rhapsodists, and probably as originating from different authors. He thinks the *Works and Days* is a century more ancient than the *Theogony*, or the *Shield of Hercules*. The first of these has generally been admitted, without dispute, as authentic, except the opening address to the Muses, which the Boetians contended was spurious, on the authority of an ancient copy they professed to have preserved, engraven on plates of lead. The *Theogony* has commonly been regarded as genuine, though the Boetians denied it. It is undoubtedly the work of very early times. But "the *Shield of Hercules*" is usually rejected as spurious. Longinus intimates more than a doubt respecting it. It appears, indeed, to be a collection of fragments, some of which were probably composed by Hesiod, and others interpolated or added by subsequent hands. It appears from the Ion of Plato, that the rhapsodists were accustomed to recite the works of this poet, as well as of Homer.

Style of Hesiod.

The great excellence of Hesiod consists in a natural and simple style. His pictures of the manners of a rustic age are sometimes more striking than those even of Homer, on account of the absence of that radiance which is shed over all the scenes in the *Iliad* and *Odyssey*, from the imagination of their author. But he is, perhaps, the most unequal of poets. In some of his delineations, he displays a daring and ardent conception, which is not afraid to grasp the mightiest things, and which succeeds in its efforts by a natural and gigantic power. At other times, he is insufferably low, creeping, tame, and prosaic. In his didactic poetry, he rises occasionally into a high and philosophical strain of thought, but commonly gives mere trite maxims of prudence, and the most common-place worldly coming; as when he advises his reader never to conclude a bargain, even with a brother, without a witness. He has none of the refined gallantry of Homer, but seems to delight in satyrizing, or rather abusing, the female sex. The *Works and Days* is a rambling and very unequal didactic poem. The description near its opening of the two different kinds of contention among men—that of hatred and envy on the one hand, and the honourable exertions arising from emulation, and a desire to excel on the other, is accurately discriminated and well finished. Hence the poet proceeds to the subject of his work—*labour*—and describes how it fell to the lot of man. We have then the story of Pandora, and of the gradual degeneracy of mankind from the golden to the iron age. A digression is made to the evils inflicted on pur race by the powerful wicked, in which the great are recommended to be merciful, and a variety of maxims are introduced fit for the purposes of com-

mon life, without much connection with the subject, or, as Homer, &c., with each other. At last, the duties of agriculture are set forth, interspersed with moral and religious admonitions, and probably regarded as of practical value in the times when the poet flourished. The whole forms a very curious relic of antiquity; but its nakedness is scarcely to be endured after the variety and the brilliancy of Homer.

The *Theogony*, on the whole, exhibits more decided traces of genius than the more domestic poem of the *Works and Days*, which seems generally to have obtained the preference. It is the best and most accurate account, or catalogue, at least, of the deities of Greece. In general it is a mere enumeration of names, and deduction of mythological genealogies; but the *Battle of the Titans* and the *Gods* is one of the most sublime passages in classical poetry, conceived with great boldness, and executed with a power and force which show a masterly, though rugged genius. It has been imitated by Milton, in his *Battle of the Angels*, and certainly not exceeded. If it is not the work of Hesiod, it belongs to some superior poet, whose name has not reached us. But, though raised far above the common level of his style, it bears evident marks of his hand. Heyne, Wolf, and Herman, suppose the present copies of the *Theogony* to be much corrupted by the introduction into the text of various readings from different editions.

The "*Shield of Hercules*," though disconnected, and entirely devoid of arrangement or plan, contains passages of more elegance and grace than any of the undoubted works of the Aæonian. It is probably a compilation, in which some fragments of Hesiod's poems, transmitted through the *mnemos* of the rhapsodists, have been connected by more modern additions. The description of the shield, which occupies only a part of the work, is an evident imitation of the shield of Achilles in Homer. Some have contended that the reverse of this opinion is the fact, and that Hesiod, and not Homer, is the original. Independently, however, of the external proof, it will appear from an examination of the two pieces, that the charge of imitation is more probably brought against the author of the "*Shield of Hercules*;" since he has embellished those parts which in the *Iliad* are simple, with a profusion of ornament: and it will always be found that a copy deviates from its original, not in becoming more simple, but in the addition of grace of which he to whom the first conception belongs did not feel the necessity.

The fame of Hesiod has, in a great degree, been reflected from that of Homer. Since they were named together by Herodotus, they have been, for more than two thousand years, frequently united. The ancients seem to have thought highly of the ethics and the precepts of Hesiod. Xenophon represents the "*Works and Days*" as quoted by Socrates. Cicero speaks of that poem as though it was customary for youth to commit it to memory. Quintilian says of him, "*Raro nescit Hesiodus magna que pars ejus in nominibus est occupata tamen utilis circa precepta sententia levitasque verborum, et compositionis probabilis; daturque ei palma in illo medio genere dicendi.*" The *Battle of the Titans* certainly rises above the terms of this eulogium.

The chief editions of Hesiod are, The *Works and Days*, together with eighteen orations of Isocrates and the *Idyls of Theocritus*, published at Milan, in folio, in

Biography. 1493; the *Theogony*, the *Shield of Hercules*, and the *Georgics*, in a collection of Greek Poems, in folio, by Aldus, at Venice, in 1495. The edition of the works of Hesiod, at Trincavellus, with Scholia, at Venice, in 1537, in quarto; the edition of Heinsius, in quarto, with Scholia, in 1603, which was long a work of great celebrity, and is, in some degree, the basis of subsequent editions; the edition of Grevius, printed at Amsterdam, in 8vo, in 1667, with commentaries and notes; that of Le Clerc, in 1701, at Amsterdam, in 8vo, containing the notes of Scaliger, the commentaries of Grevius, and annotations by the editor; which last have been the subject of much severe misapprehension, especially from Heyne; Robinson's splendid edition, published at Oxford, in 1737, with the commentaries of Grevius, and notes of the editor and others, which contains the contest of Homer and Hesiod; that of Loewner, at Leipzig, in 1779, in 8vo, which is a republication of Robinson's with improvements; and an edition of the *Theogonia*, by the celebrated Wolf, at Halle, in Saxony, in 1783. Beside these editions, the works of Hesiod are comprised in the collection of Greek Poets, by H. Stephens, in 1666; and in that of the Minor Greek poets, published at Cambridge, by Winterton, in 1635; from which last text they have been frequently reprinted. The best copy of these reprints is that pub-

lished at London, 1739. Professor Gaisford has supplied us, however, with a most respectable modern edition of the "*Poete Græci Minores*," including the works of Hesiod, printed at the Clarendon press, in 1815.

Hesiod has been translated into English, by Chapman, Cooke, and Elton. The first of these has infused into his work much of the fire and spirit which are every where prevalent in his version of Homer. But he is exceedingly diffuse, and regardless of the text of his original. It is now extremely scarce. Cooke's translation is generally correct, but very dull and spiritless. The maxims of Hesiod, which now appear trite and common-place, seem almost ludicrous in his version. He was one of the heroes of the Danciad. Mr. Elton's translation is by far the best now in use. It is more faithful than Chapman's, and more poetical than Cooke's. The *Battle of the Titans* is excellently rendered. But though Hesiod will always be interesting to the lover of antiquity, as exhibiting an accurate picture of simple manners, and will be admired by the lover of poetry for a few passages of rugged sublimity, he possesses none of those charms of story or of character which can render a translation of his works, however executed, popular among the unlearned.

C O D R U S

AND THE KINGS OF ATHENS.

FLOURISHED ABOUT A. M. 2914. B. C. 1090.

Biography. MENESTHEUS, who succeeded Theseus on the throne of Athens, advocated a better title to that honour than his predecessor, having been the descendant of Erechtheus, one of its eldest kings. This monarch, finding himself firmly seated in the kingdom, after the death of Theseus, joined in the Grecian confederacy against Troy, and, accompanied by his brother Achæus, led fifty ships, and a proportional landed force, to join the attack of Agamemnon and Menelaus upon that devoted town. Under the walls of Troy, Menestheus fell, and is scarcely noticed by historians, amidst the heaps of slain in that memorable contest; although the duration of his reign over Athens has been pretty generally fixed at twenty-four years. At his death, we find Demophoon, the son of Theseus by Phaedra, restoring the line of that monarch to the Athenian throne. He was one of the few conquering Greeks who lived to return to their native shores after the destruction of Troy; and who, surviving the turbulent passions then pervading every bosom connected with the scene, died afterwards in peace. On his voyage homeward, this prince landed at Thrace, and is said to have won the affections of Phillis, queen of that country, to whom he promised marriage; but, failing in his engagements, the forsaken and disappointed queen destroyed herself in despair. To Demophoon is attributed, by some writers, the honour of having first established the famous court of the

Epheta, which consisted of fifty Athenians and as many Argives; and continued in that form until it was re-modelled by Draco. To this tribunal was awarded the power of trying murders and all capital offences; and a singular act of justice is recorded of its founder. Having accidentally killed one of his subjects, as he was riding under the walls of Troy, he submitted to be tried by this court for the offence, and the issue only appears from the circumstance of Demophoon having reigned in tranquillity thirty-three years afterwards, and leaving the undisturbed possession of the kingdom to his son.

Of this son, whose name was Oxyntes, nothing is recorded, but that he held the sceptre twelve years, and left it to Aplydas, a prince who was assassinated, in the first year of his reign, by his bastard brother Thyminetes. In the eighth year of the reign of Thyminetes, the Athenians being at war with the Boeotians, it was resolved that the two kings of the contending nations should decide the difference by single combat, to which Xanthus, the Boeotian sovereign, readily acceded, but Thyminetes declined the contest. Melanthius, however, a noble Messenian, who had been driven by the Heracleidae to seek refuge in Attica, eagerly accepted the office of champion on behalf of the nation, and the combatants entered the lists. The Athenian cause proved

Melanthius.

Kings of Athens after Theseus.

Biography. victorious by the following stratagem: Melanthius affecting surprise as the combatants approached each other, accused his adversary, Xanthus, of dealing unfairly. "I came to fight thee singly," said he, "but thou hast brought another to second thee." The Boeotian king, on hearing this charge, looked back to discover who had followed him into the field, and Melanthius, at this unguarded moment, transfixed him with a lance.

The conqueror was now elected to the throne of Athens for an act which, some ages afterwards, would have been stigmatized as highly criminal; and a feast was instituted in commemoration of the victory, which the Athenians entitled *Apatheria*. Of the deposed Thymetes we hear no more. Melanthius seems to have held the government with a firm and a judicious hand for thirty-seven years, and was the father of the brave and patriotic Codrus.

Codrus.

Although the records of the reign of this monarch do not particularize many of his actions, it is clear, from the general tone of history, that he fully possessed the affections of his people, and that his advancement to the throne may be considered as an important epoch in their civilization. The manner of his death, indeed, is the circumstance which throws the greatest splendour around his name, and in which may be traced the first spark of that patriotism which afterwards so distinguished the Athenians.

The Heracleids (the descendants of Hercules) and the Doræ, their confederates, having already subdued all Persia, in the twenty-first year of the reign of Codrus, made an irruption into Attica. The Athenian forces, led by their king, marched to meet the enemy, and both armies were drawn out in order of battle. The invaders having, previously to their expedition, consulted the Delphian oracle respecting its success, the reply was, that, "that they should be victorious, if they avoided to slay the Athenian king;" and the confederates were therefore strictly ordered to abstain from attacking his person. Every precaution was taken to prevent such an accident which human prudence could suggest; but Codrus, being informed of the oracle, magnanimously determined to sacrifice his own life to the cause of his country. Whilst the opposing armies, therefore, stood confronted to each other, he disguised himself in the habit of a peasant, and, eluding the observation of his own troops, penetrated to the camp of the enemy. Here he purposely provoked a quarrel with some private soldiers, and, courting the death they were not backward to inflict, he fell a magnanimous sacrifice to the safety and glory of Athens. His rank was now discovered, and the tidings of his death reaching the Athenian camp on the following day, an embassy was dispatched to the enemy demanding the body of their king. The invaders were panic-struck at the remembrance of the oracle; they broke up their camp in fear, and retired from Attica without striking a single blow.

Oracle respecting him.

Magnanimous death.

With the death of this gallant monarch ended the regal sovereignty of Athens, which, between the reign of Cecrops and that of Codrus, had extended over a period of nearly five hundred years. Athens, under various modes of administering the chief magistracy, became from this period a republic, and rose, under that form of government, to the summit of human grandeur.

The origin of this change, however, is singular, if it is not peculiar to the history of this memorable state, and is closely connected with the character of Codrus; the brief history of whose family, while it enjoyed the chief magistracy of Athens, we shall not find a better opportunity to trace. On the principle of high veneration for the memory of Codrus, the Athenians are said to have made an express declaration that they deemed none worthy to bear the title of king after him, and thus arose the government of the Archons; a title which they first conferred on Medon, the eldest son of Codrus. But the election of Medon being opposed by his brother Nileus, on the plea of his intellectual incompetency, and from the circumstance of his being lame in one foot, the Athenians applied to the oracle on the occasion, which confirmed the title of the elder son, who, in consequence, enjoyed the chief magistracy for his own life, and transmitted it to his heirs for twelve generations; the Archontes derived from Medon were commonly known in history by the name of the *Medontides*.

The population of Attica had now very considerably increased, and many of the superior families being admirers and supporters of Nileus and a younger son of Codrus, the brothers placed themselves at the head of considerable bands of the Athenians, and formed various settlements in the neighbourhood. To these adventurers have been attributed the founding and peopling of twelve cities of Ionia, on the coast of Lesser Asia; Ephesus, Miletum, Priene, Colophon, Myus, Teos, Lebedos, Claromene, Erithra, Phocæa, Chios (situated in an island), and Samos; at first governed each by its separate king, but afterwards united into one state, which attained considerable celebrity. In the mean time the Medontides enjoyed their dignity in undisturbed succession, until the archonship of Alcmæon, or Alcmaeon, the son of Æschylus, who died after having exercised his office only two years. The Athenians were now ambitious of strengthening the democratic part of their constitution, by limiting the future duration of the archonship to ten years, and though the supreme magistracy appears to have remained in the line of Medon to the time of Hippomenes (about four generations), in the archonship of Eryxias a still further alteration was made in favour of the people, who declared the office in future to be elective and annual. Hippomenes, the last of the line of Codrus, is said to have been deposed for his cruelty to his own family, having had his son torn to pieces by wild horses, and his daughter stoned to death.

Early history.

Lacedæmon.

Sparta, the rival of Athens, in arms, if not in arts, is a star of the first magnitude in that bright constellation of human genius which shone in the early states of Greece. Not exempt from the usual prejudices of antiquity, the kings of Sparta ascribed their origin to the gods, threw a veil of splendour over the general ignorance of their origin, and thus supported the allegiance of the people by their superstition. Accordingly we find it alleged, that Lacedæmon, the first king of Sparta, was the son of the god Jupiter, by a mortal named Taygeta. This monarch married Sparta, or Sparte, the daughter of Eurotas, gave his own name (Lacedæmon or Lacedæmonia) to the country which he governed, and honoured his wife by bestowing hers (SPARTA) upon the city which he founded there. Perhaps the only fact to be deduced from these records is, that monarchy was the earliest form of government in this country. Twelve kings after Lacedæmon are said to have reigned over Sparta; not indeed in linear male succession, although they were all connected by relationship, whose names it may be sufficient here to mention; for little else has come down to us concerning the greater part of them, and of the rest, much of what has sometimes passed for truth is now placed, by the best critics, amongst the *terra incognita* of history. Thus we have Amyclas, the successor of Lacedæmon, and after him his three sons, Angulus, Cynortas, and Hyacinthus; the latter of whom was said to have been killed by Apollo, and by that god afterwards turned into a violet. Then followed Elmlus, the son of Cynortas, who gave his own name to a particular district of the country, of which he assigned the government to his son Hippocoon, and the rest of the kingdom to another son, Tyndareus; but Hippocoon afterwards drove Tyndareus from the throne. A story is then told of the god Hercules having been offended by Hippocoon, whose sons had beaten to death one *Æonus*, a cousin of that god; and that Hippocoon and ten of his sons were slain in an engagement with the followers of Hercules. Tyndareus, the banished monarch, was then re-seated on the Spartan throne, and succeeded by his sons, the demi-gods Castor and Pollux, in whom the male line of the divinely-descended Lacedæmon became extinct. Menelaus next governed Sparta, in right of his wife Helen, the beautiful sister of Castor and Pollux, and the fatal cause of the Trojan war. Helen was first stolen away by Theseus, and, after she was recovered by her brothers, her suitors took an oath that they would leave her to fix her own choice of a husband, to whom, in case she should be again carried off, they would all unite in restoring her. Menelaus being the husband of her own election, and this firebrand of beauty being again seized by Paris, her former lover, in fulfilment of their oaths, undertook the siege of Troy.

Succession of Agamemnon.

Clytemnestra, the other daughter of Tyndareus, was the cause of almost equal discord and enmity with her sister Helen; for having lived in adultery during the absence of her husband, Agamemnon, on his return

from Troy, she caused or connived at his murder. Menelaus, after the siege of Troy, returned to Sparta, and was succeeded on the throne by his two sons, Nicostratus and Megapenthes, not the offspring of Helen, but of another wife. The Lacedæmonians, however, threw off the yoke of these spurious kings, and elected for their monarch Orestes, son of Clytemnestra by Agamemnon, who had revenged his father's murder by that of his mother; an act for which he is said to have been accused by his uncle Perilous before the court of the Areopagus, though we are not informed of the issue. Orestes enjoyed a long reign, and died in Arcadia. Tisamenus, the son of Orestes by Hermione, the daughter of Menelaus and Helen, was now raised to the throne, in whom this short dynasty ended on his expulsion by the Hermelida, the descendants of Hercules, the ancient enemy of the Spartan kings. The reign of these celebrated sovereigns is by some writers said to have begun in the persons of Eurythènes and Procles, sons of Aristodemus, while others assign that honour to Aristodemus himself. With its new masters, the government of Sparta now took a singular form; and under the twin brothers, Eurythènes and Procles, became a diarchy, or a double monarchical state, both these kings reigning with equal authority throughout the whole kingdom; a mode of administration which seems to have been continued, not only during the lives of its founders, but in their descendants through several generations. In the one line, Agis succeeded his father Eurythènes, and from him the title of Agida was given to his successors; on the other side, Eurytionides became the name of those princes who descended from Procles, so called from Eurytion, the grandson of that prince. The jealousies of the rival sovereigns, however, at length gave birth to hostile parties in the state, and every contention between the governors increased the weakness of the kings whilst it augmented the power of the people. The following names are recorded as bearing the title of king, whatever were the separate powers of their sovereignty. Echestratus, the son of Agis; Leobates, son of Echestratus; and Dorasena. Then followed Agesiulus and Archelaus; in the same line, that of Eurythènes. In the line of Procles followed Soias, Eurytion, and Prytanis, Eunomus, and Polydeutes. From Eunomus sprang the illustrious Lycurgus. LYCURGUS, the great lawgiver of the nation, to whom Polydeutes, the son of Eunomus by another wife, left the kingdom on his death; and Lycurgus thus became cotemporary sovereign with Archelaus. During the periods of the above-mentioned dynasties, nothing of moment occurs in the annals of Sparta, except a war with the Cynosureans, a colony of Argives, the issue of which appears to have been very indecisive. It seems clear, however, that the internal state of the kingdom was generally that of much confusion and disorder.

These circumstances, therefore, together with the rank to which Lycurgus was entitled by birth, afforded him an opportunity to display those talents which otherwise might have been entirely obscured.

This celebrated lawgiver, by the fame of his institutions, has attracted the attention of inquisitive and reflecting minds in every age; while the circumstances of his personal history, and even the precise nature of those institutions, the manner in which they were received by his countrymen, and the extent to which they were adopted, are points all involved in an uncertainty which it is now impossible to remove.

Plutarch, whose Life of Lycurgus, and *Laws and Customs of the Lacedæmonians*, we must be content to follow through some portion of our way, appears to have diligently collected and preserved most of the information on those subjects which had escaped the ravages of time. He wrote, too, at a period when, though Sparta, with the rest of Greece, had been reduced to the condition of a Roman province, yet her institutions still retained some of their influence, and curiosity would naturally be excited to learn the history of her lawgiver. It appears from Horace (L. i. Od. vii.) that *patiens Lacedæmon* was a theme among the courtiers of Augustus. Livy, also, in the same age, had celebrated her rigid discipline,* and described the city as distinguished, not by magnificent buildings, but by a well-ordered government.† Yet so little had been done to separate truth from fiction in the Spartan story, that Plutarch commences his account of her law-giver by the confession that he has "nothing to relate that is certain or incontrovertible; for there are different accounts of his birth, his travels, his death, and especially of the laws and form of government which he established."

Differences of chronology.

The first difficulty which occurs to a modern biographer of Lycurgus is, how to select what may have a just claim to authenticity among the varying accounts of the age in which he flourished. Sir Isaac Newton, in his *Chronology* (p. 36.), has placed him at the year 708 before the Christian era, chiefly relying on the testimony of "Socrates and Thucydides," who "made the institutions of Lycurgus about three hundred years older than the end of the Peloponnesian war." In this opinion, Mr. West, in his learned *Dissertation on the Olympic Games* (Sec. 11.), appears to coincide. It is also adopted by Dr. Priestley, in his *Chart of Biography*, though with some marks of uncertainty, and this is the date which we have followed in the margin. Yet some able modern chronologists concur in receiving the authority of Aristotle and Strabo. Thus they consider Lycurgus as the contemporary and associate of Iphitus, and place the commencement of his legislation on his return from his travels, at about 884 years before the Christian era. With this date a passage in Livy remarkably agrees, where, describing the submission of Lacedæmon to the Achæans (189 years before Christ), he represents the institutions of Lycurgus as having then subsisted seven hundred years.‡

Sparta had been long governed by two kings of equal authority, the descendants of Eurysthenes and Procles, sons of Aristodemus, of the race of Hercules.

* In a speech which he ascribes to the Roman Consul, Tarquinus, said to Spurius, *non illis et horrida disciplina moris?* L. xxviii. c. 17.

† In the progress of Pausanias through Greece, *Inde Lacedæmonem addi; non sperem magnificentiam, sed disciplinam institutisque ammirabilem.* L. xlv. c. 28.

‡ *Nihil tamens res locis etiam dæmonis patris disciplinæ Lycurgi cui per septingenta annos amiserunt, subleat.* L. xxviii. c. 24.

Eanomus, the father of Lycurgus, was of the family of Procles. He lost his life in a popular commotion, leaving his share in the kingdom to Polydieters, the elder son, on whose decease, after a short reign, the royalty descended on Lycurgus. Yet he no sooner understood that the deceased king had left his widow in a state of pregnancy, than he declared that the regal authority would belong to her issue should it prove a son, and in the mean time he administered the government under the title of *Proculus*, by which the Lacedæmonians denominated the guardians of a minor king.

The widowed queen, in whom ambition appears to have prevailed over moral sentiment and natural affection, now made to Lycurgus the inhuman proposal of procuring the destruction of the child, if he would promise to espouse her on thus succeeding to the royalty. He abhorred the suggestion, yet disguised his resentment, and persuaded the cruel mother, from a regard to her own life, to abandon the present destruction of her child, promising that he would take care to destroy it immediately on the birth.

Having thus diverted the queen from her barbarous birth of design, he gave strict orders to her attendants, that if Charilæus, she were delivered of a girl, the child should be committed to the care of the women, but if of a boy, that he should be immediately brought into his presence, however he might be engaged. The infant, proving to be a son, was carried to Lycurgus, who was then at supper with the magistrates; to whom he is reported to have said, "*Spartans, see here your new-born king,*" naming him Charilæus, because of the joy and admiration of his own magnanimity and justice, testified by all present towards so faithful and disinterested a guardian.

"Thus," says Plutarch, "the reign of Lycurgus lasted only eight days. But the citizens had a great veneration of him on other accounts; and there were more that paid him their attentions, and were ready to execute his commands, out of regard to his virtues, than those that obeyed him as guardian of the king, and director of the administration." There were, however, some who opposed his advancement, as too high for so young a man; particularly the relations and friends of the queen-mother. He therefore took the resolution of travelling into other countries, till his nephew should be grown up and have a son to succeed him in the kingdom. The guardianship of the infant king was now probably assumed by Leonidas, brother of the queen, whose violent hostility to Lycurgus must have contributed to his resolution of becoming a voluntary exile.

At this period of his life, when, as we have just learned from Plutarch, he was still young, may be Lycurgus placed, with most probability, his interview and co-operation with Iphitus, king of Elis. Mr. West says (sect. 11), that prince "may with great justice be styled the founder of the Olympic games, for he seems to have been the first that reduced that festival into a regular or coherent system or form; united the sacred and political institutions; and gave it, by the establishment of the *Olympiad*, that principle of life and duration as enabled it to outlive the laws and customs, the liberty, and almost the religion of Greece." Plutarch claims for Lycurgus a share in this high reputation, and imputes to him the "providing for a cessation of arms during the Olympic games," as "a mark of the

humane and peaceable man." Of his introduction to the king of Sparta, he has borrowed from Herminippus and others the following marvellous account: "Lycurgus had no communication with Iphitus; but coming that way, and happening to be a spectator, he heard behind him a human voice (as he thought), which expressed some wonder and displeasure that he did not put his countrymen upon resorting to so great an assembly. He turned round immediately to discover whence the voice came, and, as there was no man to be seen, concluded it was from heaven. He joined Iphitus, therefore, and ordering, along with him, the ceremonies of the festival, rendered it more magnificent and lasting." An Olympic *diace*, mentioned by Aristotle, on which was inscribed the name of Lycurgus, is supposed to confirm the opinion of his co-operation with Iphitus.

To Crete.

The visit of Lycurgus to Crete is less disputed; and there he appears to have derived the largest assistance towards his future plans of legislation for Sparta. Minos, the king of Crete, was famed for his jurisprudence; and his laws, which he professed to have received from Jupiter, remained in vigorous exercise to the time of Plato, more than a thousand years after the death of the legislator. Here Lycurgus associated also with Thales, whom he persuaded to settle in Sparta. He was a poet, famed likewise for political wisdom, then generally recorded in traditionary verse, to which he procured the attention of the people by the attractions of his lyre.

Into Asia Minor.

From Crete, Lycurgus passed into Asia (*Minor*), desirous to compare the Ionian expense and luxury with the Cretan frugality and hard diet. There, in the reputed country of Homer, and amidst the scenes on which his genius had conferred immortality, he is reported to have discovered the entire poems of the bard, of which only a few detached pieces had been known in Greece. "Observing," says Plutarch, "that many moral sentences, and much political knowledge, were intermixed with his stories, which had an irresistible charm, he collected into one body, and gladly transcribed them, in order to take them home with him; for his glorious poetry was not yet fully known in Greece, only some particular pieces were in a few hands, as they happened to be dispersed. Lycurgus was the first that made them generally known."

To Egypt.

The proverbial wisdom of the Egyptians scarcely failed to attract the attention of Lycurgus, who could not indulge his personal security from enemies at home without seeking to acquire among foreign states all the information which could enable him, on his return, to improve the institutions of his own country. Nothing, therefore, is more probable than the opinion, that during his travels, which appear to have extended through ten, or, probably, a greater number of years, he visited Egypt, to examine those remarkable laws and customs which were early celebrated among the nations of antiquity. "He was most pleased," says Plutarch, "with their distinguishing the military men from the rest of the people; a regulation which he is said to have adopted at Sparta, though it is not easy to comprehend what distinction could exist among a people who, as to the free citizens, if they are correctly described, were all military. So indeed were many of the Helots, who accompanied their masters in battle, though their valour was frequently so ill re-

quited. The accounts of the visits of Lycurgus to Libya and Spain, and his interview with the gymnosophists of India, appear to rest, according to his biographer, on insufficient authority.

His inquiries into the institutions of foreigners were, however, suddenly terminated by the situation of his own country, probably long before the period which he had proposed for his return. This he had intended to defer till the infant king should have attained to manhood, and become a father, a period during which, time might lessen the number of his enemies, and abate the rancour of those who survived. But here we must revert to the earlier history of Sparta.

Lacedæmon, of which that city was the capital, is said to have been repeopled about eleven hundred years before the Christian æra, after having been reduced to a desert by the devastations of intestine war. Two kings, the sons of Aristodemus, as before-mentioned, then shared the regal authority. This divided rule, uncontrolled as it afterwards became by a senate, appears to have little promoted the public tranquillity. The nominal authority, indeed, still descended in the two branches of the royal family, yet it was perpetually disputed, till at length that tumult occurred which proved fatal, as we have seen, to the father of Lycurgus.

Precious to his departure from Sparta, he had administered the government only a few months, but in that time his abilities had become known to his fellow-citizens, who now, more sensible of his merit, sent deputations to him, in conjunction with the kings, to solicit his return. At length Lycurgus determined to revisit his country, and, as the only remedy he could devise for the existing evils, to new model the government.

Influenced by the superstitious notions of his time, or rather, perhaps, by the policy of encouraging them, he deferred the execution of his great design till he had visited the far-famed oracle of Delphos. The *Pythia*, who was, no doubt, prepared for his reception, saluted him as *beloved of the gods, and rather a god than a man*. "So great was either the reputation of Lycurgus to command this testimony, or so great his art in procuring it," say the learned and accomplished writers of the *Athenian Letters*.

Returning with this sanction from the oracle, he soon engaged in his design the principal citizens, of whom Arithmides was his chief supporter. They agreed, to the number of twenty-eight, to assemble armed in the public square, lest any other citizens should oppose him. None of this description appeared, and Lycurgus proceeded to accomplish the suggestions of his extraordinary mind, aided by the lights which his travels had afforded him.

He found the royal authority in the possession of Charilaus, his nephew, and Archelaus, who had both attained it by hereditary descent. But this authority was undefined, and frequently disputed, while the people passed by rapid transitions from the suffering of tyrannical oppression to the indulgence of licentious anarchy. Lycurgus now undertook to remedy both these evils, and to secure the liberty of the citizens, by tempering its exercise, while, by limiting the sovereign power, he consolidated and confirmed it.

Archelaus does not appear to have resisted his projects, or to have expressed any alarm; but Charilaus,

Lycurgus.

Biography. remarkable for the gentleness of his disposition, and still a youth, was terrified by the appearance of armed citizens, and apprehending a design against his person, took refuge in the *Chalcæceæ*, or brazen temple of Minerva; but he was soon satisfied, accepted their oath, and joined in the undertaking.

Lycurgus now established a senate, consisting of twenty-eight members; and nominated to that office those citizens who had been the first promoters of his design. Plutarch quotes the opinion of Aristotle that they were only twenty-eight, because two of Lycurgus's friends had deserted him through fear; though he himself concludes, that this number was chosen, that, with the kings, the whole body might consist of thirty members. Of these, no one must be under sixty years. This election, determined, according to Plutarch, by the shouts of the people, was for life; and the senators were not responsible. Both these regulations are censured by Aristotle. He especially considers it as prejudicial to the public weal, that those should continue to possess a control over their fellow-citizens who had survived their capacity of forming a wise and equitable decision. Plutarch applauds this establishment of a senate, as an intermediate body, which, "like ballast, kept the state in a just equilibrium; the senators adhering to the kings whenever they saw the people too encroaching, and supporting the people whenever the kings attempted to make themselves absolute."

"Lycurgus," says Plutarch, "had this institution so much at heart, that he obtained from Delphi an oracle in its behalf, called *rhêtra*, or the decree. This decree, which was couched in very uncommon terms, recognized the establishment of a senate of thirty persons, including the two kings. It also directed that the people should be occasionally summoned to an assembly between *Babæa* and *Cnacion*, and that they should have the determining voice." These boundaries are supposed to describe a spot where they held their assemblies, "having neither walls nor any kind of building for that purpose. Lycurgus thought these things of no advantage to their counsels, but rather a disservice; as they distracted the attention, and turned it upon trifles; on observing the statues and pictures, the splendid roofs, and every other theatrical ornament. The people thus assembled, had no right to propose any subject of debate, and were only authorized to ratify or reject what might be proposed to them by the senate and the kings."

Of these popular assemblies there were two descriptions. One, which was held once a month, and called the *lesser assembly*. This consisted exclusively of the citizens of Sparta. They decided on all questions respecting the regal succession; the choice or removal of magistrates; the punishment to be inflicted on public criminals; and all important questions of internal policy or religious rites. The larger assembly comprehended, with the citizens of Sparta, the deputies from the cities of Laconia, and those of their allies, and even from any nations who came to improve their success. In these assemblies of the people, no one was allowed to give an opinion till he had completed his thirtieth year, and he might lose the privilege by misconduct. When any subject which engaged the attention of the assembly had been sufficiently discussed, one of the Ephori called for their voices, or ascertained their opinion by the numbers on a division.

Whether these magistrates, named the Ephori, were established by Lycurgus, or appointed, under the sanction of the oracle, more than a century after his time, is uncertain. Herodotus and Xenophon attribute their appointment to Lycurgus, while Plutarch, after Aristotol, places their institution 130 years later, in the reign of Theopompus, of whom it is related, that when his wife upbraided him that he would leave the regal power to his children less than he received it, replied, *Not, but greater, because more lasting.*

The Ephori were five in number, like the *Quinquæviri* at Carthage. They were annually chosen by the people, in their general assemblies, and designed to be a check on both the senate and the kings, thus possessing a power not unlike the tribunitial authority in Rome. In the exercise of this power, they were obliged to be unanimous. It was among the duties of the Ephori not only to preside in the assemblies of the people, and collect their suffrages, but also to proclaim war and negotiate peace; to decide on the number of troops to be embodied, and to appoint the funds for their maintenance. They appear, indeed, at length to have engrossed nearly the whole power in the administration of the government; yet, according to Herodotus (*Eratol*), the kings still possessed an authority and distinction scarcely consistent with such a power in the Ephori.

The priesthoods of the *Lacedæmonian* and celestial Jupiter were assigned to the kings. They had the power also of making hostile expeditions wherever they pleased; nor might any Spartan obstruct them without incurring the curses of their religion. In the field of battle their post was in the front; when they retired, in the rear. They had one hundred chosen men as a guard for their persons (three hundred according to others). When on their march, they might take for their own use as many sheep as they pleased, and had the chine and skin of all that were sacrificed. Such were their privileges in war. In peace they had many distinctions. In the solemnity of any public sacrifice the first place was reserved for the kings, to whom not only the choicest things were presented, but twice as the kings, much as to any other person. In the public games they sat in the most distinguished place, appointed the *Proxeni* (entertainers of ambassadors), and each of them chose two Pythii, who were sent to the oracle at Delphi, and maintained like the kings at the public expence. If the kings did not chuse to take their repast in public, two *chemeræ* of meal, with a *cotyle* of wine, were sent to their respective houses; but if they were present they received a double portion. The oracular declarations were preserved by them, though the Pythii also must know them. The kings alone had the power of deciding in the following cases, and they decided these only. They chose an husband for an heiress, if her father had not previously betrothed her. They had the care of the public ways. Whoever chose to adopt a child must do it in the presence of the kings. Such were the honours paid by the Spartans to their princes, according to Herodotus; who has here left some interesting traces of ancient manners, but whose account we shall find, on some points, at variance with the representations of Plutarch.

Lycurgus, having established his new government and defined the powers by which it should be administered, proceeded to the important objects which he considered as essential to its permanence. The

erty.

first innovation on the existing forms of society at Sparta which he attempted, was a measure of extraordinary hazard, in which nothing could have encouraged or supported him but the reputation he had now acquired as a favourite of the oracular Apollo.

"He found," says Plutarch, "a prodigious inequality; the city overcharged with many indigent persons, who had no land, and the wealth centered in the hands of a few. These he persuaded to cancel all former divisions of land, and to make new ones in such a manner that they might be perfectly equal in their possessions and way of living. His proposal was adopted. He made nine thousand lots for the territory of Sparta, which he distributed among so many citizens, and thirty thousand for the inhabitants of the rest of Laconia. Each lot was capable of producing (one year with another) seventy bushels of grain for each man [as master of the family], and twelve for each woman, besides a quantity of wine and oil in proportion. A story goes of our legislator, that, some time after, returning from a journey through the fields, just reaped, and seeing the shocks standing parallel and equal, he smiled, and said to some that were near him, 'How like is Laconia to an estate newly divided among many brothers.' This journey has been attributed to the apprehensions of the legislator from the public odium which his innovations had excited. In the story is taken for granted, what probably never yet happened in any district, that the fertility of the lands in Laconia, and their cultivation, were in exact proportion. We are also left vainly to conjecture, how this equality of lands could be preserved, at the furthest, beyond one generation, considering the unequal increase of families; and especially how there could be always one of the nine thousand shares, the reserve of which will presently be mentioned, as the portion of an infant who was deemed strong enough to be permitted to live. Colonization is the only expedient which has been suggested; but great inequalities would occur before this relief could operate.

Lycurgus next projected an equalization of personal property; "but," according to Plutarch, "he soon perceived that they could not bear to have their goods directly taken from them, and therefore took another method. First he stopped the currency of the gold and silver coin, and ordered that they should make use of iron money only. Then, to a great quantity and weight of this, he affixed a very small value; so that to lay up ten minæ (about thirty pounds sterling) a whole room was required; and to remove it, nothing less than a yoke of oxen. He next excluded unprofitable and superfluous arts; which, if he had not done, most of them would have fallen of themselves, when the new money took place, as the manufactures could not be disposed of." Plutarch adds, that their iron coin would not pass in the rest of Greece, but was ridiculed and despised. And, as the result of this contrivance of our lawgiver, he states, that "luxury, losing by degrees the means that cherished and supported it, died away of itself; when even they who had great possessions had no advantage from them, since they could not be displayed in public, but must lie useless in unregarded repositories." But, in his *Laws and Customs of the Lacedæmonians*, he says, that there was a law against covetousness, which made it a capital crime to amass gold or silver; for which several had been put to death.

On this subject it is easy to discern the advantage the Spartans derived from having no money which would invite to their country "sophists, wandering fortune-tellers, or keepers of infamous houses;" but there is nothing very agreeable in the account that they "had no means of purchasing any foreign or curious wares, nor did any merchant ship unladen in their harbours."

Another purpose of this iron coin, and, as some authors add, of *leather money*, was to discourage avarice, and the injustice of which it is so frequently the parent. This design was generally effected. Yet a striking exception occurred about a century after the time of Lycurgus which deserves to be recorded; as nothing brings more credit on any institution than a view of the evils incurred by its violation. We refer to the story of Eucleides the Lacedæmonian, as related by Pausanias. This unworthy Spartan, by the desire of wealth, was tempted to possess himself of the property of the Messenian Polycharès, which the latter had entrusted to him, and afterwards to betray his too easy confidence by the murder of his son; crimes which principally gave occasion to the first Messenian war, horrible and calamitous, though at length successful to Sparta.

The next institution of Lycurgus was that of "public tables, where all were to eat in common of the same meats, and such kinds of it as were appointed by law. They had not the privilege of eating at home, and so to come without appetite to the public repast; and they made a point to observe any one that did not eat and drink with them, and to reproach him as an intemperate and effeminate person that was sick of the common diet." When returning home from the tables they were forbidden to use a light, that they might be accustomed to march in the night without apprehension.

At these public repasts, the plan of which Lycurgus appears to have borrowed from the institutions of Crete, there were about fifteen persons to a table. "Each was obliged to contribute monthly a bushel of meal, eight gallons of wine, five pounds of cheese, two pounds and a half of figs, and a little money to buy flesh and fish. If any of them happened to offer a sacrifice of first fruits, or to kill venison, he sent a part of it to the public table; for after a sacrifice, or hunting, he was at liberty to sup at home, but the rest were to appear in the usual place." Plutarch adds, what cannot be easily reconciled with the account of Herodotus, "that when King Agis returned from a successful expedition against the Athenians, and from a desire to sup with his wife, requested to have his portion at home, the *Polemarche* (chief men who distributed the commons) refused to send it."

In these public halls there were distinct tables or *meases*, to which a new member could be admitted only by ballot. The favourite dish of the Spartans was their *black broth*; of its ingredients we have no very inviting description, *pieces of flesh, blood, salt, and vinegar*. Yet the old men were so fond of it, that they ranged themselves on one side, and sat it, leaving the meat to the young people. Plutarch relates of a king of Pontus, what he has also, as well as Cicero, ascribed to Dionysius, the tyrant of Syracuse, that he purchased a Lacedæmonian cook for the sake of this broth. But when he came in taste it; he strongly expressed his dislike, and the cook made answer, *Sir, to make this broth relish, it is necessary first to bathe in the Eurates*;

with which expression the Spartans connected labour and abstinence.

We can easily credit the information of Plutarch, that this institution of common repasts was peculiarly unacceptable to those who had enjoyed the distinctions of opulence. In this connection he has introduced an interesting story, too creditable to the conciliating talents of Lycurgus to be omitted in an account of his life.

"The rich were more offended with this regulation than any other, and rising in a body, they loudly expressed their indignation; nay, they proceeded so far as to assault Lycurgus with stones, so that he was forced to fly from the assembly, and take refuge in a temple. Unhappily, however, before he reached it, a young man, named Alcander, hasty in his resentments, though not otherwise ill-tempered, came up with him, and, upon his turning round, struck out one of his eyes with a stick. Lycurgus then stopped short, and without giving way to passion, showed the people his eye beat out, and his face streaming with blood. They were so struck with shame and sorrow at the sight that they surrendered Alcander to him, and conducted him home with the utmost expressions of regret. Lycurgus thanked them for their care of his person, and dismissed them all except Alcander. He took him into his house, but showed him no ill treatment, either by word or action, only ordering him to wait upon him instead of his usual attendants. The youth, who was of an ingenious disposition, without murmuring, did as he was commanded. Living in this manner with Lycurgus, and having an opportunity to observe the mildness and goodness of his heart, his strict temperance, and indefatigable industry, he told his friends that Lycurgus was not that proud and severe man he might have been taken for, but above all others gentle and engaging in his behaviour. This then was his chastisement, and this punishment he suffered; and thus of a wild and head-strong young man, he became a very modest and prudent citizen. In memory of his misfortune, Lycurgus built a temple to *Minerva Optileta*, so called by him from a term which the Dorians use for the eye." Plutarch adds, from *Dinacrides*, that his eye was hurt, but not struck out, and that he built the temple in gratitude to the goddess for his cure. In memory of the accident, the Spartans never afterwards carried staves to their assemblies.

By proscribing the currency of the precious metals, Lycurgus had rendered the indulgence of those luxuries which ingenious artists must supply scarcely attainable. As an additional guard against the propensity, he ordered that "the ceilings of houses should be wrought with no tool but the saw," taking it for granted that into such houses no one would introduce highly wrought and costly furniture. Plutarch, however, attributes to the Spartans excellent workmanship "in their useful and necessary furniture," and instances their "cup called *cotkoi*," which was highly valued, particularly in campaigns." But we must now inquire how the lawgiver of Sparta provided for more important objects.

He encouraged marriage by setting a brand of disgrace upon celibacy. The bachelors were liable to a prosecution, and obliged to appear naked in the public market, even in the winter season, and sing verses containing ridicule of themselves. They were likewise

refused those honours to old age, which were in all other cases so scrupulously paid by the Spartans. On the other hand, those who married had many privileges, and if they had four children were free from taxes. Plutarch says, that "in their marriages, the bridegroom carried off the bride by violence, and she was never chosen in a tender age, but when she had arrived at full maturity." He proceeds to describe the circumstances attending the commerce of the sexes at Sparta, and affects to commend the lawgiver's gross expedient for preventing adultery, by encouraging a community of wives.

Lycurgus considered children not so much the property of their parents as of the state. Under this notion, he established the following severe regulation: The father "was obliged to carry the child to a place called *Leuke*, to be examined by the men at ancient men of the tribe, who were assembled there. If it was strong and well-proportioned, they gave orders for its education, and assigned it one of the nine thousand shares of land; but if it was weakly and deformed, they ordered it to be thrown into the place called *Apoleia*, which is a deep cavern near the mountain Taygetus, concluding that its life could be no advantage either to itself or to the public, since nature had not given it at first any strength or goodness of constitution." How much wiser to have reflected, as observed in the *Athenian Letters*, "that a weak constitution often settles into a state of health, and that nature sometimes makes amends for a feeble and deformed body by the strength and beauty of the understanding."

As to the children who survived this ordeal, the parents were not at liberty to educate them as they pleased. How the girls were initiated does not appear, except that they were taught "to exercise in running, wrestling, and throwing quoits and darts," and that Lycurgus "accustomed the virgins occasionally to be seen naked, as well as the young men, and to dance and sing in their presence, on certain festivals." Such is Plutarch's account, and he is disposed to excuse, if not to commend this indecorous custom, which was, however, guarded by a law, which punished capitally the violation of a virgin's chastity. The learned author of *Anacharsis* (c. 48) is also an apologist for this custom of occasional exposure, and claims for the female Spartans the praise of exemplary purity; *les femmes de Lacédémone se distinguaient par la pureté de leurs mœurs*. Bayle, on the other hand, in his article *Lycurgue*, says of this custom, *N'étoit-ce pas le moyen de les rendre dévergondées? Et se faut-il étonner après cela, que les filles de Lacédémone aient été en si mauvaise réputation*. He adds, from the ancient writers, examples sufficiently numerous of the character which the Spartan matrons obtained and deserved, as being the most immodest women of all the Greeks. They had, however, the praise of being excellent nurses, and for this purpose were frequently employed in neighbouring countries.

When a boy had passed the examination of the ancient men, and was allowed to live, he was laid upon a buckler, and a spear placed within his reach, that his very first efforts might be warlike. The boys, at seven years of age, were enrolled in companies, where they were all kept under the same order and discipline, and had their exercises and recreations in common. His

Biography. who showed the most conduct and courage amongst them was made captain of the company. The rest kept their eyes upon him, obeyed his orders, and bore with patience the punishments he inflicted. The old men were present at their diversions, and often suggested some occasion of dispute, or quarrel, that they might observe with exactness the spirit of each, and their firmness in battle. At twelve years of age their under-garment was taken away, and but one upper one a year was allowed them. Hence they were necessarily dirty in their persons, and not indulged the great favour of baths and oils, except on some particular days of the year. They slept in companies, on beds made of the tops of reeds, which they gathered with their own hands, without knives, and brought from the banks of the Eurotas. They were introduced to the public tables; and when they first entered, the oldest man present pointed to the door, and said, *Not a word spoken in this company goes out there.* In the education of the Spartans, the higher branches of literature appear to have been excluded upon principle, as also were arts and sciences, except some attention to the art of design, probably for the purposes of war; poetry, such as might consist with their habitual consciousness, and music, on an instrument, the form of which was limited by law. Thus Terpander, though he had the merit of setting the laws of Lycurgus to music, was severely reprimanded by the Ephors because he had added a string to the lyre.

Juvenile contests.

Among the Spartans was an instructor called *Iren*, who had left the class of boys two years, and was twenty years old. It was his employment to improve the boys by conversation, and to draw out those concise repartees for which the Spartans were celebrated, and which gave birth to the epithet *laconic*. The *Iren* also presided over the juvenile contests, which were designed to prepare the combatants for those perilous encounters which were their sole manly occupations. These contests were severe, and maintained with a perseverance of which history has furnished few, if any, adequate examples. They are thus described by Cicero (*Tuscul. v. 77*), *Adolescentium greges Lacædæmonæ vidimus ipsi indolenti contentionē certantes pugnis, calcibus, ungulibus, morum denique ut exanimarentur prius-quam se victos faterentur.*

It was also the business of the *Iren* to ensure the boys to hardships, and to encourage feats of craft and agility. These adventures have been, perhaps, improperly censured as thefts, which they could scarcely be called, when we consider the community, especially of subsistence, which prevailed in Sparta. Plutarch says that the *Iren* sends the eldest of the boys "to fetch wood, and the youngest to gather pot-herbs. These they steal where they can find them, either sily going into gardens, or else craftily and warily creeping to the common tables. But if any one be caught, he is severely flogged for negligence or want of dexterity. The boys steal with so much caution, that one of them having conveyed a young fox under his garment, suffered the creature to tear out his bowels with his teeth and claws, chaming rather to die than to be detected." So highly, indeed, was dexterity valued by the Spartans, that for a victory gained by valour they offered only a cock, but for one acquired by a stratagem, which spared the lives of their countrymen, they sacrificed an ox.

Another severe discipline of the Spartan youth, by which *Lacedæmon* *nursed her hardy sons to war*, was also one of their religious rites, performed at the altar of Diana. Plutarch appears to have witnessed this celebration, and to have seen many of the youths "expire under the lash." In his *Laws*, &c. he thus describes the scene:

"There was, indeed, a strange and unnatural custom annually observed at the celebration of the bloody rites of *Diana Orthia*. A number of children, not only of the common, but of the higher class, were whipped, almost to death, with rods, before the altar of the goddess, their parents and relations standing by, and exhorting them to resolution in suffering. Though this barbarous ceremony lasted a whole day, yet they endured these severities with such extraordinary cheerfulness and resolution, as could not have been expected from the tenderness of their age. They did not express one sigh or groan during the solemnity. But, from an emulation of glory, they contended each to excel his companion in suffering the length and sharpness of his pains, and he who held out the longest was ever the most valued person among them." Well might Cicero say, as in the words immediately preceding the passage we lately quoted, *Pueri Spartani non ingemunt verberum dolore lenitate.*

Though thus early trained to hardihood, the Spartans appear not to have been admitted into military service till thirty years of age. For this service Lycurgus established various regulations. Their dress was scarlet, probably to hide the appalling spectacle of blood. They were never to march before the full moon, nor to fight often against the same enemies, lest they should thus teach them, though by severe experience, the art of war. They slept all night in their armour, except the advanced guard, who were not allowed their shields, that they might depend solely on their vigilance. After every meal they sang hymns to their gods, who were always represented in armour, that every thing might foster the military spirit. The king, who commanded the army, was attended by two Pythii, or augurs, with the *Polemarchæ*, who formed a council of war, and he had an Olympic champion to fight by his side. On his departure from the city he offered a sacrifice to Jupiter; a youth took from the altar a flaming brand, and bore it, at the head of the troops, till they reached the frontiers, when the king offered another sacrifice. Just before the onset of battle he sacrificed to the Muses, that they might perform deeds worthy of praise. The troops then advanced to the sound of flutes, and with chaplets on their heads, as if in anticipation of a victory, the king singing the psalm, or hymn of Castor, as a signal to engage.

The Spartan wives and mothers encouraged their sons and husbands to the fight, conjuring them to return, either with their shields or upon them; never lamenting those who died in battle, but rather thanking the gods for the honour they entailed on their families. Those who fell in battle were buried in scarlet cloth, and had inscriptions on their tombs, which was not generally permitted. And that his Spartans might be familiarized with mortality, Lycurgus, contrary to the practice of the Greeks, his contemporaries, directed their tombs to be built around their temples; among which he is said to have built a temple to Laughter,

and was at length honoured with one, which Sparta dedicated to her lawgiver. Whether, after all, Lycurgus was himself a soldier, it is impossible to determine. Plutarch has quoted two directly opposite testimonies; one, that he "was a man of great personal valour, and an experienced commander," which is also the report of Xenophon; the other account is, "that he never had any military employment, and that there was the profoundest peace imaginable when he established the constitution of Sparta."

Helots re-
duced to
slavery.

There is one striking feature in the legislative system of Lycurgus, of which we have yet said nothing, but which well deserves to be considered; we mean the case of the *Helots* or *Ilots*. A maritime town of Laconia, called *Helos*, was conquered, and the inhabitants were reduced to slavery by the Lacedemonians, some ages before the time of our law-giver. From them all the slaves in Laconia are supposed to have been called *Helots*, though the author of *Anacharsis* (ch. xli.) distinguishes them from those who were domestic slaves, and describes their condition as like that of the *serfs* or *villains*, under the feudal establishments. *Ille tamen plerûq; se militem entre les esclaves et les hommes libres*. Plutarch certainly considers the domestic slaves as *Helots*, whom he describes as tempted, or rather forced, to intoxication, and then brought into the public halls, to deter the youths by their example.

To these *Helots*, who were far more numerous than the free inhabitants of Laconia, were appropriated all mechanic arts, and the cultivation of their lands; for the free Lacedemonians, when not engaged in war, or preparing for it by martial exercises, claimed the privilege of idleness, which they accounted dignity. Plutarch, in his *Laws*, &c. describes the *Helots* as "employed not only in all kinds of servile offices, but especially in tilling the fields, which were let out to them at reasonable rates." But, in his *Life of Lycurgus*, these *Helots* are represented as the victims of the most wanton cruelty. They were slaves not only of individuals but of the public. The youth massacred them in cold blood, to prepare themselves for the slaughter of foreign enemies; and, lest they should become too numerous for the safety of the freemen of Laconia, they sallied forth in the evening to cut off great numbers of them as they returned home from reaping their harvests. This occasional destruction of the *Helots* appears to have been brought into a regular system by the institution of the *Cryptia*, or ambuscade, which Plutarch describes, but is disposed to consider it an invention of much later date than the time of Lycurgus. Xenophon, however, attributes it to our lawgiver; nor is it difficult to believe that he may be correct. Even in this enlightened country negroes were scarcely allowed to be *human* beings, till

that era when Granville Sharp lived and laboured for their deliverance. Was it, then, extraordinary that Lycurgus, whose legislation, after all, was only a systematic barbarism, should have considered the *Helots* as brutes, whose lives might be sacrificed to any purpose which his policy required. Yet he has found an able advocate in the author of *Anacharsis*, whose note to his 67th chapter the reader will do well to consult.

How long Lycurgus remained in Sparta to superintend the practical application of his laws, and under what circumstances he finally left the country, are questions involved in the common uncertainty of his story. Plutarch describes him as living on good terms with his countrymen, and highly gratified by the effect of his institutions. He represents him as pretending an occasion for visiting the oracle at Delphos, and obliging the Spartans, by an oath, to alter nothing till his return, which he never intended. He then, after an interview with the *Pythia*, is said to have put an end to his life by abstaining from food, at the age, according to Lucian, of eighty-five; which must, in that case, have been after a long residence at Sparta; yet Plutarch evidently supposes him to have died in the prime of life. Tertullian, in his *Apology*, differs from Plutarch as to the retirement of Lycurgus. He twice alludes to the circumstance (ch. iv. xlvii.), and attributes it to the determination of the Spartans to mitigate the severity of his laws, on which he withdrew in disgust, and pined himself to death. These laws, which certainly discover a mind superior to the general information of his age, have been panegyriced in all times, though several of them need only a description to be justly censured. At best, they considered war rather than peace as the business of life; and it has been well observed that Sparta flourished while she was in perpetual hostilities, but in the enjoyment of tranquillity presently decayed. As to their operation on domestic life, if women were not depressed in Sparta as in other countries, yet they were formed to *roughen to the sense*, and appear destitute of *all that cheers and softens life*. But, as to human nature in general, considering the great proportion of slaves in Laconia, how ill was that provided for by Lycurgus. Upon the whole, if we compare the two lawgivers who appeared in different ages, both learned in the wisdom of the Egyptians, and merely consider how one provided to mitigate the evils of bondage, and to maintain, in the commerce of the sexes, a decorum which the other lawgiver seemed to have placed no value, we cannot avoid the conclusion that Lycurgus had only availed himself of the false pretensions of the *Pythia*, though with a laudable design, but that Moses had repaired to that only Oracle, which is neither the author nor the victim of delusion.

On the destruction of Troy by the Grecians, two only of the Trojan chiefs were exempted by the victors from the severities which followed that memorable conquest. Æneas and Antenor, the Trojan leaders thus preserved from destruction, had, on every occasion which offered, been the strongest advocates for peace; even upon the condition of surrendering Helen, the beautiful, but fatal cause of the war. These chiefs too, had another title to the clemency of the Grecians: prior to the unfortunate contest which destroyed their country, they had been the intimate friends of their conquerors; and the rites of friendship and hospitality have in no age of the world been deemed more sacred and inviolable, than in that of which we are speaking. Troy, however, being now razed to its foundation, and the whole of its little territory desolated, both Æneas and Antenor were driven out to seek other homes, and to adopt new countries.

Antenor became the leader of the Hæneti, who, uniting themselves with his few Trojan followers, formed one people, and settled in an inner bay of the Adriatic, occupying the country between that sea and the foot of the Alps. But a more celebrated destiny awaited Æneas.

Without borrowing any thing from the stores of imagination, or invading the interesting offices of poetry in the diffusion of patriotism (an application of the art never more successfully sustained than in the Roman poets, from Virgil downwards), the chief from whose progeny originated the mightiest and most extensive empire of antiquity can never cease to be an interesting personage in the history of the world. After a variety of misfortunes, after attempts at forming a settlement repeatedly baffled, the wandering hero, with a few faithful followers (in number about six hundred, who had, like their leader, escaped from the flames of devoted Troy), landed at length at Laurentium, on the western coast of Italy. Possessed of little except their arms and their ships, Æneas and his band for some time were reduced to subsist only on such cattle or other provision as they could obtain by forage or by force; their ravages consequently soon attracted the attention, and roused the fears of the neighbouring princes. King Latinus, the venerable monarch of an adjacent state, marched with his people, called the Aborigines, in an expedition to repel the invaders, and, according to some accounts, yielded up his life and his throne to the victorious Trojan, in the contest which ensued.

More judicious historians, however (amongst whom is Livy), relate that Latinus, struck with surprise and admiration at the martial appearance of the veteran troop of Æneas, suspended the battle, and demanded a conference with the chief. The former renown of the Trojans had reached the ears of this king, and prepared his mind to receive the account of their recent adventures with commiseration and respect.

Whatever were the causes, an offer of alliance was promptly made by Latinus, and no less readily accepted by the Trojan prince, who was now entertained as a welcome guest at the palace, and received the only daughter of the king, Lavinia, in marriage. Here, therefore, a place of rest was allotted to the wandering Trojans; and Æneas is said, shortly after, to have built a town, which he called Lavinium, in honour of his newly-acquired wife.

A new cause of disturbance, however, quickly arose. Turnus, king of the Rutulians, who had been affianced to Lavinia before the arrival of Æneas in Italy, commenced war upon Latinus and his son-in-law. A general battle followed, in which Turnus was slain, and the confederate Aborigines and Trojans were victorious; but in the same action King Latinus also fell. His kingdom, therefore, now descended to Æneas, who, apprehending further opposition to his plans from the jealousy of the adjacent countries, and to unite all his subjects in the closest bands, declared that henceforth the Aborigines and Trojans should be only known by the name of the Latins, and be governed without distinction by the same laws. His anticipations were soon realized. War ensued between the Etrurians and the new settlers shortly after the death of Latinus; but the fidelity of his subjects was unshaken; the Aborigines were faithful as the Trojans, nor did they, on any future occasion, prove otherwise than true and firm friends to the cause of the united nation. In the Etrurians, Æneas had to combat a powerful enemy, whose renown had been spread throughout the coast of Italy, from the Alps to the Sicilian straits; and Mezentius, the king, was determined on the destruction of the new city. Assured of the affections of his people, the king of Lavinium disdained to shut himself up within its walls, but marched out without hesitation to meet the attack. The battle proved victorious to the Latins, but with the irreparable loss of their king. Æneas, in the heat of the action, found an enemy he had long disdained; while encouraging his troops he was forced into the river Numicius, and drowned. The people having recovered his body, interred it with great solemnity on the banks of the river in which he perished; and afterwards, by ranking him amongst the gods of their country, by the title of Jupiter Indiges, convinced their admiration of his government and exploits.

The Etrurians risked another battle after this, in which Lausus, the son of Mezentius, was slain; when they entered into a treaty with the Latins, by which the Tyber was fixed upon as the boundary of the two nations, an arrangement which became the basis of a lasting peace.

During the short period of the reign of this first monarch of the Latins, which is stated by historians to have been only about three years, Æneas re-established the religion of ancient Troy, and added the

Death of
Æneas.

Biography. gods of that city to those of his newly-acquired dominions. Amongst other Trojan solemnities, he introduced the worship of Vesta, and the peculiar rites of the vestal virgins, amongst whom it was afterwards accounted so honourable to be ranked; and from this circumstance the hero is supposed to have attained the especial appellation of the *First Æneas*.

Worship of Vesta instituted. Ascanius, sometimes called Euryleon and Julius, the son and successor of Æneas, was left a minor at his death. Yet the Latins, under a temporary female reign (for the royal widow Lavinia held the reins of government for a time), continued in a state of undisturbed repose; and their affairs were sufficiently flourishing, shortly after the ascent of Ascanius to the throne, to induce him to found another city on Mount Alba, within about thirty years after the building of Lavinium.

His mother uncertain. It is uncertain whether the founder of this new city was the son of Æneas by Lavinia, or that of a former wife Creusa; for he is stated by some to have escaped with his father from the flames of Troy, and to have been the partner of his fortunes since that event until his death. It is allowed, however, on all hands, that he was the son of Æneas; that he was sometimes called Julius, and was the progenitor of the Julian family, afterwards so renowned in Roman history. Ascanius is now stated to have finally resigned the government of Lavinium to Lavinia, and to have chosen the neighbourhood of Mount Alba for his new dominion, whence the city he built was called Alba Longa. Here he reigned in peace, and the undisputed possession of Alba Longa devolved upon his son Sylvius, so called from the accident of his having been born in a wood. To Sylvius succeeded Æneas Sylvius, and to Æneas his son Latinus Sylvius. In the times of Latinus the people were again found to have increased so considerably, that he found it necessary to colonize various districts in the neighbourhood, the people of which were called the ancient Latins.

Kings of Alba Longa. From this time Sylvius was the general surname of all the Alban kings, a succession of whom is said, by some historians, to have extended over a period of four hundred years. But more reliance is to be placed on the account of Livy, who records, after Latinus, the names only of Alba, Atys, Capys, Capetus, and Tiberius, in lineal succession. The last-mentioned prince was drowned in the river Tyber, and from this event it is said to have derived that name. Agrippa, son of Tiberius, was the next king, succeeded by Romulus Sylvius, who was struck by a thunderbolt, and left the throne to his son Aventinus. This prince was buried in the Aventine hill, so called from that circumstance. To Aventinus succeeded Proca, who left two sons, Numitor and Amulius, of whom Numitor was the elder, and entitled to the throne. Amulius, however, not only deposed his brother, and usurped the government, but murdered the sons of Numitor, and obliged Rhea Sylvia, his brother's daughter, to take the vows of perpetual virginity, on the pretence of conferring upon her the rank and office of a vestal virgin.

Birth of Romulus and Remus. Vain, however, are the efforts of man to change the designs of Providence: from this very Rhea sprung the enterprising founder of mighty Rome. The royal vestal proved with child. Unwilling, and perhaps unable to name the real father, she asserted that she

had met with violence from a man in armour; and appealing to the superstitious feelings of the age, declared that Mars, the god of war, was the progenitor of the healthy and remarkably vigorous male twins which she brought forth. The boldness of this asseveration availed not to lull the suspicion, nor to awaken the awe of the usurping Amulius. He committed the offending princess to close confinement, and he commanded the twin boys, who were called ROMULUS and Remus, to be thrown into the Tyber. In pursuance of this inhuman mandate, the infants were placed in a wooden trough, and, the river having recently overflowed, they were exposed on its banks, in a pool made by the waters, that they might perish either by their reflux, or for want of proper sustenance. In this precarious situation they are said to have been found by a she wolf, and the destined founders of Rome

were for some time suckled by her, when they were discovered by the king's shepherd Faustulus. It is said that this animal was in the act of caressing the twins at the time, and licking them with her tongue, as if they had been her own offspring. Others give this story a less marvellous form, and relate that Faustulus having taken the foundlings to his own house, committed them to the care of his wife Laurentia, who suckled them herself; and that this nurse had acquired the name of *Lupa*, which word signified *she wolf*, or *prostitute*, from her former licentious conduct.

When Romulus and Remus were yet in their boyhood, they began to display that spirit of enterprise and aptitude for command, which afterwards so greatly distinguished them. The herds and the fields were forsaken for the resorts of man, and the sluggish cares of the husbandman were relinquished for the hardest sports of their time and station. At the period of an early maturity, the royal twins had induced a certain number of bold and martial youths, who looked up to them with admiration, and obeyed them with alacrity, not only to hunt with them regularly the beasts of prey in the forest, but occasionally to attack the various bands of plunderers, who were very numerous, and almost equally ferocious. The exploits of these youthful chieftains, however, soon rendered them obnoxious to the neighbourhood, and particularly to the irritated troops of handitti, who designed, and in part, successfully executed a plan to destroy them. It happened that on Mount Palatine, a festival to the god Pan, was, according to custom, to be observed with certain sacred sports, in which a number of young men assisted unarmed and naked. In this unguarded situation Romulus and Remus were attacked by the surrounding robbers; who, taking them by surprise, secured Remus a prisoner, while Romulus, defending himself with some difficulty, escaped. The outlaws then charging their own crimes upon their prisoner, delivered him up to Numitor, his grandfather, with the character of a reputed thief. It was now that the shepherd Faustulus, who had long entertained secret hopes respecting the royal birth of the foundlings, pressed by the danger of Remus, related to Romulus the manner in which he and his brother had been found and nurtured, and disclosed his suspicions respecting their descent. Stimulated at once by the danger of his brother, and by a narrative so favourable to his ambition, Romulus collected around him his intrepid associates to revenge his wrongs upon the head of Amulius,

his throne.

the usurper; but finding himself unable to cope with the forces of his kinsman, he divided his troop into various small parties, and directed each to march in secrecy to the palace of Amulius. Numitor, at the same time, being made acquainted with the story of his captive Remus, and comparing the time of the exposure of the twins with that of their alleged discovery, became convinced of the claims of Romulus and Remus to his protection. He raised a body of horse, with the command of which Remus was entrusted, and the usurping Amulius being thus doubly assailed, by the party of Romulus on the one side, and that of Remus on the other, was slain. Numitor reinstated on the throne of Alba, related to the council of the city the story of Romulus and Remos, declared their royal birth, and acknowledged them as his grandsons.

The young princes thus settled under Numitor in considerable authority, quickly found another opportunity to display their enterprising and adventurous spirit. The Alban and Latin had considerably increased in numbers, and being further augmented by the followers of the royal twins, it was found that a sufficient number of men might be spared to people a new colony. The talents, the exploits, and the supposed celestial lineage of Romulus and Remus, pointed them out as the fittest leaders of the proposed expedition, while they secured to them a number of enthusiastic associates. The princes, on their parts, at once determined to build a city on the spot where the shepherd Faustulus first found them, on the banks of the Tyber. But thus agreed with respect to their object, a controversy arose on another point far more difficult to determine, the pretensions of each of the contending parties to the presidency of the new kingdom. In adversity they had shone as twin brothers; but rank, and talents, and prosperity, gave to the circumstances of their birth a new colouring, and as from then the priority could not be determined, they resorted to the decisions of a popular form of augury: Romulus for this purpose retired to Mount Palatine, and Remus to the Aventine hill. To Remus six vultures appeared, while Romulus saw double that number. But the augury having presented itself to Remus before his brother perceived any omen, the friends of each saluted the princes separately with the title of king. The contest then became violent, and an appeal was made to arms, when Remus, in the tumult, fell by an uncertain hand. Another account states, but with less probability, that the dispute having been decided in favour of Romulus, and the walls of the town having been commenced, Remus, in contempt of its appearance, amused himself with leaping over the new erections, and was slain by Romulus, who exclaimed, "thus perish every one that leaps over my walls."

748.

Undisputed master of the rising colony, Romulus now founded that city, which was afterwards to be the mistress of the world, on the 21st of April, according to Usher, in the year of the world 3256, a day on which the Romans ever after celebrated the festival of Pales, the goddess of shepherds, and the anniversary of the foundation of Rome.

The new city, the first fortress of which was placed on the Mount Palatine, consisted of about one thousand houses, in the midst of which Romulus built a palace for himself; and, to secure respect for his authority, immediately assumed all the ensigns of kingly power. He chose twelve lictors to attend his person, armed

with rods and axes; the number of whom has been thought, by some, to bear allusion to the venerated birds which appeared to the chief, and awarded to him the office of king; while others state, that the number, as well as the custom altogether, was copied from the manners of the Etrurians; from whom the sella curulis, or chair of state; the toga praetexta, or gown of youth; and some other customs, were also borrowed. Under the control of Romulus, the infant city rapidly increased in strength; but the fortifications were of an extent rather proportioned to the wishes and expectations of the ambitious founder, than to the actual number of the inhabitants. Romulus, therefore, when he had finished the city, set apart a certain portion of it as an asylum for the outlaws and discontented of the neighbouring states; a measure that proved important to the increase of his subjects. To newly-founded Rome a multitude repaired, as to a place of security from the severities of slavery, the vengeance of offended law, and the merited or unmerited hardships of poverty.

Romulus.

Rome thus built and peopled, a hundred of the inhabitants, distinguished for age or wisdom, were selected, as a SENATE, entitled *Patres*, or *Fathers*, as a name of particular respect and honour; for the parental character was, as will be afterwards shown, held in high veneration by the Roman law. But Romulus did not limit the honours of the senators to their own persons; he awarded the rank and title of patricii to their descendants, and hence arose that order so conspicuous in the history of Rome.

Forming of
the senate.

Romulus then enrolled all those citizens who were able to bear arms, and divided them into companies; each company containing from three to four thousand foot, and three hundred horsemen. To these he gave the name of legion; and the horsemen, who were called *celeres*, from their activity, were commanded by a tribune, and considered as his own guard, additionally to the lictors already mentioned; these companies formed the second rank of his subjects, and were the body from which the knights were in after times created. From this period also is dated the distinction of patron and client; the former always belonging to the rank of the patricii, and the latter to the common people. The patrons were chosen by their clients, to protect them on all occasion with their authority, and to advise them by means of their superior wisdom or experience; a relationship which proved the source of much patriotic attachment, and of many mutual good offices between the various ranks of the state. But the king now found that although his city possessed a numerous population, its strength was not calculated to be lasting, as it consisted chiefly, if not wholly, of men alone. Romulus was now, therefore, to supply his subjects with wives; and to fulfil this interesting office, with the advice of the senate, he sent ambassadors into the neighbourhood, desiring alliances, and proffering advantages, with truly patriotic profusion and sincerity. "Cities," the embassy stated, "like other things, arise from small beginnings; and such as are assisted by the gods and their own virtue, never fail to attain wealth and renown." The ambassadors also referred to the wonderful escape of Romulus, from his being exposed to perish when so infant, as a proof of the favour of the gods; and argued, that it was no degradation to be matched in blood

Division of
the people.

Biography, and affinity with such men, and under such a leader.

This offer was, however, received with coldness by all the adjacent states, and by some with contempt and derision: the ambassadors were asked, in scorn, "whether the Romans had opened an asylum for abandoned women also; for that alone," it was added, "would render their marriages just and equal."

Roman offer of alliance rejected by the neighbouring nations.

The king and the Roman people were much irritated at this reception of their overtures: but the prudent Romulus repressed his anger, and resolved upon a new method of supplying the want in question. He ordained solemn games of horsemanship in honour of Neptunea Equestris; and took especial care that the surrounding nations should be duly informed of the extensive and extraordinary preparations which he ordered, in consequence, to be made. The expectations of Romulus were not disappointed; a multitude of people arrived to view the sports at the appointed time, and, amongst other nations, the Sabines, with their wives and daughters. They were received by the Romans with much hospitality, and conducted through the new city in perfect admiration of its extent and power. The sports now commenced, and Romulus, clad in a robe of purple, was seated on a throne, elevated in the midst of the spectators. On a sudden, he arose, and gave the preconceived signal, by folding his robe around his body; when the eager Romans rushed on the Sabine and other virgins present, and bore them triumphantly away from their astonished and terrified parents and kinsmen. Resistance was in vain under such circumstances, and the males were suffered to escape without further insult. Romulus now took every possible means to calm the fears of his captives. He perambulated the city, and assured them that they should be honourably and faithfully united to his people in marriage, bear a part in all their fortunes, and share the freedom of the city. The solemnities of marriage were accordingly performed; and the wives which the Romans had thus acquired by stratagem and outrage, were soon won to the feelings of affection and to the duties of their new station.

War with the Corninenses, &c.

The insult, however, was not so easily overlooked by their indignant countrymen. The Corninenses, the Crustumini, and the Antemnates, each of whom had borne some share in the loss of the Sabines, immediately prepared for war with the aggressors. But, whether by the address of Romulus, or hurried from more prudent counsels by the impetuosity of rage, they unadvisedly came singly into the field, and each in turn were subdued under the arms of the new monarch. The Corninenses made the first attack upon the Roman territories. They were a nation little known; but Acron, the king, is said to have assembled a considerable army, and to have ravaged the Roman territories in every direction. The vigilant Romulus, however, fell upon them in the midst of their successes, slew their king in single combat, and carried off his armour, while his troops dispersed the forces. This is the first occasion on which we read of the *opima spolia*, as Romulus entitled the arms of the defeated monarch, which he elevated on an engine, and bore himself into the city, consecrating it to Jupiter, and giving the new surname of *Feretrius*, or the *Smiler*, to that god. "I, King Romulus," said the conqueror, "having been victorious, bring thee here the arms of a king, and dedicate to thee a temple in that place which I have, in

Spolia opima.

my mind, just now marked out as a repository for rich spoils, which all posterity, when they have slain kings and generals of their enemy, shall, in imitation of me, bring thither." Accordingly, on this spot, a temple was marked out for the god, which afterwards became famous, as the place of deposit for the armour or accoutrements of the vanquished enemies of Rome.

The army of the Antemnates next encountered the conqueror: and, with less effort on the part of the Romans, met with as signal a defeat. A total rout took place at the first onset, and their town fell an easy prey to the Roman arms.

But amidst their newly-obtained wives, it happened that a lady called Hersilia, a married woman, and the only one of that quality, had fallen to the lot of Romulus. She had belonged to the Antemnates, and now successfully implored her new husband to spare the nation of her father. The Antemnates were, at her request, admitted within the walls, the name of their nation was, by the same act merged in that of Rome, and thus we may mark the origin of that wise and magnanimous policy of conciliating conquered nations, and incorporating them into the state, by which Rome became, in after ages, the mistress of the civilized world. Romulus soon experienced the benefit of this conduct, for not only did these newly-made Romans, by their numbers, increase the population of his city, but the Crustumini, another offended nation, intimidated at his victories, and won by his clemency, forgot their injuries, and were easily persuaded to form a close alliance with Rome. Here, while some of the nation contentedly seated themselves, the rest admitted the Romans to form colonies in their own country.

Brundisium. A. M. 3256. B. C. 748.

But a more powerful enemy remained yet to be appeased. The Sabines were strong in number, accomplished in policy, and of equal pretensions to Romulus himself in all the manoeuvres of war. One Sabus, as others called Sabinus, seems to have been their first leader, and gave his name to this people; he was reported, after the superstition of those times, to have been the son of Sanguis, the tutelary god of the Sabines, and to be descended, with his followers, from the Umbrians, a very ancient people of Italy. Eighteen cities belonged to his successors at the period of this war against Rome, and a considerable tract of territory. Resentful as the Sabines felt at the insult offered to their females by the Romans, they at first evinced no disposition to hostilities, but silently prepared their forces for effective war. Through this delay, however, they only afforded Romulus the opportunity of overcoming his other enemies, and increasing the experience of his troops. On their first attack of the Romans, led by Tatius, their valiant king, they found Romulus so strongly posted in his camp, that an assault by force was deemed impracticable. Tatius had, therefore, recourse to stratagem. He corrupted the daughter of Tarpeius, the governor of the castle at Rome, by gifts and promises, to admit the Sabines privately within the walls; and having, by her means, taken the fort, his soldiers threw their bucklers upon the treacherous female and killed her, either as a token of their hatred of her perfidy, or perhaps to make a show of the necessity of force, where artifice only had been employed. A different construction, however, is given to this fact, by some historians, who relate that the

Sabine war.

Biography. presents which had been promised Tarpeia (for that was her name), as a reward for her treachery, were the glittering rings and bracelets of gold, which the Sabine soldiers were accustomed to wear upon their left arms. When the assailants, therefore, had by her means attained the fort, they chose to assign to their promise another meaning, and performed it by throwing the heavy bucklers, which they also wore on their left arms, on Tarpeia, who was thus destroyed by means of the very reward that had induced her to betray her country.

Important battle with the Sabines. The Roman valour was provoked to fury when it was discovered that the enemy had obtained so important a position as the castle; and they rushed with impetuosity to the assault for the purpose of regaining it. Metius Curtius at the head of the Sabines, and Hostus Hostilius, the Roman general, animated their respective troops, and displayed in their own personal conduct, great courage and skill. Hostus, after maintaining a disadvantageous post for a considerable time, fell, covered with enemies; and the Romans retreated to the gate of the palace. Romulus himself, at this time, was either wounded by a stone received in the head, according to some accounts, or borne down by the promiscuous and tumultuous flight of his troops; but the undaunted king, soon recovering his vigour, uttered aloud a vehement prayer to Jupiter, for assistance in this emergency; and made a solemn vow to build him a temple on the spot. "O Jupiter," he is said to have exclaimed, "by the command of thy sacred birds, on this spot of the Mount Palatine, I laid the first foundation for my new city; and now the Sabines have obtained possession of that castle by treachery not by courage, and they are posting down from thence in arms over the valley that lies between us. But, Father of Gods and Men, do thou, at least, repel the enemy from this place—remove this terror from my Romans—stop their dishonourable flight, and I vow that I will build thee a temple by the title of Jupiter Stator, which may be a monument to all posterity that our city was preserved, in this battle, by thy immediate aid." Then affecting to perceive an omen of the acceptance of his vow, and calling to his soldiers, he exclaimed, "Romans, the good and great Jupiter himself bids you rally and renew the fight." Animated by these words, his troops rushed with renewed vigour on the enemy, and the battle once more became doubtful. On the other side, Metius Curtius reminded his troops of the insult they had sustained from the Romans, in the persons of their unoffending and confiding females; and had driven the Romans across the plain below the castle, through the forum, or market-place of the city, nearly to the Palatine gate. At this place, Romulus, with a select party of youths, met the Sabine general, who, encumbered by being on horseback in a straight passage, was repulsed with advantage, and escaped with great difficulty to the fort, through a deep and dangerous fen. The Sabines, now in turn discouraged, gave way on all sides, but regained the fort, and the Romans were nearly masters of the field, if not of all the honours of this bravely-contested day, when the Sabine women, the wives of the Romans, took upon themselves a noble and most important task. Attired in mourning garments, and with dishevelled hair, these generous

and affectionate females suddenly appeared from the city, many of them with their sucking children (the offspring of the one army, and the near relations of the other), and rushed between the combatants; they implored the Sabines, by the respected names of fathers and brothers, and the Romans by the still more tender titles of husbands, to refrain from further acts of hostility. "If your enmity," they exclaimed, "cannot be subdued without blood, upon us turn your weapons; we are the unfortunate cause of your wounds, and of this slaughter: better is it that we should die, than live inevitably to become mourners either for our husbands, our parents, or our brothers, slain." A general silence ensued, and the leaders and soldiers on both sides, moved with the same impulse of affection, advanced from their respective ranks, to meet in friendship, and to form a treaty of peace. The terms of this celebrated treaty were, that the two kings, Romulus and Tatius, should both reside in Rome, and govern it with equal authority; that the city should still retain the name of its founder, but that the united people should be called Quirites, from the Sabine city Quir; and, lastly, that both nations should become one, and enjoy all the privileges of the new city. As a compliment to Sabine valour, the place where Curtius leaped his horse out of the fen and escaped with so much difficulty from the late fight, was called, the Locus Curtius. Thus ended the Sabine war, which at once doubled the population and strength of Rome; and, like every occurrence which at first threatened destruction to Romulus, from his exposure when an infant on the banks of the Tiber, to the propitious event of this contest, tended ultimately to increase the brightness of his prospects and the consolidation of his power. This enterprising and successful leader, therefore, was, in that age of darkness and superstition, easily accredited as the favourite of the gods, and their especial protection was believed, and relied upon, for the newly-erected and fortunate Rome.

This union having been accomplished, it next became the object of the two kings to cement it by certain ordinances. In the first instance, many marks of honour and privileges of distinction were awarded as tokens of respect and gratitude to the Roman ladies, who, on account of the noble part they had acted, had doubly endeared themselves both to their kindred and to their husbands. Every one was commanded to give way to these matrons of Rome in the public streets; all immodest discourses were forbidden in their presence; no indecent objects were to be presented to their sight; they were exempted, in all capital cases, from the judgment of the common magistrates; and lastly, their children were allowed to wear the bulla aurea, or golden ball, suspended from their necks, and the pre-texta, an elegant robe, with a border of purple, to distinguish them from the children of the vulgar. In consequence of these ordinances, the title of Roman matron was held from this time forth as one of particular honour, and in high veneration, wherever the fame of Rome itself extended. It was at this period also that the feast of Matronalia was instituted, so called in additional honour of the matrons, and in commemoration of the late peace.

Tatius, after the manner, and in compliment to the institutions of his co-partner in the government, also

formed to himself a senate, consisting of the same number of fathers, and enjoying the same rank, titles, and privileges as that of Romulus. The two councils of the nations at first held their meetings separately, each at the palace of its own king, but soon afterwards appointed a court, wherein they both sat together as one assembly, in a place called from hence the *comitium*, from *comire*, to meet. A body of three hundred knights was then formed, and divided into three troops; one troop of which was named *Rumenenses*, from Romulus; another *Tatienses*, from Tatius; and a third *Luceres*, but for what reason is uncertain; (most probably in honour of some officer of distinction who commanded them,) and these knights were enlisted into the Roman legions before described.

But this impartial administration of affairs could not suddenly extinguish all the remaining jealousies and distinctions between two nations who had lately been such bitter enemies to each other as the Sabines and the Roman people. It had not perhaps been prudent to attempt it. Accordingly we find that the Sabine monarch held his court on the hill *Tarpaeus*, while Romulus selected the *Palatine* mount as the centre of his government. The habitations of the Sabines too were at first as distinct from those of the Romans. Gradually, however, these distinctions vanished; the forum, or market-place, became the joint and constant resort of both nations; they were every day more intimately connected, and it is no small proof of the superior civilization of the Romans, that the Sabines were soon induced to adopt the fundamental laws and tutelary gods of the new city.

Thus closely united in peace, their fidelity to each other was tried shortly after this settlement in a war together against the *Camerini*, in which they were quickly victorious, and on the conquest of their city, according to the policy now becoming usual with Romulus, they sent a strong colony to the subjugated place, and admitted four thousand of the *Camerini* into Rome. This was the only military achievement performed by the two kings; for in the sixth year of their joint reign over Rome, Tatius was slain. It is related by some historians that the rights of the ambassadors from *Laurentium* being violated by certain friends of Tatius, who imprudently shielded them from the punishment due to the offended laws of nations, he was assassinated at *Lavinium* in revenge of the insult, while others allege that the friends of Tatius had invaded the territories of the *Lavinians*, and were protected by that king from the demands of justice. Whatever were the cause, the fact is undisputed; he was dispatched when joining with his associate Romulus, at *Lavinium*, in a solemn sacrifice to their common gods; and because Romulus did not attempt to avenge his death (a forbearance which might well accord with his prudence on other occasions), it gave rise to the suspicion that he connived at the murder. The surviving monarch, however, bore the body of Tatius back to Rome, and there gave it interment, on Mount *Aventine*, with all the honours of royalty.

The first act of Romulus when again sole monarch of Rome, was to pacify offended *Lavinium*; and to renew the treaty of peace between these anciently allied cities. Shortly after, the newly-subdued *Camerini*, taking advantage of a dreadful plague which then

ravaged the country, broke their faith, and appeared in open rebellion against him, but Romulus promptly met them in battle, and putting six thousand of their troops to the sword, reduced the insurgents to obedience. He then found a new enemy in the *Fidenates*, a people whose capital city, *Fidene*, stood but a short distance from Rome, and who had hitherto been friendly to his rising power. Impatient, however, now of his rapid and extensive encroachments on the neighbourhood, they suddenly declared war, and surprised the Romans by carrying their plundering expeditions to the very walls of the city. Romulus immediately drew forth an army to oppose them, quickly drove them from his suburbs, and encamped his force in turn within a thousand paces of *Fidene*. Finding some difficulty in bringing the enemy to meet him in the open field, he had recourse to the stratagem of leaving a small force in his camp, and having posted an ambuscade in a neighbouring wood, with the rest of his troops, of whom many were horsemen, he ravaged the country around up to the very gates of *Fidene*; now advancing with apparent temerity, and now, by a hasty retreat, assuming the appearance of fear. The *Fidenates*, provoked by his insults, and encouraged by this desultory and skirmishing kind of warfare, at length drew out their forces, and commenced an attack. The Roman army now feigned a retreat, and induced the enemy to advance so far, and with so much irregularity, as to throw them completely into the snare prepared. At a given signal the ambuscade issued from their concealment, and vigorously attacked the scattered *Fidenates*. Confusion was followed by flight, and flight itself was vain, for at this moment the garrison of the Roman camp quitted their entrenchments, and rushing upon the fugitives, pursued them to the gates of their town, where, joined by their brave comrades, they cotered at the same moment with the flying foe. Thus fell *Fidene*, another conquest ordained to swell the power of Rome, which it had vainly hoped to crush, and from this time became a colony of that city.

The last military exploit which the founder of Rome achieved, was his successful war with the *Venientes*, a people allied to the *Fidenates* in the strictest bands of friendship, and even of consanguinity, for both these nations traced their origin from the *Etrurians*. The war, which began on the part of the *Venientes*, is therefore considered to have originated from a desire of revenge on the Romans for the injuries inflicted in their late conquest of *Fidene*; and the manner in which the aggressions were made seems to confirm this supposition. The enemy began by making hostile excursions into the Roman territories, carrying off whatever they found, and committing every species of unnecessary and barbarous havoc across the exposed property and persons of the inhabitants. They established no encampments, and even pitched no tents, but, as if waging a war for destruction only, when the work of mischief was accomplished, they returned to their own city. Romulus endeavoured in vain to provoke them into the field, and was therefore obliged to take steps for the siege of their city. He passed his army across the *Tiber*, and found the enemy strong in numbers, a circumstance which at last emboldened them to venture forth before the town. Totally unable, however, to cope with his veteran Romans in military skill, Ro-

malus defeated them without much difficulty, and pursued their flying troops, with considerable slaughter, to their city, Veii, a place so remarkably strong, both by nature and art, that Romulus felt it prudent not to venture on assaulting it, and contented himself with wasting the country as he retired. This he did so effectually, however, that the Veientes felt themselves thoroughly unable to sustain the contest, and sent ambassadors to the Romans to sue for peace. A truce was made in consequence for one hundred years, on the humiliating conditions of the Veientes ceding a considerable district of their country to the Romans, containing seven small towns on the banks of the Tyber, and the valuable salt-pits near its mouth; fifty of their chief citizens being demanded by the Romans as hostages for the fulfilment of the treaty. On the prosperous termination of this war, Romulus enjoyed the honours of a third, and, as it proved, a final triumph.

Rome in
peril.

Rome had as yet tasted few intervals of repose, and its early records speak of little else but arms and violence. Created and nurtured by war, this city had, under Romulus, acquired considerable accessions of territory, of population, and of power, from each succeeding contest. The time now arrived when its illustrious founder was anxious to consolidate in peace the advantages gained by war; to cultivate other talents than those of the successful general—the wisdom of a law-giver, and the habits of discernment, so essential in the absolute magistrate of such a state as infant Rome. If we rightly consider the darkness of the period in which the Roman founder flourished, we shall not, perhaps, think him deficient in these qualifications. Considerable prudence must have been necessary, hitherto, to have kept together, as Romulus did, the heterogeneous elements of his power; but we now find him sustaining, by wise regulations at home, those impressions of respect and homage which his conquests must have made abroad, and giving to his country a period of profound repose unexampled in that barbarous age.

Laws of
Romulus.

Few of his laws have descended to us; but they argue a mind capable of penetrating into all the great principles of human nature, the various present circumstances of his people, and their future prospects. To the kingly office, he united that of the priesthood; and, in his own person, executed the higher duties of both. He appears to have been well skilled in all the superstitious rites and ceremonies of the age; and was thus enabled to throw around his political authority all the sanctions of the popular religion.

After the first building of the city, he divided his people into three tribes, each commanded by its own tribune. Every tribe was then divided into ten curiæ, or courts; and these curiæ were again separated into ten decuriæ, or under courts; the commanders of the curiæ having the titles of curiones; and officers called decuriones being appointed over the decuriæ. He set, apart the revenue of his territories, one-third to maintain the religion of the state, another portion to defray its expenses, and a larger one (subdivided into thirty portions) for the administration of justice in the thirty curiæ. The senate, on its enlargement and final establishment by Romulus, was elected by each tribe naming three members of this great council of the nation, and each of the thirty curiæ selecting the same number. Thus ninety-nine senators were chosen by

the people, and Romulus named but one, to make up the number one hundred. The powers of the sovereign were marked out with much precision: he watched over and officiated in all the religious ceremonies, decided the higher appeals, and more important affairs of justice, and summoned together the senate; he commanded the army, and superintended the use of public money. The senate had their duties and their rights defined to them with no less accuracy; on occasions of minor importance they administered justice, they debated upon and determined such public affairs as were laid before them for that purpose by the king, and decided all questions by majority of votes. The people had also their appointed privileges; they elected magistrates, concluded upon wars, and even enacted laws; but no act of theirs was valid until first approved of by the senate. Many wholesome laws were made in confirmation of the junction between the patron and the client, whom the former was bound on all occasions to protect, to advise, and personate, in all suits of law, and to promote on every occasion, to the best of his power and talents, his happiness, and safety. On the other hand, the reciprocal duties of the client were, to assist his patron with money when possible, to ransom him or his children when taken prisoners, to defray the charges of any public office which fell upon the patron (the honour of such an office being considered as reflecting honour on the bearer of it, to his client), and to portion the daughters of this privileged patrician in marriage. It was also decreed that no accusation should be admitted between these parties on either side; and that the violation of any of these regulations was punishable as an act of treason to the state. In the laws which related to marriages,

a wife was forbidden to leave her husband for any cause whatsoever, although the husband was permitted to put away the wife. Even absolute power of life and death over the married woman was given to the man, in case of her committing adultery, attempting to poison, making false keys, and other such offences. On the other hand, polygamy was forbidden; and all goods and chattels were the common property of both wife and husband. The power given to parents over their children was also remarkable; by his own private authority, a father possessed a legal right to imprison his children, to sell them for slaves, and even to doom them to death; nor was this power restricted by the age of the offspring, nor by any employment they exercised, any office they possessed, nor any dignity, however illustrious, to which they had attained. The same principle of high veneration for parental authority which dictated these laws, induced a total omission of assigning any punishment to the crime of parricide. Every kind of murder was indeed called by this name, but the actual murder of a father by a son was deemed an impossible thing, and therefore not provided against in the Roman code of legislation. It is noticeable also, that that horrid guilt remained uncommitted in Rome for nearly six hundred years; nor within the same period is there a single instance of divorce on record, notwithstanding the power awarded to the husband for that purpose. By these and other such ordinances, which, however imperfect in themselves, do not appear to have been unfitted to a people just emerging from barbarism, did Romulus govern his city during a prosperous reign of thirty-seven years, and increased his

under Rom-
ulus.

subjects from the small number of three thousand three hundred men, originally little better than outlaws and slaves, to a nation of forty thousand, valiant in war, and rising every year in the arts of civilization and peace. In this computation it must, however, be noticed, that the kingdom of Alba devolved upon Romulus at the death of his grandfather Numitor, the time of which event is not upon record. The king of Rome governed Alba by naming a dictator, and it was called a republic.

After a life of glory and almost unprecedented success in his various projects, both in peace and war, the death of this first hero, and founder of Rome, approached. It is said that he continued the idol of the common people and of the soldiers, but was looked upon, in his latter days, rather with fear than with love by the senate. He had abridged some of their privileges, and increased his own power. He divided the lands of the conquered enemies amongst his soldiers by his single authority, and contrary to the advice of this grand council of the nation; and he restored to the conquered Volscians their hostages, by an act of his own will. The senate were duly assembled indeed, but the fiat of the monarch was the only law, and the meeting of that venerable body became almost a mere form. These encroachments were deeply felt by the fathers, and their resentment is the first instance on record of that jealous and proud spirit of aristocracy which, in after ages, so greatly distinguished the patricians, and elevated a Roman citizen above the rank of a barbarian king. The discontented patricians at last determined upon his death; but the king, ever accompanied by his soldiers, and being the darling of the common people, was no easy object of attack. At length, however, an unusual opportunity occurred for the accomplishment of their disgraceful purpose. Romulus was reviewing his troops in the field, when a sudden and unusual darkness, accompanied by a violent tempest, obscured their beloved general from the army. The conspiring senators alone were near him, and they eagerly rushed to complete their premeditated revenge. Romulus was slain, and when the storm had subsided, the astonished soldiers missed their leader! The conspirators had taken especial care to conceal the body; and boldly availed themselves of the admiration in which Romulus was held, and the credulity of the age, to divert the people from revenging his death; and, at the same time, to flatter their general prejudices. They immediately reported, that amidst the gloom which had just enveloped them they beheld the king surrounded by celestial fire, in which his kindred gods had exalted him to their own abodes. "All hail!" they exclaimed, "to Romulus: a god, born of a god, the king and father of Rome. We all pray to him for peace, and that he would always be ready

propitiously to protect and preserve his own progeny." But, notwithstanding this stratagem, and the partial success with which it was at first attended, suspicion soon arose that their idolized sovereign, the founder of their city, and the protector of its citizens, had been assassinated by the ambitious senate; and the people and the army became tumultuous against the patricians, and clamorous for vengeance. At this crisis, Proculus Julius, a popular favourite, stepped forward in a public assembly of the citizens, with the following opportune commission from this new deity: "Romans," said the orator, "as Livy preserves his speech, 'the father of the city came down from heaven this morning, at break of day, and suddenly stood full in my sight. Astonished and trembling before him, I begged that I might see his face; 'No,' replied our deified king, 'hasten thou to my people, and inform them that the gods have ordained my Rome to be the head of the world; let them perfect themselves, therefore, in every military accomplishment, and transmit the important science to which we owe so much, to posterity; so shall no human power be able to withstand the arms of my Romans; and having thus spoken,' continued the deluding, and, perhaps, self-deluded orator, 'he vanished.' Whether the minuteness and confident tone of this narration, or the character of the speaker, had the greater weight with the people, we have not now to determine; nor how far the propensity to believe, that which most flatters our ambition might contribute also to produce the result. The tumult, it appears, subsided; the people were reconciled to the senate; the patricians, the army, and the plebeians united henceforth in one flattering belief, that this mighty son of mighty Mars, fortunate on earth, and having fully accomplished his mortal destiny, had become, like his sire, immortal, had been received into the abodes of his kindred gods, and was to be accounted and honoured as one of the tutelar deities of Rome.

The character of Romulus, as a warrior, appears to have united the most indisputable personal valour with consummate skill, and a sound and provident judgment. These qualities, too, were well proportioned to each other in his mind; nor is it on record that on any occasion, however trying, his native courage broke away from the discipline of his reason. On the other hand, Romulus, the lawgiver, must be viewed as surrounded by the darkness of his age; and it must also be duly considered that war, and not legislation, was the more especial object of his inclination, and the one which he was particularly allotted to practise. Enough is it therefore for his fame, and more than enough for his virtue and humanity, to regard him as the distinguished founder of a military state, with whose entire history were connected all the future fates of civilised man.

THE early history of Attica, like that of the other Grecian states, is involved to such an extent in fable, that it is difficult to select any ancient narration on which a reader may, with confidence, rely. So numerous, indeed, and contradictory, are the marvels recounted concerning the founders and restorers of these states, and that in proportion to their subsequent consequence and splendour, that we can hardly repress our incredulity as to the simplest facts that are related concerning them.

We have had occasion repeatedly to notice these disadvantages in the study of ancient history; and with regard to Athens, from the age of Theseus to the period at which we are now arrived, six centuries elapsed, whose records furnish us but with the single name of COBRUS, as a subject of Biography, and of his life, as we have seen, the materials are very few.

Nine
archons ap-
pointed.

On the close of the archonship of Eryxias, and some time after the death of Hippomenes, the last of the Medontidæ, the people having made the office of archon elective and annual, nominated nine of the richest citizens to the chief magistracy, and assigned to each his peculiar duties. The title of Archon was confined to the first of these magistrates, and the year in which he was chosen was distinguished by his name; the second was honoured with the title of Basileus, or king, and had his distinct tribunal for the administration of justice; the third was called Polemarchos, and his chief occupation was the management of the military affairs of the country; the six remaining archontes were called indiscriminately Thesmothetæ.

From the commencement of the Athenian republic, it is worthy of remark, that although both the nobles and the people joined in the wish to limit the powers of their rulers, yet there existed a contention between themselves for power and authority; which indeed, though always distracting, was not unequally divided. For the right of electing the supreme magistrates, the archontes, was settled in the people; but it was from amongst the nobility alone that these officers could be chosen.

The first of the nobles who exercised this office, under the new limitations, was Creon; to him succeeded Theseas; then Lysias; Antostheus; Archimedes; Miltiades; Dropis; Damastias; Epomenus; and lastly, the celebrated lawgiver, DRACO, to whom we devote the present article.

Of Draco's early life nothing is recorded, and the year of his accession to the archonship is a point of considerable uncertainty; of his after progress to fame, and even of his institutions, very few particulars remain scattered through various authorities, among which we are chiefly indebted to Pausanias. Some authors place his archonship in the second, while others refer it to the thirty-ninth olympiad. The commencement of his legislation is now, however, generally placed at the year 624 before the Christian

VOL. IX.

era, when he appears to have been considerably advanced in age.

Under the different sovereigns of Attica there were probably many attempts to legislate; but it does not appear that there were any laws in a connected form till the time of Draco, when the flourishing state of Sparta might awaken the Athenians to a sense of the value of a regular legislation. According to Demosthenes (who mentions a law of Theseus engraven on stone), till Draco compiled and framed a regular code, neither the criminality nor punishment of any action had been distinctly defined.

The precise nature of the institutions of DRACO, though they have become proverbial in all history for their sanguinary character, is very little known. He renewed an extravagant law for the prosecution even of inanimate things which had caused the death of any one. Another law, attributed to him by Diogenes Laertius, was designed for the prevention of idleness; a habit which (as may be seen in our account of Lycurgus) was differently estimated at Sparta, where it formed a distinction between the free citizen and the slave. It has been said that Draco also depressed the authority of the *Areopagus*, by instituting a tribunal called the *Epheta*, but Plutarch considers the *Areopagus* as not established till the time of Solon.

Aristotle, who highly esteemed the laws of Draco, has preserved an ancient censure of them, as less the work of a man, than of a dragon, alluding to the name of the legislator. The orator Demades also declared that they were written with blood, rather than with ink. Excessive severity appears upon the whole to have been their striking feature, and that death was the punishment of almost every crime, from a trivial theft to the foulest murder; a severity which, indeed, entirely frustrated the legislator's design.

Notwithstanding the divine sanction which DRACO assumed, by directing that his laws should be named *Thermos* (if the conjecture of Herodotus respecting the origin of the word *Θεός* may be followed, that this term was applied to the Gods because they *laid down* or *disposed* all things), they were presently neglected, and their author compelled to fly from the indignation of his countrymen. In his old age he took refuge at Egina, where he met with a most flattering reception; but his residence there was short, and the manner of his death singular as it was tragical. Entering the theatre, the audience, to testify their regard, threw upon him their cloaks (a mode of homage then in use), and under this load of honours DRACO perished. Thus is the transaction represented. Yet the character of DRACO was the last to excite the fond though indignant enthusiasm of a mixed assembly, and it is most probable that the real design of this semblance of respect was accomplished in his assassination.

From the concurrent testimony of historians, DRACO

Obscurities
in Draco's
history.

Biography. appears to have possessed a stern integrity, united with a disposition harsh and austere. The first is probable from the choice of him by the Athenians, to the important functions he exercised, though he failed in the execution of his trust. But of how dark a cast must that mind have been, and of how questionable a character his heart, to whom the most trifling crime of a fellow creature appeared as an atrocity admitting of no palliation, and who to the charge of that excessive

severity, is said to have answered, "the smallest crimes deserve death, and I can find no higher punishment for the greatest!"—thus confessing that his rigour was bounded only by his ability. Such was Draco, according to the scanty remains of him discoverable in antiquity. As a legislator, he might have shone with distinguished lustre at Sparta, but he was ill prepared by his unqualified austerity, to conciliate the milder genius of Athens.

SOLOON.

—
FLOURISHED ABOUT A. M. 3410. B. C. 594.

Biography. THE history of Attica, after the expulsion of Draco, has preserved no name of eminence, before that of Solon, her second and more successful law-giver, who also attained a high distinction among the sages of Greece. He was born, according to the most approved computation, in the second year of the thirty-fifth Olympiad, which answers to the year 639 before the Christian era.

The name of Solon's father, according to one author, was Euphorion; but Plutarch decides in favour of the more common opinion, that he was the son of Execestides. His family was eminent among the Athenians, and is said to have been descended from their king Codrus. They must have resided in the isle of Salamis at the birth of Solon, according to Diogenes Laertius, who in one place calls him a Salaminian, and in another speaks of his native country of Salamis. His mother was related to Pisistratus, with whom Solon formed an intimate friendship, although, as will appear in the sequel, he refused to sacrifice the liberties of his country to his friend's ambition.

The father of Solon is said to have reduced his fortune by liberality, and habits of expence; so that his son inherited a small property, inadequate to the support of his rank. It must, however, be added, that Aristotle describes Solon as one of the inferior citizens, upon the authority of some work of the legislator himself. In either case it is admitted, that he entered into life, scantily supplied with the favours of fortune.

He, however, possessed wealth of another description, for he early discovered a genius for poetry; and it was the opinion of Plato, to whose time many of his pieces had no doubt been preserved, that if he had finished his compositions, and found leisure to correct them, they would have equalled the most celebrated productions of the ancients. In the occupation of this talent, his first object was amusement. He afterwards applied it to moral and political purposes; and, according to Plutarch, "he cultivated chiefly that part of moral philosophy which treats of civil obligations."

The same writer, who adopts the opinion of Solon's hereditary rank, says, that though he "might have been supported by his friends, yet, as he was of a family which had long and often assisted others, he was ashamed to accept of assistance himself; and therefore, in his younger years, applied himself to merchandize." For, as he observes, after Hesiod, "in those times no business was looked upon as a disreputable

ment, nor did any trade cause a disadvantageous distinction." Yet while Solon, in pursuit of commerce, visited other countries, he at the same time acquired that knowledge and experience which enabled him to improve the condition of his own, and placed him, deservedly, among the sages of Greece.

Of Solon's travels, before his name becomes connected with the public affairs of Athens, no particulars have been recorded; nor indeed has his biographer, Plutarch, been careful to observe any order which might guide us through his narration. Yet we learn, from anecdotes which he has related, that Solon visited Delphi, Coriinth, and Miletus. These visits, however, must be referred to a late period of his life; for, as appears from a circumstance which occurred at the latter place, he had previously married and raised a family at Athens. His first public appearance there of which any record has been preserved, was under the following circumstances:

The Athenians, who had long contended with the people of Megara for the possession of the isle of Salamis, were now become weary of the contest. They forbade any one, under pain of death, to propose, by speech or writing, a renewal of the war; thus submitting to abandon their claim to the sovereignty of that island, rather than encounter the further peril of supporting it. Solon disapproved this decree, which he considered as dishonourable. He was, perhaps, also unwilling that Salamis, the place of his birth, should be wrested from the dominion of Athens; and having observed among the youthful Athenians, in particular, a desire to recommence the war (though they feared to incur the penalty of the decree), he counterfeited madness, and sallying out to the market-place, with a cap upon his head, such as was worn only by the sick, he stood upon the *herald's stand*, and read, with a loud voice, some verses he had prepared to expose the impolicy of the decree. In this design he was successfully supported by Pisistratus, his relative; and the people repented the decree. They now immediately determined to renew the war, and invested Solon with the principal command. Of the manner in which he proceeded to gain possession of Salamis, Plutarch gives two different accounts, but describes the following as that generally received.

"He sailed with Pisistratus to Colias, and having seized the women, who, according to the custom of the country, were offering sacrifice to Ceres there, he sent

His travels.

First appearance in public.

Biography. a trusty person to Salamis, who was to pretend he was a deserter, and to advise the Megarensians, if they were inclined to seize the principal Athenian matrons, to set sail immediately for Cefæa. The Megarensians sending out a body of men, Solon discovered the ship as it put off from the island, and causing the women directly to withdraw, ordered the young men, whose faces were yet smooth, to put on the dresses of the women. Thus, with weapons concealed under their clothes they danced and played by the sea-side, till the enemy landed, and their vessel was near enough to be seized. The Megarensians, deceived by this stratagem, ran confusively on shore, striving which should first seize the supposed women; but they were all cut off, and the Athenians, proceeding immediately to Salamis, took possession of the island.

Yet the people of Megara renewed the war, until, at length, the question of right to Salamis was referred to the decision of five Lacedæmonians, who determined in favour of the people of Attica. Diogenes Laertius, who is confirmed by Plutarch, relates that Solon caused several graves to be opened at Salamis, and exposed the bodies lying with their faces towards the east, a custom peculiar to the Athenians, which proved their early possession of the island. He is said also to have availed himself, upon this occasion, of an oracle, in which the island Salamis had been styled *Ionian*; and not to have scrupled the fraud of interpolating a line to his purpose in Homer's catalogue of the ships. The Athenians, however, rejected this story, and maintained that the island had been ceded to them in a former treaty, of which Solon convinced the Lacedæmonian judges.

To the reputation he thus acquired among the Athenians, was added the praise bestowed upon his wisdom by the whole people of Greece on the following occasion: The inhabitants of Cirrha, a town in the Corinthian gulf, after repeated incursions on the territory of Delphi, attacked the capital itself. The *Amphictyons* declared war against these sacrilegious invaders; and, according to the advice of Solon, all the Grecian states united to resent their impiety. Having besieged Cirrha for some time unsuccessfully, they consulted the oracle, which answered, that the place could not be taken till the waves of the Cirrhan sea should wash the sacred shore. The Greeks were surprised, and despaired of obeying the oracle, till Solon recommended the consecration of the whole of the Cirrhen territory, which was maritime, to the Delphic Apollo. The oracle thus satisfied, the confederate army was encouraged to rely on a victory, and Cirrha in consequence was taken, and made the arsenal of Delphi.

Solon may be fairly supposed to have now obtained his station among the wise men of Greece; and to this period of his life we may refer with more propriety than to any other, his interview with the rest of the sages at Delphi, and afterwards at Corinth, on the invitation of Periander, king of that country, at whose court they were entertained. Here the question was started, Which is the most perfect popular government? That, said Bias, where the laws have no superior. That, said Thales, where the people are neither excessively rich, nor miserably poor. Anacharsis, decided for the government under which virtue is honoured and vice detested; Pittacus for the one

where dignities are conferred only on virtue; Cleobolus for that which should inspire more fear of blame than of punishment; and Chilo for that under which the laws are more regarded than the orators; but Solon's was esteemed the wisest decision. "It is," said he, "that government where an injury done to the meanest citizen is considered as an insult upon the whole community."

There is a story related of these sages which strikingly displays their modesty. A dispute arose between some Coan fishermen and several strangers from Miletus, respecting the right to a golden tripod which the former had drawn up in their nets. The Milesians claimed it, as having purchased the draught, whatever it might contain. Yet the fishermen refused to yield their prize; and the states to which the two parties belonged might have been involved in hostilities, but for the irresistible interference of Apollo. His priestess directed that the tripod should be bestowed on the wisest man who could be discovered. On this decision it was sent first to Thales; the Coans, says Plutarch, readily presenting to one of the Milesians that for which they would have made war with all his countrymen. Thales, acknowledging the superior claim of Bias, it was carried to him. He referred it to another, as wiser still. After thus travelling round to them all, it was returned to Thales; and, at length, was dedicated at Thebes to the Ismenian Apollo. It is added to the story, besides some variations usual in these anecdotes, that this tripod was thrown into the sea, in compliance with an ancient oracle, by Helen, on her return from Troy.

During Solon's entertainment at Miletus, his host practised upon him an artifice, neither creditable to his feelings nor his judgment. On his expressing surprise that Thales did not marry and raise a family, the latter made no reply; but shortly after a stranger was introduced, who, being previously instructed, pretended to have just arrived from Athens. Solon inquired what was passing there. The stranger recollected only the public funeral of a young man, the son of an honourable person abroad on his travels. What an unhappy man, exclaimed Solon, but what is his name? I have forgotten the name, replied the stranger, but his wisdom and justice are much celebrated. Solon, whose alarm was increased by every reply, tremblingly inquired if the deceased youth were the son of Solon? The stranger replying in the affirmative, he was transported into all the extravagance of sorrow. Upon which Thales, taking his hand, said, with a smile, "The dread of evils, sufficient to overwhelm the firm mind of Solon, have deterred me from marriage and the cares of a family. But be assured, my friend, that your present distress is groundless. Not a word which has been told you is true." It was either on this occasion, or on the real loss of a son, when one of his friends represented to him that his tears were unavailing, that Solon is said to have replied, "It is for that cause I weep."

On his return to Athens, Solon was soon called forward into the public service by the dissensions which prevailed among the citizens. There had always been a strong party averse to the democratic government; and especially to the annual election of the magistrates. Among these, Cylon, a man of rank, was conspicuous. He had taken advantage of the absence of the citizens

at the games, and made himself master of the citadel, in the forty-fifth Olympiad. Being there besieged, and reduced to extremities, he fled, and his followers who survived took refuge in the temple of Minerva. The sanctuary was violated, and the fury of the people excited against the sacrifice. "The dispute," says Plutarch "was greater than ever, when Solon, whose authority was now highly respected, persuaded the persons called *accrabiæ*, to submit to justice, and a fair trial, before three hundred judges, selected from the nobility. They were condemned and driven into exile, and the bodies of their deceased comrades were dug up and cast out beyond the borders of Attica. Amidst these disturbances, the Megarensians renewed the war, and once more recovered Salamis."

The friendship of Solon and Epimenides.

About this time Epimenides arrived at Athens, whither he was invited on account of his skill in the forms of expiation; which the soothsayers had taught that the gods required, on account of "certain abominable crimes pointed out by the entrails of the victims." Solon formed a friendship with this philosopher, and consulted him on the projects he was now entertaining. To prepare the way for the reception of his friend's designed regulations, Epimenides, says Plutarch, "taught the Athenians to be more frugal in their religious worship, and more moderate in their mourning, by intermixing certain sacrifices with their funeral solemnities, and abolishing the barbarous customs which had generally prevailed among the women; and he made the people more observant of justice, and more inclined to union."

Plutarch observes of Solon, "that his reputation was very great before he appeared in the character of a legislator; nor is it surprising that the Athenians should rely on his counsel when they 'relapsed into their old disputes concerning the government.' His biographer adds, that 'there were as many parties among them, as there were different tracts of land. The inhabitants of the mountainous part were for a democracy; those of the plains for an oligarchy; while those of the sea coast contended for a mixed government. At the same time, the inequality between the rich and poor occasioned perpetual discord: so greatly were the poor in debt, that they were obliged either to pay a sixth part of the produce of the land, or to engage their persons to their creditors, who might seize them on failure of payment. Accordingly, some made slaves of them, and others sold them to foreigners. Some parents were forced to sell their own children, and to quit the city to avoid the severe treatment of those usurers.' Thus, 'the state was in as dangerous a situation, that there seemed to be no way to quell the seditions, or to save it from ruin, but the changing it to a monarchy.'"

Solon declines the royalty.

Solon was now indeed urged by the heads of the disagreeing parties to assume the honours of royalty which he resolutely declined, even though the oracle was employed to recommend that measure, and his friends affected to ridicule his refusal. He was, however, chosen principal archon, with special authority to settle the differences between the rich and poor. Plutarch says he was preferred "as a man least obnoxious to either party, having neither been engaged in oppressions with the rich, nor entangled in necessities with the poor;" and that "though he rejected absolute authority, he discovered a sufficient spirit, neither making concessions to the powerful, nor indulging the humour of his

constituents." The mode of his election was as singular as the occasion. The choice had been usually decided by the form of drawing lots, which the gods were supposed to over-rule, but Solon was elected by acclamation, the people not chusing, in a case of so much importance, to rely even on their divinities. The archonship of Solon is dated at about 594 years before the Christian era, when the legislator must have been at the age of forty-five. Considering the period assigned to his death, he probably employed several years in consolidating his code of jurisprudence.

Solon.

A. M.
3410.
B. C.
594.

His immediate attention was now directed to a case of peculiar urgency, the condition of the poor under engagements which they had no means of discharging. To put an end to the severities inflicted by creditors, and which had been the frequent occasion of public disorder, he employed his authority, which was indeed that of a dictator, by publishing an ordinance, entitled *Siackthia*, or the discharge. On the precise meaning of this term there are different opinions. It was probably designed to express a general remittance of debts of every description; so that no creditor in future should be permitted to take for severity the body of his debtor. Yet some have supposed that the relief consisted not in cancelling the debt, but in reducing the interest, and raising the value of money; the *missa*, for instance, from the value of 73 to that of 100 drachmas. Yet the former explanation best agrees with Solon's verses, in which he boasts of having removed the marks from mortgaged houses; alluding to a custom of placing billets on those which were held under such engagements.

This contrivance of Solon seems to have been particularly grateful to his recollection; for he boasts, in one of his poems, of having freed many of the people's minds from apprehension, and their bodies from the condition of slaves. The law was, indeed, as much to the credit of his self-denying generosity, as of his philanthropy, if we receive the account of Laertius. He says that Solon's father having "left him in money seven thousand talents, which were owing from several men, he presently remitted all those debts, and, by his example, excited others to discover the same lenity." This appears to be confirmed by Plutarch, where he mentions three of Solon's friends who, on a precious knowledge of his design to abolish the debts, and not to divide the lands, borrowed large sums of the rich, and purchased estates. This brought on him reflections, as if he were "an accomplice in the fraud. The charge, however, was soon refuted, on his being the first to comply with the law, by remitting a debt of five, or, as some say, fifteen talents."

The effect of this ordinance has been variously represented. The name *discharge* is attributed to the people's approbation of the measure. Yet Plutarch presently adds, that it "satisfied neither the poor nor the rich," the first having desired a division of lands, as at Sparta, and the latter resenting the "cancelling of their bonds." Yet he afterwards describes the people as "sensible of the utility of the decree, and offering a public sacrifice, which they called *siackthia*, or the sacrifice of the discharge." They also constituted Solon law-giver, "committing to him the regulation of the whole magistracies, assemblies, courts of judicature, and senate, leaving him to determine the qualifications, number, and time of meeting for them all, as

Laws relating to debtors.

Biography. well as to abrogate or continue the former constitutions at his pleasure.*

A. M.
3410.
B. C.
594.

Solon soon discovered that he was superior to the vanity of rejecting any thing useful, because it was the work of another. On the contrary, he preserved whatever he found commendable in the existing institutions. "Where the former establishment was tolerable," says Plutarch, "he neither applied remedies, nor used the incision-knife, lest he should put the whole in disorder, and be unable to compose it again in the temperate he might wish." Such a conduct was well calculated to secure the good opinion of the people; and, indeed, his reply to the sarcasms of Anacharsis sufficiently discovers his knowledge of mankind.

Anacharsis' friendship with Solon.

Anacharsis, the Scythian philosopher, according to Herodotus, arrived at Athens about the 47th olympiad, or 590 years before the Christian era. The story of his interview with Solon is told by Plutarch, whose account, however, of their being strangers to each other, does not exactly agree with their previous meeting at Corinth, where all the sages are said to have assembled. The philosopher sought admission to Solon, expressing a wish to cultivate his friendship. Solon answered, that friendships were made best at home. "Then," said Anacharsis, "do you, who are at home, make me your friend, and receive me into your house." Solon, pleased with the quickness of his repartee, bade him welcome. He was at this time occupied in his great work of legislation, as appears from the following story, which Plutarch has preserved, though Laertius has only mentioned the repartee.

Upon the discovery of his friend's employment, Anacharsis expressed his surprise that any one should hope to control the avarice and injustice of mankind by written laws, which resembled spiders' webs, as they only entangled the poor and defenceless, while the rich and powerful easily broke through them. Solon replied, that agreements are kept when both parties see their interest concerned in not breaking them; and his design was, to make his laws obviously beneficial to the Athenians. Plutarch immediately adds, as to the event of Solon's legislation, "that Anacharsis was nearer the truth, in his conjecture, than Solon in his hope." Yet there is a testimony highly creditable to Solon's expectation, and which shows that his laws were still held in esteem, even after his biographer was in his grave. So late as A. D. 130, on a complaint by the Athenians, that too many changes had been made in the laws of Solon, the emperor Adrian assumed to himself the office of archon, and restored the ancient law. (Butler's *Hore Juridice Subsecive*, 2 vol.)

The exact order in which Solon proceeded to execute his great work of legislation cannot now be ascertained, nor is it of much importance. Nothing can be more probable than the first act ascribed to him, of repealing the laws of Draco, which could have been but ill observed after the expulsion of that lawgiver; and, indeed, their severity had rendered them impracticable. Solon, however, now formally repealed them all, except that for the punishment of murder: he also, according to Laertius, retained the law against idleness, which, on the authority of Lyrius, the orator, he describes, as "written by Draco, but enacted by Solon," though certainly without the penalty of death.

Solon next estimated the estates, intending to leave the great offices to the rich. Such as had a yearly

income of five hundred measures of corn he placed in the first rank. The second consisted of those who could keep a horse, or whose lands produced three hundred measures. Those were in the third class who had but two hundred measures. The rest, who had no property, were not admitted to any office; they had only a right to vote in the general assembly. This right soon appeared to be highly important, for an appeal laid from the decisions of the magistrates to that assembly. Plutarch adds, that "he is said to have expressed his laws with some obscurity, on purpose to enlarge the influence of the popular tribunal. For, as disputants could not decide their differences by the letter of the law, they were obliged to resort to the whole body of citizens, who thus had all controversies brought before them."

Desiring yet further to give security and importance to the commonalty, he empowered any man to prosecute the offender, in behalf of a citizen who suffered damage or violence; and in reference to this law, on being asked "What city was best regulated?" He answered, "That in which those who are not injured, are no less ready to prosecute and punish offenders than those who are."

Plutarch, who has thus represented Solon as solicitous to give a preponderating influence to the people, presently after describes him as detracting from their importance, by subjecting them to the control of a senate. "Observing that the people, now discharged from their debts, grew insolent and imperious, he proceeded to constitute another council, or senate of four hundred, a hundred out of each tribe, by whom all affairs were to be previously considered; and he ordered that no matter, without their approbation, should be laid before the general assembly." This senate appears to have had a power like that of the *Lords of Articles* over the parliament of Scotland; for to them, according to Robertson (Hist. b. i.), "every motion for a new law was first made and approved, or rejected by them at pleasure." Yet as the members of the Athenian senate were chosen out of the people at large, and were subject to annual election, they could scarcely maintain an opposite interest. History indeed sufficiently discovers, that when Attica was not oppressed by some tyranny, the popular influence was little controlled, except by the "famous orators," whom Milton celebrates:

Those seditious, whose restless eloquence
Wielded at will that fierce democratic,
Shook th' annual and solemn crown from Greece,
To Macedon, and Antares' throne.

The senate and court of Areopagus, of which Arch-
bishop Potter (Antiq. b. i. c. 19.) has given a full and
interesting account, were rather restored and regulated,
than established by Solon. He particularly reinstated
this court in those rights which, as we have remarked,
had been taken from it by Draco and bestowed on the
Ephete. The number of the senators has been dis-
puted, whether nine, thirty-one, or fifty-one, on grounds
which are detailed by Potter. This court became pro-

Areopagus.

verbally venerable in the ancient world, while foreigners resorted to it for counsel, or referred their differences to its decision. Nor can the name ever lose its interest, while we recollect that the Apostle of the Gentiles there first taught Christianity, at Athens, with that commanding eloquence which the rhetorician and the artist have alike laboured to describe.

"To this court of Areopagus," says Mr. Tytler, Solon "committed the guardianship of the laws, and the power of enforcing them. To this tribunal belonged also the custody of the treasures of the state, the care of religion, and a tutelar power over the youth of the republic. The number of its judges was various at different periods, and the most immaculate purity of character was essential to that high office." Potter has collected from the ancients the following particulars. "All that had undergone the office of an archon were not taken into this senate, but only such of them as had been able to give a satisfactory account of their administration, after an inquiry which was extremely severe, rigorous, and particular. To have been sitting in a tavern was a sufficient reason to deny an archon's admission into it; and though their dignity was usually continued to them as long as they lived, yet if any of the senators was convicted of any immorality, he was, without mercy or favour, presently expelled. Nor was it enough that their lives were strictly innocent and unblamable, but something more was required of them; their countenances, words, actions, and all their behaviour must be composed, serious, and grave to a degree beyond what was expected from other (the most virtuous) men. To laugh in their assembly was an unpardonable act of levity; and for any of them to write a comedy, was forbidden by a particular precept of the law."—(Antiq. c. xix.)

The powers of the principal archon, and the origin of his appointment, we have shown in the life of Draco. His duties in the civil administration of justice cannot be described more correctly than in the words of a learned writer on "the Grecian Law," Mr. Butler, whom we have already quoted:

Rights and
duties of
the archon.

"All cases respecting the rights of things belonged to the jurisdiction of the archon: he had six inferior magistrates of the same name for his assessors. The person who sought redress in a court of justice denounced the name of his adversary and the cause of his complaint to the sitting magistrate; and if the sitting magistrate thought the cause of action maintainable, he permitted the complainant to summon the defendant: if the defendant disobeyed the summons he was declared infamous; if he obeyed it, the parties were confronted, and were at liberty to interrogate one another. If the magistrate thought there was a probable cause of action, he admitted the cause into court; here the pleadings began, and were continued till the parties came to some fact, or some point of law, asserted on one side, and denied by the other: this brought them to issue: then all the pleadings and evidence in the causes were shut up in a vessel which was carried into court. The archon then assigned the judges to try the cause, and they decided not only upon the fact, but upon the law of the case." (*Hor. Jurid. ed. ii. p. 19.*)

Among the laws which regulated the conduct of the people towards the government, Plutarch describes one as the most extraordinary, which declared the man

infamous who remained neutral during a sedition. Aulus Gellius adds, that such an one was condemned to lose his estates and to be sent into exile. Plutarch applauds this law, lest a citizen might otherwise determine to consult his safety till he saw on what side victory inclined. But it is obvious that, in the case supposed, a conscientious citizen might be unable to discover the side of justice. Another regulation was likewise calculated to advance public improvement, as it imposed a heavy responsibility on a projector; for he that propounded a law contrary to the common good was to be indicted, leaving the question of good or evil to the uncertain result of a popular decision. That was a more judicious regulation which appointed an annual examination of the laws, to correct any contradictions which might be found among them:

The fragments of the Athenian laws, as they could be discovered in the writings of the ancients, were collected and first published by Samuel Petrus, in 1635, with a commentary, which has the credit of Mr. Butler's praise. Of this collection, Archbishop Potter professed to avail himself in his *Archæologia Græca*. From that work chiefly we shall select a few specimens of the manner in which the laws of Solon appear to have affected the personal and domestic condition of the Athenians.

As to their worship, the first fruits of the earth were annually offered; and in the sacrifice of animals, the offerer carried part of the oblation to his family, leaving the remainder as a fee to the priest. No strange god could be worshipped at Athens, till approved by the Areopagus; and, as appears from the Acts of the Apostles, it was on this law that St. Paul was brought before that tribunal. During the celebration of new moons or other festivals, all business unconnected with the feasts was suspended, and the too common employment of defamation was expressly forbidden. The *initiated*, who must be natives, dedicated the garments which they wore, during the ceremony, in the temples of Ceres and Proserpine; and it was a capital crime to divulge the mysteries.

As to amusements, Plutarch mentions a law of Solon Amuse-respecting entertainments at the public charge. He forbade the same person to be often found at them, and laid a penalty on those who neglected to attend when invited. Yet, from an anecdote which he relates of a conversation between Solon, in his old age, and Thespis, it appears that the legislator, though himself a poet, was no friend to theatrical exhibitions. In these the actors must be thirty years of age at least, and no archon was to be exposed in a comedy.

The public appearance of women was strictly regulated, according to Plutarch, as to their journeys, mournings, and sacrifices. He adds the following account: "They were to travel with no more than three habits, and their provisions were not to exceed the value of an *abolus*. Their basket was to be only a cubit in height, and in the night they were not to travel without a torch. At funerals (where none under sixty years of age could attend) they were forbidden to tear themselves, and no hired mourner might utter lamentations. They were not permitted to sacrifice an ox on such occasions; or to bury more than three garments with the body; or to visit any tombs beside those of their own family, except at the time of interment."

Marriage was sanctioned by a law which punished a detected adulterer with death; while an adulteress was

forbidden to adorn herself, or to assist at the public sacrifices; or, if she appeared, she might have her garments torn and be beaten, though not so as to be killed or disabled. The violation of virgins was, at the same time, punished only by a fine.

As to children, it does not appear so clearly that Solon sanctioned their exposure, as we have seen Lycurgus to have done. Yet the custom having been always described as general in Greece, with the exception of the Thebans, and as, in the time of Aristotle, it was reckoned and defended by him as a common practice, it may be fairly considered as at least not forbidden by the laws of Solon. Respecting the education of children, Solon determined that their first instruction was to be in the art of swimming and the rudiments of literature; those whose prospects or abilities were but mean, were then to learn husbandry, manufactures, and trades; but those whose parents could afford a genteel education were to be taught the use of musical instruments, and to ride; to study philosophy, learn to hunt, and be instructed in the gymnastic exercises. He who struck his parents, or refused to provide for them, was declared infamous; though this provision was not obligatory on bastards, or those whom the parents had neglected to educate for some occupation.

The ingenious, but unfortunate, Dr. Brown, in his "Code of Education," finds fault with the Athenian government, because there was "the total want of an established education, suitable to the genius of the state;" and he extols, in contrast, the institutions of Sparta, where "no father had a right to educate his children according to the caprice of his own fancy." To this it was justly answered by Priestley, in his *Remarks* (1765), p. 163, that "while the arts of life were improving in all the neighbouring nations, Sparta deriv'd this noble prerogative from her constitution, that she continued the nearest to her pristine barbarity; and in the space of near a thousand years produced no one poet, orator, historian, or artist of any kind." He adds, "the convulsions of Athens, where life was in some measure enervated, and the faculties of body and mind had their proper exercise and gratification, are with me far preferable to the savage uniformity of Sparta."

Laws re-
specting the
slaves.

As to the slaves, who formed the great majority in Greece, though not honoured with the name of people, the laws of Solon were humane, compared to those of Lycurgus. It appears, indeed, from a work on the revenue of Athens, attributed to Xenophon, that they were branded, and sold in droves like cattle, to be employed in the silver mines of Attica. But, as to the domestic slaves especially, they appear to have enjoyed an unusual protection by the laws. Above all may be reckoned that law which suffered "any slave unable to drudge under the imperiousness of his master, to quit his service for one more gentle." By another law, a slave was allowed to buy his freedom. Slaves were permitted to appear at the temples, but were not allowed to plead, or give evidence in any court. They were also forbidden, as well as women, the practice of medicine.

Our readers who would further investigate the laws which Solon enacted, or of which he gave the hints on which his successors improved, will do well to consult the authorities we have mentioned, and to which we have here been principally indebted. We now continue the history of the legislator.

Solon decreed that his laws should remain in force for a hundred years. They were written, according to Plutarch, "upon wooden tablets, which might be turned round in the oblong cases which contained them." He adds, that some remains of them were "preserved in the Prytæum" to his time; and we have seen that they were esteemed by the people of Athens for some years after the death of Plutarch. He adds that "the *Theramistes*, or guardians of the laws, severally took an oath, in a particular form, by a stone in the market-place, that for every law they broke, each would dedicate a golden statue at Delphi of the same weight with himself."

However Solon had endeavored to conciliate the interests of all parties, in compiling his laws, he could scarcely have expected complete success. Plutarch says, he "had his visitors every day finding fault with some of them, and commending others, or advising certain additions or retrenchments. But the greater part desired a reason for the several articles, or a precise account of his design." Despairing of satisfying such various applications, he determined to leave his country for at least ten years, during which his laws might be familiarized to the people; and he employed for his purpose the pretence of traffic.

He first visited Egypt, where he conversed with the Vitis learned priests, and borrowed from them that fable of Egypt an Atlantic island, on which Plato improved. From Egypt he sailed to Cyprus, where he appears to have remained long enough to construct a city, and to regulate its institutions. His interview with Cressus, king of Lydia, is next related; but, by Plutarch's admission, it was considered, in his time, as a doubtful story. It is, however, one which will never cease to be told for its edifying moral. Undazzled by the splendour of the monarch, he referred him, among others, to "a plain, but worthy citizen of Athens" for a happier man than himself; and counselled the prince not to determine on the felicity of life till he had seen its conclusion. This advice is said to have been remembered by Cressus when he was about to be burned alive by his conqueror, (if to Cyrus such cruelty may fairly be attributed,) and became the occasion of saving his life.

During Solon's absence, which probably extended beyond the period he had proposed, the Athenians were divided among themselves, and a prey to three factious men, of whom one was Pisistratus. Solon at length returned, and found all parties united to do him honour. He, however, on account of his great age, declined the public administration of the government, but laboured in private to reconcile the factions. For a time he succeeded; but Pisistratus, by his largesses to the common people, secured their attachment, and, notwithstanding the opposition of Solon, usurped the government. The legislator, on the failure of this last effort, placed his weapons at his door, saying "I have exerted all my power to defend my country and to preserve her laws."

Solon's friends now feared for him, but Pisistratus was disposed rather to conciliate, than to destroy his relation. The old man, however, would not disgrace his illustrious life by suffering it to close in the court of a tyrant. He presently withdrew from Athens, and, according to Laertius, retired to Cyprus, where he might justly claim the rites of hospitality. There, according to the same authority, he died at the age of eighty

years, "with this command, that his bones should be removed to Salamis, and being burst to ashes, should be scattered over the island." This account is treated by Plutarch as fabulous, though he admits its reception, among others, by Aristotle.

Besides what has been incidentally mentioned of the honours paid to the legislation of Solon, it must not be forgotten, that about a century after his death, the Romans, according to Livy, lib. iii. c. 31, were attracted by the fame of his jurisprudence, and sent deputies to Athens to procure a copy of his code, *inclytus leges Solonis describere*. On the other hand, besides those moderns who professedly treat of laws, several writers have strongly, but not unfairly, displayed the imperfections of the Athenian as well as the Spartan code.

We may refer to Hakenill "On the Power and Providence of God," b. iv. c. 2. Leland in his "Necessity of the Christian Revelation," part ii. c. 3.; and especially to the comparison between Moses, Lycurgus, and Solon, in vol. ix. of the "Prize Dissertations," by the Society of Harlem. Yet whatever were the excellencies or defects of the Athenian sage, he was, as a lawgiver, the last of the Greeks; for, as Mr. Butler has remarked, "with the death of Solon the era of Grecian legislation finishes, and the era of her military glory begins."

Comparison
between
Solon and
Moses.

In looking back upon the Grecian lawgivers, we find that kind of coincidence between the wisest of their statutes and the institutions of Moses, upon which it is but just and philosophical to bestow a brief notice. At the close of the life of Lycurgus, we ventured to point out the great inferiority of his various provisions to those of the Jewish legislator. In the life of Draco, we had occasion to advert to the sanguinary character of his laws. These may, indeed, have been in some respects, represented inaccurately: for it is a singular circumstance, that while they are so frequently alluded to, scarcely any fragments of them have been preserved in any writer; and the general censure of them seems founded principally upon the authority of Aristotle; but the single circumstance of their punishing with death trivial offences, is sufficient to warrant the conclusions of Stagyrite, and cannot be justified on any plea of necessity, founded upon the temper of the times; although there can be little doubt that Greece was, at the period of his legislation, in a state of considerable anarchy. At the close of the life of Solon, upon a review of those laws which have been preserved to us, and to which the Grecian legislators and historians have taught us to look up with such admiration, we shall find many important cases unprovided for, and others capriciously guarded by unequal enactments. If proofs appear wanting they may be found, although it is unnecessary to produce them here in detail, in the singular contradictions and waverings in his laws respecting marriage and adultery. Nor could he carry into completion his own design. Being compelled to yield to circumstances, he confessed that his laws were not the best possible institutions, but the best which Athens could then bear. In short, as in the lives of these illustrious men, fable mixes with truth, so that it is sometimes difficult to dis-

tinguish them; darkness and light alternately appear to prevail over their legislation. In all these cases we miss that eternal stamp of consistency, which impresses so much sublimity upon the code of the Jewish legislator. His character and life appear in open day, unmingled with fable; and his principles, although bearing in their application more immediately upon the people for whom he legislated, are so pure, so true, and so comprehensive, that they have become a basis for legislators in almost all ages and countries, and must stand for ever. For can it be doubted upon an impartial inspection of the fragments that remain to us of the Grecian lawgivers, especially when these are associated with certain facts in their history, that some of their wisest institutions were borrowed from traditions of the Hebrew code? It would be too much to infer this, unless it were supported by other considerations; from the stress which they all lay upon obedience to parents, since this might be said to be a law of nature, founded upon her most powerful instincts; or the enactment that the first-fruits of the earth should be offered to the Deity; since this might be referred to the dictates of reason, prescribing to gratitude so significant an acknowledgment of the Divine bounty; and the mere circumstance of these appointments being found in the law of Moses, would not necessarily prove the origination of them there. But when we come to the specific provision made for the priests from the altar; and the injunction that the sacrificer should carry home a part of his offering, there appears to be a more visible transduction of the Grecian from the Hebrew institutions. To this we may add the singular circumstance that Solon wrote his laws from right to left, obviously the Hebrew method of writing; an imitation that would suggest the conclusion, that he was acquainted with the characters in which those laws, which he is supposed to have borrowed, were originally written. To strengthen the whole of this presumption, (if it be admitted to be nothing more) it is well-known that Solon travelled into Egypt with the design of gathering the wisdom of former ages, previous to the formation of his laws; Egypt being at that time the depository of oriental science and literature, and that Lycurgus is acknowledged to have borrowed many of his laws from Crete, with which, through the Phœnicians, the Jews had evident intercourse; and through the same channel the knowledge of their institutions reached these distinguished countries, and from them were derived to Greece. This conclusion accords again with the whole history of Grecian philosophy, the principles of which were, by the confession of Plato himself, and other eminent sages, gathered from the Socrus, another name, as employed by these writers, for the Hebrews, and one less obnoxious to their prejudices against this singular and secluded people. Those who may be desirous of seeing this subject treated at large, and proved by the most ample and erudite researches, may be gratified by consulting *Gale's Court of the Gentiles*; and the testimonies which relate more immediately to the Grecian lawgivers, collected in vol. i. b. iii. c. 9. of that work.

HISTORY.

CHAPTER IV.

CONTINUATION OF THE HISTORY OF THE JEWS,

TO THE CAPTIVITY OF THE KINGDOM OF JUDAH.

History. WE closed the narrative of the history of God's chosen people, in our last chapter, at the gloomy period of the captivity of the ten tribes.

A. M. 3278. In the meanwhile Hezekiah had ascended the throne of Judah, and was applying himself with pious zeal to the destruction of idolatry, and the reformation of his people. He opened and repaired the temple, sanctified the Levites, offered sacrifices, proclaimed a solemn passover, to which he invited the Israelites with his own people; ordered the courses of the priests and Levites; made provision for public service; appointed proper officers to superintend and apply the offerings, and restored the worship of Jehovah in its purity throughout his dominions.

A. M. 3291. The most memorable events of his reign are—the invasion of Sennacherib, king of Assyria, whose army was miraculously destroyed; the sickness of Hezekiah, from which he was miraculously recovered; fifteen years being added to his life, accompanied by an extraordinary sign in the retrogression of the shadow on the dial of Ahas, fifteen degrees; the complimentary visit of the envoys from Babylon, to whom, in the elation of his mind, he showed all his treasures, and for which he was censured, and their future capture by the Babylonians foretold; but, as these are particularized in the life of the prophet ISAAH, in the higraphical department of this work, they are slightly glanced at here; and it is only necessary to add, that after an honourable and useful career, he died in the fifty-fourth year of his age, and the twenty-ninth of his reign; and was buried with great distinction, lamented by all his people.

A. M. 3306. Manasseh, who succeeded him at the age of twelve years, was far unlike his father; his first work was to undo all that his pious ancestor had effected, and to overthrow whatever he had established. He restored idolatry, and added to it the most infamous rites; his reign was so oppressive and tyrannical, that he was said to "fill Jerusalem with blood." This career of wickedness was terminated by his being surprised and taken prisoner by the king of Assyria; who carried him into Babylon (which city he had captured about six years before, reigning sole monarch over the Assyrians and Babylonians), and cast him into a dungeon. Solitude and suffering brought reflection and repentance, and he returned to the God of his father with his whole heart, who vouchsafed him a happy emanci-

pation from his bondage. Upon his restoration to his kingdom, he cleansed it from the idolatry which he had introduced; repaired and fortified Jerusalem, and died in peace in the sixty-seventh year of his age, after a long reign of fifty-five years.

He was succeeded by his son Amon, of whom nothing is recorded, but that he adopted the evil practices of his father, without sharing his repentance. He was killed by his own servants, after having held the sceptre only two years. The conspirators were put to death by the people, who had taken no share in the rebellion; but when they had avenged the death of their murdered sovereign, placed his son Josiah, then a child of eight years old, upon the throne of his ancestors.

No sooner did this amiable monarch arrive at an age when he could think and act for himself, than he effected a complete reformation in his kingdom. In the eighth year of his reign, and sixteenth of his age, he sought the Lord; and in the twelfth year of his reign, or twentieth of his age, he began to remove the monuments of idolatry, and ceased not until he had destroyed them: a work, however, which occupied him many years fully to accomplish. In the eighteenth year of his reign, he repaired the temple; and the book of the law was found, and read to the king; who, deeply affected at its contents, sent to Huldah, the prophetess, by whom the threatened judgments were confirmed; yet, she added, that on account of the piety of Josiah, he should be exempt from sharing them, and they should not take place until after he was gathered to his fathers. The youthful monarch assembled his people, and caused the law to be read to them; appointed a passover, and restored the services of the sanctuary. He then proceeded with renovated zeal to extinguish the remains of idolatry; in the prosecution of which holy service, he came to the altar of Bethel, and fulfilled a prediction delivered centuries before, in taking the bones of Jeroboam's priests out of their sepulchres, and burning them upon it, while the ashes of the man of God who had foretold its destruction remained undisturbed. In the midst of this active zeal, Pharaoh-nechah, king of Egypt, warred against the king of Assyria; and Josiah, considering himself under some engagement to the Assyrian monarch, notwithstanding the Egyptian king endeavoured to dissuade him from meddling in the

Jehoiachaz. Jehoahaz succeeded him, but reigned only three months; a space sufficient, however, to show how unlike he was to his pious father. The king of Egypt, who had triumphed over Josiah, set aside Jehoahaz, and placed his brother Eliakim upon the throne; whose name he changed to Jehoia-
Jehoiachin. kim, taking the deposed monarch with him to Egypt, where he held him prisoner until he died. The monarchy of Judah was now fast hastening to extinction. Jehoia-
Jehoiachin. kim held his crown of Pharaoh-necho at a heavy tribute: but a new and illustrious opponent appeared in the person of Nebuchadnezzar, who also rendered him tributary for three years, after which he rebelled, and in his resistance originated those calamities which terminated in the captivity of the Jews. After a reign of eleven years of misery and violence he died, leaving the sceptre in the hands of his son Jehoia-
Jehoiachin. chin, who held it only three months, during which he discovered the same evil tendencies with his father, and at the close of which he was displaced, and carried captive into Babylon by Nebuchadnezzar, who made Zedekiah, the brother of the deposed monarch, king of Judah. Even the terrible calamities he had witnessed had no influence upon the new sovereign, who followed the same evil course with his immediate predecessors. At length he also rebelled against the king of Babylon, to whom he had sworn allegiance, and who now sent and destroyed Jerusalem, slew the princes of the royal house in sight of their miserable father, whose eyes he afterwards put out, and thus finally overthrew the Jewish monarchy, which terminated in Zedekiah, whom he imprisoned in Babylon, where he died.

Such was the captivity of Judah, of which the following is a brief review, rendered necessary to bring together events which were drawn out through three reigns. It was commenced by Nebuchadnezzar, and completed by his general Nebuzar-adan. The interval between the first devastation of Jerusalem by the king of Babylon, and its total overthrow by his servants, was about twenty-two years. It was begun in the reign of Jehoia-
Jehoiachin. kim, 606 years before Christ. Nebuchadnezzar took the city on the 12th day of the 9th month, called *Chesef*, which answers to our *November*, and is still observed by the Jews as an annual fast, in remembrance of this event. Among the captives of this first invasion were DANIEL, Hananiah, Mishael, and Amariah; called in Babylon, Belteshazzar, Shadrach, Meshach, and Abed-nego. The interval between the commencement and the consummation of the destruction of Jerusalem is crowded with important transactions; some of which are recorded by Jeremiah, and others by Daniel. The reading of the roll of Jeremiah pronouncing these judgments before Jehoia-
Jehoiachin. kim, who was not rendered sensible of his wickedness by the first desolation of his country, excited the most infuriate emotions, and, having first cut it in pieces with his own hand, he threw it into the fire. The Jews kept also the 29th day of *Chesef* a fast, in memory of the impiety of the monarch by whom this important writing was destroyed.

explained the first vision of the king of Babylon, which elevated him to the highest dignities of the empire.

The other events recorded in the book of Daniel, of the expulsion of Nebuchadnezzar from society, follow in the order in which they are there narrated; and conduct us to the total overthrow of Jerusalem by Nebuzar-adan, in the reign of Zedekiah; which was accompanied with the most horrible circumstances of rigour and cruelty. The temple was spoiled of all its riches and furniture, and was burned, together with the royal palace. The slaughter was dreadful: the city was totally dismantled; and the whole of its inhabitants, who escaped the sword, were led into captivity, or reduced to slavery. This event took place in the year of the world 3416, five hundred and eighty-eight years before Christ, and one hundred and thirty-four years after the destruction of the kingdom of Israel, and the captivity of the ten tribes.

While Providence was thus pursuing its solemn and irresistible march to punish a people so distinguished by its favours, so notorious for ingratitude, and who were hastening to fill up the measure of their iniquities, many eminent prophets arose, as the ministers of mercy to the penitent, or the heralds of impending ruin to the obstinately rebellious. This is a feature in the moral government of God too prominent, and the messengers were themselves too eminent, to be passed by unnoticed. The first circumstance is stated, with the most touching simplicity and pathos, by the sacred historian: "The Lord God of their fathers sent to them by his messengers, rising up betimes, and sending; because he had compassion on his people, and on his dwelling-place." The last will appear, when it is recollected that amongst those who were employed as prophets, during that eventful period, to the Israelites and other nations, the names of Jonah, Amos, Hosea, Micah, Nahum, Joel, Zephaniah, and Habakkuk, are conspicuous; and may here, therefore, with propriety precede those of their more illustrious contemporaries or successors Isaiah and Jeremiah.

JONAH, the son of Amittai, was a Galilean, of Gath-hepher, in the tribe of Zebulun, and lived in the reigns of Jona-
Jonah. h and Jeroboam (that is, the second Jeroboam), kings of Israel. Some have conjectured that he was the nameless prophet sent to by Elisha, to anoint Jehu: it is unnecessary to add, that this can be only conjecture, and of conjecture there is no end. We have never felt ourselves justified in indulging it, or we could amuse our readers with various plausible hypotheses respecting this prophet, of whom so little is known, some of which are destroyed by facts, and all of which must be necessarily uncertain.

The only history upon which any dependance can be placed, is that found in the book which bears his name, among the minor prophets; so called, not because they were later, for some of them were still earlier than their more distinguished competers: not because they were less inspired, for their predictions received the full confirmation of Providence; but because their prophecies were less numerous than those of others.

We first become acquainted with Jonah, in the opening of his commission against Nineveh, whose destruction he was commanded to foretell; when more jealous of his own honour, than concerned for the glory of God, or the salvation of the people to whom his commission related, he was only anxious to

relinquish, or escape his arduous and difficult office. He adopted a singular method to effect this purpose; in taking ship to Tarshish, "to flee from the presence of the Lord." The superstitious and irrational notions of the age in which he lived, which fancied gods of the mountains and of the valleys, the woods and the plains, the sea and the dry land; might almost induce us to suppose that he was willing to believe Jehovah to be a local deity; or did he imagine that, if he could shift the commission for a season, or evade it, by travelling abroad, it would be altogether relinquished, and so reluctant a messenger be exchanged for one more prompt to the service?

He had no sooner embarked, however, than a tempest arose, and he was in imminent danger of shipwreck. In vain the mariners implored their idols to pity and save them; the storm increased every moment. After casting overboard whatever might tend to lighten the ship, and employing all possible means to save themselves, the captain, having missed one of his passengers, found Jonah asleep in the body of the vessel, apparently unconscious of the hurricane; and being, with all the seamen, satisfied that an extraordinary judgment had overtaken them, they resolved to decide the question by the prevailing custom of the day, in every doubtful case, and particularly if it were a religious one; they cast lots, to ascertain on whose account this calamity had befallen them, and the lot fell upon Jonah. Closely interrogated on the subject, he now confessed his fault and folly; and, impelled by the spirit of inspiration, assured them, that their only safety consisted in consigning him to the waves. Unwilling to proceed to such an extremity, they laboured to subdue their difficulties and escape their peril; but, finding all human effort unavailing, and the fury of the tempest augmenting, at length they yielded to their sad circumstances, and threw their dangerous and offending passenger overboard.

It was then that a miracle was wrought which has amused infidelity, and employed its criticisms, in all ages.

Swallowed
by the fish.

"Now Jehovah had prepared a great fish to swallow up Jonah; and Jonah was in the belly of the fish three days and three nights." We cannot admit that any vessel is intended by the term *ἰχθυος* in the Hebrew, or *εὐρος*, which is employed by our Lord; because, although such a deduction is possible from mere verbal criticism, the result is at variance with the context in both cases, and can only be deduced by doing violence to the natural import of the expressions. The terms *ἰχθυος* and *εὐρος*, signify alike a *great fish*, without determining the species; although our translators have rendered the latter, in the New Testament, a *whale*. This fact removes the objection arising from the narrow passage of the throat of the whale, in comparison with his size, which, it is said, renders it impossible for him to swallow a man. The fish, if of any natural species, might be of the *shark* kind, of whose voracity and ability to swallow so considerable a bulk as the human body we have other instances: but what is not affirmed in the narrative, we are not called upon to decide. It is further expressly said, that "Jehovah prepared a great fish;" it is evident, therefore, upon every possible interpretation, that a miracle was wrought in this case; and when once the ordinary limits of nature are exceeded, it rests not with man to fix the bounds of the operation. As if to an-

ticipate the evils of scepticism upon a history so brief, so simply narrated, and so replete with miracle, our Lord pledges his own character to its veracity, by two appeals to its circumstances (not to mention other, and constant allusions to it, throughout the subsequent scriptures); the one, the repentance of the Ninevites, as a condemnation of the age and generation in which he lived—the other, the miraculous event just recited, as a sign of his own death and resurrection—precisely agreeing with the time he should occupy the tomb. It is not to be imagined that he would refer an event of such infinite moment that all Christianity rested upon it, as well in its principles as in its prospects, to any fact disputable in itself, or doubted by his countrymen; or that a Teacher of Truth (and such even his adversaries have allowed him to be), a man of unimpeachable veracity and integrity, should adopt a mere legend, or give any countenance to a fable. Yet the matter so stands, that the authenticity of the history of Jonah must be admitted in all its miraculous features, or the judgment, integrity, and authority of Jesus Christ impeached. It is further remarkable, that among the few fragments of antiquity remaining to us, this little history should receive from them larger confirmation than some others of greater extent and magnitude. The heathens have preserved the fact, but applied it to Hercules;

Ἡρώδης ἑρμῆς, ἐν ὧν ἰσχυρὸς
ἦν ἡρώδης ἑρμῆς ἑρμῆς ἑρμῆς.

LTCORANOS.

"That fam'd three-nighted lion, whom of old,
"Triton's carcharias" dog, with horrid jaws
"Devour'd."

Æneas Gæzæus, recording the same event, which also he refers to Hercules, employs the very term *εὐρος*, adopted by the LXX. and by St. Matthew. *Ἐπεὶ καὶ Ἡρώδης ἑρμῆς, ἐπιβήσας τῆς νύκτος, ἐρ' ἡς ἐπὶ τοῦ νῆο ΚΗΤΟΥΣ καταβῆναι καὶ εἰσελθεῖν.* "As Hercules is also reported, when he was shipwrecked, to have been swallowed by a (*εὐρος*) whale (or *great fish*); and yet to have been saved.—(*Æneas Gæzæus Theophrastus*). That Hercules should have been substituted for Jonah can excite no just astonishment; since Tacitus himself acknowledges, that to advance the fame of this distinguished favourite, they do not hesitate to ascribe to him whatever is extraordinary or noble in history, to whomsoever the real praise is due. They plunder every other celebrated character, of whatever country, of all his merit, to adorn their fabled hero with the spoils stolen from truth, and honestly belonging to others.

Jonah was emancipated from his terrific and miraculous prison; and thus admonished, upon the repetition of the original command, advanced to Nineveh; to compass which required three days journey, it being, according to Diodorus Siculus, twenty-five leagues in circumference, and contained 120,000 persons "who could not discern between their right hand and their left," by which we may presume children to be especially intended; and as these are usually estimated at not more than one-fifth of the whole population, the result will be, that Nineveh contained 600,000 inhabitants—"and also much cattle." This is the compassionate argument used by the Father of mankind for sparing his creatures; and in his expostulation with the angry prophet, he showed that he "cared for oxen."

* The *εὐρος* *corvus* is the *shark*.

588.

At the awful message of Jonah, the Ninevites fasted and repented; and the threatening, being conditional, was repealed. This example of humiliation was set by the sovereign, who descended from his throne, clothed himself with sackcloth, and deprecated the Divine vengeance. Calmet supposes this king to have been the father of Sardanapalus, known in profane authors by the name of Amasyndaraxa, or Anabaxanis; and called Phul in the scriptures. That he might have been the Phul of the Bible is not improbable; but, whether known by his scripture or his heathen name, he was the father of Sardanapalus, must remain a question, while it is even doubtful whether such a man as Sardanapalus ever lived; two persons of the most opposite qualities being called by that name, and both of those, perhaps, fictitious.

Jonah, having fulfilled his commission, retired to the environs of the city, resolved to wait the result, and seems rather to have chosen the destruction of the place than that his prediction should appear to fail. The climate of Nineveh was most trying—scorchingly hot by day, and intensely cold at night. He made a booth as a temporary shelter; and a guard, a plant of the country of remarkably rapid growth (*likajen*), sprung up over his retreat, and afforded him a deeper shadow by day, and a better covering at night. As it was said to be "prepared," it was probably distinguished from ordinary plants, as well by the completeness of its umbrage, as by the rapidity of its production. Jonah rejoiced in its shadow: but a worm was also "prepared;" an insect devoured the root, and it perished in a night, so suddenly, so unexpectedly, that the prophet, finding himself exposed to the united action of a scorching sun and a piercing east wind, was moved with anger and impatience. It was then that the noble reproof was given, already adverted to, which placed in so striking a point of view the selfishness of the man, and the compassion of the Deity. After this Jonah disappears. We read of him in another portion of the scriptures, and on another occasion; when he foretold the second Jeroboam, that he should "restore the coast of Israel from the entering of Hamath, unto the sea of the plain" (2 Kings xiv. 25.); but whether this prediction were uttered before or after the events which we have recited, it is impossible to determine; and nothing further respecting him is known from any authentic record.

Amos.

Amos also flourished about this time. His birth-place is unknown. He tells us himself that he was not educated among the sons of the prophets, nor was he the descendant of a prophet, but a man of no pretensions, and occupying a humble station in life. "I was a herdsman, and a dresser of sycomore fruit; and the Lord took me as I followed the flock, and said unto me, Go, prophesy unto my people of Israel." He began to prophesy in the reign of Uzziah, two years before the earthquake. He was charged with a conspiracy against Jeroboam the Second, because of the sharpness with which he reproved the sins of his people; and was severely threatened by Amaziah, the high-priest of Bethel—with how little effect, the fidelity of his plain, but pointed predictions will testify. He retired, however, into the kingdom of Judah, and dwelt at Tekoa. He foretold the invasions of Phul and Tiglath-pileser: and reproved the Israelites in language as distinguished for its energy as for its

sublimity. The time and manner of his death cannot be ascertained. He lived only in his prophetic testimony—and this shall outlive the world.

Hosea, whose predictions, from their extent and variety occupy a larger space among the minor prophets, does not appear more conspicuous than Amos on the page of history. He lived in the kingdom of Samaria, and his prophecies principally regard that state, then fast verging towards its ruin. He is said to have prophesied under the reigns of Uzziah, Jotham, Ahaz, and Hezekiah; and must have been, therefore, contemporary with Isaiah, and not inferior to him in length of life. The most singular circumstance attending the prophecies of Hosea, is not that they are very pathetic and energetic, for his style is rather concise, sententious, and abrupt, nor that they were enforced by symbols, for this mode was also prescribed to, and practised by Ezekiel; but that he was permitted, as enjoined, to adopt a type which appears to the present age to involve an immoral connection. "Go, take unto thee a wife of whoredoms, and children of whoredoms; for the land hath committed great whoredom, departing from the Lord." And it appears, from the whole account given, that this cannot be understood figuratively, but must signify a real transaction. The Baron de Tott illustrates this circumstance in the account which he gives of those temporary marriages, unknown to us, but common in the east. He says, "There is also another kind of marriage, which, stipulating the return to be made, fixes likewise the time when the divorce is to take place. This contract is called *casus*; and, properly speaking, is only an agreement made between the parties to live together, for such a price, during such a time." Such a contract is probably that mentioned by Hosea. Mr. Hurmer observes, respecting contracts for temporary wives, from Sir John Chardin, and which are made before the *cadis*, that "there is always the formality of a measure of corn mentioned, over and above the sum of money that is stipulated." These circumstances will serve to explain the whole transaction, and to prove, that however singular in itself that transaction was, it accorded with the customs of the country and of the age. "So I bought her to me for fifteen pieces of silver, and for an homer of barley, and an half homer of barley. And I said unto her, thou shalt abide for me many days; thou shalt not play the harlot, and thou shalt not be for another man; so will I also be for thee." That this transaction was intended to expose the idolatry and the iniquity of the Israelites, is fully shown by the prophet himself.

MICAH, the Morasthite, prophesied in the reigns of Jotham, Ahaz, and Hezekiah, kings of Judah. Morassa, or Marassa, of which place he is named, was a village in the south of Judah, in the vicinity of Eleutheropolis. His predictions relate to his native country, and to the kingdom which separated from it; since he expressly terms them "a vision concerning Jerusalem and Samaria." Some parts of them were evidently, therefore, written before the captivity of the ten tribes; and it is supposed that he prophesied longer than Hosea. His style possesses great energy, copiousness, pathos, and sublimity; not without singular beauty and elegance. There are distinct predictions in the book bearing his name, not inferior in grandeur and eloquence to the most illustrious of the prophets, and which will bear a

comparison, without injury, even with Isaiah himself. The substance of his prophecies agrees with those of his contemporaries: the iniquities of Israel and of Judah, which are reproof with sharpness and fidelity; the impending ruin of these monarchies, and by what nations it should be effected; the future restoration of them, according to the divine promise; and all turning upon that glorious centre of providence and grace, to which all prophecy hastened, and in which it terminated—the reign of the Messiah. Micah is distinguished also for having fixed the birth of the Messiah expressly at Beth-lehem (Ephrathah), in language too distinct to be misunderstood, and allowed by the Jews themselves. (Mic. v. 2.) There is an interesting circumstance respecting a prophecy of Micah, Jer. xxvi. 11–24, which was the means of saving the life of the latter prophet, while the fearful Urijah was slain. The time of Micah's death is uncertain, and his sepulchre unknown; although it is conjectured that he was buried at Morasha.

Nahum.

NAHUM, the Elkoshite, so called from a little village of Galilee, occupies a small, but splendid space among the predictions of those times. Josephus supposes him to have flourished in the reign of Jotham; and says that his prophecies were accomplished one hundred and fifteen years after they were delivered. But the best and most accurate chronologists place him in the reign of Hezekiah, and conclude that his predictions were delivered soon after the destruction of Samaria by Shalmaneser. Accordingly his book opens with a sublime exhibition of the power and goodness, the justice and compassion of Deity. He represents "whirlwind and storm" encompassing him; "clouds, scattered "as the dust of his feet"; the "sea" shrinking, and the "rivers" failing at his "rebuke." Then this storm subsides instantly into a calm; every attribute of terror is laid aside, as he turns to his people; and all his majesty and power are combined for the security of those "that trust in him." After this sublime exordium, he directs his prophecies chiefly against Nineveh, and foretells the destruction of the Assyrian empire. The time of the death of this prophet is unknown.

Joel.

JOEL, the son of Pethuel, prophesied before the subversion of Judah, but when that event was fast approaching, in the reign, as some think, of Manasseh or, according to others, of Josiah; we cannot determine from his predictions themselves precisely the time or reign in which they were delivered. He is said to have been of the city of Betharan, in the tribe of Reuben. He is distinguished for the fervour, elegance, and sublimity of his style, and his short, but sublime work exhibits all those characters of energy for which the most illustrious prophets were celebrated; combined with a richness of imagery, seldom rivalled, and never surpassed. His description of the army of locusts, in the second chapter, and of the effusion of the Spirit in the third, have no equal. The substance of his predictions relate to the impending ruin of his country, and the final restoration of his people by the Messiah. We have no certain information further respecting the prophet himself.

Zephaniah.

ZEPHANIAH, the son of Cushi, was supposed by Epiphanius to have been of the tribe of Simeon. He fixes himself the date of his prophecies in the reign of Josiah, and from some of their contents we must conclude, that he flourished in the early part of that

reign. His censures on the disorders of Judah would induce the conclusion, that their formation by that pious prince, in the eighteenth year of his reign, had not then been effected: and he predicts the destruction of Nineveh, which probably took place about the sixteenth year of Josiah. Judah is first mentioned, and then the enemies of Israel successively—the Philistines, the Moabites, Ammonites, Cushites, Phœnicians, and Assyrians. The predictions terminate, as usual, in the glory of the latter day, as connected with the restoration of the Jews. The circumstances and time of the death of Zephaniah are no where recorded.

HABAKKUK is supposed to have been also of the

tribe of Simeon, and to have lived in the reign of Jotham. That he prophesied *after* the taking of Nineveh is inferred from his silence respecting the Assyrians, while he predicts the terrible judgments which threatened his country from the Chaldeans, whom he calls "a bitter and haughty nation;" and describes their ferocious character and unsparring cruelty with all the force and grandeur of oriental imagery. "Their horses also are swifter than the leopards, and are more fierce than the cunning wolves; and their horsemen shall spread themselves, and their horsemen shall come from far; they shall fly as the eagle that hasteth to eat." The Chaldeans are threatened in their turn; and the book closes with a magnificent description of the majesty of God, which exceeds, perhaps, in sublimity every other similar delineation even in the scriptures themselves. (Hab. iii.) The only genuine works of this prophet are those predictions contained in the book which goes under his name. Some singular incidents respecting him are recorded in the Apocrypha, but which being extremely doubtful, to say the least, if not absolutely fabulous, we do not recapitulate. So far as any probable history of his life can be at all collected, it is given in few words by Calmet, from Epiphanius, et Dorotheus de Vita et Morte Prophetarum, who says, "Observing that Nebuchadnezzar advanced towards Jerusalem, and foreseeing he would take it, Habakkuk escaped to Ostracine, in Arabia, near the lake Sirbonis, where he lived for some time; but the Chaldeans having taken Jerusalem, and returned to Chaldea, Habakkuk returned to Judea; while the Jews who escaped from being carried to Babylon, after the death of Gedaliah, fled into Egypt."

These were the illustrious men who lived in the age to which this chapter of history relates, and who foretold the destruction that hung over their country. And although men were the instruments in producing the fearful scenes which they predicted, God was the adversary. Jeremiah unveils the cause of the calamities of Israel and Judah—those calamities which have now been seen reaching their climax. "The Lord was as an enemy: He hath swallowed up Israel, he hath swallowed up all her palaces: he hath destroyed his strong holds, and hath increased in the daughter of Judah mourning and lamentation. And he hath violently taken away his tabernacle, as if it were of a garden, he hath destroyed his places of assembly: the Lord hath caused the solemn feasts and sabbaths to be forgotten in Sion, and hath despised in the indignation of his anger the king and the priest." (Lam. ii. 5, 6.) A similar sentiment, expressed in language less sublime, will be recollected by the classical reader in Virgil, *Æn. l. ii. v. 609–619.*

RESPECTING this distinguished prophet little is known with any degree of certainty; but to supply the deficiency of genuine history with rabbinical tradition would afford little pleasure, and no instruction; and would be inconsistent with the plan of a scientific work, the object of which is to present truth always, and truth only. Under these circumstances, we must be satisfied to gather up the remaining fragments of his personal history, to state whatever is doubtful fairly as it stands, and to leave undetermined questions upon which we can collect no certain information. The most important particulars of the life of such a man become interesting, from their connection with his writings; while the most magnificent circumstances that ever distinguished a mortal career (had they been certainly attached to him) could add nothing to the glory which surrounds ISAIAH as a prophet, and to a fame which is imperishable. He stands, perhaps, at the head of that celebrated class of ancient writers, the prophets of the Bible; and, in this view of his character, appears to us to belong to this period of our progress in the history of the world.

Isaiah's family.

Our perplexities begin even with his birth. He is generally held to have been of the seed royal; his father being understood to be that Amoz who was son to Joash, and brother to Amaziah, kings of Judah. This opinion seems to have obtained upon good ground; and supposing it to be justly founded, Isaiah presents a wonderful and affecting spectacle of the close union sometimes subsisting between high distinction and severe affliction, and a memorable example of the reverses of human life: since he is seen as the grandson of one monarch, the nephew of another, and the martyr of a third.

Length of his ministry.

He prophesied, as we learn from his own writings, during four reigns—in the days of Uzziah, Jotham, Ahaz, and Hezekiah, kings of Judah. It is also supposed that his predictions extended to the reign of Manasseh, the son of Hezekiah, to whom St. Jerome says the prophet gave his daughter in marriage; while it is more generally thought that he was put to death by that prince, a death also of the most cruel kind, being “sawn asunder.” For this there is only traditional evidence, and a supposed allusion of the author of the Epistle to the Hebrews; but, in reality, his death, like his birth and his life, is involved in much obscurity.

Calmet concludes that he did not enter upon his prophetic office until the beginning of the reign of Jotham, and that he died in the first year of that of Manasseh. The first position appears to us to impugn his own declaration, that his visions opened in the days of Uzziah; but in the last he agrees with many other writers. And if it be conjoined with the general tradition of his death, it exhibits the unworthy son of Hezekiah as hastening to destroy, with an eager indecency, in the prophet whose admonitions he abhorred, his father's bosom friend; a circumstance which but too well comports with his blood-thirsty character. It is evident that Isaiah prophesied a long time; some writers have suggested a period of eighty-five years, while the representation of Calmet, which is the most moderate, allows to his public career but threescore years.

It is sometimes difficult in prophetic writings to ascertain with accuracy when the prophet speaks in his own person, and when he personifies another: this is particularly the case in predictions which refer to the Messiah, where the transition from one event to another, and from one person to another, is sometimes very abrupt, and at others almost imperceptible. We are disposed to think, from an expression in the first verse of the forty-ninth chapter of the book of Isaiah, notwithstanding the tenor of the argument evidently relates to the Saviour of the world, that an intimation is given of the separation of the prophet himself, from his earliest infancy, to the station which he afterwards filled with such pre-eminent majesty and fidelity. However this may be, it is very evident that he commenced his prophetic career very early; and continued it, with indefatigable assiduity and energy, to a remote period of life; that while he soared as on an eagle's pinion, like the eagle he appeared to renovate his vigour in his old age; and that his fine description of a servant of Jehovah most aptly applied to himself—“he ran without weariness, and walked without fainting.”

His predictions may be arranged in the following order:—He has himself named four reigns under which he prophesied. Five chapters of the beginning of his majestic work relate to the reign of Uzziah. The sixth, containing the description of a magnificent vision, which occurred to him in the year of the death of that monarch, must be therefore referred to the reign of

Isaiah.

Confederacy of Israel and Syria.

Jotham, his successor. Those which remain are divided between Ahas and Hezekiah; nor is it easy to draw precisely the line between these monarchs, as to their share in the several predictions, from the prophecies themselves, until we arrive at the thirty-sixth chapter, when we find ourselves in the fourteenth year of the reign of Hezekiah. It should be noted, that the difficulty of distinguishing the predictions appropriated to the respective reigns of these four sovereigns, arises from the interposition of prophecies relative to the Messiah, which bore alike upon all, with those which were local, and arose out of circumstances peculiar to the times. Chronology alone can settle the division; and by its aid it may be done with tolerable precision. According to the general opinion as to the order in which this prophet delivered his predictions, the book of Isaiah may be thus classed. The first five chapters are assigned to Uziah's reign; the sixth to that of Jotham, thence to the fifteenth the reign of Ahas seems to be included, and all that remains must be referred to that of Hezekiah; perhaps extending into the opening of the tyranny of Manasseh. According to the chronology of Usher, which we have usually followed, Isaiah begins to prophesy A. M. 3244. B. C. 760; and his last predictions were delivered A. M. 3306. A. C. 698; thus allowing space for the exercise of his arduous office of sixty-two years. The predictions relative to the Messiah occupy the largest proportion of his writings; and they possess a character of such precision as well as grandeur, that he has been styled, with one consent, in all ages, the Evangelical Prophet.

The predictions themselves conduct us to some important events in the Jewish history during the life of Isaiah, with which he was intimately connected. He appears to have had but two children; whose names were given as signs of certain prophecies which he had delivered. *Shear-jashub—the remnant shall return*—alluding to the restoration from the captivity of Babylon, which event had occupied a considerable place in the prophet's writings; and *Maher-shalal-hash-baz, making speed to the spoil, he hasteneth to the slaughter*—an appellation which too surely announced the approaching desolation of the kingdoms of Israel and Syria. His wife is called a prophetess; whether, according to the opinion of the Rabbins, that a spirit of prophecy rested upon her, or, as others have concluded, only because of her connection with Isaiah, cannot be easily determined. Some have also imagined that the father of Isaiah was a prophet, from the circumstance that his name is coupled with that of his son; and it has been said that the father of a seer was never mentioned, except he had been himself a partaker of the same inspiration; but it does not appear that such a sentiment can be borne out by facts. These are the only particulars suggested relative to Isaiah himself; and henceforward we learn his history only as it is associated with the public events of the times in which he lived.

The historical facts distinctly adverted to in his prophecies are four: The confederacy against Judah, by Rezin, king of Syria, and by Pekah, king of Israel, in the days of Ahas; the invasion of the same country, in the fourteenth year of Hezekiah, by Sennacherib, king of Assyria; the alarming sickness of Hezekiah, and his miraculous recovery; and the complimentary visit, consequent upon it, of the ambassadors of Me-

rodach-baladan, king of Babylon. These events gave rise to distinct prophecies, relating partly to the destiny of the Jews, and principally to the reign of the Messiah; and it will be discovered, by an accurate examination of the predictions of Isaiah, relative to other countries, which will be hereafter classed and enumerated, that they principally sprang from some historical facts, recorded in the chronicles of the empire, but not distinctly named by the prophet.

It must have been unexpressedly more grievous to the king of Judah, that Israel should have been linked with Syria against him, than if two of the mightiest potentates of the age had been leagued for his destruction. But little more than two centuries had passed since they were one kingdom, under the glorious sceptre of Solomon. No political changes could erase from the bosom of each that they were brethren, descended from one grand ancestor, speaking the same language, originally heirs of the same promise, and embracing a common faith; the interposing rock had divided those streams, which were once one current, but the fountain of both continued the same. In private life, when animosities arise among brethren, there is an unusual bitterness attached to them. The affections being engaged in the first instance, when they become repressed and violated, alter their whole character; and there is no hatred so deep and irreconcilable as that which arises from wounded love and insulted friendship. It is usually found that this principle acts with tenfold force upon nations in this situation, who add political fervour to outraged affection and original union; and this was manifested in the most marked manner in the war carried on between Israel and Judah. We lose almost the part which the Syrians took in it in the memory of Israel. The unnatural hostility of the Israelites; and while Judah felt most deeply the assault from the sea tribes, they, on the other hand, having obtained certain advantages, set no bounds to their oppression; and it became necessary that the prophet Obed should be sent to them, to require them to be satisfied with the spoils which they had taken, and remanding the prisoners to their country; or the lump of David had, at that time, been wholly quenched; and, to increase the calamity, would have been extinguished by the hand of a brother. These circumstances, not mentioned by Isaiah, constituted a part of that war to which he distinctly alludes, and which gave occasion to his predictions immediately before us. They were subsequent to this period, and were provoked by the idolatry of Ahas, after he had been delivered from his immediate apprehensions.

In the year 742 before Christ, this iniquitous league took place; a confederacy which joined the armies of Israel, the professed servants of the only and true God, with the host of Syria, a people distinguished, from time immemorial, for their idolatrous inventions; for an ingenuity in multiplying divinities, and improving upon the superstitions of other nations; and this, against the house of David, and the sceptre to which they had originally yielded obedience, proud of its greatness, and sheltered under its protection. Ahas was justly alarmed. The alliance against him was formidable in itself, and he had forfeited the only security which can deserve to be so called—the divine favour—by his idolatrous practices and infamous life. The apprehensions of the monarch, and of his people, are beautifully described. "And it was told the house

We lose the memory of Israel.

Isaiah, hy. of David, saying, Syria is confederate with Ephraim: and his heart was moved, and the heart of his people, as the trees of the wood are moved with the wind! This little circumstance would be unworthy of notice, were it not that in this short sentence, which is also poetic and historical, we have the figurative and commanding features of that style, which distinguished the prophetic writings, and to which our attention must be directed, before we close this article. The Being who had been insulted with the impieties of an apostate monarch, and an ungrateful nation, was not forgetful of his people on this occasion. Isaiah was commanded to approach Ahaz, taking with him his son, Shear-jashub, then an infant; and to mark the precision of the fact, in connection with the prophecy, as one of those little, but irresistible circumstances, incompatible with falsehood, because so minute that mere invention would not think of them; the place of meeting is prescribed and mentioned: it took place "at the end of the conduit of the upper pool, in the highway of the fuller's field." The alarm of Ahaz appears to have been two-fold. He was afraid of the immediate consequences of this joint assault; and he apprehended that the dissolution of the Jewish monarchy was at hand. The prediction is therefore double; and it is necessary to observe this, in order to afford a solution of it, at once consistent with the existing circumstances, and the future aspect which it bore upon the Messiah. For want of this attention, commentators have plunged themselves into difficulties, which, as it appears to us, would not have existed, had they kept these simple facts in view. His immediate fears are allayed, by a time being fixed for the destruction of those invading monarchs, who were not so to prevail against him as to dispossess him of his throne; while they were themselves exposed to ruin which they did not anticipate; and it was revealed to him, that the throne of David should stand, until a greater than David came, whose miraculous birth is predicted, and in whose spiritual kingdom the temporal sovereignty of his house should be absorbed; in other words, to repeat the expressions of dying Jacob, "the sceptre was not to depart from Judah until Shiloh came." As a sign of the sudden destruction of the confederate monarchs, Isaiah presented his own child. Ahaz having refused to ask a sign, God deigned to give him a double one, relative both to the monarchy and to his pressing dangers. "Before the child" (properly, before *this* child) "shall know to refuse the evil, and choose the good, the land that thou abhorrest shall be forsaken of both her kings." There could be no possible reason for Shear-jashub to accompany his father, except for this purpose, to be a sign in the prediction. His immediate fears allayed, he was instructed as to the termination of the dynasty of David, as a temporal monarchy, and encouraged in the prospect that this extinction of worldly glory was only that absorption of a lesser light which must always take place in the presence of a greater; that, in truth, it was to be absorbed in the splendour of a spiritual and eternal kingdom. "Behold a virgin shall conceive, and bear a son, and shall call his name Immanuel; butter and honey shall he eat, that he may know to refuse the evil and choose the good." The application of this sign to the Messiah by St. Matthew, removes all doubt upon the subject of the propriety of this reference. The butter of the East

The double prediction.

Butter and honey.

was a sort of thick cream, and, mingled with honey, was considered a luxury of the first order. Such an image represents the actual prosperity of a dominion which had no external marks of grandeur, and refers to better blessings than this world could give, under a figure perfectly familiar to those to whom it was addressed. It was further considered a nutritious diet for children, which, by strengthening the body, would be likely to contribute to the soundness of the judgment; vigour of mind often depending much upon physical causes; and this fact forms an easy solution of the closing remark of the prophet. Although we have altered the order of the prediction, to render the argument clearer, it will be seen that such a transposition cannot affect the interpretation; which will be equally valid, whether the promise of the Messiah, or that of the overthrow of the kings of Syria and of Israel, stand first in the arrangement of a prophecy, which, evidently relating to two events, and embracing two signs (viz. that of the prophet's son, and that of the miraculous conception), must necessarily be divided into two parts.

The next event of importance, in the life of Isaiah, the Jews connected with his prophecies, is the invasion of Judea by Sennacherib, king of Assyria. The monarchy of Israel had perished under the conquering forces of Shalmaneser, about ten years before this period. Hezekiah having failed to pay the tribute exacted by the kings of Assyria from the monarchs of Israel, the incensed and unprincipled tyrant invaded and subdued the defenceless cities of Judah. He was appeased, for a time, by the submission of Hezekiah, and the payment of a very heavy annual sum. But after three years, inflated with the successes which he had obtained over several surrounding nations, once distinguished for their valour and consequence, without any pretext, but the mere impulse of wanton and arbitrary power, he sent Rabshakeh, his cup-bearer, from Lachish, which he was then besieging, to Jerusalem, with instructions to employ the most insulting language to Hezekiah; and to listen to no terms which did not include the most abject submission, without any correspondent guarantee, even for the life of the outraged monarch. The threat was immediately followed by an immense army, quite equal, in the opinion of the Assyrian monarch, to the execution of his unprincipled purpose. The pious king of Judah spread his case before Jehovah. In this national emergency the prophet Isaiah again appears—and again in all that dignity and energy which always distinguished him. With Jewish characteristic force and beauty, he personified "the daughter of Zion, as laughing" her invader "to scorn;" he showed, with singular ability and propriety, the causes of the weakness of those nations whom Sennacherib had enervated, in their idolatry; and he promised a miraculous and speedy overthrow of the large army which this imperious invader had sent against Jerusalem. Accordingly, it is said, "the angel of the Lord went forth, and smote in the camp of the Assyrians, 185,000 men," in a single night. Whether this destruction were effected by a spiritual, or by a natural instrument, it is still miraculous: since the prediction of such a fact, and the timing of it, argue, beyond question, a divine and immediate agency. We dare not say, that this slaughter was not effected by an angel; more especially as we have learned always to respect

The Jews connected with his prophecies, is the invasion of Judea by Sennacherib, king of Assyria.

With Jewish characteristic force and beauty, he personified "the daughter of Zion, as laughing" her invader "to scorn."

the angel of the Lord went forth, and smote in the camp of the Assyrians, 185,000 men, in a single night.

Biography. the language of revelation; and never to depart from its simple import, excepting in cases in which the expressions are evidently figurative, and accord with the common forms of oriental metaphor. The most likely opinion, on the part of those who understand by the term "angel of the Lord," only a delegated natural cause, is, that it was the smooch, or fiery blast of the desert, which surprised them; which often extends to the width of half a mile, which is peculiarly fatal to persons sleeping, and which affects those who survive with a languor and depression of spirits, that render them incapable of exertions, and overwhelm them with cowardice and despondency. The result was, that the army of Sennacherib was so diminished, that he was compelled to retreat; and, after his return to his kingdom, he was slain in the house of his idol, by two of his own sons.

Sickness of Hezekiah. The alarming sickness of Hezekiah happened so near this time, that it is not easy to determine absolutely, whether it occurred during the investment of Jerusalem by the army of Sennacherib, or after his defeat. The language of the prophet seems to decide in favour of the former; since, in promising the pious monarch an addition of fifteen years to his life, he adds, "and I will deliver thee and this city out of the hand of the king of Assyria; and I will defend this city." Such an indisposition, at such a moment, must have added to the distress occasioned by the invasion in an inconceivable degree. The whole history is very singular; the first announcement of approaching death; then the rescinding the sentence at the supplication of the dying monarch; the addition of fifteen years to his life: the number of years being precisely specified; and finally, the miraculous sign by which this prolongation of his days was accompanied. We can add nothing to these facts, beyond the authority of the sacred writings, and the assurance that these things were well known at the time, as is evident from the embassy of congratulation from Babylon. But it is doubtful whether the dial of Ahaz were any thing more than a flight of steps in his palace, so constructed that the rays of the sun fell upon them during the day, throwing the shadow in different directions, which was noted in the different stages of its progress, and divided into spaces, sufficiently accurate to determine the larger Jewish divisions of time—since we read nothing of dials, constructed as such, in an age so remote as that of Hezekiah. As to the method of the performance of the miracle, there is no necessity to imagine a retrogression of the earth's motion (which is, however, held by no less a man than Archbishop Usher), since the inflection of the solar rays would produce all the results of this phenomenon. We held a different opinion relative to the miracle of Joshua, principally, because such a solution did not appear to us reconcilable with the scripture narrative; also, that it seemed inadequate as a cause to the effect stated: in this instance, no contradiction of the sacred history is involved—the explanation is adequate to the phenomenon, and while it is unnecessary to multiply difficulties in the discussion of miracles, as to their mode, the event itself is no less miraculous for this interpretation, if we consider the occasion on which it was wrought, and the time at which it took place; on the recovery of Hezekiah, and as a confirmation of God's word, by the mouth of his servant,

Dial of Ahaz. The mission of the Babylonians to inquire after the circumstances of the king's recovery, seems to indicate

Retrospection of the shadow. that they had only reached this people by report, and that their attention was not called to them by any astronomical observations, for the knowledge of which they were celebrated. It is merely said, that Merodach-baladan had heard that Hezekiah had been sick. Had there been a suspension of the earth's motion, the effect must have been universal, and could not have escaped the notice of such accurate students of astronomy as were the Chaldeans. Two things are, however, evident; and these are sufficient to the history and the occasion; it was a sign perfectly demonstrative of the divine mission of the prophet, and it was, on every hypothesis, a miracle wrought by the immediate interposition of God. We should not, however, omit to state, that some writers have thought that the astronomical effect of the miracle in question contributed to bring the Babylonian embassy to Jerusalem, to inquire more fully into the circumstances of the case.

Fantasy of the Babylonians. This complimentary embassy from the king of Babylon became a snare to Hezekiah, and furnished an occasion for a prediction of the after ruin of his kingdom, which was then approaching; while it afforded, in the issue, a remarkable example of his resignation to the Divine will.

About this time ISAIAH received directions to walk naked and barefoot, three years, as a type of the approaching degradation of Egypt and Ethiopia, by the hand of the king of Assyria. This circumstance illustrates a singular fact connected with prophecy. The prophets accompanied their predictions, by divine direction, with certain signs attached to persons, or things, and chiefly to themselves, which were as strikingly expressive of the events signified, as their ordinary language was bold in figure, and accurate in description. Isaiah, who abounded in majesty of diction, sublimity of thought, and richness of imagery, seems, in this solitary instance, to have taken the typical mode of conveying his predictions; while Ezekiel employs chiefly this method of instruction. Both acted unquestionably under the direction of the same Spirit: it was the language of symbols, where that of words failed; and it is highly interesting thus to observe it used by some of the first writers of antiquity.

We ventured to say, that the predictions of Isaiah would be found, upon close inspection, to bear respect to certain historical facts, connected with the age in which he lived, which were not, however, specified by himself. His prophecies principally related to Tyre, Tyre, Edom, Babylon, Egypt, and the Messiah. This last and most numerous class of his predictions, must be considered as common property—the Saviour, like the air which we breathe, and the sun which shines upon us, is not the right exclusively of any nation, but, as he was declared to be, the wealth of the world—"a light to lighten the gentiles, and the glory of his people Israel." With each of the other subjects the Jews had a peculiar relation, which was especially intimate at this part of their history. Tyre had furnished them with workmen to consummate that temple which was the wonder of the world; and Solomon had brought them into an alliance with that enterprising state, although the peculiar habits of the Jews restrained their intercourse with other nations. This bond of friendship was soon to be broken. "Who hath taken this counsel against Tyre? the crowning city, whose merchants are princes, whose traffickers are the honourable of the earth?"

Edom.

Egypt.

Personification.

The Lord of Hosts hath purposed it, to stain the pride of all glory, and to bring into contempt all the honourable of the earth."—Edom, the possession of Esau, who ought to have felt sympathy with the posterity of Jacob, had exulted, with the most cruel malignity, in their misfortunes; and was not forgotten in the day of retribution. As the glory of Israel and Judah waned, this unnatural people aided in their oppressions. At this part, therefore, of the history of the Jews, we may judge of the force and effect of the prophet's denunciations against the Edomites.

Egypt had been always the resort of the Jews, when she was not their tyrant. An undue confidence had been placed in this power. It seems as though the impression of her strength and superiority, derived from the bondage of their ancestors, had remained from age to age; and this feeling was certainly strengthened by the rank which Egypt held, as well for literature as for military glory, among the nations. But her sun had touched the meridian; and that orb, which had illumined the world, was now visibly on the decline, to have no future rising. His countrymen were to be warned of the folly of trusting in this powerful state, and the prophet cried, "Woe to them that go down to Egypt for help! Babylon was then rising into distinction, as Egypt was veiling her glory. She was the morning, as Egypt was the evening star. Babylon was already seen by Isaiah in all the splendour of her victories, as she appeared under the sway of Nebuchadnezzar; although more than a century was to elapse before this scourge of his country should invade Judea, and strike the tabernacle of David. But while he foretold the captivity of his people, and announced the proud pre-eminence of Babylon, he foresaw the transient character of her empire, and predicted her utter ruin. It was then that the patriot mingled with the prophet, and, while he gave scope to the inspiration within him, all the grand faculties of a powerful mind were called into action; and the fall of the king of Babylon, recorded in one chapter with a precision that would almost induce the conclusion, that the prophet was an eye-witness to the scenes which he predicted, is anticipated

in another with that boldness of personification, that force of description, that sublimity of conception, that torrent of eloquence, which find no parallel in all antiquity; and have ever stood, as they ever must stand, unrivalled in grandeur—the admiration of all ages, and the constant example of every writer on rhetoric, who intends to illustrate his subject or to charm his readers. The passage, in which the king of Babylon is introduced in his glory and his ruin, is too long to transcribe, but it is full of splendour. (Is. xiv.) The cruelty of his oppression precedes his fall, in the delineation, to manifest its justice. In the peace which succeeds his tumultuous reign, and in which the whole earth participates, we share with oppressed nations their gratification at the defeat of his ambition—it is the stillness of nature after a hurricane. Not satisfied with making the inanimate creation exult with the intelligent, in this signal overthrow—the very cedars of Lebanon rejoicing because the axe no longer threatens their destruction; he draws the veil of eternity aside, and shows us the impression which such an event makes upon the invisible world. He represents the dwelling-place of separate spirits as agitated at his approach; he shews the solemn, yet shadowy state of departed monarchs, still retaining the semblance of majesty amidst utter

weakness, and exhibiting a gratification in his humiliation to whom they once were tributary. The contrast between what he was, and what he is—the loss of empire, wealth, flattery, pleasure—the nakedness of the dispossessed and disembodied spirit—is very striking. This contrast is heightened by the repetition of his vain boasting, and visionary purposes. The threatening, that even death shall not terminate his degradation—that his body shall be denied the rights of sepulture—that his children shall never inherit the empire—that with him the dynasty shall cease—terminates the majesty and terror of the delineation. Such are the leading predictions of the book of Isaiah, relative to the destiny of different empires; and it will be at once apparent to every reflecting mind, how closely allied these were with the events of his day, and the interests of his country, although certainly not influenced by them.

It remains to give a brief, but comprehensive view of the substance of his prophecies. As to the order, it is of little consequence to disturb the form in which they are presented, since it differs chronologically, in no important particular, from the course of the predictions. They shall, however, be stated in their actual succession, which will require an inconsiderable transposition of the chapters. The prophecies open in the year 760 B. C. with an affecting representation of the rebellions of Judah against God; a dignified remonstrance against their hypocritical forms of worship, while the power of religion was absent, and a lively contrast between the national ruin which impended, and their future restoration, together with the universal beneficence which should characterize the reign of the Messiah. These prophecies occupy five chapters, in the course of which he furnishes some curious illustrations of the dress and manners of oriental nations, in his description of the female ornaments which were to be taken away; and exhibits the care of the Duty and the ingratitude of the Jews, under the beautiful parable of an unfruitful vineyard.

About two years subsequently he had the vision which is recorded in the 6th chapter, and the sublimity of which induced Saurin and his Commentators to give it the pre-eminence in his critical and theological discourses on the Bible; making it the centre around which all the remarks upon Isaiah and his prophecies revolved, in that laborious work. It is, indeed, an object of primary moment, whether we consider it as containing the credentials of the mission of this prophet to his countrymen, or whether we contemplate it as the point upon which the Evangelist fixed; thus ratifying its transcendent majesty, when he said of the Messiah, that "Esaiah beheld his glory." And it may not be amiss to remark here, that visions and dreams, in prophetic communications, were perfectly distinguishable—the circumstances of the two being essentially and entirely different, and the impressions of the former being greatly superior to those produced by the latter. Dreams were inspirations imparted when the prophet was asleep, the character and congruity of which distinguished them from the romantic and heterogeneous combinations of the fancy. Visions surprised the prophet when he was awake, and without suspending the ordinary functions of the senses or the understanding, absorbed them wholly in visionary scenes, inaccessible to others, but so powerfully operating upon the mind of the prophet, as to abstract him from all surrounding objects. This was sometimes ac-

The Edom-
ites, &c.

companied by an actual transportation of his person from one place to another, by rapid and almost momentary transitions. The description given by Ezekiel of his vision, in the 8th chapter of his prophecies, will fully illustrate the character of a vision, as distinguished from a dream; and the fears expressed by Obadiah to Elijah will confirm what we have advanced respecting the participation of the body in the impressions made upon the mind. "It shall come to pass, as soon as I am gone from thee, that the Spirit of the Lord shall carry thee whither I know not; and so when I come and tell Ahab, and he cannot find thee, he shall say me." For the same reason the sons of the prophets instituted a search of three days for Elijah, after his translation, supposing that "the Spirit of the Lord had taken him up, and cast him upon some mountain, or into some valley."

The three succeeding chapters, including also the 17th are a series of predictions relative to Syria, Israel, and the Assyrians; and embrace a space of time extending from the 742d to the 738th year a. c. These are occupied with the apprehensions of Ahaz respecting the league of Israel and Syria against him. Moab is next threatened, conjointly with Ephraim, in the 15th, 16th, and 28th chapters of the prophecy, delivered in two succeeding years, the 736th and 725th a. c. Within three years from this period, Moab was to be so consumed as to leave a very "feeble remnant," while the hope of Ephraim, extinguished as to political existence, revived, never to be quenched, in the glories of the kingdom of Christ. Ten years afterwards, Tyre and Sidon were threatened, in the 23d chapter. The year succeeding, the sentence went forth against Ethiopia, Egypt, Babylon, Israel, and Assyria, including a train of prophecy, from the 18th to the 21st chapters. It is in this first denunciation against Babylon that all the events of that dreadful and memorable night in which she was taken are so minutely detailed. The scene of festivity turned into terror at the apparition of the hand-writing on the wall—the cry of the watchmen upon the towers of the city—the approach of the combined armies of the Medes and Persians, symbolized by the vision of a chariot, to which asses and camels, the distinctive animals employed by the two nations, were yoked—these circumstances are all described with the most astonishing precision. In the two years which followed, 713th and 712th a. c. the prophecy against Babylon is resumed, and associated with predictions against Assyria, Palestine, Judea, and Egypt, occupying the book from the 10th to the 14th chapter; the 22d again, from the 24th to the 27th, and from the 29th to the 56th. Predictions relative to the Messiah are interspersed with these several denunciations; but from the 40th to the 56th chapters they relate almost entirely to him, with sudden transitions to the capture of Babylon by Cyrus. We are then brought down to the 698th year before Christ, during which the Jews are severely reprovred, and the Edomites included in the censure; and the miseries of mankind are seen terminating in the distant, but true perspective, of the reign of Christ. The book is thus occupied from the 57th chapter to the end.

In reviewing these predictions, it cannot have escaped the observation of the most superficial readers that the prophecies which relate to the Messiah have the pre-eminence. It is in these that the fullness of

the genius and inspiration of the prophet manifest themselves; and we are at a loss which most to admire, the sublimity of his language, or the transcendent character of his conceptions. Isaiah has been considered a prophet of difficult interpretation; and if we consider the extent and variety of his communications, the conclusion is just; they relate to subjects which pass the limit of the finite, and lose themselves in the infinite; but if we regard them as relating simply to facts, detailed in prophecy and afterwards established by actual events, our astonishment springs from another quarter—and that the striking agreement between the representation and the thing represented. Whatever might be the immediate object of the prophet, whether the prosperity or the destruction of a state, he did not fail so to connect it with the moral government of God, as to merge it in the infinite blessings which should characterize the reign of the Messiah. He, therefore, enlarges, with singular satisfaction, upon such the features of that dominion, which, while it shall ultimately absorb all others, shall educe from partial evil universal good. Thus referring all events to his government, "whose right it is to reign, and who must reign for ever and ever," he reduced the inexplicable politics of this world to a simple standard; and passing over the decrees of monarchs who lived but for a season, showed their subservience to his purpose who lives for ever. The prophet, in this point of view, had no equal, no rival. All men were absorbed in their present concerns and interests. But he, ascending the Eastern mountains, stood upon their lofty summit, as a point of light, illuminated by the glory of the yet unborn sun: "darkness covered the earth, and gross darkness the people;" the plains and the valleys were enveloped in the gloom of midnight; but when the nations looked towards Jerusalem, he appeared as the harbinger of day, and scattered abroad that radiance which he alone had received. How insignificant, in comparison with his high destiny, do the achievements of conquerors appear! And he has a key to the cabinet of princes of which they have no suspicion; he is admitted, by the intelligence from which nothing is concealed, into their most secret councils; and not only declares things present, but points out consequences of which the wisdom of this world had no conception, and declares what should be the policy of nations yet unborn. This lends us to the great question of prophecy. So many attempts had been made, in the heathen world, to prejudge futurity, and so miserable were the shifts of oracles, by a perplexed and involved answer, to suit any circumstances which might possibly arise, that it behoved prophecy to have its credentials clear, in order to establish its claims. Accordingly, in the prophet before us, there are many striking appeals to the heathen world, not only as to the superiority, but as to the distinguishing characteristics of inspiration over the efforts of superstition. "I have not spoken in secret—from dark places in the earth"—is a testimony which sets heathen oracles at defiance, as to their structure. But when we consider the substance of prophecy, as compared, or rather contrasted with these, it is no longer a question of rivalry. The one presents only double meanings, uncertain conclusions, unauthorized presumptions; the other a cool, perspicuous, detailed representation of things not seen as yet. It should

Clearness of
Isaiah's prop-
hecies.

Example.

also be remembered, that the results stated by the prophets were the most unlikely, in the ordinary process of human events, that could well be imagined. For instance, the desolation of Egypt, never to be retrieved, at a time when she was the mistress of the world in arms, and the admiration of the world in literature. A train of political events may lead to a certain conclusion; and the political foresight of a man who has been accustomed to weigh consequences, and to connect effects with their causes, may enable him to arrive, with no small measure of conviction, at the fixed operation of given principles; but what shall we say when the conclusion is against all human calculations, all reasonable inferences?—when a train of prosperity is shown to issue in ruin, when unpromising beginnings are encouraged to anticipate a glorious termination, and when the prediction of the prophet bears equally against probability, against his country, against his prejudices national and individual, and against his personal interest?—These are conclusions to which nothing could lead but inspiration, and which nothing could compel the man to deduce but a sense of duty.

Upon this high ground stands Isaiah, the prince of prophets, as well for the clearness of his revelations as for the sublimity of his conceptions and language. It is difficult to select instances in a book full of evidence upon this important question. Shall we take the grand feature of his prophecies—his constant allusion to the Messiah? The 53d chapter of his unequalled work at once surprises and convinces us. Let any one look at that chapter, and say, whether it be possible to alienate it from its object? A man may look at a portrait, and say, such and such features agree with those of this person or the other; he may, if he please, exercise his ingenuity in finding remote resemblances, and transfer that which is the actual likeness of one, to fifty, who in some particular feature may be allowed to answer to the comparison; but the question is, whose is the entire image? and if it be a faithful delineation, only one answer can be given to it. Such is the case with Isaiah. He was no inconsiderable portrait painter; nor were his likenesses doubtful. None could mistake the resemblance of the portrait to the original; and when Jesus came to "his own," it was not that they did not know him, but that, for reasons suggested by their prejudices, and not by their understanding, they would not receive him. The Jews have acted the unworthy part of attempting to distort the fair and marked features of the Messiah, and to apply them to others than Jesus of Nazareth. They have fixed upon single and insulated resemblances, and have satisfied themselves to apply the predictions of this interesting chapter to Hezekiah, and to other distinguished characters. It is unnecessary to add, that this has been done with little success. The object was, not to discover the original of the portrait, but, if possible, to turn the eyes of the world from the original, that they might not perceive the likeness. But we have to do with facts, and to compare facts with prophecy; and in instituting this comparison, we shall find hardly any part of the Saviour's personal character, circumstances, or office, left undisturbed. When the Jews set themselves, with an inveterate obstinacy, against the Messiahship of Jesus of Nazareth, they were not aware that, by this very hostility, they were establish-

ing his pretensions. The evangelical prophet opens his wonderful discourses with this very circumstance, and complains, "Who hath believed our report? and to whom hath the arm of the Lord been revealed?" If they would overthrow the claims of the son of Mary, they ought to have met him with distinction, and surrounded him with prosperity; and he had been no longer Isaiah's Messiah. His unpretending character, his deep poverty, his unequalled injuries, the object of his sufferings, as an atonement for sin; the necessity of this sacrifice, as originating in human apostasy; the submission with which he bowed to his cruel oppressions; the violence of the procedure against him, defying all justice, and outraging even its forms, while it pretended to exercise them; the circumstances of his death, and his burial; numbered with malefactors, yet occupying a distinguished tomb with Joseph of Arimathea; the perfect innocence, which submitted to all this injury; the reference of the whole to a plan of Deity, as unsearchable as himself, and subordinating all things to its benevolent intentions; the glorious effects of this sacrifice, extending themselves over the whole earth; looking to future ages yet for their development, and expecting their consummation in eternity: all these things, taken as a whole, demonstrate what each regarded separately must suppose; the sole and irrefragable reference of the prophecy to Jesus Christ.

But in questions of Theology we may be supposed to be biased, and to lean to the convictions of our creed; for we are really old-fashioned enough to confess that we *love a creed*. We will, then, place the argument upon other grounds, and bring the predictions into contact with facts, which are simply the subject of history, and with which Theology has nothing to do. Take, for example, the prophecy relative to the destruction of Babylon. We say nothing of the memorable description of the night of dissipation and ruin, so powerfully presented in the 21st chapter, lest it should be imagined that the advantage of being able to compare the history with the prediction should have induced a fanciful interpretation; but what shall we say of the prophecy which calls *Cyrus* by his name, a century before he was born? which speaks of opening the gates of Iram, before we are quite certain of their existence? It is well known that, in Isaiah's days, Babylon was a rising state; it is even uncertain whether the river was then walled, as the prophecy supposes it must be; it is indisputable that Niborsia, the queen, mother of Belshazzar, added greatly to its majesty; and that Nebuchadnezzar, who was, when the prophet wrote, unknown, if not unborn, so strengthened and embellished this wonderful city, that he arrogated to himself its creation, and said, "Is not this great Babylon that I have built?" But even supposing Babylon were what we are very sure it was not, and what it appeared a century afterwards, the circumstance that it was foretold that a deliverer of Israel should arise, whose name should be *Cyrus*, one hundred years before the birth of such a person, demonstrates the truth of Cyrus, ancient prophecy; which, as an argument in favour of revelation, does not depend upon the number of facts detailed, but upon the authenticity of them; and if it can be proved, in any one unquestionable instance, that any thing has been decidedly predicted, the argument is as conclusive, as to any application of it, as

Isaiah.

Biography. though we could produce ten thousand examples. But as it is very possible we might be deceived in any single instance, although the argument is conclusive from one only, the repetition of the case renders the principle indisputable, and the inference proportionally irrefragable. Accordingly, what has been stated relative to Babylon obtains in reference to the other states whose destiny is pronounced by the prophet. In short, such is the variety of prophecy, as in its forms and its subjects, its principles, and its application, that it is capable of being tried upon the largest possible scale; and Isaiah furnishes a just exhibition of his contemporaries and successors; while, representing all, he is inferior to none.

Evidence arising from prophecy. The investigation of this important topic cannot fail to convince every inquiring mind, that prophecy is not the conclusion of a penetrating and thinking intellect, calculating results from existing circumstances; far less, that it is the bold guess of a daring spirit which plunges into futurity at a venture, presuming that time may shape its conjectures, and give them a resemblance, if it cannot attach to them certainty: least of all can it be supposed to be a design to practise upon the credulity of mankind, by professing a knowledge not really possessed, and working upon the hopes and fears of the multitude, to bend them in any purpose, political or religious, which may be supposed to be in the contemplation of the prophet. Nothing of all this appears, or can be maintained, even with plausibility: but the prophetic pages are flooded with light; as though heaven would write its own truth only with its own sun-beams.

Style of Isaiah. Our article must not be closed without adverting to the style which distinguishes this prophet. His language is as magnificent as his sentiments are elevated. It is such language as inspiration might be supposed to suggest; and leaves at an immeasurable distance all compositions merely human. It combines with argumentative force the loftiest flights of poetry; and while some critics, ancient and modern, have amused themselves in calling him the Demosthenes and the Homer of the Hebrews, we think every comparison instituted, where there is no actual equality, an injury offered to a man, the grandeur of whose expressions as far transcended the most illustrious poets and orators that ever lived, as the majesty of his thoughts surpassed their noblest conceptions. His style is evidently poetical; and while it has its own peculiar characteristics of sublimity, it participates all the singularities of Hebrew poetry. No one has been able to do full justice to this subject; but the writer who has most excelled in treating it is Bishop Lowth. The difficulty lies at the very threshold of every disquisition relative to it: since all men are not exactly agreed as to what is poetry; and every nation has its own forms of poetical composition, to which another nation, accustomed to other forms, can apply no correct standard. A marked difference subsists between the ancient poetry of Greece and of Rome, and the poetry of modern nations. The difference between the Hebrew and all other poetry is still greater. But if sublimity of conception, loftiness of style, richness and fullness of imagery and measured cadences, constitute poetry, these cannot be denied to Isaiah.

Hebrew poetry. On the question of Hebrew poetry at large, besides its general cadences, its claims are rendered evident, by artificial arrangements, adapted to poetry, but altogether unsuitable to prose. Such are the alphabetical divi-

sions so frequent in the Psalms, and apparent in various parts of the prophetic writings. The visible difference between the style and form of Isaiah's usual compositions, and the few chapters in his book which record historical occurrences, seems to decide the question with respect to his prophecies. And here it must be remarked, that while inspiration allowed every man to retain his own characteristic style, that peculiarity is no where to be traced more distinctly than in the compositions of the different Hebrew poets. There is not a greater distinction between Isaiah and Ezekiel, as prophets, than subsists between them also as poets. When God made the prophet, he did not unmake the man. Hebrew poetry consists of every possible species of poetical composition, and these are all carried to the loftiest pitch of excellence. It is elegiac, and the lamentation of David over Saul and Jonathan, stands unrivalled in this kind; it is didactic, and the Proverbs excel as much in this mode; it is pastoral, of which the Song of Solomon is a splendid specimen; it is devotional, of which the Psalms reach the highest elevation, while they furnish fine examples of the ode, in all its varieties; nor must it be omitted, that the book of Job, as well as the Canticles, if not strictly speaking regular dramas, have evidently a dramatic form. But that which characterized the Hebrew poetry, and which the sages of Greece and Rome borrowed for their philosophy, was its parabolic form; as conspicuous in these compositions, as it is peculiar in the general style of the orientalists. The poetry of the Hebrews is founded upon their habits, and the features of their country. Arising from the former, it is chiefly pastoral, and borrowing from the latter, it surrounds us with the

most awful features of grandeur. In every species of poetical composition, Isaiah excels, and specimens of almost the whole might be adduced from his prophecies. Encircled by the most sublime objects in nature, he transfigures their spirit and character into his own powerful style; sometimes rushing like his own mountain-torrent, when he pours his tide of eloquence against the sins of his people; and at others, when assailed by the hatred of an increased multitude, standing himself as immovable as the rocks which surrounded Jerusalem. Majestic as the towering Lebanon; he is fertile as his own vallies by the river-side; as awful as the thunder-storm which desolated his native forests, and splintered the pinnacles of his mountainous country; as irresistible as the whirlwind of the desert, which sometimes swept over its surface. But, as though the sensible forms of being were all too mean to clothe his conceptions, and the boundaries of the creation too limited for his faculties, he passes beyond all space, penetrates into the invisible world, and embodies the most awful forms of spiritual being. We follow him, with astonishment, through unexplored regions; beyond the margin of created nature, and the lines drawn by the eternal Architect around the material universe; until losing sight of sun, moon, and stars, other light breaks in upon the soul, and like him, we see Jehovah upon his throne. But we must no longer indulge in these delightful contemplations, or expatiate on a theme so full of grandeur; we shall be gratified if we have done any thing like justice to a character which surpasses all eulogy; and especially if our cursory remarks shall induce our readers to consult his matchless compositions for themselves.

Ancient
records.

THE important name with which we have inscribed this page associates with it almost every thing that has been thought great in human destiny, and much that is obscure. This prince, in strict propriety of language, is the first of the Babylonish empire; the existence of which, although possibly more remote than that of most others, seems blended, until this time, with the destinies of the Assyrian monarchy, to which it was decidedly subordinate. The foundation of the Babylonian kingdom was laid, so far as can be ascertained, at Babel—the plain of Shinar, the land of Chaldaea, being the ancient site of Nimrod's dominion; but, after his death, it is lost amidst mightier states, and the first great monarchy, the Assyrian, occupies, for ages exclusively, the attention of the world. And here the obscurity begins. The Assyrian monarchy is so completely involved in fable, as to perplex the historian in reference to each of its dependencies. All the records of these early nations, with themselves, have perished; and the Grecian writers, into whose hands some portions of them must have fallen, from an unaccountable indifference, or more criminal pride, neglected to avail themselves of them; preferring to supply their own scanty knowledge from the imagination, rather than to derive authentic information from any other people, all of whom they regarded as barbarians, whatever were their power, distinction, and science. The very few fragments which remain of these early historians, preserved to us in later works, establish a sentiment which we have distinctly avowed, and upon which we have unhesitatingly acted, that the scriptures afford the only records of these remote periods that can be depended upon; for in none of the Greek writers, with the exception of Herodotus, can we venture to repose any confidence. This latter historian, however, we think, has been treated with as little justice, in some respects, as other Greek writers have been unduly estimated; and certain points of ancient history, which appeared most questionable in his narrative, have been rendered so far clear by subsequent researches, as to afford ground to conclude that he was influenced by a spirit of candour, to which his countrymen were generally strangers, and which induced him to avail himself, in many important instances, of that foreign intelligence which they despised. It is the more to be regretted that the Greeks should have been infected with the childish vanity of being supposed the first of people, and have either slighted or destroyed the literary monuments of other nations; since to them we owe (with the exception of the Bible) almost all that can now be collected of ancient history. The Chaldean records have perished; and those of Persia were destroyed by the Greeks, when they conquered that empire: the Egyptians alone seem to have excited their reverence; and they, in return, were very sparing in their communications.

Diodorus Siculus prefers speculating himself, or adopting the fables of others, to using the information he might have acquired from Manetho and Berosus; and Ctesias, of all writers the least to be accredited, and the most palpably fictitious, seems to be the fountain whence the Greek historians generally derived their monstrous accounts. A few fragments of the ancient historians of other nations are preserved by Josephus, and some others; but these only serve to make us regret the treasures which we have lost, which Greece not only neglected, but of which, in certain instances, she was guilty of despoiling the world. We owe to Ctesias the fable of Semiramis; to whom are imputed many works and achievements utterly impossible to any individual, whatever resources were at her control, whatever enterprise was in her disposition, or however constant the prosperity which might attend her movements. We have admitted this celebrated name into our Biography, because it seems scarcely possible wholly to deny her existence; or, at least, it has been so long admitted, that we could not be justified in wholly discarding her from the ancient list of heroines, however little credit we attach to her exploits. We have been obliged to give her history, as it came to our hands, from the Grecian historians; but we have not hesitated to state our doubts as to most of the events handed down to us as facts; and we repeat our conviction, that the majority of them are palpable fictions. There is a remark by the judicious Mr. Bryant, Bryant, in the second volume of his *Ancient Mythology*, which appears to us to throw considerable light upon this obscure subject, and to furnish the only probable solution of certain incontestable facts, which, when confined to the reigns of Ninus and Semiramis, assume the character of fable, because impossible to have been effected by them. His observations are of the greater moment, as they accord better with the account given of those transactions by Herodotus; and as they are perfectly reducible within the space which must be assigned to them, if they took place at all, in conformity with the scripture list of Assyrian kings, which has been already given under the article SEMIRAMIS. Mr. Bryant says, “the whole of those histories, in their common acceptation, is to the last degree absurd and improbable; but if we make use of an expedient, which I have often recommended, and for a *person*, substitute a *people*, we shall find, when it is stripped of its false colouring, that there is much truth in the narration.” Upon this principle, he proceeds to strike out the names of the earliest supposed founders of states, and to transfer from individuals, whom he accounts fabulous, historical exploits to an entire nation; and he thus explains and justifies himself: “It was a common mode of expression, to call a tribe, or family, by the name of its founder, and a nation by the head of the line. People are often spoken of col-

Biography. lectively in the singular, under such a patronimic. Hence we read in scripture, that *Israel* abode in tents; that *Judah* was put to the worst in battle; that *Dan* abode in ships, and *Isaiah* remained on the sea-coast. The same manner of speaking undoubtedly prevailed both in Egypt and in other countries; and *Cusus* must have been often put for the Cuthites, or Cusans; *Amor* for the Amorians; and *Assur*, or the *Assyrian*, for the people of Assyria. Hence, when it was said, that the Ninevite performed any great action, it has been ascribed to a person, *Ninus*, the supposed founder of Nineveh. And as none of the Assyrian conquests were antecedent to Pul and Assur-Adon, writers have been guilty of unpardonable anticipation, in ascribing those conquests to the first king of the country. A like anticipation, amounting to a great many centuries, is to be found in the annals of the Babylonians. Every thing that was done in later times has been attributed to Belus, Semiramis, and other imaginary princes, who are represented as the founders of the kingdom. We may, I think, be assured, that under the character of Ninus, and Ninias, we are to understand the Ninevites; as by Semiramis, is meant a people called Samarina; and the great actions of these two nations are in the histories of those personages recorded. But writers have rendered the account inconsistent, by limiting what was an historical series of many ages to the life of a single person. The Ninevites and Samarins *did* perform all that is attributed to Semiramis and Ninus. They did conquer the Medes and Bactrians, and extended their dominion westward as far as Phrygia and the river Tanaïs; and to the southward as far as Arabia and Egypt. But these events were many ages after the foundation of the two kingdoms. They began under Pul, of Nineveh, and were carried on by Assur-Adon, Salmannassar, Sennacherib, and others of his successors.* This learned writer here conducts us to safe ground, and the authentic records of these monarchs; at least so much of them as remains in the scriptures, and are there preserved, from the connection of their conquests with the political and religious interests of the Jewish nation. He goes on—"Nineveh was at last ruined, and the kingdom of Assyria was united with that of Babylon." This is the reason that we find these kingdoms so often confounded, and the Babylonians continually spoken of as Assyrians, and sometimes as Persians. (Βαβυλωνίαι Ἀσσυρίων καὶ Περσῶν, Steph. Byz.) This is probably alluded to in the supposed marriage of Semiramis and Ninus. Then it was that the Samaritan performed the great works attributed to them. For, exclusive of what was performed at Babylon, there are, says Strabo, almost over the face of the whole earth, vast mounds of earth (these mounds were high altars, upon which they sacrificed to the sun. By Ctesias they are supposed to have been the tombs of her lovers whom she buried alive—Symecellus, p. 64), and walls and ramparts, attributed to Semiramis, and in those are subterraneous passages of communication, and tanks for water, with staircases of stone. There are also vast conduits to direct the course of rivers, and lakes to receive them, together with highways and bridges of a wonderful structure. (Strabo, l. xvi. p. 1071.) They built the famous terraces at Babylon, and those beautiful gardens at Egbatana, after that city had fallen into their hands. They built Babylon itself; which, by Eusebius, was said to have been the work of Belus and the giants." (Euseb. Prep.

l. ix. c. 17. p. 418. Quant. Curt. lib. v. c. 1. Abydenus, Nebuchadnezzar. apud Euseb. Prep. l. ix. c. 15. Symecellus, p. 44.) He proceeds to establish his position by further facts, and supports his inferences by a quotation from Clemens Alex. Strom. lib. i. p. 364, and thus concludes—"The Samaritan of Egypt and Babylonians were of the same family, the sons of Chus. They came and settled among the Mizraim, under the name of shepherds. The reason of their being called Samaritan, and Samarim," having been already adduced under the article of Semiramis, from this writer, need not be here repeated. Upon the whole, we see an reason, after the most careful revision of the subject, to depart from the opinions expressed in that article; and without going all the lengths of this distinguished writer, and supposing that there were no such persons as Ninus, Ninias, or Semiramis, we are disposed to adopt in general his principle, that the heroic achievements ascribed to those personages were, in fact, the exploits of a people named after them, or connected with them; and which are, demonstrably, the works not of a reign but of ages.

Nothing can be more difficult than to attempt to fix the precise bounds of any ancient empire topographically, as may be seen by any one who will try to define the boundaries of Syria and the Holy Land; and politically, as appears in the mixture of state with state, and the influence of one domination over another: the empire of the Assyrians is particularly difficult to ascertain, as it becomes, in some measure, confounded with the Syrians and blended with the Babylonians. Rejecting as fabulous the list of monarchs inserted by Ctesias, some of whose names, from their very construction, are not of Assyrian origin, we look to the celebrated canon of Ptolemy as supplying Ptolemy's the next best information to that of the scriptures; canon. and the first name of eminence upon this authority is that of Nabonassar, probably a descendant of the first Assyrian monarch mentioned in the Bible, Pul. This prince has been thought, with a high degree of probability, to have been afterwards overslipped by the Babylonians, who were well content to be considered as of Assyrian origin, under the name Bel, or Belus.* We make no pretence to fix the date of the Assyrian monarchy; but, taking Pul as the earliest sovereign of eminence of whom we have any certain information, we shall find his first appearance in the formidable character of an invader, in the second year of the reign of Menahem, amidst the treasons, tumults, and usurpations which, in that age, oppressed the kingdom of Israel, about A. M. 3231, B. C. 773. Having now found land on which to set our foot, are we being tossed upon an ocean of conjecture, we shall be able to trace rapidly, yet distinctly, the Assyrian succession, until it merges in the distinguished and united sovereignty of Nebuchadnezzar. To Pul succeeded Tiglath-pileser, who was contemporary with Tiglath-Ahaz, king of Judah (whether he were the son of Pul or not, is a point which historians cannot determine), and archbishop Isher, who is in most cases to be relied upon, has fallen into the mistake of supposing him to have been Sardanapalus, in which he is followed by Prideaux and Holles, but ably refuted by the writers of the Ancient Universal History; who justly observe, that Pul being, upon the most authentic records, supposed

* The more common opinion is, that Nimrod was Belus, so we have formerly stated.

to be the founder of the Assyrian empire, as to its greatness, and Sardanapalus being generally admitted to have been the last of the Assyrian monarchs, it would, to adopt the learned primæ's opinion, lead to the supposition, that this mighty monarchy began and ended at nearly the same time; nor could there be any space for the known reigns of sovereigns succeeding Pul, whose existence and exploits are by no means problematical. The alliance of this prince with the king of Judah, and the fatal consequences of it to that unhappy monarch, as it conducted still more to those idolatrous propensities with which he was already but too much infatuated, have appeared in their proper places in the history of Israel and Judah.

To Tiglath-pileser succeeded Shulmaneser, whose existence and power are not only to be gathered from indisputable ancient records, but must be considered as established beyond all doubt by the circumstance that to him the Israelites yielded their long-defended sovereignty; a blow from which they never afterwards fully recovered.

Sennacherib was the successor of Shulmaneser. Hitherto, from the days of Pul, Assyria, in the zenith of her glory, is evidently the mistress of surrounding nations, and of Babylon and the Medes among the rest, the last of whom seemed to have been the most important of the yoke, and the earliest disposed to shake it off. Upon these principles we may account for the haughty and insulting menaces of Sennacherib to Hezekiah, and his boast of having subdued the gods of all the neighbouring countries. The miraculous defeat of his army has its proper record in another place, under the article ISRAEL; but his political influence was dreadfully weakened by this unexpected blow, and he himself soon after suffered assassination from the hand of two of his own children, who fleeing to escape the consequences of the murder which they had perpetrated, left the throne to be occupied by another of his sons, Esar-haddon.

This prince, whose name is also written Assarhaddon, and variously by some of the Jewish prophets, and by the LXX. succeeded indeed to the throne, but not to the power of his insolent and unfortunate predecessor. The Assyrian monarchy had long existed in obscurity, and amidst fluctuating circumstances, scarcely distinguished from surrounding nations, and divided into petty sovereignties. It had risen to eminence, under a succession of enterprising conquerors; Pul standing at the head of them; had assumed the most extensive domination over other states; and had spread its line of territory beyond its own power of control. Dominion acquired by violence, and by rapid conquests especially, must always be subject to fearful reverses; and what one adventurer can win, another excited by his exploits, may recover. The glory of Assyria was now waning, and the Medes, revelling from the sceptre of Sennacherib, could not be reduced by that of Esar-haddon. By some circumstances auspicious to his situation, but which are not distinctly explained in any quarter, he ascended the throne of Babylon, and soon found himself able to assume, like his predecessors, the attitude of a conqueror. He subdued both Egypt and Ethiopia, and having recovered to his crown its ancient lustre, he expired after a long reign, which became most distinguished as it drew nearer its termination.

With this monarch the light of sacred history is

awhile withdrawn from us, and other lights but feebly serve to dispense the gloom. There is a chasm in the records of the Bible from Esar-haddon to Nebuchadnezzar; respecting which it will be sufficient to remember that the history of the Israelites is the object of the sacred historians, and that other nations occupy their pages only incidentally, and as they are, by events affecting the Jewish monarchy, brought into contact with that people. Hence appear the names of the Assyrian conquerors, from Pul to Esar-haddon, on those records; and, after a blank occasioned by the separation of the Assyrian interests from those of Judah, the mighty sovereign of Babylon, by whom the house of David was led captive and his throne overturned, arises, as it were, at once in the plenitude of power, and adding to his many crowns the sacred diadem of the Jews. The links of the intermediate narrative are supplied by parts of the Apocryphal books, by Herodotus and Ptolemy's canon; for which, unitedly, we gather that Esar-haddon was succeeded by his son Saoduchimus; by whom it has been conjectured Manasseh, king of Judah, was set at liberty, and during whose reign of twenty years Egypt resumed her independence. His son and successor was Clytus, supposed to be the Nabuchodonosor of the book of Judith, to whose reign, therefore, those events recorded in that book, so far as they happened at all, must be referred. It appears, in general, that the Medes had acquired independency, and having conquered the Persians, were strong enough to threaten even the Assyrian empire; that in this emergency the Assyrian monarch called together his tributary provinces, some of whom refused to obey the summons. He mustered, however, an army of considerable strength, and marching against the Medes, defeated them, seized upon their capital, and slew their monarch. After his victory, the Assyrian monarch resolved to turn his arms against the nations who had refused to assist him in his war with the Medes, and setting no limits to his wrath, included the Jews among other objects of his vengeance. The tale of their deliverance, and the defeat of his general Holofernes, by the hand of Judith, is too long to insert here, especially as we are doubtful as to its authenticity in respect of the heroine, although the general facts themselves receive confirmation from other ancient historians. It will be sufficient to remark, that the expedition was unsuccessful, and the Assyrian empire considerably weakened.

Sarac is said to have succeeded him; and his character and fate seem to accord with the Sardanapalus of Ctesias, as Esar-haddon has been supposed by the writers of the Ancient Universal History to have been the heroic Sardanapalus of other profane historians: it being evident, from Suidas, that there were two persons of that name, said to have been kings of Assyria, the one as brave as the last (supposed to be Sarac) was effeminate. Nabopolassar having the command of his Chaldean forces, seized upon the throne of Babylon; and to strengthen his usurpation by a powerful alliance, he demanded and obtained for his son, Nebuchadnezzar, the hand of the daughter of Astyages, who was governor of Media. The Medes and Babylonians thus united, subordinated the ancient dynasties of Assyria to the rising empire of Babylon.

Thus are we introduced to the illustrious object of this article; but before we enter upon his life, so far as we can gather its particulars, it is necessary still fur-

ther to remark, that Babylon was long in subjection to Assyria; and that the Babylonians and Assyrians were two ramifications of the same family. It seems pretty evident that Nabonassar, who was the first king, or ruler, of Babylon, was a younger son, whose elder brother, Tiglath-pileser, was king of Assyria, residing at Nineveh, the ancient capital of that empire. Some writers have hence conjectured that Nabonassar was the Ninus of Ctesias, and that Semiramis (supposing her ever to have existed) was his wife; who, holding the reins of government for a short time after her husband's death, bestowed much attention to the beauty or strength of the rising city of Babylon. Nadins (not improbably the Ninus of Ctesias) succeeded, and reigned two years. Chinzirus, Porus, Jugrus, are undistinguished names that now appear in the line of succession. Mardoc-enpud, the Merodach-baladan of the scriptures, acquires some notice as the monarch who congratulated Hzekiah upon his recovery; and the first who held any intercourse with the kings of Judah. He had possibly some sinister intention to draw Hzekiah into a secret alliance with him, favourable to his ambitious designs against Assyria, whose yoke, although perhaps one of consanguinity, was not always light. Arkiannos, Belibus, Apronadius, Regibelus, Mesessimordacus, in rapid and not regular succession, made way, after an interregnum of eight years, for Esar-haddon to the throne of Babylon. Then followed the princes of Assyria and Babylon, unitedly, as we have stated, until Nabopolassar rent Babylon from Assyria, seized the crown of the former, and, allied with the Medes, finally overthrew that ancient monarchy in its distinct form, merging it in the empire of Babylon, and transmitting its condensed authority to his son, Nabocollassar, the Nebuchadnezzar of scripture.

Important as is the character of this conqueror to different nations, it is far from being evident what was the nature of his exploits before he appears to us in the pages of the Bible; and even of those which are known, it is not possible to fix the date. On the authority of Berosus, he is said to have conquered Egypt, and to have been called thence, or from Judea, to the throne, upon the death of his father; a statement, which, however, neither accords with general probability, with the history of Egypt, nor with the necessities of the Babylonish empire, then beginning to establish itself in its independence. That Nebuchadnezzar in the event subjugated Egypt is an indisputable fact, repeatedly foretold by the Jewish prophets; but it was not at the time assigned by Berosus for the transaction. Egypt was, before the death of Nabopolassar, a more powerful state than Babylon. The father of Nebuchadnezzar required all the mighty genius of his son, combined with his own, to seat him firmly upon a throne which had recently asserted its independence. And whether Nebuchadnezzar were really ever associated with his father in the empire, or whether, as age and infirmity fell upon him, Nabopolassar resigned the reins of government to his son, does not distinctly appear. It can only be our business, in conveying the best information upon the different subjects of this work which we can collect, to refer to all the remaining sources whence the most ample and authentic intelligence may be derived; and perhaps an Encyclopedia of reference alone would be found a desideratum in

the literary world: but we may be permitted, in justice to our predecessors in these intricate paths, to observe, that on the very obscure topics, which we have introduced in this article as necessarily associated with the name of Nebuchadnezzar, more patient research, more learned criticism, and more impartial statements, are not any where to be found than in the pages of the Ancient Universal History, relative to the Assyrian and Babylonian monarchies.

We first hear of him with certainty after the death of his father; whose extensive projects he made it his business to complete. This was done by so reducing the Assyrian monarchy as to subordinate it to the Babylonian, and finally to blend both, as one sovereignty, in his own person. In conjunction with Cyaxares, the Mede, he crossed the Euphrates, rescued Carchemish from the usurpation of Egypt, over-ran Syria, and some years afterwards subjugated Egypt itself. His first appears in the Bible in the reign of Jehoiakim, king of Judah, as invading that country; and although he did not wholly ravage it, but upon certain conditions restored the Jewish prince to his throne, he plundered the temple, carrying its spoils to the temple of Belus, and, at the same time, among other captives distinguished for their beauty and illustrious for their rank, he took with him Daniel, and his three companions, Hananiah, Mishael, and Azariah. It was at this period also that, having established and extended his empire, he applied himself to fortify and ornament his capital, and that Babylon first began to acquire that magnitude and splendour for which it has been celebrated in all ages.

In the second year of his reign the king was exceedingly distressed, on account of a dream, which appeared to him to involve in it some important intimations, and which yet passed entirely from his memory. Of the terrified Chaldeans, who were the priests and the astrologers of the country, he made the extraordinary requisition, that they should not only give an interpretation of the vision, but recall its vanished circumstances to his mind; enforcing this arbitrary demand by threatening the destruction of themselves and families, in case of their non-compliance. There can be no doubt that these menaces would have been too surely executed, had not the insignificant captive, Daniel, undertaken, in reliance upon the God of heaven, to accomplish that which lay not within the compass of human ability. His faith did not deceive him; the sanguinary decree was suspended; the purport and circumstances of the monarch's dream were revealed to the prophet in a vision of the night; and by detailing the fact, and explaining the first, he obtained, with the remission of the punishment threatened against the Chaldeans, the highest distinctions of the empire, under its absolute and impetuous master. As hasty in his gratitude as in his wrath, the tribute now paid by Nebuchadnezzar to the wisdom of this extraordinary young man was not less extravagant than his former displeasure against the sages who had forfeited his confidence. He prostrated himself before him; commanded that they should offer an oblation to him, "with sweet odours;" promoted his three friends, Shadrach, Meshach, and Abednego, to distinguished offices in the state; and made him chief of the wise men of Babylon. The vision itself is too important to be wholly passed over in silence, both

nification.

on account of the great events which it foretold, and because it establishes certain facts connected with this biographical sketch. It presented to him a gigantic image, of excellent brightness and appalling majesty, singularly composed of four metals. His "head was of fine gold, his breast and his arms of silver, his belly and his thighs of brass, his legs of iron, his feet part of iron and part of clay." While the attention of Nebuchadnezzar was fastened upon this object, from an unseen quarter a stone was launched at the image, and having smitten the incongruous materials of which it was composed, and crumbled them into dust, the stone itself increased, and became a great mountain, which appeared to fill the whole earth. Such was the dream; and the interpretation was as momentous as the vision was in itself extraordinary. It referred to the successive monarchies of the Babylonians, signified by the richest metal; the Persians, who next rose, typified by the silver; the Grecians, to whom these again were subjected in the days of Alexander, prefigured by the brass; and the Romans, by whom these last were subdued, symbolized by the iron; these in their turn losing their power, and having their dominion broken into various fragments by the incursions of the northern barbarians, represented by the debased and incoherent mixture of iron and clay, forming the feet of the image. The stone is explained by the prophet himself also to refer to the spiritual kingdom of the Messiah, set up under the Roman domination, which alone can neither know change nor end, and which is to be as universal in its influence as eternal in its character. We observed, that Nebuchadnezzar might be considered as the first monarch of the Babylonish empire; since under him its ascendancy over that of Assyria was so complete as to immerge the latter in itself; and this fact is distinctly established by the address of Daniel to the king,—"Thou art this head of gold."

Rebellion of
Jehoiakim.

While Nebuchadnezzar was thus occupied at Babylon, Jehoiakim, the king of Judah, rebelled the second time; on which occasion the various nations tributary to Nebuchadnezzar's crown were instructed to invade Judea; and Jerusalem was shortly after again plundered by the king in person. Yet the final blow was not struck; for after laying the country waste, he placed its harren sceptre in the hand of Zedekiah.

Egypt's
decline.

By one of those incidental, but important remarks, so frequently to be met with in the brief and simple narratives of the Bible, we learn the declining and diminished state of Egypt at this time. "And the king of Egypt came not again any more out of his land: for the king of Babylon had taken from the river of Egypt unto the river Euphrates, all that pertained to the king of Egypt."

Zedekiah's
rebellion.

Nine years after this event, the infatuated Zedekiah rebelled against his conqueror, encouraged by Pharaoh-hophra, king of Egypt; and at the same time other nations began to show symptoms of impatience under his yoke. Nebuchadnezzar, with the promptitude and energy which characterized him, determined to march against all these revellers; but, perplexed as to the quarter against which he should first direct his irresistible forces, he seems, from a singular passage in the prophecies of Ezekiel,* to have had recourse to a practice

common in that day, of divination by arrows; a mode not confined to the Babylonians, but practised by the Greeks, and by the Arabs down to the very days of Mohammed. He determined to march against the Jews; and having rapidly taken their chief cities, he sat down before Jerusalem. In the mean while the king of Egypt attempted a diversion in their favour, but retreated upon the advancement of Nebuchadnezzar against him. The siege of Jerusalem occupied so long a time, that the monarch himself withdrew from it, leaving its conduct to his generals, by whom it was at length assaulted, and taken by night. The last king of Judah was deprived of sight, and sent to Babylon, and the city entirely dismantled; but the progress of this dreadful transaction will be noticed more particularly in its proper place. After this complete victory, he returned home enriched with the spoils of tributary nations, and more especially by the plunder of Jerusalem, to execute another absurd project of unlimited power, affording a fresh example of that intoxication of reason and justice almost inseparable from its possession.

"Nebuchadnezzar the king made an image of gold, whose height was threescore cubits, and the breadth thereof six cubits: he set it up in the plain of Dura, in the province of Babylon." Grotius supposes that he has discovered the site of this idolatrous transaction, on the banks of the Euphrates, on a spot called Duraba by Ptolemy. St. Jerome notices a small difference as to the reading of this name among various writers, and remarks that the term *Dura* is rendered by the LXX. by a word which signifies an enclosure. An enclosed plain appears consonant with the structure of Persian temples, which consisted simply of a large court, surrounded by walls, but uncovered by any roof, in the midst of which the perpetual fire burned upon an altar. Supposing an enclosure at all, less compass than is implied by the term a *plain* could not admit the countless throngs who, impelled by the severe decree of the king, crowded to pay homage to the idol; and if it were set upon an open country, known by the name of Dura, the place will appear to be still better adapted to the innumerable worshippers than any imaginable enclosure.

The image may either be supposed to have been consecrated to Belus, the principal idol of the Babylonians, or to the memory of his father, it being no unusual thing to deify a deceased monarch: or it might be a representation of himself—an excess of pride, folly, and impiety, not without its parallel in the records of human presumption. To determine this point is very immaterial, and must be to us absolutely impossible. The proportions of the image have greatly surprised and puzzled all writers upon the subject. A statue ninety feet in height, and only nine in breadth, is in altitude ten times its thickness; whereas, in the proportion of the human figure, a man's height does not exceed six times his breadth. To reduce the figure to a due proportion, and ascribe the remainder to the pedestal, as is done by Dr. Prideaux, would be to make the pedestal exceed by ten feet the height of the figure; a violation of proportion not to be imagined, even in the rudest state of the arts. The ingenious editor of Calmet has proposed a much more probable solution in the fragments attached to the Dictionary of the Bible; and which fully agree with the known forms of the statues of the same age. Egyptian
idols.

mens of that country have all perished, we have Egyptian examples of sculpture of an equal antiquity; and it is probable, from the high scientific renown of Egypt, as well as from the circumstance that he had despoiled Egypt of several of her cities, and was no doubt well acquainted with her public monuments of all kinds, that Nebuchadnezzar would prefer to form his idol after the pattern of her images. We may, at least, fairly presume, in the absence of other specimens of sculpture of equal date, that those which remain of Egypt may be considered as representing the taste of that age, and the proportions and attitudes then preferred. The idols of Egypt, of a date so remote as the age of Nebuchadnezzar, were uniformly carved in a sitting posture, and with a lofty ornament on the head, considered, by the Egyptians, as a mark of some divine attribute.

Let us suppose, therefore, the height of the figure to be described by Daniel, not as it was while sitting, but as it would have been if erect—that is, *proportionally*, not *perpendicularly*—and to this conjecture let the beard-ornament, inseparable from statues of the gods of that age, and the pedestal upon which the image was placed, be taken also into the account, and the alleged disproportion will vanish. The original word (*רָחֵב*), rendered *breadth*, may be translated either *depth* or *thickness*, as will best comport with the preservation of the due proportion of the figure.

Riches of
Babylon.

As we have already (under the article *SIMIRAMIS*) adverted to the immense wealth treasured up in the temple of Babylon, the image thus raised agrees with the testimony of ancient writers in general, both as to the inexhaustible riches of the Babylonish monarchs, and their appropriation to purposes of idolatry. Incredible as these may appear at first sight, it must be recollected, that we are very inadequate judges of the actual mines of the oriental world; and that it is indisputable that the overflowing affluence of the Persian monarchy was subsequently drawn from the spoils of the Babylonian empire; while it is equally evident that Nebuchadnezzar derived the immense resources which enabled him to effect this, and similar works of magnificence, from the plunder of subjected nations, among whom Judea was not the least, and from the treasures of their respective monarchs, whom he either rendered tributary, or reduced to a state of captivity.

It was one of the strongest tokens of submission which he could demand from the conquered nations, to require of them to worship his God. And while the remotest provinces of his empire were expected to present this homage, in the persons of their governors and representatives, the varieties of language among them rendered it necessary that a signal should be given, which all would comprehend. This was now made by all the then known instruments of music, some of which are now unknown to us; and when these were heard, all the people prostrated themselves before the idol.

Shadrach,
Meshach,
and Abed-
nego.

There were three men, and only three among these multitudes, who had fortitude to resist the imperial decree, at least, so far as their personal homage was concerned, and who dared to be singular in order to be good. These were Shadrach, Meshach, and Abed-nego, the illustrious companions of Daniel; who, from what else were unequivocally determines his character, him-

self must have been absent at the time on the public business, or have been tolerated in his voluntary withdrawal, since he is not named on this memorable occasion. When the king heard of this refusal, his rage was unbounded, and he commanded them to be brought before him; but whether he felt some "compunctious visitations of nature," which rendered him unwilling to inflict so cruel a punishment as he had threatened upon any man; or whether he recollected, with any emotions of respect and gratitude, the services of men who had faithfully promoted the interests of his empire, in wonderful inconsistency, both with his general impetuosity of temper, and his excessive wrath at their presumption, he condescended to expostulate with them, to suspend their punishment, and to give them an opportunity of securing its remission, by affording another chance of obedience. But when their firm but respectful reply, absolutely refusing to worship his idol, met his ear, and they dared to justify, in the royal presence, conduct dictated by their consciences, and demanded of them by their God, his suppressed indignation broke forth in augmented and uncontrollable fury, and with an impotence of malice which defeated its own purpose, he ordered the furnace to be heated (the death to which the disobedient were doomed) seven times hotter than usual. They were then led forth to execution, and the fierceness of the fire was such, that the flames rushing upon the soldiers who were employed to cast them into the furnace, consumed them. The monarch himself was present to feast his eyes upon this cruel sacrifice to his superstition and tyranny, when a decisive miracle was wrought to preserve his victims. The fire appeared to have no power to harm the men, who fell down into the midst of it; but rising from their bonds (these only being consumed), they walked unhurt amidst the flames, accompanied by a fourth personage, then first seen, of so glorious and majestic an aspect, that Nebuchadnezzar had no hesitation in deeming him a divine person. Struck with this miraculous deliverance, he now called them forth, and, in the presence of the whole court, it appeared that a hair of their head was not singed, their garments were not changed, nor was there even the smell of fire about them. With a temper as impetuous as before, Nebuchadnezzar now decreed that the God of Shadrach, Meshach, and Abed-nego, should not be subjected to any indignity among his numerous subjects, on the penalty of the utter extermination of the offending individual and his property.

The furnace into which these celebrated sufferers were cast is not to be identified with the structures so called in modern times. No certain form of building can be absolutely determined from the word (*כּוּר*) employed. The ancient furnace was probably an open enclosure for fire; such we know to have been the broad, but enclosed layer of fire, through which the superstitious passed in honour of Moloch; and this is sanctioned by the Apocryphal writer, who says, that the angel of the Lord descended, and smote the flame of the furnace by a current of air.* Now, admitting the wind to have been the instrument in producing, or in assist-

Miraculous
deliverance.

* Song of the Three Children, ver. 20-27.

ing, this miraculous deliverance, it is evident, on the supposition of a furnace so constructed, that the very blast, which had sufficient power to abate the fury of the element within the enclosure, by driving it beyond its limits, would also, by that very act, urge it upon the soldiers of Nebuchadnezzar, and cause it to scorch and to devour them. Calmet places this event at the close of the scriptural account of Nebuchadnezzar, and after his restoration from the insanity which seized him (of which we are to speak hereafter), but upon what authority it does not appear. It is placed in the order in which we have considered it, not only in the book of Daniel, but according to the chronology of Archbishop Usher, adopted in the margin of our bibles, and by most other writers. Having followed this chronological arrangement hitherto, we have met with no arguments sufficiently conclusive to induce us to depart from it on the present occasion.

Three years after the destruction of Jerusalem, the most considerable of the neighbouring nations confederated against the king of Babylon, whose power was too formidable, and his empire too extended, to allow him to continue in repose, so long as any possibility of resistance to his authority remained to the conquered provinces. It is not impossible that they might have been stirred up with indignation against him, from the imposition of homage to his deities, which we have just noticed, and which was exacted in such rigorous terms, from all over whom his domination extended. A higher indignity could not be offered to any vanquished nation, as we have observed, than to oblige them to abandon their own deities, and receive those of their conqueror. Tyre and Egypt had been long threatened in the sacred prophecies with the Babylonish yoke; and the time was now come when Nebuchadnezzar was to be the unconscious instrument of carrying into effect these menaces of heaven. The arms of this mighty warrior were first turned against Tyre; but he found the city so strongly fortified, that its siege occupied no less than thirteen years; and when, eventually, he made himself master of the city, there were but few inhabitants, and no spoil. The wretched remnant he put to the sword; and razed the city to the ground. The Tyrians, anticipating the result, and being fully acquainted with the persevering character of the man with whom they had to deal; hopeless also of finally repelling, although they were able so long to keep him in check; gradually removed their effects, and the population of the old city, to an island belonging to them, about half a mile from the shore; upon which they founded a new state, and left the disappointed and exasperated victor to vent his fury upon the deserted houses, and the miserable beings who could not escape.

The prophet Ezekiel distinctly enumerates the difficulties and circumstances of this siege: the final success of the invader; the little profit accruing from his victory; and the recompence for his warlike toils awaiting him in Egypt—"Son of man, Nebuchadnezzar, king of Babylon, caused his army to serve a great service against Tyre; every head was made bald, and every shoulder was peeled; yet had he no wages, nor his army, for Tyre, for the service that he had served against it. Therefore, thus saith Jehovah, Behold, I will give the land of Egypt unto Nebuchad-

rezar, king of Babylon; and he shall take her multitude, and take her spoil, and take her prey; and it shall be the wages for his army.* Accordingly, the Babylonish monarch, who was not idle during this long investment of Tyre, nor confined his operations to that object (for he had punished by the hand of his general, Nebazardan, the remnant of the Jews who had been left in their native land, and who had assassinated Gedaliah, their governor; and chastised the Sidonians, Moubites, Ammonites, and Idumeans), at length directed his energies against Egypt, already weakened by his former retrenchment of his empire, and now still more enervated by intestine dissensions. A civil war was at this time carried on, with the animosity usual to such contentions, between Apis and Amasis, each striving for the sole sovereignty, and mutually laying open their devoted country as a spoil to the advancing destroyer. He succeeded in the subjugation of this renowned kingdom, and returned again to Babylon a victor, enriched with spoil. What arrangements he made in Egypt is not so certain as his success. The name of Amasis, however, is so considerable in the history of that people, as to induce a probable conclusion that he confirmed to him the crown in subordination to himself. Once more settled quietly in his dominions, Nebuchadnezzar set himself to perfect those works which we have already adverted to as commenced in an earlier part of his reign, for the embellishment and fortification of the astonishing city which was the boast of his empire. Into a detail of these it is unnecessary that we should enter further than has already been done, under the article SEMIRAMIS, with whom they were fabled to originate. We venture to say fabled, because, even admitting her existence, and that she, or Belus, commenced the work, and drew the mighty outline, no more can be pretended, with any colour of probability, than that she laid the foundation of its future magnificence: that outline swelling under the enterprising genius of Nebuchadnezzar, until it reached an extent beyond human ability to fill it up; and although he accomplished his design in part, and was succeeded in his labour by his daughter-in-law, the Queen Nitocris, and the city thus actually reared was the admiration of the world—the Babylonish monarchy did not exist long enough to suffer the magnificent design to be carried into completion. With the circumstances of the destruction of this city, we have not at present any thing to do; they are connected with the overthrow of the monarchy itself. To Nebuchadnezzar we must assign whatever was most esteemed in Babylon; the fortifications, bridge, gardens, lake, and canals for draining the river—so confidently ascribed to Semiramis; and with this assumption agrees his own vaunt, as he looked down upon the city from the terraces of his palace:—"Is not this great Babylon that I have built for the house of the kingdoms, by the might of my power, and for the honour of my majesty?" And before we pronounce, upon the almost incredible extent of these labours, a final sentence of doubt, if not of absolute denial, let us recollect that the vestiges of antiquity yet remaining of different nations, convey an irresistible evidence of the stupendous operations of the ancients; and that the materials of which the for-

tifications of Babylon were built, being of unburnt bricks, clay baked only in the sun, would render the monuments of its greatness most liable to the injuries of the seasons and the ravages of time.

We are now approaching the last scene of this monarch's life, of which we have any authentic record. Elated by conquest, and inflated with personal vanity, a signal punishment awaited his pride and presumption.

It was declared to him in a vision of the night, and Daniel, as usual, was called in to interpret it. The whole is told with so much grandeur and simplicity in the scripture narrative, that it is impossible to equal, and it would be injury to imitate, the language of the sacred historian. That heart must be made of singular materials, that is not affected by it; and we confess, that we never read the solemn, and even awful terms of the denunciation, conveyed through the medium of the most beautiful imagery, and connected with the event thus predicted, without feeling an unusual and indescribable awe stealing upon our spirits. It is thus related by the king himself. "I saw, and behold a tree in the midst of the earth, and the height thereof was great. The tree grew, and was strong, and the height thereof reached unto heaven, and the sight thereof to the end of all the earth. The leaves thereof were fair, and the fruit thereof much, and in it was meat for all: the beasts of the field had shadow under it, and the fowls of the heaven dwelt in the boughs thereof, and all flesh was fed of it. I saw in the visions of my head, upon my bed, and behold, a watcher, and an holy one, came down from heaven. He cried aloud, and said thus—

Hew down the tree, and cut off his branches, shake off his leaves, and scatter his fruit; let the beasts get away from under it, and the fowls from his branches. Nevertheless leave the stump of his roots in the earth, even with a band of iron and brass in the tender grass of the field, and let it be wet with the dew of heaven, and let his portion be with the beasts in the grass of the earth. Let his heart be changed from man's, and let a beast's heart be given unto him; and let seven times pass over him. This matter is by the decree of the watchers, and the demand by the word of the holy ones: to the intent 'that the living may know' that the Most High ruleth in the kingdom of men, and giveth it to whomsoever he will, and setteth up over it the basest of men." The prophet had no sooner heard this, than perceiving its import, he was filled with astonishment and dismay: "not fearing the wrath of the king," but anxious to impart to him so afflicting a message in the gentlest terms; and actuated, as it should seem, by the sincerest feelings of regard to the sovereign, Daniel "answered and said, My lord, the dream be to them that hate thee, and the interpretation thereof to thine enemies. The tree that thou sawest, which grew and was strong, whose height reached unto the heaven, and the sight thereof to all the earth; whose leaves were fair, and the fruit thereof much, and in it was meat for all; under which the beasts of the field dwelt, and upon whose branches the fowls of the heaven had their habitation: It is thou, O king, that art grown and become strong; for thy greatness is grown, and reacheth unto heaven, and thy dominion to the end of the earth. And whereas, the king saw a watcher, and an holy one, coming down from heaven, and saying, Hew the tree down,

and destroy it, yet leave the stump of the roots thereof in the earth, even with a band of iron and brass, in the tender grass of the field; and let it be wet with the dew of heaven, and let his portion be with the beasts of the field, till seven times pass over him: This is the interpretation, O king, and this is the decree of the Most High, which is come upon my lord the king: that they shall drive thee from men, and thy dwelling shall be with the beasts of the field, and they shall make thee to eat grass as oxen; and they shall wet thee with the dew of heaven; and seven times shall pass over thee till thou know that the Most High ruleth in the kingdom of men, and giveth it to whomsoever he will. And whereas they commanded to leave the stump of the tree roots; thy kingdom shall be sure unto thee, after that thou shalt have known that the heavens do rule. Wherefore, O king, let my counsel be acceptable unto thee, and break off thy sins by righteousness, and thine iniquities by shewing mercy to the poor, if it may be a lengthening of thy tranquillity."

Astonished as the king must have been by this interpretation, and affected by the singularity of the dream itself, no lasting impression appears to have been made upon his mind. The habits of such a man as Nebuchadnezzar, so flattered, so surrounded, and so absolute, were not likely to be permanently influenced by the most evident indications of Divine Providence. We have a singular demonstration of this in connection with these very transactions. Although he had proved more than once the inability of the Chaldeans and astrologers to make good their pretensions to read futurity, and interpret mysteries, yet from mere habit, or prejudice, and contrary to those convictions which one might have supposed him to have received, and which ought certainly to have arisen from his own observation and experience, he consulted them, and received another mortifying evidence of their insufficiency, before he sent for Daniel. But, as in the former instance, "the dream was certain, and the interpretation thereof sure;" and the purposes of heaven were not to be turned aside by human opposition or indifference; the mighty king of Babylon was to learn that he was subject to a mightier than himself, and as he gathered no wisdom from the menace, it was quickly put in execution. "All this came upon the king Nebuchadnezzar. At the end of twelve months he walked in the palace of the kingdom of Babylon. The king spake, and said, Is not this great Babel that I have built for the house of the kingdom, by the might of my power, and for the honour of my majesty? While the word was in the king's mouth, there fell a voice from heaven, saying, O king Nebuchadnezzar, to thee it is spoken: the kingdom is departed from thee."—"The same hour was the thing fulfilled upon Nebuchadnezzar; and he was driven from men, and did eat grass as oxen, and his body was wet with the dew of heaven, till his hairs were grown like eagles' feathers, and his nails like birds' claws."

It is by no means agreed in what this extraordinary change consisted, or how long it continued. The most probable interpretation of the matter is, that the king was seized with a species of insanity, not wholly unknown in the present day, under the term *lycanthropy* (Aλκαςτροφία); when, under the influence of a black *thymus*, melancholy, he imagined himself to be an ox, broke

Fulfilled.

Biography. from the restraints of his guard, and, assuming the manners and habits of the beast he supposed himself, was suffered at length, as the only method of appeasing him, to roam in the park of his palace, in the circumstances stated by the sacred historian. As to the time during which this delirium raged, some have held it was no more than seven months; others, from the circumstance that the Persians divide their year into two seasons, winter and summer, conclude that three years and a half is the time specified. Others have supplied arguments from their imaginations. The scripture phrase is "seven times;" and the most natural, consistent, and usual signification attached to this expression is, seven years. It is not stated how this inter-regnum was filled. It has been assumed, that his son Evil-Merodach, who afterwards succeeded him, was regent, and acquitted himself so ill, as to incur the severe displeasure of his father, on the return of his reason and his restoration to his kingdom. Nor are the circumstances of the death of Nebuchadnezzar recorded; which, however, has been thought to have taken place the same year with his restoration, or about twelve months afterwards. He lived long enough to issue a decree, in which he gives God the glory of his recovery, and acknowledges with edifying humility, the sovereignty of the Eternal;—a decree, the spirit of which but ill agrees with the opinion of those, who suppose he set up the golden image in the plains of Durn, after this contrite confession. Abydenus * represents the king to have fallen into an ecstasy, and to have foretold the destruction of his empire by the Medes and Persians; and adds, "immediately after uttering this prophecy, he disappeared." The import of this expression is very doubtful. He might intend to convey by it an insinuation that the monarch was snatched away in a miraculous manner—a fable not unfrequent in antiquity among most nations,

Restoration, decree, and death.

Time of his deposition.
Inter-regnum.

who preferred having it supposed that their favourite sovereigns were rather translated than that they died; an example of which we have seen in the story of the death of Romulus. Or, as Scaliger seems more judiciously to conclude, it may darkly intimate the disappearance of the monarch from his kingly authority and office, by reason of his disease. This event, however, is related by Josephus, and was never disputed or arraigned by any of his numerous opponents. In Ptolemy's canon, Nebuchadnezzar is said to have reigned forty-three years, eight of which are passed over in silence. It may be not unfairly inferred, that this chasm in the record of a life so active, and so public, was occasioned by his deposition from the throne, on the grounds stated by the sacred writer.

But apart from all conjecture, it is not credible, it is not even possible, that Daniel, who wrote at the time when those events took place, should have endeavoured to impose upon the world any circumstances not founded in fact, relative to such a man as Nebuchadnezzar. The conqueror is a character too well known to history; and, hated and feared as he is, he is in still known. The very scale of the mischiefs he inflicts, and the interest which all men unavoidably, however unwillingly, take in his movements, will not suffer any material occurrence respecting him to remain a secret; and for these reasons such circumstances cannot be fabricated on the one hand, or greatly misrepresented on the other. Of all the things which Daniel records also, he professes to be an eye-witness. If, therefore, he mistakes them, the deception practised could not originate in mistake, it must be wilful. And to this we must add, that throughout the life of this monarch we have found the sacred history the only record upon which we could place any reasonable dependence. In so far as we have arrived at any certainty, it is this clue which has hitherto guided us through the labyrinth of antiquity.

DANIEL.

FLOURISHED FROM ABOUT A. M. 3398. B. C. 606. TO A. M. 3470. B. C. 534.

Biography. DURING the captivity of the Jews in Chaldæa, Daniel was raised up by providence to exhibit and to uphold the true religion; and it cannot surely fail of striking the attentive observer that whatever may have been the depression of truth, even in the worst of times, when his light had almost suffered extinction, God has never been without a witness; but, however deplorable the state of his cause, in the very crisis of its fate, he has interposed for its revival. The present history records such a period and such a manifestation, and while it is of so extraordinary a nature as to assume, in its principal circumstances, the appearance of fiction and the characteristic exaggerations of romance, it is nevertheless a tale of reality, and fraught with the most valuable instruction.

Daniel was no ordinary man; no ordinary prophet;

it might even be added, that he was no insignificant confessor and martyr to the truth. The opportunities which occurred for the development and exhibition of the qualities of his mind were, moreover, no less rare and singular than those qualities themselves: his gifts and graces were not destined to be hid in a corner, but stood forth, in all their brilliancy and prominence, in one of the most conspicuous theatres of human action.

The birth-place of this eminent person is said to have been Upper Bethoron, in the territory of Ephraim, and his descent from the illustrious family of David. Epiphanius and others have indeed represented him as born at Batheber, in the vicinity of Jerusalem, which has, however, been deemed an improbable tradition. He was the relative, as well as intimate associate of Shadrach, Meshach, and Abed-nego; and, like them,

was transported as a captive to Babylon, at an early period of life, in the fourth year of the reign of Jehoiakim, king of Judah, about the year of the world 3398. He is thought at this time to have attained about the age of eighteen, or at the utmost twenty; a period when it required a peculiar elevation of character and force of mind, to obtain the distinguishing notice which he was attracted, to sustain those complicated trials, which he was so soon appointed to endure, and to merit those commanding and honourable stations which he was soon afterwards enabled to occupy.

His superior wisdom and great accomplishments of mind commended him, with three others of his nation, to the attention of Nebuchadnezzar, before whom he was called to occupy a conspicuous station, even in the days of his captivity. The persons alluded to have been already mentioned. In conformity with the established custom of the times and of the people by whom they had been transported from their native land, each of them received a new name. This was the constant practice of conquerors, especially when their captives were designed to fill any office about the court, or to be in personal attendance on the sovereign. Daniel was henceforth named Belteshazzar, and of his companions in tribulation, Hananiah was called Shadrach; Mishael, Meshach; and Azariah, Abed-nego. It has been justly noticed as remarkable, that the former names of these individuals related to the true God, and that all the new names which were at this time imposed upon the four Jewish captives, had some reference to Babylonish idols. Daniel, in Hebrew, signifies "God is my guide;" in Chaldee, Belteshazzar means, "the treasure of Babel." Hananiah is, in Hebrew, "well pleasing to God;" Shadrach, in Chaldee, "the inspiration of the sun." In Hebrew, Mishael denotes "proceeding from God;" in Chaldee, Meshach is "belonging to the goddess Sheshach." Azariah is, in Hebrew, "God is my help;" Abed-nego, in Chaldee, "the servant of Nago," that is, the sun, or the morning star, which were Babylonian divinities. It is still the practice of the Mogul, derived from the ancient usages of eastern nations, to distinguish his favourites, by conferring new names upon them when they are advanced to more elevated or honourable stations.

Refuses royal meat.

At this early period of his history we have a very remarkable indication of that greatness of character for which Daniel was distinguished, and which now began to appear. During three years, he and his companions already mentioned, were carefully and fully instructed in all the learning of the Chaldeans, which consisted of natural philosophy, astrology, divination, the science of auguries, the worship of the gods, and other mysteries, and from the proficiency in these departments of knowledge which Daniel ultimately discovered, it is obvious that he prosecuted his studies with the most laborious attention. What, however, particularly claims our notice is, his conduct, at the time in question, with regard to the food with which he and his companions were supplied from the palace. It appears that they had a daily allowance of meat and wine from the royal table; but as this provision often consisted of the flesh of unclean creatures, as it was, perhaps, bestowed not merely as an expression of the king's munificent favour and patronage, but for the insidious purpose of alienating their minds from their own country, and inducing them to transfer their affections to

the land of their captivity; as, moreover, it was incompatible with the temperance, approaching to abstemiousness, which these Jewish worthies deemed most suitable, both to their circumstances and their religion, and as it was first, according to their custom, blessed in the name of their idol Bel, Daniel solicited the principal eunuch that they might be excused from eating it; and this he did both with a firmness and respectfulness of manner that won upon the chief officers' regard. Two objections, however, were mentioned; the one that the king might take offence, and being an absolute monarch, his own head would most likely be endangered by his compliance; the other, that the abstemiousness proposed, in only partaking of pulse to eat and water to drink, would produce a bad effect upon their appearance, and this was of material consequence, because the eastern monarchs were uniformly desirous of having beautiful and healthy looking persons in immediate attendance upon them. They imagined that nothing but a sordid and corrupt soul could reside in a meagre and disagreeable body. Daniel then made the same proposal to Melzar, who seems to have been next in rank, who was appointed to superintend the Hebrew youths, desiring him to make an experiment for ten days, which would be a sufficient time for determining whether the alteration of their diet produced any change of appearance. This being accordingly done, they were permitted to adhere to their own scrupulous abstemiousness. Thus happily, in this instance, were the sacred rights of conscience pleaded with success. At the expiration of the period of three years allotted to their studies, Daniel had become remarkable for his "understanding in all visions and dreams," and he had soon an opportunity of displaying his characteristic superiority. Being brought before the king at the expiration of their studies, he and his companions were examined with regard to their attainments, and the skill they displayed induced Nebuchadnezzar instantly to place them in the situation for which they had been preparing. He could not avoid discovering how much they excelled all the magicians and astrologers of the empire, nor did he suffer any prejudices that might have existed against their country to disparage their eminent qualifications.

An opportunity occurred, after the advancement of Daniel, of putting his powers to the test, and the result, as we have already seen, was such as not only to fulfil the early promise of his character, but to demonstrate that he was honoured with an inspiration infinitely exceeding all the attainments of mere human science. With a piety truly characteristic of this eminent man, he prefaced the disclosure of Nebuchadnezzar's first dream, which had passed from his memory, by the declaration that it was the God of heaven from whom he had received the secret which the astrologers, magicians, and soothsayers, in vain attempted to discover, and that, consequently, it was not to be imputed to any superior sagacity of his own, nor was the circumstance of his being entrusted with it in preference to others to be imputed to him as a merit, it being communicated solely, he said, "for their sakes that shall make known the interpretation to the king, and that thou mightest know the thoughts of thy heart." Josephus imputes to Daniel the following speech on this critical occasion, which, to say the least, is certainly in unison

Biography. with his character, as represented in the inspired page.

"It is not any high conceit of my own wisdom, as if I understand more than the Chaldeans do, or any designed reproach upon them for not being able to resolve a question which I am able to unriddle, that I engage in this matter; for I am not a person that pretends to more skill and knowledge than my neighbours; but it is purely the work of God, in pity to the miserable, and in mercy to my prayers for the life and safety of myself and my friends, that has now laid open this dream to me, and explained the meaning of it. Nor have I been so sollicitous for the safety of myself and my companions under your displeasure, as for your honour and glory, lest you should tarnish them by putting to death, contrary to all right and justice, so many worthy men, merely because they were not able to do a thing that is impossible for flesh and blood to perform."

The exact coincidence between his forgotten dream and Daniel's representation, and the authoritative manner in which the predictions of future times were delivered, filled Nebuchadnezzar with the utmost astonishment and admiration. He was ready to pay him divine honours as a god, commanding an oblation and sweet odours to be presented to him, which the pious Jew no doubt declined as a piece of insufferable idolatry; but he did not refuse the presents of great value which the king gave him, nor the station of high dignity and honour to which he was immediately advanced.

Daniel's advancement.

Daniel was accordingly made ruler over the whole province of Babylon, and superintendant over all the wise men, or magicians of the empire. While exalted to distinction himself, he did not forget the interests of his three friends, Shadrach, Meshach, and Abed-nego, who, at his request, were placed under him, in stations of distinguished importance and trust, probably as deputy-governors. De Dien is of opinion, from the use of the term in the Chaldee language, and from the corresponding word in the Arabic, that these men had the superintendence of agriculture, and of the revenue arising out of it.

It has been already observed, that the name of Daniel is not introduced in the account of the remarkable preservation of Shadrach, Meshach, and Abed-nego. That he was out in spirit with the three worthies who sacrificed (in purpose, at least) life to the claims of duty and of God, cannot for a moment be doubted; and that both his firmness and the king's displeasure would have been equally manifest as in the instance recorded, is unquestionable. How then does it arise that he is wholly overlooked in the affair? The chasm of information here cannot easily be filled up; we must be satisfied with conjectural probability, and perhaps shall not materially err in supposing that he was absent on some important affair of state, in a remote province of the empire; the peculiar vacancy which he had already displayed, and the confidence reposed in him, rendering it natural that he should have been so employed.

Daniel again becomes prominent in the inspired story, on the occasion of another dream of the king, which, although Nebuchadnezzar could distinctly remember, he was unable to interpret. As in the former instance, the astrologers and magicians of every class who were regarded as constituting the learned body of the empire, were again summoned into the royal pre-

sence; but they were utterly confounded; when recourse was had to Daniel. This faithful servant of the living God was so struck with awe and terror at the judgment indicated by the dream, that he stood in silence for an hour; but upon being encouraged to expound its meaning, he at length explained it as we have already detailed; and, having given the interpretation, he dismissed the character of the mere expounder of mysterious prognostications, and assumed that of the counsellor and the friend. With a faithfulness which may well excite our astonishment, while it cannot fail of securing our approbation, he proceeded to admonish the king to abandon his iniquitous courses, to practise a holy life, and especially to manifest compassion to the poor; of which, probably, he had been notoriously negligent; and thus to secure prosperity and peace. After the delay of a year, which, it may be supposed, was given as a space for repentance, the ambition and vanity of this monarch occasioned the infliction of the threatened chastisement of seven years' deposition from his imperial dignity, and from the exercise of his reason; after which, at his restoration, he published a decree, expressive of the reverence he felt for the God of heaven, and the just sense with which adversity had inspired him of his own insignificance and guilt.

The death of Nebuchadnezzar occurred soon after his restoration, and he was succeeded in his dominions by his son Evil-Merodach, whose reign was marked with wickedness, and was of short duration. Neriglassar, who was the head of the conspiracy by which Evil-Merodach died, took the vacant throne. This latter perished in battle against Cyrus, nephew to Cyaxares, the king of Media, who came out of Persia with 30,000 men, to afford assistance to his uncle. Labrosorarched, the son of Neriglassar, sat upon the throne only nine months; his odious character having excited a conspiracy against him; when Belshazzar, probably the grandson of Nebuchadnezzar, took the reins of government, which again introduces us to the story of Daniel. With regard, however, to the succession in question, it may be proper previously to state the sentiments of the intelligent chronologist Dr. Hales, which occur in the second volume of his Analysis. This writer does not admit that Evil-Merodach was cut off in a conspiracy, but slain in battle by Cyrus, when commanding the armies of Cyaxares, whose territories he had prepared to attack. He was succeeded by his son Neriglassar, the Belshazzar of Daniel, and grandson of Nebuchadnezzar; and it was Belshazzar, or Neriglassar, the cruelty of whose government was so insupportable to his subjects, as to provoke them to a conspiracy, in which he was slain. The inquiry may be pursued by consulting Dr. Hales, already mentioned, and Prideaux's Connection, anno 553.

It was in the reign of Belshazzar, whoever he was, that Daniel, who still continued to occupy his extraordinary rank, had his two celebrated visions of the four beasts; and the ram, and the he-goat; the one in the first year of his reign, and the other in the third. By the former was signified the Assyrian, Persian, Grecian, and Roman empires; and in the latter, Darius Codomanus, the last of the successors of Cyrus, by the emblem of the ram; and Alexander the Great, by that of the he-goat.

Cyrus, the founder of the Persian monarchy, had frequent engagements with the armies of Belshazzar,

Biography. and at length succeeded in shutting him up in the city of Babylon, against which he commenced a regular siege. While in this situation, so inappropriate to merriment, a great festival was celebrated, which, since, according to Xenophon and Herodotus, it was foreknown by Cyrus, was, most likely, an anniversary feast; either, perhaps, in commemoration of the king's birth-day, or in honour of his gods. The Sackean feast, or one celebrated in honour of the god Shach, is more than once alluded to by the prophets, and might possibly be the very festival in question, as, during its observance, the utmost licentiousness was practised: every one, in short, did as he pleased.

The courtiers, and principal persons of the empire, to the number of a thousand, were, it appears, present upon this occasion; and Belshazzar, in the excess of his revelry and impiety, commanded the vessels of gold and silver which his grandfather had taken out of the temple at Jerusalem, to be brought into the hall of festivity, in order that he, his nobles, and his concubines might drink out of them. This seems to have been intended as a profane defiance of the God of Israel, and to throw contempt upon the religious services of the Jews; it was therefore probably accompanied with many blasphemous jests, and certainly with praises of the different gods of silver and gold, of brass, wood, and stone, whom they were addicted to worship. But the delirium of intoxication was soon at an end; and by a very remarkable, and yet simple interposition of his power, the God of heaven, whom these inebriated sensualists ventured to ridicule, changed their merriment into sadness; a sadness which was the prelude of a tremendous calamity. The fingers of a man's hand were distinctly perceived upon the wall, writing upon the plaster a brief sentence of condemnation. The characters, however, were foreign and unintelligible, and the king, in the utmost trepidation, immediately summoned together his astrologers and soothsayers, to furnish him with an interpretation of the mysterious sentence. The excessive terror of his mind, and which, as he was unable to read the writing, nothing but the power of conscience could have occasioned, is apparent in the great promises he made to any interpreter of this sentence, declaring that he should be clothed with scarlet, and have a chain of gold about his neck, and be the third ruler in the kingdom. None of the wise men, however, could read the inscription, or comprehend its purpose; and the king continued in a state of extreme agitation.

In this dilemma, the queen-mother entered, and after pronouncing the highest eulogium upon the sagacity of Daniel, to whose former interpretation of Nebuchadnezzar's dream she particularly adverted, recommended him to be called for upon this difficult and distressing occasion; to which the king eagerly consented. Belshazzar now offered to bestow upon Daniel the distinguished rewards which he had promised in vain to his own magicians, in case of his giving the interpretation he required. The latter disclaimed any views so much marks of royal favour, saying, "Let thy gifts be to thyself, and give thy rewards to another;" but assured him of his readiness to explain the mysterious inscription, which had produced so much uneasiness. But to do so was no easy task, since it materially affected the king himself, and contained a most awful denunciation. Daniel, however, was unmoved

by any sense of personal danger, in discharging his duty to God and man, and having introduced his interpretation, by reproving the king for his ingratitude and profanity, he added, "This is the writing that was written; Mene, Mene, Tekel, Upharsin. This is the interpretation of the thing: *Mene*; God hath numbered thy kingdom, and finished it. *Tekel*; thou art weighed in the balances, and art found wanting. *Peres*; thy kingdom is divided, and given to the Medes and Persians." It seems not a little remarkable, that notwithstanding the terrible aspect of this statement, and the pointed appeal against the king's conduct, with which it was introduced, Daniel should immediately receive all the promised tokens of distinction that awaited the successful interpreter. Yet such was the case, the apparel and the proclamation of his advancement but at once, and without hesitation, bestowed.

Every circumstance of the prediction was soon verified. The city, which had been so long besieged, was taken. When Cyrus was informed of the approach of the great Babylonish festival, he determined upon a measure of surprise, and having ordered a body of troops to the point where the river ran into the city, and another to the place where it issued out, they were to attempt the passage as soon as they should perceive the river fordable; in the mean time others were employed to turn the stream into another direction. This was accordingly done, and the gates being open, no doubt, in consequence of the careless superintendence by the excessive festivity of the time, Cyrus marched his army into Babylon, and took possession. Belshazzar was slain, and the kingdom transferred to Cyrus, denominated in scripture, Darius the Mede. Xenophon, in the *Cyropædia* (lib. vi.), states, that the king was slain in the following manner: two deserters named Gadates and Gobryas, having assisted some of the Persian army to kill the guards, and seize upon the palace, they entered into the room where the king was, whom they found standing up in a posture of defence, but they soon dispatched him, and these that were with him.

According to the usual policy of the Medes and Persians, with regard to conquered nations, it appears from Berosus, that the victorious Mede appointed a Babylonian nobleman, of the name of Nabonadus, as viceroy of Babylon, and a hundred and twenty princes as superintendants of the different provinces of the empire. Over these were placed three presidents, of whom Daniel, for obvious reasons a favourite of the conqueror, was the principal. He was naturally supposed to have contributed to the success which he had predicted, and the reputation he had acquired by his sagacity and discretion, together with his long acquaintance with the affairs of the government, pointed him out as a proper person to occupy the very highest station of trust and influence.

Ordinary minds easily admit and cherish curious sentiments, and cannot endure the good fortune of others, even when it is most merited. The favourites of great princes are indeed certain of incurring considerable obloquy, either in the discharge of their official duties, or on account of some private peculiarity. So it happened to Daniel, whose character, however, shines with the more glory and brightness in consequence of the infamous machinations of his adversaries. No sooner did he come into power, than every engine was set at

work to degrade him, and by those who hoped to acquire the ascendancy on his removal. He appears to have been accused long before they were able to fix upon him any charge which seemed likely to accomplish their purpose. In his administration of public affairs he was unimpeachable: his capacity and integrity were alike conspicuous, and the utmost vigilance which malice was able to exercise could not discover any thing upon which to found an indictment that should operate his ruin. After conferring with each other, therefore, upon the subject, the presidents and princes determined that the only method of proceeding against "this Daniel" was, to impeach him for his religion, which he maintained with great scrupulousness, notwithstanding the very peculiar circumstances in which he was placed, and the innumerable temptations to idolatrous compliances with which he must constantly have been surrounded. Having laid the snare, they resolved upon a plan to lead him into it, and their arrangement was certainly not destitute of political sagacity. A solemn deputation was sent to the king, in the name of all the presidents of the kingdom, the governors and the princes, the counsellors and the captains, to solicit the establishment of a royal statute, by which it was to be enacted, that whoever should ask any petition either of a god or of man during the period of thirty days, excepting of the king himself, should be cast into the den of lions. The Persian monarchs were extremely renacious of their honour, and the people universally held their persons in the same degree of veneration as they cherished for their gods. Darius, conceiving this application as intended to do him honour upon his accession to the sovereignty, most readily granted their request, taking no time to reflect upon its absurdity.

Cast into
the den of
lions.

Daniel was perfectly aware of the stratagem which the princes had adopted to effect his destruction; the vigilance of his administration being such that it must have been scarcely possible for so daring a conspiracy to elude detection. But infinitely more concerned for the glory of his religion, and the honour of God, than distressed at the apprehension of personal suffering, he did not, even for a moment, desist from those devotional exercises to which he had conscientiously addicted himself through all the period of his captivity, and by which he maintained a total separation, both of spirit and practice, from the heathen impieties of Chaldeas. As soon as he was informed of the royal signature being given to the decree, he retired into his house, and, according to his usual custom—a custom, too, which was always observed by the Jews in any distant situation—he prayed with his face turned towards Jerusalem. This he continued, as usual, three times a day, with his chamber window open in the direction of the Jewish capital. This was not a mere caprice or formality; it was founded upon the consideration of the blessings which were connected with such a proceeding, and which were pleaded distinctly by Solomon at the dedication of the temple: "If thy people sin against thee (for there is no man that sinneth not), and thou be angry with them, and deliver them to the enemy, so that they carry them away captives into the land of the enemy, far or near; yet if they shall be-think themselves in the land whither they were carried captives, and repent, and make supplication unto thee in the land of them that carried them captives, saying,

We have sinned and have done perversely, we have committed wickedness; and so return unto thee with all their heart and with all their soul, in the land of their enemies, which led them away captive, and pray unto thee toward their land which thou gavest unto their fathers, the city which thou hast chosen, and the house which I have built for thy name: then hear thou their prayer and their supplication in heaven, thy dwelling-place, and maintain their cause." 1 Kings, vii. 46—49.

The enemies of Daniel soon discovering that their plot had succeeded, and that he was, as they had reason to expect, a resolute adherent of the divine religion of his country, hastened to Darius to acquaint him with the disobedience of his subject, and to demand the enforcement of his decree. They endeavoured to aggravate his conduct by misrepresentation, intimating that Daniel was guilty of disaffection to the royal person; for, said they, "He regarded not *thee*, O king, nor the decree which *thou* hast signed." The king now found himself in an extreme difficulty, and, dismissing the accusers for a time, devoted several hours to devise some expedient, if possible, to evade the execution of a law which affected the life of a favourite and most meritorious servant. He felt excessively grieved at his own folly in so suddenly adopting a suggestion which drew in its train such fatal consequences; and, as the sacred historian records, "laboured till the going down of the sun to deliver him." His courtiers, however, were determined, representing to him, that the law of the Medes and Persians, when once passed, was absolutely unalterable; and to this urgency he felt himself at last obliged most reluctantly to yield. The object of their malignant persecution was accordingly delivered up to them, and with all the impatience that characterises successful guilt, they issued instant orders to seize and convey him to the den of lions. A stone was rolled against the mouth of the den to prevent escape, which was sealed both with the king's own signet, and that of the different nobles and princes: upon which Darius withdrew to his palace in a very disconsolate state of mind, probably having perceived the manoeuvre of his courtiers; but finding himself incapable of resisting their will, he had sacrificed a favourite servant to their baseness, and one whose public character had excited a confidence proportioned to its merit—a character against which the tongue of calumny dared not to utter a sentence. The night was spent in fasting and sleeplessness; and all the instruments of music were discarded. Whether the king, however, at the moment of executing his decree, had any presentiment of his deliverance, we cannot tell; it appears that he said to him, "Thy God, whom thou servest continually, he will deliver thee." If this were the conviction of his mind, it no doubt originated in his knowledge of the innocence and integrity of Daniel, and from an impression of his piety and peculiar intercourse with heaven, arising out of the prophetic character he had displayed on more than one occasion. It might, indeed, have been only an ardent desire for this purpose, dictated by his partiality for the sufferer; and is, indeed, susceptible of the rendering, "May thy God deliver thee."

However this may be, the king's anxiety brought him to the mouth of the den of lions at an early hour in the morning, where he inquired, in a doleful and depending tone of voice, whether he was possibly alive:

ties of those amongst whom he was educated. The history has already recorded his objections against the meat which was accustomed to be dispensed from the king's table; and the same scrupulousness, founded in principle, which induced him to refuse such sustenance, would unquestionably influence his conduct on still more important occasions. He and his companions might be permitted to follow such studies as were most congenial to their taste, most consonant to their religion, or most adapted to qualify them for official situations in the state;—as, the niceties of language, the arts of war, the plans of civil policy.

In further illustration of this topic, we may be permitted to introduce the judicious remarks of Dr. Gleig, in the notes to his edition of Stackhouse's History of the Bible. "That he (Daniel) was taught, even by the astrologers, much useful knowledge, can hardly be doubted; for those men could not have pretended to foretell future events from the conjunctions or oppositions of the stars or planets, without acquiring great knowledge in the useful and sublime science of astronomy, which the agricultural life of the Jews, and the perfection of their law, deprived them of almost every inducement to study. No Chaldean astrologer can have employed himself in more frivolous pursuits than were those of the alchemists, in the dark ages of modern Europe, in quest of the philosopher's stone; and yet to the alchemists we are in a great measure indebted for the origin of the science of chemistry, which has, within these thirty years, been carried to such perfection, and contributed so much to the comfort and elegance of civil society.

Even in the interpretation of dreams something might be learned from the Chaldean wise men. Neither the gods of Babylon, indeed, nor the conjunctions of the stars, could reveal any thing to the astrologers or soothsayers; but no man, who admits the divine origin of any part of the scriptures, can doubt but that the true God occasionally revealed his will to the prophets in dreams and visions: and when he did so, he must have made use of such symbols, or such language, as were generally employed to denote the thing intended. The narrowness of original languages, and the practice of hieroglyphical writing, which seems to have prevailed in most nations, especially in the east, during some period of their existence, rendered it almost necessary to express occasionally one thing by another to which it was supposed to have some resemblance or analogy. In visions or dreams, whether sent by God or not, some symbols or language must have been employed; and the business of the oneirocritic, or interpreter, was to ascertain the import of such symbols. The interpreter, who practised by art, could only guess at that import, and in nine instances out of ten was likely to guess erroneously; but he who interpreted by inspiration was in no danger of falling into error, though each symbol, or word, taken by itself, must have had some meaning generally understood by those among whom such symbols and words were in general use, as well as by the prophet.

"The early interpreters of dreams," says Bishop Warburton, "were not juggling impostors; but, like the early judicial astrologers, more superstitious than their neighbours, and so the first that fell into their own delusions. However, suppose them to have been as arrant cheats as any of their successors, yet, at their first

setting up, they must have had materials proper for their trade; which could never be the wild workings of each man's private fancy. Their customers would look to find a known analogy, become venerable by long application to mysterious wisdom, for the groundwork of their deciphering; and the decipherers themselves would as naturally fly to some confessed authority, to support their pretended science. But what ground or authority could this be, if not the mysterious learning of *symbolical characters*? The Egyptian priests, the first interpreters of dreams, took their rules for this species of DIVINATION from their *symbolic* riddling, in which they were so deeply read; a ground of interpretation which would give the strongest credit to the art, and equally satisfy the diviner and the consulter; for it being generally believed that their gods had given them *hieroglyphic writing*, nothing was more natural than to imagine that those gods, who, in their opinion, gave dreams likewise, had employed the same mode of writing in both revelations." Div. Leg. b. iv.

"When the true God gave revelations by dreams, he, of course, made use of the symbols that were most likely to arrest the dreamer's attention, and, at the same time, were generally understood; and in different countries he would make use of different symbols, according to the practice of the people for whose information the dream was sent. Thus, in Pharaoh's two dreams, the symbols made use of were, in one, *seven kine*; and in the other, *seven ears of corn*. In the hieroglyphics of Egypt the ears of corn denoted its fertility; and the kine, its great tutelary patroness, *Isis*. Thus far Pharaoh seems to have understood the dream without an interpreter; and hence arose his anxiety to understand the rest, as a matter that concerned the public. Accordingly, when Joseph comes to decipher the dream, he does not tell the king that the two *sevens* denoted seven years in Egypt, but simply *seven years*; the *scene* of the famine needing no deciphering. In Nebuchadnezzar's second dream he saw a *four and high tree*, of which the height reached to heaven; and this being the symbol of majesty in general, very naturally made the proud monarch anxious to know what particular monarch it signified; and therefore the prophet Daniel begins his interpretation with saying—"The tree that thou sawest is thou, O king." But if Daniel was intended by God, as he certainly was, to be an interpreter of the dreams sent by him to the king of Babylon—the scourge by whom he chastised sinful nations—it is obvious that a knowledge of the symbols by which events were supposed to be represented in Chaldaea, was a species of preparatory knowledge absolutely necessary to him. The symbols employed for this purpose by the Chaldean might have been different from those in use amongst the priests of Egypt; but whether they were or not, it seems evident that *hieroglyphical writing*, and all kinds of *symbolical representations of God and his attributes*, were absolutely prohibited by the Mosaic law. Daniel, therefore, must have been taught the import of the Chaldean symbols, to fit him for an important part of the office he was destined to fill; and as God appears not on any occasion to work miracles for an object which can be attained by natural means, it is to be hoped that the deist will permit Christians to believe that Daniel might, without sin, be taught the meaning of the mysterious symbols of Chaldaea, by those wise men of that empire,

Daniel.

among whom they were best understood. The sciences of *astronomy* and *chemistry* furnish many illustrious proofs of the power, wisdom, and goodness of the Creator and Governor of the world; these sciences have been successfully cultivated by philosophers in France, who seem not to acknowledge the moral attributes of the GREAT FIRST CAUSE—if, indeed, they allow any cause to be *first*; but surely an intelligent Christian clergyman, of a mind tolerably firm, might take lessons in astronomy and chemistry from such men, not only without incurring guilt and danger, but with great advantage to himself." Hist. of Bible, vol. ii. p. 504—506.

His character as a man and saint.

As a man, and as "an Israelite, indeed," Daniel was truly pre-eminent: so much so, that on one occasion he was addressed by a celestial messenger in those extraordinary terms of affection, "O man! greatly beloved, fear not." Dan. x. 19. At an early period of his life we have seen him manifest a conscientious scrupulousness, and subsequently, an inflexible adherence to his religion, amidst circumstances of extreme danger and powerful temptation, which have conferred upon him immortal renown. It was by no idolatrous compliances, no creeping meanness, that, during the various changes which occurred in the government, he retained, nevertheless, his elevated situation. His worst enemies, too, acknowledged the integrity and singular wisdom with which he conducted the affairs of the kingdom entrusted to his management, and devised a method of bringing him into trouble, which, from proving successful, as they had probably anticipated, was itself a memorable testimony to his worth as a man, and his piety as a saint. In effacing and rubbing the gold, they only furnished it into greater brightness, and exhibited more conspicuously its substantial value.

Daniel has been compared to Joseph, perhaps with some propriety, as there are unquestionably points of resemblance, and a coincidence of circumstances to be traced in these two illustrious individuals. Each of them was removed at an early period from his native country into a land of strangers; the one sold as a slave, the other seized upon and borne away as a captive. Each was elevated by a marvellous train of events to similar stations of dignity and influence in a foreign court; by means, indeed, which demonstrated, in either case, the interference of a particular providence in their behalf. Each preserved his fidelity to God, amidst the most embarrassing circumstances; and notwithstanding the corruption of manners and of religion with which they were encompassed; and it is by no means easy, without being placed in somewhat of a similar situation, to estimate, properly, the strength of principle, the heroic fortitude of character required to sustain, not only the outward attacks of adversaries, but the nameless and numberless efforts of a more insidious, more secret, and more constant kind, which, in such cases, are employed to shake fortitude and re-firigate zeal. The conduct both of Daniel and his three companions furnish a very fine specimen of religious firmness. It may be asked, indeed, whether, instead of incurring so much danger by their inflexibility, they might not have evaded the decrees which threatened their destruction: whether, for instance, Daniel could not have desisted for a month from the usual exercises of his religion, without any material departure from his principles; and whether life was not

too precious, and his influence too important, to be risked upon a mere scruple of conscience? Might he not have closed his windows, and have been more private in his devotions; or might he not have availed himself of some business of state, to have withdrawn into some remote and secluded part of the empire? It is true, this might have been done; and thousands, and tens of thousands, would have adopted such an expedient; but Daniel justly appreciated the entire circumstances of the case, and no sooner saw the consequences which would result from any thing like evasion or artifice, than he determined, at every hazard, to maintain his integrity, and do honour to his religion and his God. It was not an affair of trivial moment; it was no part of his character to sacrifice conscience to convenience or personal safety; and he plainly foresaw that such a conduct would be pleaded hereafter as a disparagement to religion; that evasion, in such circumstances, would in reality be tantamount to renunciation; and that he should be justly exposed to be censured as cowardly and hypocritical.

The true cause of his boldness must be traced to an origin which illustrates another very remarkable trait in his character. He was a man of *ardent devotion*, and, no question, the flame of his piety, vigorous as it was, and bright as it appeared, was kindled from above, and perpetually recruited from the altar of heaven. Nothing can be more interesting than his humility and unreserved intercourse with God, amidst the weighty cares of state, and in defiance of all the machinations of wickedness. That his sedulous attention to secret duties, prepared him for public action, is obvious, and worthy of imitation: for, whoever derives his support from the same quarter; whoever derives his means and motives to conflict from the same armoury, will, by consequence, be able to encounter similar difficulties, and come off victorious from the same field.

The book which passes under the name of Daniel, in the inspired record, was certainly of his composition, although some Jewish writers maintain that prophecies were never committed to writing out of the limits of Judea, and that the book in question was composed by men of the great synagogue. In many passages, however, he represents himself as the author, in the most express and unequivocal terms. This composition was admitted into the Hebrew canon as his, and its authenticity, as such, is confirmed by the references of the New Testament. (Comp. Mat. xxiv. 15. Mark xiii. 14.) Josephus, moreover, affirms, that Daniel himself committed his prophecies to writing. (Antiq. l. x. c. 22.)

The style of Daniel is not in general so remarkable for its poetical and figurative cast, as that of most of the other Jewish prophets, but possesses more of the simplicity and ease of historical narration; though the visions which he records are in themselves highly figurative and emblematical. The whole book comprises a detail of regular history and remarkable prophecy; and this intermixture gives it a very novel and interesting complexion. The first six chapters are principally historical, with the exception of the second chapter, which contains the interpretation of Nebuchadnezzar's prophetic dream, respecting the successive establishment and decay of the chief kingdoms of the world, till the introduction of that which was finally

to obtain unrivalled power and universality. There is such an air of truth, and such a justness of colouring in the different accounts of the miraculous deliverance of Shadrach, Meshach, and Abed-nego, from the fiery furnace, to which they were consigned by the persecuting intolerance of Nebuchadnezzar; in the unhallowed and sacrilegious festivity of Belshazzar, with the awful consequences that ensued; in the story of Daniel's commitment and deliverance from the lions' den; and in all the minute details of these transactions, that the reader is transported to the very spot, and has his passions infallibly engaged in every scene. The alternations of terror and of delight agitate the bosom, while sentiments of the sublimest nature are incidentally communicated. It is, indeed, a tale of wonder, divested of all fictitious adornments; but a tale of great political and moral importance, and of most evident practical utility. The events of the sixth chapter belong to the time of Darius the Mede; in the seventh and eighth the reader is carried back to a previous period, namely, to the first three years of the reign of Belshazzar. The last six chapters consist of prophecies, which, though manifestly connected, were delivered at different times.

As a prophet, Daniel must be allowed a very high rank, whether we consider the magnitude and glory of the events themselves which he describes, or the explicit minuteness and exactitude of his delineations. "The prophecies of Daniel," observes Dr. Gray, "were in many instances so exactly accomplished, that those persons who would otherwise have been unable to resist the evidence which they furnished in support of our religion, have not scrupled to affirm that they must have been written subsequently to those occurrences which they so faithfully describe. But this groundless and unsupported assertion of Porphyry, who, in the third century, wrote against Christianity, serves but to establish the character of Daniel as a great and enlightened prophet; and Porphyry, by

confessing and proving from the best historians, that all which is included in the eleventh chapter of Daniel, relative to the kings of the north, and of the south, of Syria, and of Egypt, was truly, and in every particular, acted and done in the order there related, has undesignedly contributed to the reputation of those prophecies of which he attempted to destroy the authority; for it is contrary to all historical testimony, and contrary to all probability, to suppose that the Jews would have admitted into the canon of their sacred writ a book which contained pretended prophecies of what had already happened. And indeed it is impossible that these prophecies should have been written after the reign of Antiochus Epiphanes, since they were translated into Greek near a hundred years before the period in which he lived; and that translation was in the possession of the Egyptians, who entertained no kindness for the Jews, or their religion. Those prophecies also, which foretold the victories and dominion of Alexander (ch. viii. 5, xi. 3.) were shown to that conqueror himself by Jaddua, the high priest, as we learn from Josephus (lib. x. cap. 12. lib. xi. cap. 8.), and the Jews thereupon obtained an exemption from tribute every sabbatical year, and the free exercise of their laws. Many other prophecies in the book have likewise been fulfilled since the time of Porphyry.

"Daniel not only predicted future events with singular precision, but likewise accurately defined the time in which they should be fulfilled, as was remarkably exemplified in that illustrious prophecy of the seventy weeks, in which he prefixed the period for 'hinging in everlasting righteousness by the Messiah,' as well as in giving the mysterious predictions which probably mark out the time or duration of the power of Antichrist, and, as some suppose, for the commencement of the millenium, or universal reign of saints, which they conceive to be foretold; for the explanation of which we must wait the event."

HISTORY.

CHAPTER V.

O F E G Y P T.

Egypt.

OUR views of the history of the world must be governed by the actual state of its annals; but unless we have most widely mistaken and mis-stated some of the greatest uses of history, they are not to be confined to those precincts. With the actual state of historical records it is the first duty of the historian to be acquainted; but the motive that he has to this duty will urge him beyond them in his final views. The philosopher must be a student of history, and the real historian must be a philosopher. History, as a mere collection of facts, may supply a correct outline of what man has been; but philosophy must add the light and shade, the colouring and the keeping of the picture, to show him what he ought to be; she must even afford us many views of our event, and show us every side of prominent characters and circumstances, or the facts themselves will fall from our remembrance, and the record at last become as neglected as it has been unprofitable. To the absence of such views of history in its votaries, we do not hesitate to attribute much of its present state of imperfect details. It was not addressed to the heart, and the passions of men were too much engrossed in the passing scene, to be by any mere process of intellect called away to the past. Hence arises our preference for biographical views of all history. They reach nearer the heart, and belong more to the whole man. We are not unaware, however, of the necessity of gathering up the fragments of history at intervals; and our materials must here be their own apology. We only aim to give in these interspersed chapters that which we cannot give biographically:—a connected view of kingdoms and states, as such; and of their relations to each other; topographical details; public manners and customs: public bodies and sentiments; and those facts in the general history of man which are only interesting in groups and multitudes.

When an inquiry is made after the origin of the most distinguished states, those which are acknowledged to be of very early date spring up into a competition for antiquity, with pretensions equally bold and equally uncertain; so that it becomes difficult to decide between their respective claims, while it is absolutely necessary to make an election among many rivals. Egypt, Phœnicia, Assyria, are alike prepared to assert their superiority on this ground; and all may be traced

to the sons of Noah as their progenitors, and to the plains of Shinar as the place whence they were dispersed into different regions. Phœnicia, identified with the Canaanites, claims to have descended from the younger son of Ham: Assyria, to be derived from Ashur; Babylon (although, for ages after Assyria flourished, comparatively unknown, and absorbed in that mightier monarchy), to be founded by Nimrod; and Egypt to originate with Ham himself; appealing to those ancient titles which connect her either with that personage or with his earliest descendants. In the mean while, it is obvious that the history of these several states, rivals to each other from the beginning, is necessarily intermingled; that their destinies are interwoven; that many of the most eminent events which have been respectively applied to them in later times, are, in fact, common property: and that the incidents which have been assigned to the parts with so little precision belonged only in truth to the whole. We must often transfer the same action from hero to hero, and from nation to nation, if we listen to the ancient writers of different countries; and the historian, who seeks after truth only, must be sometimes satisfied with the fact, and to record it with fidelity and simplicity, without undertaking absolutely to fix its period, or certainly to decide its application. In the earliest histories of all nations, we can easily trace fragments of the Mosaic records, and obtain satisfaction as to the important point that all nations have a common origin. To determine the priority of their several after-claims is not so easy a task; and it is rendered still more difficult by the alternate influence which each exercised over the other, as their respective physical powers increased or diminished, as well as by the common interests which linked them together in the earlier stages of their existence. Where it is impossible to settle the point, it may be more prudent not to enter at all into the controversy; and as it is allowed by all writers, ancient and modern, that Egypt has pretensions as fair to antiquity as any other nation which has laid claim to it; as also it is indisputable that she long bore the palm for science and philosophy, and became the receptacle into which their streams flowed from other countries, it is judged proper to follow the usual order of history, and to begin with this illustrious state.

Topographical description.

Egypt.

§ 1. *Topographical description of ancient Egypt.*

Egypt, as it was known to the ancients, was bounded on the north by the Mediterranean sea, on the south by Ethiopia, on the east by Arabia, and on the west by Libya. It derived its name either from Egyptus, one of its kings, or, more probably, from the *dark colour* of its soil and inhabitants, called by the Greeks *Ægyptios*. Its most ancient appellation, however, was derived from Misraim (the name by which it is most commonly called in the Scriptures), the son of Ham, and founder of the Egyptian monarchy. Chemi and Chemia are ancient Coptic names for this country, evidently derived from the same source, and corruptions of Ham. Egypt may be properly divided into three parts: Upper, Middle, and Lower Egypt. Thebes was the capital of Upper Egypt, and Memphis of Middle Egypt. Lower Egypt comprehended the Delta, so called from its triangular shape, which resembles the fourth letter of the Greek alphabet. Herodotus, in the *Enterpe*, says that the Delta was formed by the accumulation of earth washed down from the upper countries by the Nile.

Upper Egypt was also called Thebais, from its capital, which Homer, in his *Iliad*, mentions by the epithet *ἑκατοπόροσ*, "The hundred-gated" Thebes.* This description serves to distinguish it from the Thebes of Bactria. Several proofs of its former grandeur and magnificence still remain; and unvaried temples, palaces, and columns, vindicate the eulogies passed upon the Egyptian metropolis by Tacitus and Strabo.† It was reported by these writers that Thebes was able to send out two hundred chariots and 10,000 warriors at each of its hundred gates. The same authors mention the existence of a celebrated statue of Memnon, an Egyptian king, in this city, respecting which the accounts vary too much to inspire any confidence in the vocal power ascribed to it, and yet are too numerous, and were too generally received, not to demand some attention. He was the fabled son of Aurora, and it is said, that at sun-rising and sun-set, certain sounds issued from the statue, and even from the pedestal, after the destruction of the statue itself. These have been described as cheerful and harmonious upon the appearance, and as plaintive upon the setting of the sun. Others, again, have spoken of the sound as sharp and sudden, like the breaking of the string of a harp, from too great tension. Strabo, who declares himself to have heard it, at the same time confesses that he was unable to distinguish whether the sound proceeded from the pedestal of the statue, or from the people who surrounded it; but hints his suspicions of the latter. Many ingenious philosophical solutions of this phenomenon, on the supposition of its reality, have been attempted. Those who reason upon the description of it, as a sharp and sudden sound emitted from the statue, suppose it to have been constructed of some kind of sonorous stone, capable of being expanded or contracted by the rarefaction of the air, or the general temperature of the morning and evening. Others, who receive the more enlarged account of its varied tones, have conjectured that some strings, easily affected by heat or cold, might be concealed within the statue, which

the warmth of the morning might brace, and that the breeze which usually accompanies the rising and setting of the sun might have access through some small and artfully-contrived apertures, acting upon these strings as upon an Eolian harp. But if the fact be conceded, there seems to be no good reason why we may not suppose that the sound was conveyed to the statue, or its pedestal, through concealed pipes, from some vault or cavern, which may long since have been filled up, so that the notes would appear to come from the statue itself; since we know that such contrivances were common to the several oracles of Greece subsequently. Cambyzes, after the conquest of Egypt, dismantled this statue; but its remains, from their grandeur and beauty, have delighted and astonished modern travellers. The Thebaid does not seem to have been so populous as the Delta; but there is no doubt that Upper Egypt was first peopled, as the Delta must necessarily have been a swamp, until it was drained by canals, constructed to carry off the water.

Memphis was the capital of Middle Egypt, or Heptanomis, so called from its containing seven districts. It was built upon the west bank of the Nile, a little above the Delta, and was famous for a temple dedicated to the god Apis, who was worshipped with costly ceremonies by the Memphians. Where this celebrated city stood is not accurately known; the ruins of its ancient splendour were conveyed to Alexandria, to adorn the rising capital of the conqueror after whom it was named. The pyramids and the lake of Maria were in the vicinity of Memphis.

The erection of the pyramids alone would go far to prove that Egypt was the mother of the arts and sciences; for no nation has as yet been able either to surpass or rival them. Of these wonderful structures it may indeed be said, "their grandeur awes, their beauty wins the soul;" and their origin and purpose have been the endless theme of antiquarians and historians. Some suppose that they were built by the Israelites, others by the native Egyptians, as sepulchres for their deceased monarchs. That the Israelites constructed them is a conjecture scarcely to be reconciled with the testimony of Moses, who distinctly affirms that their principal service consisted of making bricks—the bricks of the age, and such as those of which Babylon was constructed, clay mixed with straw, and hardened in the sun: and it seems natural to conclude that the works also which they were expressly said to have erected were formed of these materials; but the pyramids are uniformly built of stone. That they were sepulchres is by no means evident; that is, sepulchres exclusively, and in the sense in which we understand the term. Antiquity gave other and more important significations to the word; and a tomb implied not only a receptacle for the dead, but a temple for the deity. In this double and united sense is the term ΤΥΜΒΗ used by Lycophron; whence came the *tumulus* of Virgil and the Romans, and the *tomb* of our own native tongue. The most ancient tombs were conical heaps of earth, or accumulations of stones. Hence appears to have originated the shape of the pyramids: they are artificial *tumuli*, in imitation of the ancient sepulchral mounds of earth. But tombs were also temples; and even supposing them to have been ever intended as sepulchres (which, nevertheless, is an

* *HOM. IL. II. v. 313.* † *TACIT. ANN. I. II. c. 60.* *STRABO, I. IV. c.*

EGYPT.

The Pyramids.

admission not quite consistent with the general practice of the Egyptians in regard to sepulture), it will by no means follow that they were not also intended for a higher and a nobler purpose, since the respect paid to the dead, and the homage due to the divinity, were so frequently commingled. While no vestiges that distinctly mark the pyramids to have been ever employed as sepulchres remain, or were ever found to assist the earliest inquiries of historians, there are apartments of different kinds, which might well become a temple constructed to suit the dark, solemn, mysterious, and secret superstitions of the Egyptians. This conjecture seems to be further confirmed by the subterraneous passages attached to some of them, and their connection with stupendous chambers, extending in length 1,400 feet, in depth 30, cut out of the solid rock in the vicinity, and formed with infinite labour; circumstances which, together with the well in the principal pyramid, are unaccountable on the supposition of their being sepulchres merely, but seem well to accord with the conclusion that they were temples. We may then look for the preference given to the conical form of the pyramids, of the tower of Babylon, and others of the most ancient monuments, in the oldest species of idolatry, the worship of fire, and find the resemblance between the pointed sanctuary and the spiral shape of flame. Accordingly temples of this form, and consecrated to fire, are to be found among the Persians, and even among the Mexicans of the New World. In these stupendous structures we may also see the taste and genius of the remote ages in which they were reared; and on monuments which yet exist, approaching them the nearest in antiquity, we find uniformly the same characters of magnitude and strength impressed. In the plains of our own country, the wonderful remains of Stonehenge bear a testimony to the bold and stern conceptions which found the fittest temples for the Deity not in the graceful and ornamented fane, but in the accumulation of one massive stone upon another; piling the fragments of his own creation into a monument to his honour; or shaping a sanctuary more mighty than human hands could rear, in the bosom of the eternal rocks and mountains with which he diversifies the face of nature. The pyramids were spoken of by the Greeks as the works of the giants; possibly the shepherd kings of Egypt, of whom so little is known. These structures are twenty in number; but three, more eminent than the rest, have been considered as among the seven wonders of the world. A description of the largest of the three will amply suffice to give an accurate idea of the whole. This pyramid was built upon a rock, with a square base, and cut on the outside like steps, gradually decreasing towards the summit. The stones are of an immense magnitude, many of them thirty feet, cubically, and covered with hieroglyphics. According to Herodotus, Diodorus Siculus, and Pliny, each side of the pyramid, when seen at its full height, was eight hundred feet broad, and of the same length in ascent. The summit was a platform, about eighteen feet square, composed of ten or twelve large stones; but it seemed the apex of a cone to those who viewed it from below. It is supposed that 100,000 men were constantly employed in rearing this work. Ten years are said to have been consumed in hewing out the stones from the quarries of Ethiopia, and twenty years more in completing the building. This pyramid

alone cost the enormous sum of about 200,000 *ster-* *Topograp-*
lings. But great indistinctness arises in the history of *physical de-*
these stupendous erections, while doubts must remain *scription.*
so connected is the human workmanship with the rock, whether the greater part is not the work of nature, shaped and concentrated by art. Mr. Bryant concludes, that this is at least the case with those opposite Cairo: that they were probably immense rocks, which stood upon the brow of the mountain, cased over with stones, and thus brought into symmetry and proportion. He infers it further from the internal passages, which seem rather to be shaped by necessity than choice. Without implicitly adopting this opinion, too important, however, to be overlooked, and considering the pyramids as the mighty efforts of human genius, it would seem that some historians have been too hastily severe in their remarks upon those Egyptian kings who reared these imperishable fabrics; for, in addition to the considerations already suggested, candour surely would conclude, that they were built, not from ostentation, but for the encouragement of the arts and sciences and from the laudable ambition of showing to posterity the progress made in astronomy and architecture by the Egyptians. Pliny, conscious that Rome could not produce such buildings, and that she was even indebted to Egypt for her obelisks, calls them "*Regum pecuniarum ac stultitiae ostentatio*:" "an idle waste of money, and a silly piece of royal ostentation." These very obelisks, rearing their graceful forms in a foreign land, and covered with hieroglyphics, proclaimed their origin, and were lasting memorials of the summit of excellence which Egyptian architecture had so early reached. On this subject Bryant's Ancient Mythology, Clarke's Travels, Maurice's Indian Antiquities, Rich's Ruins of Babylon, with Maurice's Remarks and Continuation of the subject, may be consulted with advantage. See also PYRAMIDS, in our Miscellaneous Division, where the modern accounts of them are compared.

The sphynxes are other stupendous monuments of the skill and perseverance of this people. The largest and most admired of these, like the pyramids, seems partly the work of nature, and partly that of art, being cut out of a solid rock. The larger portion, however, of the entire fabric, is covered with the sands of the desert, which time has so accumulated around these master-pieces of other days, that the pyramids themselves have lost much of their elevation. The number of sphynxes found in Egypt, besides their shape, seems to countenance the oldest and most commonly-received opinion, that they refer to the rise and overflow of the Nile, which lasted during the passage of the sun through the constellations Leo and Virgo; both these signs are therefore combined in the figure, which has the head of a virgin and the body of a lion. The largest sphynx was imagined also, as Pliny affirms, though with what reason does not appear, to have been the sepulchre of King Amasis. It having, however, been considered that time must have effected revolutions in respect of the signs themselves, of which these structures were supposed to be symbols, as it regards the rising of the river and the order of the months, it has been more recently concluded, that the sphynxes were mysterious symbols of a religious character, not now to be unravelled.

The lake of Menis derives its appellation from the

Egypt.
The lake of
Meris.

The Nile.

monarch of that name, by whom it was formed. According to Pomponius Mela it was from seven to eight leagues in circumference, and communicated with the Nile by means of a canal four leagues long and fifty feet broad. Herodotus says it was about seventy-leagues in circuit. Sluices opened and shut the canal and lake at pleasure. This lake was excavated for two reasons: first, if the Nile rose too high, the sluices were thrown open, and received the waters of that river. By this plan the lands were relieved of the superfluous water, which became a reservoir against a time of deficiency; when it was supplied to the grounds from the lake by means of drains. Strabo says that in this manner Egypt was preserved in a state of plenty even when the Nile did not rise more than twelve cubits.

This extraordinary and celebrated river, after running from south to north about 200 leagues, empties itself, by seven mouths, into the Mediterranean. It is the largest stream in Egypt, and, by its overflowing, contributes to that wonderful fertility for which this country has been ever distinguished. It is well known that Egypt was considered by the Romans as the granary of Europe; and from its produce, and that of Sicily, they derived much of their corn; hence the poet says, "*quidquid de Libya terrarum areis*."

The ancients never discovered the source of the Nile, and the expression "*querere caput Nili*," became a common proverb at Rome, to signify a difficult or impossible undertaking. Princes and states fitted out large armaments to discover its source, but in vain. Modern travellers have been more successful; for, according to Father Lobo and Mr. Bruce, the Nile takes its rise in Abyssinia; and the latter traveller hung with rapture over its fountains. Herodotus, in the *Euterpe*, vainly attempts to explain the cause of the inundations of this river. It is now generally admitted, that the overflowing of the Nile arises from the heavy rains which fall in Ethiopia, through which country this river takes its course, while Egypt itself has little or no rain. According to Herodotus, these periodical inundations commence about the end of June, and continue until the end of September; they then gradually decrease. The height of the inundation is estimated by Pliny at sixteen cubits; but it sometimes rose only twelve cubits, at other times more than sixteen. The day on which this event took place was always considered by the Egyptians as auspicious; and the overflowing of the river diffused joy and gladness through out the whole community. The Emperor Julian, in common with the Egyptians, considered the god Serapis as the cause of this phenomenon.

Virgil thus mentions the Nile in *Æneid*, l. vi. v. 800:

Et septem gemis turbant trepidi ora Nili.

The seven mouths of the troubling Nile are disturbed.

The same fact describes the river in *Jen*. l. ix. 31.

Ant' pinger flumine Nilus.

Com' result canals, et jam se condidit alveo.

The Nile, when it has flowed back from the fields with its fertilizing stream, and now has buried itself in its own channel.

Dionysius Periegetes, speaking of the Nile, says,

Theri stratos torquas vultu Argæum.

Fertilizing the delightful land of Egypt with its stream.

Our stratosque torques vultu Argæum. *Echy. Prom.* 838.

As much land as the broad-flowing Nile waters.

Again, in the *Persæ*,

Altho' I's pater non vultu Argæum Nilus irrigat.

v. 33. And others whom the mighty and much nourishing Nile had sent.

The river Nile was an object of worship amongst the ancient Egyptians; hence *Æschylus* says, in his *Suppl.*

Topographical description.

Μὴ γὰρ Νίλου σπονδὰς ἀνέχου σπονδῶν. 1037.

We shall no more worship the mouths of the Nile with hymns.

Upon the banks of this fertile river grew the papyrus, a kind of reed, from the flag of which paper was afterwards made. Lucan calls this plant byblus.

Nondum byblusina Memphis contemere byblus

Noverat.

Memphis did not yet know how to fashion the watery byblus. 10.

The Delta, or Lower Egypt, may be regarded as a kind of island; it commences at the Pelusian and Canopic mouths of the Nile, and extends upwards nearly as far as the supposed site of Memphis. Its chief cities anciently were Heliopolis, Sais, Canopus, and Pelusium; and, in more modern times, Alexandria. Heliopolis, which, from its Greek name, signifies the "city of the sun," was famous for a temple dedicated to that luminary. Alexandria, as is well known, was built by Alexander the Great, and called after that conqueror. It was long the principal mart for all the trade of the east; and its merchants might be termed the carriers of the world. The Ptolemies made it the seat of empire; and by their encouragement of the arts and sciences, and the facilities which the Lagides held out to commerce, this became the commercial capital of the world. It flourished during several centuries, and, monopolized the trade of all nations; but the discovery of the Cape of Good Hope was a death-blow to its prosperity. See ALEXANDRIA.

The Pharos was a famous light-house, built by Ptolemy Philadelphus, in an island called Pharos, near the harbour of Alexandria. Like the pyramids, it was numbered among the seven wonders of the world. The estimation in which it was held may be concluded from the circumstance that every structure of a similar description has been named after it, a "Pharos." Pliny mentions Sostrates as the architect who built this beacon.

Luxury and voluptuousness were predominant in the wealthy capital of Ancient Egypt, and were the natural consequences of its excessive riches. Quintilian talks of the "*Alexandrinæ deficiæ*," and Horace's line, "*Non curis contrahit adire Corinthum*," might have been well applied to this noble city. Learning, however, flourished there considerably; and was particularly favoured by Ptolemy Soter, and his son Ptolemy Philadelphus.

Egypt, from the account which Strabo gives, does not appear to have been known to the ancients higher up than the city of Elephantine. This was the frontier town between Egypt and Ethiopia; and, according to Tacitus, in his *Annals*, was the boundary of the Roman empire in this direction: "*claustra olim Romani imperii*," "forming the limits of the Roman power." The cataracts, which are situated above Elephantine, must have formed an invincible barrier against Grecian or Roman enterprise; and we are not surprised to find, from these difficulties being exaggerated by Cicero, Seneca, and Lucan, that the ancients considered it useless to attempt to penetrate further into the country. Indeed it is but very lately that Nubia, the Ethiopia of the ancients, was at all known to the moderns; but the labours of Pococke, Norden, Denon, and Leigh, have made us better acquainted with this interesting region. We refer those who have any desire to know

Egypt the real facts respecting the catarnets of the Nile, and the present condition of Nubia, to the works of these accomplished travellers.

§ II. *Learning, religion, and polity of the Egyptians.*

Learning, &c. of the Egyptians.

We have the testimony of all antiquity that the Egyptians, in the earlier stages of society, accumulated, if they did not originate, all the learning of the ancient world; and that this was the source whence the rest of mankind long derived their knowledge of the arts and sciences. She excelled, as a school both of politics and philosophy, all the existing kingdoms of the earth; and so conscious were the ancients of her superiority in learning, arts, sciences, and general civilization, that most of the illustrious men of other countries visited Egypt, either with a view of comparing her institutions with those of their respective states, or of acquiring new information. It was here that Homer gathered materials for song; and, having refused and expanded his sublime genius with Egyptian lore, produced his immortal poems. Here Solon and Lycurgus found the archetypes of their celebrated laws, the chief excellencies of which are borrowed from the Egyptian polity. Pythagoras drew hence the principal tenets of his philosophy; and the doctrine of the Metempsychosis, or the transmigration of souls, was confessedly of the same origin. Here Plato, too, imbibed that religious mysticism, those beautiful illusions, and those elegant, but fanciful theories which characterize his works; and he was, probably, indebted to the priests of Memphis and Thebes for the knowledge which he displays of the Deity, in his Phædon and Alcibiades, which, although obscure, is far superior to the vulgar conceptions of his age. Greece was indebted to Egypt, not merely for letters, but for the mysteries of religion. The Ammon of the Egyptians, the Baal of the Assyrians, and the Zevæ of the Greeks, are undoubtedly that Jupiter who was worshipped in common by the three nations, although under different names. The Grecians derived their Mercury, or Hermes, from Egypt, who was there adored by the name of Thaut.

Pythagoras derived his notions of the nature of the gods from Egypt, and was initiated by the Egyptian priests into the mysteries of their religion. The Eleusinian festivals in honour of Ceres may be traced to the same origin, as is evident from the resemblance between Ceres and the Isis of the Egyptians, and from the fact, that Erectheus, king of Athens, who founded the mysteries, was himself of Egyptian extraction. Herodotus says that the Greeks borrowed their *Dii Majores* from the Egyptians: his words are, *ἡμετέρας τε θεῶν ἐκωνόμας ἀλλήνους πρότερον Αἰγυπτίους νομοῦσι καὶ ἑλληνες σπουδὴν ἀναλαμβάνει*. It might, perhaps, appear, if this interesting and difficult subject were traced further, that Egypt herself was indebted to remoter ages, and to other countries, which were favoured with the genuine inspirations of heaven, for her literature and philosophy; but she deserves, at least, the credit of having been the repository of ancient knowledge, whence Greece, and, after her, Rome, and indeed the world at large, derived their information and their science. The polity of the Egyptians was equal to their skill in the arts and sciences. The form of government was monarchical, and the succession to the throne hereditary. But the princes of Egypt were not absolute monarchs,

being bound by the existing ordinances and laws of the country. The government was in fact a limited one; and we must admire the wisdom and political sagacity of a people whose kings were parents and *πομπαιεταὶ λαοῦ*, shepherds of the people, rather than tyrants and despots; nor is it possible to contemplate such a form of government in an age so early, without tracing it to that patriarchal system whence all legitimate authority arose.

*The super-
stition of
the Egypt-
ians.*

It is lamentable, however, to think that a people so wise in their politics, so conversant with the arts and sciences, and so profound in their general knowledge, should have been so grossly superstitious, as to expose themselves to the ridicule of nations greatly their inferiors in universal intelligence, and should have cherished the meanest and most degrading conceptions of the Deity. They not only worshipped him under the names of Isis, Osiris, and Apis, symbols which had not lost all traces of their philosophical origin, but they made a cat, a dog, or a stork, an object of adoration, and admitted into the list of their gods the very herbs of their gardens. Superstition is always intolerant and cruel; while it debases the understanding, it hardens the heart. Those who imagined they found symbols of the Divinity in an onion, perceived not his image in a fellow-creature; and would, when a difference in religious faith gave them a pretext, not only put the offender to death, but afterwards feed upon the flesh. To this barbarous custom of a nation which arrogated to itself all the wisdom and learning of the world, the Roman satirist indignantly refers:

*Porcum et capra nefas violare, et frangere morem.
O! sanctas gentes, quibus hoc inscruerit in horis
Nemini!*

Caribibus humanis vossi licet.

Juv. Sat. xv. v. 9.

*'Tis mortal sin an onion to devour,
Each clove of garlic is a sacred power,
Religion's nature pure, and blest shades,
Where every orchard is o'er-run with gods!*

—Man's flesh is lawful meat.

Dryden's Juv.

And again in the same satire, v. 77.

*Labitur hinc quidam, nimis formidine cursum
Precipitans, capiteoque : sat illium in plurima secum
Frusta et particulas, ut multis mortuus unus
Subfoecet, totum convulsis oculibus edit
Vicia verba.*

*An Oodile wretch (by headlong haste betray'd,
And falling down I'di' root) in prisoner made;
Whose flesh torn off by lumps the carious foe
In morsels cut, to make it further go;
His bones clean pick'd, his very bones they gnaw,
No stomach's bulk'd it, because the corpse is raw.*

Dryden's Juv.

If Egypt, renowned, revered, and unvisited Egypt, was thus ignorant, we may well admit the plain fact asserted in Sacred Writ, that "the world by wisdom knew not God." Let infidels refer to facts, and take a short survey of the cruel, obscene, and unwholesome rites of paganism, from its earliest exercise in Egypt; let them dispassionately consider the revolting superstitions, the religious quarrels, and the nameless atrocities of the pagan world, and the contrast presented by the religion they malign must strike even them; and neither will the alleged intolerance of Christians, or their differences in minor points of faith, be longer adduced as a fair argument for the utter disbelief of a divine revelation.

The Egyptians claimed the invention of letters, and

Egypt. assigned the first introduction of them to their *Hermes*, or *Mercury*. According to Pliny, who takes his data from Anticletes, a Greek historian whose works are lost, letters were first discovered by Memnon, king of Ethiopia and Egypt, a. c. 1822; and first introduced into Greece by Cadmus, who, though a Phœnician by birth, was the son of an Egyptian. It would indeed have been extraordinary, if Egypt, so renowned for her skill in astronomy, geometry, and all the arts of life, had not been among the first to find the means of embodying her knowledge in visible symbols.

Language The ablest scholars have generally and successfully contended that the characters introduced by Cadmus into Greece resembled the Hebrew; and it is indisputable that the children of Israel dwelt in Egypt about the time specified. To what degree, therefore, the Egyptians borrowed the Hebrew letters, or the Hebrews the Egyptian, must remain uncertain, but it is not improbable that these letters formed the common written language of the country. The hieroglyphics, which were the symbols of Ethiopia, may be considered as the sacred language of Egypt, and were used by the priests for the preservation of their historical information and mythological speculations. However this may be, it is, on the other hand, very certain that no literary works of the ancient Egyptians have come down to us; they have given us no poetry, history, or philosophy. It appears also remarkable, that Herodotus, who visited Egypt to obtain materials for his history, does not mention any ancient works composed in the language of the country. The historian, during his stay in Egypt, seems merely to have heard the traditional stories of the priests. His own expressions, in the beginning of the *Euterpe*, are, *Ἡρώδης δὲ καὶ οἱ ἄλλοι τὴν Μῆρην, ὁδὸν τε λόγους, &c. &c. οὐδὲν ὁμολογεῖσθαι οὐκ οἶον*. He never tells us that he examined any historical annals or records of the ancient people of Egypt. This singular circumstance can scarcely be accounted for, except on the supposition of their having concealed their historical and religious documents under these hieroglyphical symbols, a conduct to which they might have been incited either by a superstitious idea of their sanctity, or a desire to keep the exclusive enjoyment of their literary treasures, and to prevent all inquiry into their high pretensions to a long duration.

Comparison. An interesting question arises respecting the complexion of the ancient Egyptians, but at this distance of time it is impossible to decide accurately whether they were negroes, or resembled in complexion its present Coptic inhabitants. Herodotus expressly calls them *Μελανόχροι καὶ ὀλτοχρόι*, "having black skins and curly hair." The historian, in another passage, informs us, that he infers the Egyptian origin of the priestess who founded the oracle at Dodona, from the circumstance of her being represented as a black dove. *Μελανόχρως δὲ λεγούσης αὐτὴν πτελομένην, εἰρηνομένην αὐτὴν Ἀργεῖαν αἰ γυνὴν ἦν*. "And saying that the dove was black, they signify by this that the woman was an Egyptian." We may also add, that the word *τελευται*, which, in common Hellenic, signified "dove," also meant, in the barbarous dialect of Epirus, where Dodona was situated, "old women." *Æschylus*, also, in his *æschylus*, recording the expedition of Danaus from Egypt into Greece, describes the Egyptian mariners, and applies to them the expression *μελανόχροις γυναικί*, "having

black limbs." To this it may be added, that Memnon, who fought at the Trojan war, was king of Ethiopia or Egypt, or perhaps both; his capital was Thebes, in the latter country; and as a temple and statue were erected to him in that city, it would seem, from the gratitude of his subjects, that he was one of the active princes of Egypt. Be this as it may, it is well known how often Egypt and Ethiopia are commingled, and even confounded by historians both sacred and profane; and when we recollect, at the same time, that both countries were immediately adjacent, we may fairly conclude that they must have been very similar in their physical appearance. Virgil speaks of

— *fulgi Memnonia arma*; *Æn. l. 469.*

"the arms of the black Memnon." Dryden carelessly translates it, "the swarthy Memnon," not perceiving the difference between "fuscus" and "niger." But the Latin poet knew there was a distinction, and his expression in the tenth *Eclouge* v. 38, proves it: "si fuscus Amyntas," "if the brown Amyntas." Virgil, speaking of Ethiopia, *Ecl. x. 68*, says,

Æthiopum versum oves sub sidere Cauri;

— *We keep*
On *Merics* bounding past the Lybian sheep; *Dryden.*

which demonstrates that it was situated under the torrid zone. It is obvious that the Greek word *Αἰθιοπία* meant "persons with black faces;" and that the skin of the Ethiopians, or, perhaps, Egyptians, was dark even to a proverb.

So well known was the complexion of the Ethiopians, or Egyptians, to be of a dark colour, that all nations possessing this tincture of skin were called by the ancients Ethiopians. Thus Juvenal:

Loricæm rectis ostendit, Æthiopum alio.

Sat. ii. v. 83.

The straight-lined man laughs at the crooked one, the fair-complexioned person at the Ethiopian.

We should not thus have detained the reader on the subject of the Egyptian complexion, but that it has scarcely, if ever, been touched upon by modern historians. It is not improbable that the negroes and slaves of modern Africa are the descendants of the ancient people of Ethiopia, considered from the times of the Romans as a degraded and inferior race. Juvenal, *Sat. i. 130*,

— *Inter quos cunctos habere*
Nescio quin Utibus Ægyptiis atque Arabæstibus.

Among whom an obscure Egyptian slave and Arabæstian durst to put in his claim.

§ III. Miscellaneous history of Egypt.

In our "Introductory Chapter," we gave an account of the Egyptian kings down to Proteus, who, according to Herodotus, was king of Memphis, and flourished a. c. 1204. That historian, in his *Euterpe*, says, that this monarch detained Helen in his hands during the siege of Troy. But in this statement he is at variance with Homer, who introduces Helen, in the *Iliad*, no less than three different times, as being present at Troy. Herodotus seems to have taken the story from the priests of Memphis. Rhampsinitus was the successor of Proteus, and Cheops and Gephren were the successors of Rhampsinitus. They were the joint sovereigns of Egypt, and to them is assigned, by Herodotus, the erection of the pyramids: they were

noted for their cruelty and impiety. Mycerinus succeeded his father Cheops, and Asychis filled the throne after him. Supposing the six preceding reigns to contain one hundred and seventy years, there remains an hiatus of about three hundred years, until the reign of Sabachus; a deficiency which is supplied by the Old Testament. A Pharaoh reigned about b.c. 1013, who married his daughter to Solomon, king of Israel. Sennach succeeded a.c. 978; was the protector of Jeroboam, and in the reign of Rehoboam invaded the kingdom of Judah, and despoiled the temple. Zerah reigned n.c. 941; he was the prince who warred unsuccessfully against Asa, king of Judah. Anysis succeeded him, but was deposed by Sabachus, king of Ethiopia, n.c. 725; he reigned fifty years. Upon his voluntary retirement, Anysis again recovered his throne. Sethos, reigned fourteen years, a.c. 719; he undertook to raise the siege of Jerusalem, but was unsuccessful; and Thiarac, king of Ethiopia, ascended the throne of Egypt upon the death of Sethos, n.c. 705. At the decease of this monarch, an interregnum of two years took place; but at last twelve nobles seized upon the regal power, n.c. 685, and divided the kingdom among them. These twelve kings lived in concord until the expulsion of Psammethichus, one of their number.

This prince, with the assistance of some Grecian soldiery, gave battle to the eleven kings, defeated them, and obtained possession of all Egypt, a.c. 670. He undertook an expedition against Palestine; and, according to Herodotus, was stopped before Azotus. The siege of this place lasted twenty-nine years. Herodotus informs us, that it was Psammethichus, who, desirous of discovering which nation was the most ancient, made the strange experiment of placing two infants under the care of a shepherd, who was not allowed to utter a word in their presence. At the expiration of two years, it is said that both the children cried out *brece*, the Phœnician word for "bread." The Egyptians, in consequence, conceded the priority to the people of Phœnicia.

Necho, the Pharaoh-necho of the Scriptures, succeeded his father Psammethichus a.c. 616. This prince successfully made war against the Babylonians; he also defeated Josiah, king of Judah, and imposed a tribute upon that country. He was succeeded by his son Psammis, a.c. 600, who reigned six years. Apries, the Pharaoh-hophra of the Bible, now mounted the throne, which he held about twenty-five years. He attempted, but in vain, to raise the siege of Jerusalem, which Nebuchadnezzar had invested, but was dethroned by his people, and Amasis, his general, who was a Naite by birth, was elected in his stead, n.c. 589. He swayed the sceptre forty years, and during his reign Pythagoras visited Egypt.

Psammethichus succeeded his father Amasis, n.c. 525; and during his sovereignty Egypt first became subject to the Persian power, under the invasion of Cambyses. Herodotus, in the *Thalia*, describes this monarch as marching into Egypt, after the death of Amasis, when he totally routed Psammethichus's army, and pursued him to Memphis, which he besieged and carried. Psammethichus was taken prisoner, and honour-

ably treated by Cambyses, who even allowed him a considerable pension, until he discovered that he had entered into a conspiracy against him; when the Persian monarch secured himself by putting his formidable captive to death. With this prince terminated the line of the ancient Egyptian kings, and the whole country unresistingly submitted to the Persians. The history of Egypt is now merged in that of the Persians, until a fresh dynasty sprang up from the Macedonian conquests. Egypt, having become a province of the Persian empire, and, in fact, incorporated with that power, sunk into oblivion until the year n.c. 460, when, aided by the Athenians, she attempted to shake off the Persian yoke, and, revolting from Artaxerxes, chose Inarus, prince of Libya, for her king. The Egyptians, although powerfully supported by the Athenian fleet, were unsuccessful in this struggle. Inarus was defeated by Megabyzus, the Persian, taken prisoner, and afterwards put to death by Artaxerxes. The Athenians shared deeply the calamity; their fleet was destroyed, and they were compelled to surrender to the Persians. This war, according to Thucydides, lasted six years. The submission of the Egyptians, however, was neither cordial nor permanent. They again revolted, during the reign of Darius Notius, a.c. 414, chose Amyrteus for their king, who reigned about six years, and drove the Persians from the realm. It appears from a passage of Herodotus, that the Persians had recovered their usual authority over the Egyptians, since it was said to be by their express permission that Pausias, the son of Amyrteus, ascended the throne. This country, however, seems to have maintained some shadow of independence from a.c. 407, the date of Pausias's succession, to a.c. 361, when Nectanebus, king of Egypt, affected to be entirely his own master. Ochoas, the Persian monarch, determined, however, to regain possession of the country, marched a great army into Egypt, and utterly overthrew Nectanebus, who retired into Ethiopia; the country, from that time, has always been subjected to the yoke of foreigners.

The Persians remained undisturbed possessors of Egypt after this conquest, until Alexander the Great invaded that country, a.c. 331. So great was the hatred which the Egyptians bore to the Persians, that they immediately received the Macedonian conqueror with open arms, and hailed him as their deliverer. Memphis surrendered to him without resistance. Alexander, before he left Egypt, laid the foundation of Alexandria, the future capital of the kingdom; and Egypt was thenceforward a part of the great Macedonian empire. After the decease of this monarch, his conquests were divided amongst his generals, and Egypt fell to the lot of Ptolemy, the son of Lagus. This prince, surnamed Soter, or the preserver, who became ruler of Egypt, a.c. 323, did not take the title of king until eighteen years afterwards, a.c. 305, as fixed by Ptolemy, the famous astronomer; and was engaged in many wars with Alexander's successors, in which the issue was various. He compelled Demetrius to raise the siege of Rhodes, a.c. 303; and, on that occasion, was complimented by the Rhodians with the title of *Sourys*.

HISTORY.

CHAPTER VI.

ASSYRIA, PHÆNICIA, SIDON, AND TYRE.

§ I. Of Assyria.

Assyria, &c.

Assyria, properly so called, deriving its name from Assur, the son of Shem, was situated upon the eastern bank of the Tigris. It was bounded on the north by Armenia, on the south by Susiana, on the east by Media, and on the west by the Tigris, on which stood its capital, Nineveh. This city was founded, or rather completed, by Ninus, from whom it took its name. Babylon, the other great metropolitan city of the Assyrian empire, was situate upon the Euphrates, which flowed through it. Nimrod, or Belus, who encompassed the place where Babel stood with walls, is thus supposed to have originated that memorable city about *a. c.* 2204. Semiramis is regarded by the Greek historians as having founded Babylon; but it has been already shown, that she only adorned and enlarged it. This city may be considered as the capital of the ancient Assyrian empire, afterwards transferred to Nineveh, when Babylon dwindled into a province of that empire. From the account given of Nimrod, in the book of Genesis, we are justified in concluding that he was the founder of the first Assyrian monarchy. This empire contained within its limits Assyria, Chaldaea, or Babylonia, and Media. Its duration, according to Herodotus (who is followed by Archbishop Usher), was only five hundred and twenty years, when it was overthrown by the Medes. Ctesias, Diodorus Siculus, Trogus Pompeius, as abridged by Justin, together with most modern authors, assert that it existed near 1,450 years from Nimrod, its founder, down to Sardanapalus. It was doubtless the most ancient, perhaps the most powerful monarchy in the world; but the profane authors, in attributing the foundation of this monarchy to Ninus, confound him and his exploits with his father Nimrod.

Nimrod founder of the Assyrian empire.

Assyria was remarkable for its fertility, which is even compared by Herodotus with the fecundity of Egypt. Spoking of Babylon, in his Clio, he states that it was situated in a plain noted for the richness of its soil. Although, while the Assyrian monarchy remained entire, the seat of government was Nineveh; and it was not until it became divided, that the ascendancy of the Babylonian power transferred it to the capital bearing that name; yet the latter is, on many accounts, so important as to demand priority of attention. We have

accordingly described it already, under the article *Assyria*. SEMIRAMIS, by a minute detail of such particulars as may be gathered with any certainty respecting it, and may, therefore, pass on to the consideration of its once distinguished rival, Nineveh.

Nineveh, according to Diodorus Siculus, was the most magnificent and largest city in the world. We must, however, suspect him of exaggeration, when he gravely asserts, that it was one hundred and fifty stadia in length, ninety in breadth, and four hundred and eighty in circumference. We are inclined to doubt the ancient historian's accuracy the more, because he fixes the site of Nineveh upon the Euphrates, whereas it stood upon the eastern bank of the Tigris. It appears, however, that the walls of this city were a hundred feet high, and so thick that three chariots could easily drive abreast upon them; and that they were fortified with 1,500 towers two hundred feet high; which are, perhaps, the only particulars upon which any reliance can be placed. To Nimrod is also attributed, by the sacred historian, the foundation of this early branch of the Assyrian empire. He was the son of Chush, and is called in the Scriptures "a mighty hunter before the Lord;" by which is generally understood an enterprising conqueror. It is further said, according to the better reading of the margin of our Bibles, that he went into Assyria, and took possession of that country; from which it is universally concluded that he was the founder of the Assyrian empire. Upon the same authority, he is disjunctly stated to be the builder of Nineveh, which city his son Ninus probably finished; and the class of his achievements may be easily inferred, when, with those specified works, so brief but accurate a record says of him, "he began to be a mighty one in the earth." Ninus succeeded his father Nimrod, and, according to Diodorus, marched with a numerous army against the Bactrians. In this war he would have been unsuccessful, but for the advice of the famous Semiramis, whom he afterwards married. Ninus was the fruit of this marriage. Semiramis ascended the throne, after the death of Ninus, and is said to have adorned and enlarged Babylon beyond all former precedent, and to have caused the erection of those edifices which rendered it the most magnificent city in the world. Ninus succeeded her: after whose

End of the
Assyrian
empire.

death the names even of those who followed in the empire have not reached us. During thirty generations we have no history until we come to Sardanapalus, who flourished, according to the Greek historians, A. C. 707. He reigned twenty years, was noted for his luxury, and was dethroned by two of his officers—Arbaces, governor of Media, and Belesis, governor of Babylon. With this monarch ended the first Assyrian empire.

Out of the ruins of this unwieldy monarchy were formed three kingdoms: the kingdom of Media, the kingdom of Babylon, and the kingdom of Nineveh. Belesis was king of Babylon A. C. 747, and is the same with Nabonassar. He was succeeded by his son Merodach-baladan. Tiglath-pileser is said to have been the first king of Nineveh, A. C. 747, after the ruin of the ancient Assyrian empire. By this division commenced what is called the second Assyrian empire. Tiglath-pileser was succeeded by Shalmaneser, A. C. 728, who reigned fourteen years.

Sennacherib, his son, came to the throne A. C. 717. This prince made war upon Hezekiah, but was foiled by divine interposition; and returning to Nineveh discomfited, he was there slain by his sons, whilst worshipping in the temple of his god Nisroch. Esar-haddon (his assassins having fled) ascended the vacant throne, A. C. 710, and added Babylon to his father's conquests. Thus the two kingdoms of the second Assyrian empire were united. Esar-haddon reigned thirty-nine years, and left his sceptre to his son Sardanapalus, A. C. 699. Prudent supposes him to have been the Nebuchadonozor of the book of Judith; but we have already assigned reasons for supposing him in an error, and concluding that Chyniladan, who succeeded him, and was an active and warlike prince, was this Nebuchadonozor of the Scripture. Sardanapalus succeeded Chyniladan, A. C. 648. Under this prince Nineveh was taken, and utterly destroyed, by CYRUS, the king of the Medes, and Nabopolassar usurped the sovereignty of Babylon, A. C. 626, from which period Babylon became the only capital of the second Assyrian empire.

Nebuchadnazzar the Great succeeded his father Nabopolassar, A. C. 606. This monarch besieged Jerusalem, A. C. 589, took it at length by storm, and made Zedekiah prisoner. He reduced also Tyre and Egypt, and under him the Babylonian empire reached the summit of its glory. Nebuchadnazzar was succeeded by his son Evil-Merodach, A. C. 563, who was put to death after a short and inglorious reign; and Neriglissar, the chief conspirator against him, reigned in his stead, A. C. 560. Neriglissar being slain in battle, Laborsorach, his son, succeeded him, A. C. 556, who was distinguished only for his vices, and assassinated before he had reigned quite a year. His successor was Labynitur, called in Scripture Belshazzar, A. C. 555; during whose reign Babylon was taken by Cyrus, A. C. 536. Thus ended the second Assyrian empire, having lasted two hundred and ten years from the destruction of the first. Assyria afterwards became a part of the great Persian monarchy.

§ II. Of Phœnicia.

Phœnicia Proper, according to the ancient geographers, was bounded by Syria on the north and east, on the west by the Mediterranean, and on the south by

Palestine. Some derive its name from Phœnix, one of its ancient kings, and son of Agenon; others from the Greek word *φοινίς*, a palm, as if that tree grew in abundance in this country. Others refer it to the Red sea, or sea of Idumea. Vossius de Idol. lib. i. c. 34, says, "*φοινίς* is the same with *εὐφοινία*, red, thence the Latins from *phœnice* made *phœnicea*, and from *φοινίς* *purpurea*." He proves that the Tyrians came from the Idumean sea; and concludes that from the Idumeans, the posterity of Esau, the Red sea was styled Erythraean mare; whence the Tyrians transplanted were styled *phœnicei*, Phœnicians. Others again derive the name from *φονος*, slaughter. These are all purely Greek derivatives; and the origin of the name is far more probably Hebrew. Scaliger, Fuller, and Glassius, all agree to derive the name from the Chaldaic, *210 to live debately*, referring to the luxury of the Tyrians, as merchants; whence *phœnicea*, the name of Phœnicians, *q. d. εὐφροσύνη, delicata*. But the most probable solution is that of the great Bochart, who derives the Greek word *φοινίς* from the Hebrew *פִּינִיץ* or *פִּינִי* the son or sons of *Adah*. From this Canaanitish name (and there can be no question that the Phœnicians were Canaanites) *Ben-Adah*, or, contracted, *Beanal*, the Greeks at first formed *phœnice* (it being very usual with them to turn *n* into *p*, as from *φῶν* *αἶψα*, *αἰχμή*); thence *phœnic* and *phœnice*, Phœnicia. (See Gale's Court of the Gentiles, vol. i. book i. chap. iii. p. 18, 19.)

This territory was generally considered by the ancients as a province of Syria; and it is rather remarkable that Herodotus indiscriminately makes use of the three names, Phœnicia, Palestine, and Syria, as if they were the same country. The two principal cities of Phœnicia, or Phœnice, were Tyre and Sidon; both of which were situated on the sea coast. Sidon, which was the metropolis of the country, derived its name from Sidon, the son of Canaan, by whom it was built. The city of Tyre also stood about two hundred furlongs to the south of Sidon, and was built upon an island half a mile distant from the shore, and surrounded with a wall a hundred and fifty feet in height, and broader in proportion. Agenon is considered as its founder by the Greeks. It does not appear to have been of very considerable extent, though, on this point, ancient geographers are much divided. Phœnicia besides Tyre and Sidon, contained many considerable cities: Aradus, Orthosis, Tripolis, Byblus, Berytus, and Sarpis, were situated on the coast of Phœnicia. Tyre and Sidon now present only a mass of ruins to the eye of the traveller. Both the soil and the climate of this country are excellent. It is watered by rivers, which take their rise from Mount Libanus, the celebrated Lebanon of the Bible; and these streams, when swollen by rains, or the melting of the snow from the mountains, overflow their banks, and inundate the country.

The Phœnicians, as we have observed, were undoubtedly Canaanites by descent. Small as was their country, it was still divided into many petty kingdoms, of which the principal were Tyre and Sidon. The people of Phœnicia worshipped Baal, whose name signifies Lord, and who was the Assyrian Jupiter. Astarte, the Hebrew Ashtaroth, and the Grecian Aphrodite, was also one of their superior deities. She was represented, like the Egyptian Isis, with the horns of a cow upon her head. The death of Adonis, or

Thammuz came next behind,
Whose eternal wound in Lebanon still'd
The Syrian demesne to lament his fate
In anacrusis dithies all a woe's day;
While smooth Adonis, from his native rock,
Ran purple to the sea, suppos'd with blood
Of Thammuz yearly wounded!—

and it was arraigned by a greater than the poet, when Ezekiel, in his vision of the abominations of Israel, says, "He brought me to the door of the gate of the Lord's house, which was towards the north, and behold, there sat women weeping for Tammuz."

The Phœnicians were well skilled in astronomy and arithmetic; and to them is attributed the invention of letters. According to Herodotus, Cadmus, a Phœnician (as we have seen) by birth, first introduced letters into Greece. The people of Phœnicia were also noted for the manufacture of fine linen, the glass of Sidon, and the purple of Tyre. The "*Sidonis æra*," was a common proverb amongst the ancients; and the epithet "Sidonian" was used by way of emphasis to express whatever was elegant or magnificent. As merchants, navigators, and colonists, they had no equals, nor even rivals, for many ages. In ancient times, their country was a great warehouse, in which might be found all the necessities and luxuries of human life; and was long and justly considered as the emporium of the east. Their commerce by sea, extended from their own shores even to the British islands, to Spain, to the ports of the Mediterranean, the Black sea, and the lake Mæotis. According to the best etymologists, our own country derives its name of Britain from these Phœnician navigators and merchants, who designated these islands, from the minerals with which they most abounded, *ἡν νῆα*, Barat-anac, or Bratanac, from the abundance of tin and lead mines found in them. (See Sammes' Britannia). By land, they carried on an extensive trade with Syria, Assyria, Persia, Arabia, and India. Phœnicia sent out several colonies to various parts of the world; and Carthage and Thebes are indebted for their existence as states to Phœnician founders. As an evidence of their skill in navigation, it is stated that some Phœnician adventurers, in the service of Necho, king of Egypt, undertook, and completed a voyage round Africa, sailing out of the Red sea, and returning through the straits of Gibraltar.

We have noticed, in our "Introductory Chapter," that, according to the doubtful records of Greece, Agenor was the first king of Phœnicia, and the founder of Tyre, a. c. 1497. Upon the same authority, it is affirmed that he was succeeded by his son Phoenix; next to whom stands the name of Phalis. This is the meagre, and, perhaps, fabulous account given

us of the first kings of Phœnicia by the Grecian writers.

§ III. Of the kings of Sidon.

After Sidon, who was, according to Josephus, the first monarch of the city bearing his name, we do not meet with the record of a single prince until n. c. 598, when we read of a monarch whose name is not known, but who is said by Jeremiah to have sent ambassadors to Jerusalem to propose a league with Zedekiah against Nebuchadnezzar. In point of order we are next introduced to Tetramestus, who assisted Xerxes in his Grecian expedition, n. c. 481, and after him to Tennes; at which time it appears that Phœnicia was tributary to Persia. Tennes and the Sidonians having determined to throw off the Persian yoke, entered into an alliance with Nectanebus, king of Egypt and, assisted by a body of Greek troops, drove the Persians out of the country. Darius Ochus, enraged at this defeat, marched an immense army into Phœnicia, and laid siege to Sidon. The Sidonians, when they saw that the Persian was upon the point of entering the town, set fire to their houses and possessions, and died amidst the ruins of their city, n. c. 351. The city was afterwards rebuilt, and Strato invested with the sovereignty, until he was deposed by Alexander the Great, a. c. 333. The crown of Sidon was then bestowed by the conqueror upon Ballonymus, who is called Abdiolimus, by Quintus Curtius; and after this event Phœnicia became a part of the great Macedonian empire.

§ IV. Of the kings of Tyre.

Abibal is the first mentioned by Josephus, of whom Tyre we only know that he was David's contemporary, and lived a. c. 1056. He was succeeded by his son Hiram, 1046, the friend and ally of David and Solomon; by whom the latter monarch was considerably assisted in building his celebrated temple, and whose daughter he married. He was succeeded by Baalazar, a. c. 1012; and according to Josephus, Abdastartus, Astartus, Astartus, and Phelles, followed him in direct succession. It appears, on the authority of the same historian, that Ithobal ascended the throne of Tyre and Sidon, a. c. 962, followed by his son Baderon, by Mettinus, and next by Pygmalion, to whose sister, Elisa, called also Dido, the honour of having been the founder of Carthage is attributed by Virgil. To Pygmalion succeeded Eubanes, a. c. 717; then Ithobal II. in the year a. c. 585; after whom was a suspension of royalty, and Tyre was governed by judges, a. c. 562. The regal dignity was restored in the person of Balaton, n. c. 556, who was followed in an unbroken line of succession by Merbal, Irom, Marten, Strato, and Azelmie. Under this latter king, a. c. 332, Tyre was taken and burnt by Alexander the Great.

HISTORY.

CHAPTER VII.

OF GREECE.

Greece.

§ I. Topographical description of Ancient Greece.

GREECE, in the most extensive application of the name, was, according to the ancient geographers, bounded on the north by Illyria and Thrace, on the south by the Cretan sea, on the east by the Ægean, and on the west by the Ionian sea. Ancient Greece was divided into five parts, Græcia Propria, Peloponnessus, Epirus, Thessalia, and Macedonia. Græcia Propria contained the states of Etolia, Doris, the Locri Ozolæ, Phocia, Boetia, Attica, and Locris. The Peloponnessus is a peninsula, joined to Greece Proper by the isthmus of Corinth, which is only six miles in breadth.

Ancient divisions of Greece.

The principal divisions of the Peloponnessus were Achæi, Elis, Messenia, Arcadia, Laconia, and Argolis. The chief parts of Epirus were Chaonia, Molossia, Thesprotia, and Acarnania. Thessaly comprehended the towns of Pharsalia, Methone, Phthia, Larissa, and the straits of Thermopylæ, which were the keys of Greece. Macedonia contained a great number of towns, the principal of which were Pella, its capital, Epidamnos, Pallene, Olynthus, Thessalonica, Stugira, Amphipolis, and Philippi. The chief mountains of Greece were Olympus, Pelion, Ossa, Parnassus, Helicon, Hymettus, Pindus, Athos, and Cithæron. The modern name of the Peloponnessus is the Morea, and that of Greece Proper, Livadia. The continent of Greece was well watered by several streams, which ran through the country, of which the principal were the Eurotas, Peneus, the Cephissus, and the Ilissus. The climate of Greece was very salubrious, and the soil particularly fertile; from which, however, we must except the northern parts, and Attica, which were rocky and barren. In treating of Greece we must not omit to mention the islands which are contiguous to it, which were all of them inhabited by Grecian colonies, and were in general subject to the mother country. The principal of these were Corcyra, now Corfu, Cephalonia, Zacynthus, Ithaca, Cythera, and the Strophades, situated in the Ionian sea. In the Ægean sea were the Cyclades and the Sporades. Higher up in the Ægean lay Eubœa, Lemnos, and Scyros. A little lower down we meet with the isles Lesbos, Chios, and Samos. Crete was the largest of the Greek islands; it was situate in the Mare Creticum, to the south of the promontory Malea. It is said by the ancients to have once contained an hundred

cities; hence Homer gives it the epithet of *ἑκατοπόλις Κρήνη*. Religion and manners.

§ II. Religion and manners.

It was observed in our account of Egypt, that she was not only the mother of letters, but of the superstitions of the ancient world; it is certain that she supplied Greece both with a language and with a faith. The Greeks, who were, perhaps, the most susceptible and ingenious people that ever lived, seem to have been most warmly devoted to the splendid and magnificent ceremonies of their sacred worship, and peculiarly observant of those rites which they conceived would conciliate the favour or appease the anger of their gods. And however absurd their idolatries must appear to the eye of reason, as it is now assisted by revelation, it must still be granted, that there was something captivating in their mythological fables; a nameless charm, which seizes upon the imagination and enchains the judgment. The Grecian mythology, with all its faults, has its characteristic beauties; and contains not grosser errors than those to be found in the creed of Mohammed, the superstitions of the north, or the splendid, but sensual systems of the east. If the beautiful visions and elegant forms of paganism have interested and fascinated even northern nations, and fill our imagination through every period of life, what must have been their influence upon men implicitly believing in their truth, and whose minds were previously disposed to ardour and enthusiasm, as well by their constitutional temperament, as by their warm suns, their blue unclouded skies, and the soft, genial atmosphere in which they lived? To the glowing fancy of the Greek every scene of nature presented not merely the residence of man, but the abode of the unseen divinity; and every prospect reminded him of some presiding power, whose spirituality he could not separate from local habitation. All things around him teemed with wonders; he saw in the gliding stream the Naiad of the fountain; he heard, in the murmur of the trees, the Dryad of the grove; on the mountains, his mind's eye beheld Diana and the Oreads; and fawns and satyrs peopled the forests. When the morning dawned, he hailed Aurora rising from the bed of Titheos, and when the sun appeared to sink into the bosom of the ocean, he imagined him retiring to the couch of Amphitruia.

The superstitions of the ancient world.

Religion.

Greece. trite. In the meridian fervour of the orb of day, he beheld his own Apollo; in the silver beams of the moon, he admired and worshipped "the queen of heaven." The starry cope was peopled throughout its immeasurable extent with the visionary beings of his imagination, and surrounding nature seemed animate with deity alone: every stream was sacred, and every mountain hallowed. His fancy went so far as to place his future heaven on the top of Olympus, and his Hades in the rivers of Styx and Acheron: he supposed the abodes of Apollo and the Muses were upon Parnassus and upon Pindus; the streams of Helicon, the Castalian fount, the land of Pieria, were all consecrated by his superstition to their service. His imagination embodied and deified even the winds of heaven. Did the western gale stir the trees on the summer's evening, it was the breath of Zephyr: did the north wind pour its furious and tempestuous blast, he heard in it the terrible voice of Boreas: did the south-west bring its customary showers, he saw Anster, the parent of ruin, riding on the wings of his own wind. But the religion of the Greeks did not evaporate in these enchanting visions; they endeavoured to embody their conceptions, and to this end built many magnificent temples to the objects of their adoration, founded solemn festivals, and instituted costly sacrifices. The temple of Minerva, at Athens called the Parthenon; the temple of Theseus, dedicated to the Olympian Jupiter; the temple of Ceres, at Eleusis; and the temple of Diana, at Epheusus, were sufficient indications of their religious zeal. This zeal, however misdirected, called forth the latent powers of their sculptors and painters; and to the enthusiasm of superstition may be probably attributed the breathing stone of Phidias, and the glowing canvas of Apelles. The festivals of the Greeks were, like their temples, almost innumerable. The principal ones at Athens were the Panathenæa, in honour of Minerva; the Dionysia, which were consecrated to Bacchus; and the mysteries of Eleusis, sacred to Ceres. Besides these were many others in various parts of Greece; such as the Carnea at Sparta, the Isthmian, at Corinth, dedicated to Neptune; the Nemean, at Nemea, commemorative of Hercules.

As Greece was originally colonized by various nations, and divided into separate governments, it is by no means surprising that the manners and customs of the states should considerably differ. Even in matters of religion, although all believed in one common mythology, the guardian gods of each city were perfectly distinct. Minerva was considered as the tutelary deity of Athens, Juno presided over Argos, and Neptune over Corinth. Their laws and forms of government widely differed; and as these arose out of the varying, and even opposite dispositions of the people, their civil institutions, by a natural reaction, impressed a broad distinction of customs and manners, of habits, and of general character between them. We accordingly find that the Lacedæmonians were haughty and austere in their deportment, barbarous and cruel in their manners, and totally destitute of that elegance and refinement which were the characteristics of their Athenian rivals. At the same time it must be confessed, that the Spartan valour which alone conspicuous over every other state of Greece, was in no small degree brought into action, and fostered by the laws of Lycurgus. Their laconicism may also be

imputed to that stern and severe spirit which these institutions breathe. It is a curious, but by no means an inexplicable fact, that Sparta never produced an orator, historian, or philosopher; an architect, a sculptor, or a poet. The Lacedæmonians despised the cultivation of letters, and, in the spirit of the first Cato, banished them from the commonwealth. They considered literature as dangerous to the interests of the community, and their previous prejudice against it was considerably heightened by their envy of the superiority which Athens had attained in letters, and the progress which she had made in the arts and sciences.

Of the character of the people of Corinth there is little to record. Their form of government was originally monarchical; it afterwards was converted into a republic, or rather an oligarchy. They possessed, in common with the other states of Greece, an unquenchable love of liberty, and that valour and intrepidity which so highly distinguished their countrymen. The Thebans were considered by the rest of the Greeks as particularly sluggish and dull, so much so, that the appellation of "Borotian hog" was a proverbial expression among the Athenians when they wished to designate a person as remarkable for ignorance and stupidity. Notwithstanding this reproach, Boætia was the birth-place of Pindar, Plutarch, Pelopidas, and Epaminondas; under the last of whom she completely foiled the Spartan power. Athens was the Cynosure of Greece, and shone conspicuous amidst the lesser stars by which she was surrounded. Her government, which was a pure democracy, placed both her external and internal policy entirely in the hands of the people. There can be no doubt that this contributed more than any other cause to the proverbial sickness, inconstancy, and ingratitude of the Athenians. An acute and susceptible people, they were open to the grossest flattery, and their vanity and self-conceit are only to be paralleled by their levity and credulity. They were in the habit of estimating their national character by the glorious battles of Marathon and Salamis; and not by the condemnation of Miltiades, or the murder of Phocion.

So volatile was their disposition, that at one moment they would melt into tears over the tragic scenes of Euripides, and the next be convulsed with laughter at the parodies of his malignant satirist, Aristophanes. This fickleness manifested itself alike in politics and taste; every novelty had charms for them; their susceptibility seemed equally excited in listening to the thunder of the eloquence of Pericles, or to the vulgar insulence and factions, empty declamation of the demagogue Cleon. We may almost say literally with a writer of the New Testament, "All the Athenians, and strangers which were there, spent their time in nothing else, but either to tell or to hear some new thing." Their morbid sensibility was demonstrated by their imposing a fine upon the tragedian Phrynichus, because his scenes were too pathetic; and by starving Anaxandrides, because his satire was too poignant and severe. They deserted Alcibiades, in the midst of an eloquent oration, to pursue a bird; they erected a monument to Crætiæ, the comic poet, and inscribed nothing upon it, but that he was a notorious drunkard; they passed sentence of ostracism upon Aristides, because his virtues had acquired him the surname of Just; they heard with delight and admiration the doctrines

Character of the Athenians. of Socrates, then laughed at him, murdered him, and finally erected an altar to his memory. This extraordinary people were so penetrating to be insensible of the superior talents which occasionally appeared amongst them, but at the same time too envious to allow them their proper exercise; they persecuted the virtue which they admired, and exalted the vice which they laughed at and despised. To those citizens, such as Miltiades, Socrates, and Phocion, who were illustrious for their virtue and their merits, they behaved like the vilest tyrants, but to the factious and the demagogues, who were the base panders of their passions, they crouched as the most abject slaves: in short, they almost deified those turbulent orators, who, by the grossest flattery, consulted the dispositions of the populace, and who ministered to their worst propensities, by the indiscriminate abuse of all that was great and good in the state, and by the most extravagant praise of themselves.

The Greeks were so exclusively devoted to the amusements of the stage, that they would forget their fondness for litigation and politics to partake of theatrical entertainments. They deposited an immense sum of money in the public treasury for the purpose of exhibiting in splendour the works of the drama; and passed a decree, in which it was *capital* for any person even to propose that this money should be applied to the wants of the state, whatever might be its emergencies. It is said, the whole expenditure of the Peloponnesian war, which lasted about twenty-seven years, did not amount to more than the theatrical exhibition of three of the tragedies of Sophocles. Allowing this statement to be much exaggerated, we may still form from it some idea of the magnificence and splendour in which tragedies were brought forward on the stage in those ages, and of the enthusiastic fondness of the Athenian people for these brilliant spectacles. As some apology for this predominant passion, it may be justly pleaded, that Athens had been blessed by the bounty of nature with a triumvirate of tragic poets, whom succeeding ages have been proud to acknowledge as models and as masters, and with a host of comic writers, as Eupolis, Cratinus, and Aristophanes, whose wit and humour were as successful in exciting the lighter feelings of the mind, as the tragedians were distinguished for rousing its deeper emotions. The prodigious size of their theatres, the imposing splendour of their apparatus, the music of the choral odes, the devotional cast of their poetry, which sung of heroes and of gods, and the perpetual allusions to their wars and triumphs, must have made an instantaneous and irresistible impression upon the breast of this susceptible, but volatile people, altogether unknown to us at this distance from the events, and inconceivable by a stranger. The truth is, that these theatrical displays partook very much of the nature of religious spectacles; they were generally instituted in honour of some divinity; and their duties often formed the principal personages of the drama.

The Athenians, in order to encourage the poets and to elicit the fire of national genius, instituted a prize for the best dramatic compositions at the feast of Bacchus. The successful candidate was crowned with applauses and distinctions; and the honours were so flattering which were conferred upon him by the people,

that it has been said, some, through excessive joy, *Miscellaneous* have expired under them. This love of the theatre was not confined to the higher classes, but extended to all ranks of society; even the populace were in the habit of committing the tragedies of Euripides to memory; and to this custom some Athenian captives at Syracuse were indebted for their liberty, because they had delighted the Sicilians with the recital of some beautiful passages from their favourite poet. From the pleasure which the Athenians took in elegant literature, and the high degree of polish and refinement which pervaded all their amusements, and, especially, from the exclusion of those exhibitions of blood which were afterwards tolerated amongst the Romans, we might, perhaps, on a superficial survey of the subject, conclude that this people had made a very considerable progress in civilization. We shall not adduce the atrocities of the Peloponnesian war, or the well-known cruelty of the Athenians to their statesmen and generals, as a decisive proof that no nation who was guilty of the commission of such acts could ever sustain a high public character. We are, fortunately, enabled to form a tolerably correct estimate of their national character, from a source as once authentic and decisive.

There can be no better criterion of the morals and civilization of a people than is afforded by a fair view of their literature. If, however, from the perusal of the wild sublimities of *Æschylus*, the splendour and dignity of *Sophocles*, or the moral sententiousness and pathos of *Euripides*, we should suppose the Athenian manners to be decorous, refined, and grave, we shall be miserably deceived. The attachment of the Athenians to the comic theatre will furnish a more correct specimen of their morals, especially as it respects the people of Athens. Of the works of *Eupolis* and *Cratinus* nothing but insulated passages have come down to us; and but part of those of *Aristophanes*. This poet was the delight of the Athenians, and considered as the principal ornament of the comic drama. But he is to the last degree gross and obscene; he calls the worst of things by the worst of names; and pleases his audience by perpetual allusions to the meanest of our appetites, and the grossest of our necessities. All the immoralities and indecorum of the English comic muse, of *Congreve*, *Vanburgh*, and *Farquhar*, are thrown into the shade by the unparalleled effrontery of this coarse jester, and the disgusting licentiousness of his sentiments and language. We have been astonished that a people who had been accustomed to the elegance, the gravity, and the dignity of their tragic poets, could for one moment tolerate the grossness of *Aristophanes*; and the only solution we can conceive of this moral problem is, that his comedies must have been addressed to the lowest ranks of a multitude scarcely emerged from barbarism. Perhaps we may add that nothing so truly points out the various degrees of civilization as the satirical or comic writings of a nation. We have seen it in ancient Greece and Rome; and, in modern times, in France, Spain, and England. The nice sense of decorum, the consequence of superior civilization, which has so long and happily prevailed in our own country, has driven from the stage those indecent performances, which so much delighted the licentious court of the latter Stuarts.—But we shall have occasion to resume these considerations in a

Greece.

subsequent paper, and in connection with the lives of the comic poets of Greece.

The Athenians, in common with the Romans and other semi-barbarous nations, had little social intercourse with their women; to this circumstance must be chiefly attributed the indelicacy of their manners and the depravity of their morals. So entire was the seclusion of the women, amongst the Athenians, that they were not even permitted to frequent the entertainments of the theatre; or to be present at the celebration of the public games. Indeed the two sexes lived in an almost absolute state of separation even in their own families. The houses were divided into distinct sets of apartments, one range of them being appropriated for the males, and another for the females; the former were called by the Greeks *andros*, the latter *gynaikon*. We gather from a line in the *Phœnissian* of Euripides, that the upper part of the house was assigned to the women; it was called by the Lacedæmonians *gynaikon*.

Step these down upon this old cedar ladder.

v. 100.

Notwithstanding, however, the various defects in the internal economy of this extraordinary people, and although we may be disgusted at their monstrous perversity of morals, and even of taste, the republic of Athens rose, in arts, if not in arms, not only far superior to the rest of the Grecian states, but her poets, historians, orators, and philosophers, have served as models for imitation to succeeding ages, and have excited a spirit of literary ambition, and of generous rivalry, extending to our own times. As the sacred fire of Vesta, when once extinguished, was re-lighted at the rays of the sun, so the torch of European literature, which had been so long quenched, was once more kindled, after the dark ages, at the flame of Grecian lore and genius; and although so many ages have elapsed since the existence of these worthies, it is problematical whether the moderns can exhibit attainments in some of the finer arts at all to be compared with the efforts of the Grecian school. Nor should the peculiar beauties of the Greek language be omitted in our estimate of the manners of this people. Of all others the most comprehensive and harmonious, its vocabulary contains from ten to twelve thousand words, but the primitives are few in comparison with the compounds. So plastic, and capable of assuming so many various shapes, it may safely be pronounced the Protæus of grammar. There were four principal dialects in use—the Attic, the Ionic, the Doric, and the Æolic. The Attic was used by the Athenians, and was proverbial for its terseness and elegance. The Ionic was spoken by the Greek cities of Ionia, in Asia Minor, and was noted for its softness and delicacy. The Doric was employed by the inhabitants of the Peloponnese, and was remarkable for its strength and vigour. The Æolic, adopted by the Boeotians and the Æolians of Asia Minor, was well known for its homeliness and rusticity. No scholar of ancient Greece dared to appear before his countrymen in the undress and slovenly guise of the common Hellenic, or in the antiquated and obsolete expressions of the originally harsh and coarse dialects of Doric or Æolia.

§ III. Miscellaneous history.

But we must now turn to the history of Greece, so

far as it can be deemed authentic; and, rejecting the fables of the heroic ages, we refer first to the annals of Pausanias, Strabo, and Eusebius. According to the latter historian, the most ancient kingdom of Greece was Sicyon. The city giving name to this kingdom was founded s. c. 2089, and is supposed to have continued 1000 years. Next to this in antiquity was the kingdom of Argos, established a. c. 1856, Inachus being the first king; the last of whose family was dethroned by Danaus. The successors of Danaus were Abas, Proetus, and Acrisius. Perseus, the son of Danaë, the daughter of Acrisius, having slain his grandfather, transferred the seat of government from Argos to Mycenæ, about a. c. 1474. He was succeeded by Electryon, Sthenelus, and Eurystheus. Under the reign of this latter prince, the Heracleids, the descendants of Hercules, made themselves masters of the Peloponnese, so called from Pelops, the next king of Mycenæ whom we meet with in history (*Ἡρακλέους γένος*), and whose descendants were denominated Pelopids. After him the crown devolved upon Atreus; and thence, in undisturbed succession, upon Phlistheus, Agamemnon, Orestes, and Tisamenus, under the last of whom the Pelopids were finally expelled from the peninsula by the Heracleids.

Cecrops, a native of Sais, in Egypt, was the founder of the kingdom of Athens, about a. c. 1556. He divided Attica, of which Athens was the capital, into twelve districts, and instituted the Areopagus. He was succeeded by Cranaus.

Amphictyon was the third king of Athens, and established that celebrated council which was called Amphictyonic, after his name. This assembly met twice a year, at Thermopylæ, to consult upon public business; and to it, finally, were referred the disputes of all the neighbouring states. Of Erechtheus, king of Athens, it is said, that he founded the Eleusinian mysteries, and that Ceres first introduced agriculture into Attica during his reign, a. c. 1383.

In the reign of Ægeus, the son of Pandion, the heroic age may be properly considered at its zenith: he flourished about a. c. 1284, and was succeeded by his son, the renowned Theseus, of whom we have given a distinct biographical account.

Codrus, to whom we have also devoted a separate article, was the next successor to the throne of any eminence; and with him perished the Athenian monarchy, which had existed, from Cecrops to Codrus, about five hundred years. The Athenians having abolished the title of king, instituted a republic, and placed Medon, the son of Codrus, at the head of the state, with the title of archon, or ruler, a. c. 1070. The first archons were for life, afterwards for ten years, and at last only for one.

Theseus was founded by Cadmus, a Phœnician, a. c. Thibes. 1455. Labdacus, Læus, and Œdipus, were amongst the number of his successors. The misfortunes of the Labdacids have furnished ample materials for fiction and romance, of which the ancient historians and poets have not failed to avail themselves.

Sparta, as we have seen in the life of LÉLAGORUS, is Lacedæmon. generally stated to have been founded by Lacedæmon, and named after his queen; while others attribute the building of the city to Lelex, an Egyptian, a. c. 1516. This is, perhaps, the proper commencement of the dynasty of the kings of Laconia, or Lacedæmon. Tynd-

Corinth.

darus, or Tyndareus, the ninth king of Lacedæmon, or Sparta, was the father of the celebrated Helen, whose rape by Paris occasioned the far-famed Trojan war, which closed, according to Archbishop Usher, a. c. 1184. About eighty years from this period the Heracleids again entered the Peloponnese, and obtained possession of Lacedæmon. Eurysthenes and Procles, a. c. 1104, began to reign jointly, and the sceptre from that time remained in the hands of the descendants of the two brothers.

The kingdom of Corinth was of a later date than any we have mentioned; its earliest monarch, Sisyphus, commencing his reign a. c. 1376. The descendants of this prince were expelled by the Heracleids, about one hundred and ten years after the sacking of Troy. The regal power afterwards came into the hands of Bacchis, under whose posterity the government became an aristocracy, at the head of which was a chief magistrate, called *prytanis*, who was annually elected. This change took place a. c. 779, and continued until a. c. 659, when Cypselus, with the consent of the people, assumed the sovereignty, kept it for thirty years, and transmitted it to his son Periander, a. c. 629.

Macedonia.

Of the ancient kings of Macedonia we know little. Justin says that Caranus was the founder of this kingdom, a. c. 814, and Perdiccas was his successor. It lasted about six hundred and forty-six years, from its establishment to the battle of Pydna, when the Macedonian king, Perseus, was defeated and taken by the Romans, and the whole of Macedon submitted to the conquerors. Macedonia, afterwards so renowned, was but little known to the Greeks before the time of Philip and Alexander, during whose reigns this kingdom attained the zenith of its glory.

From the foundation of the kingdom of Lacedæmon, under Eurysthenes and Procles, down to the days of Lycurgus, who flourished about a. c. 710 (according to others, a. c. 684), nothing important occurred in the Spartan annals; but after the death of this legislator, in the reign of Theopompus, who flourished about 130 years later, the Lacedæmonians and Argives quarrelled concerning a frontier town called Thyrea, a. c. 743. When the two armies were upon the point of engaging, Herodotus states that they agreed to settle the dispute by three hundred men being chosen on each side to fight for the town in question. The combatants met, and fought with such perseverance that only two survived on the side of the Argives, and but one on that of the Spartans. The two Argives fled, but Othryades, the remaining Spartan, kept his post, and erected a trophy of his success from the arms of the Argives. This dauntless bravery, however, appears to have been exhibited to no purpose; for the very next day, the two armies, having disputed about the award of the victory, joined battle. The Lacedæmonians were successful, and obtained Thyrea as the meed of their triumph. A short time afterwards, during the reign of Theopompus, a war broke out between the Lacedæmonians and Messenians, which lasted about twenty years. The Spartans, at the commencement of the campaign, took Amphæa, a town in Messene, and two battles were fought, with equal loss on both sides; but a pestilence breaking out amongst the Messenians, they consulted the oracle of Delphi, and were ordered to present to the gods, in sacrifice, a virgin of royal blood; in consequence of which, Aristomenes,

a Messenian of kingly descent, offered up his own daughter. The people of Messenia then retreated to Ithome, and there held out against the Lacedæmonians for the space of seven years. In the eighth year of the war, Euphares, the king of Messenia, gave the Lacedæmonians battle, and fell desperately wounded in the beginning of the engagement; the contest for his body was long and bloody. At last the Messenians, under Aristomenes (sometimes called Aristodemus) and Cleonia, bore off the still panting body of their king, an equivocal token of victory. After the combat, the prize of valour was contested by the two Messenian chiefs, but being adjudged to Aristomenes, on the death of Euphares he succeeded to the crown. Towards the close of his reign, which continued nearly seven years, he defeated the Lacedæmonians, took their king, Theopompus, prisoner, and sacrificed him to Jupiter. Aristomenes then slew himself, agreeable to the oracle, on the tomb of his daughter. After his death, the Messenians submitted to the Lacedæmonians, Ithome was razed to the ground, and thus ended the first Messenian war.

The second Messenian war commenced about a. c. 685, when Anaxander and Anaxidamus were kings of Sparta. In the first battle which was fought between the two nations the Lacedæmonians were defeated by the Messenian general; upon which they consulted the oracle, and were directed to send to Athens for a chief. The Athenians, in derision, sent them Tyrteus, a lame poet. Under this commander the Spartans were defeated in three successive battles; and the kings of Lacedæmon, quite disheartened, were bent upon retreating to Sparta, but were dissuaded by Tyrteus. The hard addressed the troops, reciting some of his own animated verses, until impatient for action, and inspired with the highest enthusiasm by these spirited strains, they vowed to conquer or perish. In the battle which ensued they were completely victorious. This triumph did not, however, finish the war; since Aristomenes, with the wreck of his forces, retreated to Ira, where he held the Spartans in check during eleven years; and when Ira was at last taken, he escaped with several of his adherents to Sicily, where they founded the town of Messena. The rest of their countrymen were reduced to servitude, and were classed among the *heLOTS*, or slaves, by the Lacedæmonians. This war lasted fourteen years, and terminated about a. c. 670; from which period we hear nothing more of the Lacedæmonians until the time of Pisistratus, the tyrant of Athens.

After the resignation of the archonship by Solon, and his departure from Athens, upon the usurpation of Pisistratus, a. c. 560, that city was split into three factions. Herodotus, in his *Chio*, says, that Pisistratus possessed himself of the sovereignty by stratagem: he wounded himself, and exposed his bleeding body to the people in the market-place, asserting that he had received the wounds in defence of their rights. The assembly voted him a body-guard of fifty soldiers; and Pisistratus having increased their number, seized upon the citadel, and made himself master of Athens. He treated Solon with the greatest respect, and caused all his laws to be religiously observed. After the death of that legislator, he was twice deposed by the opposite factions, and twice restored; until surmounting at length all opposition, the last seventeen years of his reign were distinguished for their

tranquillity. Pisistratus was succeeded by his sons Hippias and Hipparchus, A. C. 520. According to Thucydides, Hippias, as the eldest son, held the reins of government, but Plato seems to think that the two brothers were colleagues in the empire. Their reign lasted about eighteen years. Harmodius and Aristogiton, according to Thucydides, assassinated Hipparchus at the feast of the Panathenæa, for having insulted the sister of Harmodius, which incident also led to the expulsion of Hippias. The Alcmaeonids, the faction which had so much hated Pisistratus, were not deficient in enmity to his son. The Pythian priestess, at their instigation, so wrought upon the superstitious feelings of the Lacedæmonians, that they determined to deliver Athens from the tyrants who oppressed it, by making war upon the Pisistratide. In their first attempt the Spartans were repulsed with considerable loss by the tyrant; but, a short time afterwards, they rallied, and laid siege to Athens; whence they were, however, upon the point of retreating, when the capture of the children of Hippias changed the face of affairs. The tyrant then agreed to evacuate Attica, and accordingly retired to Sigeum, in Phrygia, A. C. 508. It is a singular coincidence, as stated by Pliny, that the kings were expelled from Rome the very same year the tyrants were driven out of Athens. Notwithstanding this event, this celebrated city continued a prey to contending factions. At the head of the principal competitors for superiority in the commonwealth were Clisthenes and Isagoras. The former was the favourite of the people, and the latter of the Lacedæmonians. Cleomenes, one of the two Spartan kings, compelled Clisthenes and his adherents to leave Athens. They soon, however, returned with their leader, and were restored to their estates, when the Lacedæmonians, jealous of the rising power of the Athenian republic, conceived designs of re-instating Hippias, and even privately sent for him from Sigeum. In an assembly of the deputies of their allies, they communicated their plan of replacing him upon the throne of Athens; but these generous deputies heard with astonishment and horror this unprincipled proposal; and to their usually opposition must be attributed its relinquishment by the Lacedæmonians. Hippias, thus disappointed in his sanguine expectations of support from Sparta, retired into Asia, and took up his abode with Artaphernes, the Persian governor of Sardis. The banished tyrant, by his persuasions, induced Artaphernes to demand of the Athenians his restoration, and to their decided refusal may be assigned the true and original cause of the Persian war against the states of Greece. Darius had, previous to the expulsion of Hippias, made himself master of the Ionian cities in Asia Minor; the Ionians, determined to throw off the Persian yoke, had applied to the Athenians for assistance; who, enraged at the insolence of Artaphernes, in demanding of them the restoration of Hippias, readily consented to their wishes. They accordingly furnished the Ionians with twenty ships, and, in conjunction with them, marched against Sardis,

took and burnt it, A. C. 504. This spirited attack immediately induced, on the part of the Persians, the invasion of the states of Greece, and Darius, about ten years afterwards, sent his first expedition against Greece, under the command of Mardonius; when the Persian fleet, attempting to double Mount Athos, in order to arrive at the shores of Macedonia, was dispersed by a storm, with the loss of three hundred ships. The army under Mardonius, in the mean while, was attacked by the Thracians. These barbarians entered the Persian camp by night, wounded the general himself, and made a great slaughter amongst his troops. The Persians were compelled by these losses to return to Asia with the remnant of their armament. But the next year, A. C. 493, Darius sent an embassy to the various states of Greece, requiring of them earth and water, which, amongst the Persians, was the symbol of subjection. The people of Ægina, an island opposite to Athens, with many of the Grecian cities, complied with these demands, but Athens and Sparta received the Persian heralds in a different manner: they threw the one into a well, and the other into a ditch, telling them to take earth and water from those sources. Darius, soon afterwards, A. C. 490, sent Datis and Artaphernes with a fleet of six hundred ships, and an army of 500,000 men, against Greece. This expedition landed in Eubœa, reduced the town of Eretria to ashes, and carried its inhabitants into slavery. After this success the Persians advanced, under the guidance of the exiled tyrant Hippias, into Attica, and pitched their camp at Marathon, about ten miles from Athens. Here the celebrated battle ensued, in which Hippias fell, and the Persians sustained an overwhelming defeat. See PISISTRATIDÆ.

It is a remarkable circumstance that most of the states of Greece finally adopted a republican form of government, in preference to a monarchical one; a circumstance which, by diffusing a popular interest in the concerns of the state, animated this people to resist the invasion, and finally to destroy the power, of the then most considerable empire in the world. Of the various states into which this country was divided, it is obvious that four took the lead—Athens, Sparta, Corinth, and Thebes. But of these cities, the two former far surpassed the rest, and were ambitious rivals for the sovereignty of Greece. We refer our readers to the lives of Lycurgus and Solon for an account of the laws of these celebrated legislators, observing only, that to these institutions we must attribute much of that Spartan valour which triumphed at the straits of Thermopylæ, and the Athenian bravery of the battle of Marathon. Their love of liberty fostered their native valour, and the excellence of their internal polity essentially contributed to make the Greeks the masterspirits of the world. Like many other rising nations, they formed extensive colonies; and possessed settlements in Sicily, and Italy, towards the Farther Calabria. But their principal foreign establishment was in Asia Minor: and their three chief settlements, Æolis, Ionia, and Doris.

HISTORY.

CHAPTER VIII. OF CARTHAGE.

Carthage. § 1. *Of the origin, topography, and customs of Carthage.*

PHILISTUS, the historian, of Sicily, says that Carthage was built before the destruction of Troy; and that its founders were Carchedon and Zodruss, from the former of whom it derived its Grecian name, Καρχηδών. It is, however, to be recollected, that the authority of Philistus is by no means decisive, and that his veracity and accuracy are impeached by Pausanias, the Grecian historian. Livy, speaking of Carthage, asserts that it was founded ninety-three years before Rome, which would fix the date of the event about a. c. 847. According to the opinion more generally received amongst chronologists and historians, Dido, a Phœnician princess, and sister to Pygmalion, king of Tyre, is supposed to have first arrived on the shores of Africa and founded Carthage, about a. c. 869. To this date, among so many conflicting opinions, we may probably assign the origin of a state, whose government excited the admiration, and received the applause of the best judge of political and moral perfection amongst the ancients; and whose arms over-ran the farthest portion of civilized Europe. Carthage was the capital of Africa Proper, and her empire comprehended, besides nearly three hundred tributary cities in Africa itself, Spain, Sicily, and Sardinia. The city was advantageously situated on the shores of the Mediterranean, whose waters washed it both on the north, the east, and the west. To the south, its possessions extended as far as the Great Desert. The Carthaginian republic flourished about seven hundred and twenty-two years, and was finally destroyed by the Roman arms a. c. 147. Livy, in his Roman History, affirms that Carthage, in its most prosperous state, contained no less than 700,000 inhabitants; but this number was reduced at the close of the third Punic war to about 50,000, when the city was burnt and destroyed by Scipio Africanus. He adds, that it was surrounded by lofty walls, and that its circumference was no less than twenty-three miles. Indeed, we may form some idea of its ancient magnitude, from the circumstance that when the Romans set fire to the city, it continued to burn during the space of seventeen days.

The political hatred which the people of Rome had conceived against the Carthaginians must be attributed to the ferocious temper of those polished barbarians, and their spirit of rivalry, not altogether unmixt with

a painful consciousness of inferiority. The faded laurels of Cannæ, the perseverance of Hannibal, and the Carthaginian army drenched with patrician blood, were ever present to their eyes. Their dislike to Greece was literary, not political. They would brook no rivals, however, either as lords of intellect or as lords of empire; and in this spirit Virgil sneers at the arts of Greece, and praises the arms of Rome.

The Carthaginians worshipped two principal deities: the goddess Cælestia, who is mentioned by Tertullian and St. Austin, and whom the prophet Jeremiah calls "queen of heaven." She was probably the Tyrian Astarte, so well known by that title. Their second deity was Saturn, from his sanguinary rites, evidently the Moloch of the Scriptures. To this idol, Philistus says that the Tyrians offered up their children in sacrifice; while Plutarch declares, that the mother, hardened against nature by superstition, would stand by without a tear or a groan, to see her child perish in the flames: and we find, from a passage in the Apologia of Tertullian, that although this barbarous custom ceased with the Carthaginians, after the destruction of their city, it continued in various parts of Africa, down to the consul Tiberius, who finally abolished it.

§ II. *Of the government of Carthage.*

The constitution of Carthage was considered by the ancients as a pattern of political wisdom. Aristotle highly praises it in his Politics, and recommends it as a model to other states. His argument, in the Πρώτη Πολιτεία, is this: That during the space of five hundred years (viz. from the foundation of the republic to his own time) no tyrant had destroyed the liberty of the state, and no demagogue had stirred up the people to anarchy. By the wisdom of its laws, Carthage had been able to steer clear of the opposite evils of aristocracy on the one hand, and of democracy on the other. The nobles did not engross the whole power, as was the case in Sparta, Corinth, Rome, and, in more modern times, in Venice; nor did the people exhibit the factious spirit of an Athenian mob or the ferocious cruelty of a Roman rabble. The constitution of Carthage may be divided into three parts. The first consisted of the suffetes, two supreme magistrates, resembling the consuls of Rome, who presided over the senate, and whose authority extended to the camp as well as the city. The second was the senate itself, composed of

Its territory, government, &c.

Carthage. the illustrious men of the state; but whose precise number has not been mentioned either by Aristotle, Polybius, or Livy. This body possessed a supreme jurisdiction over the questions of peace or war; had the power of making laws, and appointed to all offices, whether civil or military. Aristotle states, that when the votes were unanimous, the decision of the senate was absolute; but, in case of division or disagreement, an appeal lay to the people: and adds, that the republic was prosperous at home and successful abroad during the administration of the senate. The third estate was still more popular. In the infancy and maturity of the republic, the people indeed had taken no active part in the administration of the affairs of the country; but in process of time, grown arrogant by wealth and prosperity, they laid claim to a more active share in the government, and obtained nearly the whole power. They instituted a council of one hundred and four persons, better known by the name of the hundred, or the tribunal of the hundred; who were intended to act as a check upon the power of the nobles and senate, and to limit the authority of the generals. The members of this council were elected for life, and five of their number, the *quinqueviri*, had a supreme power peculiar to themselves, forming a kind of select committee invested with particular privileges, resembling the council of ten in the aristocratical senate of Venice. When a vacancy occurred in their number, the members alone had the right of filling it up; and they had even the privilege of nominating those who should compose the council of the hundred. No salary or emolument was attached to the office. Although the original institution of this tribunal was good, it finally degenerated into oppression and tyranny. There was another kind of civil officer, who bore a strong resemblance to the Roman censors; and whose duty it was to inspect the morals of the citizens, and to reform those abuses which brought discredit upon the character of the country. Corn. Nepos mentions these officers by the title of "*pæfecti morum*."

§ III. *Of the commerce of the Carthaginians.*

It is not surprising that the Carthaginians should pay the greatest attention to their commercial advantages and resources; they were a Phœnician colony, and therefore derived from their ancestors the love of navigation and the spirit of enterprise. These were greatly strengthened by the maritime position of Carthage, which allowed her merchants to trade with equal facility eastward and westward, and extend their commerce from their own shores to those of Spain, Gaul, and the straits of Gades. Accordingly the commercial empire of this state reached to Egypt and the Red sea, Tyre, and Phœnicia; comprehending, indeed, the whole of the known world; and making her the mistress of the ocean, from the shores of the Levant to the pillars of Hercules.

It was a great axiom of political economy among the ancients, that all commercial nations should, from time to time, plant colonies upon their remote possessions; that the mother-country might thus at once be relieved of an excessive population, and receive additional strength from her extended relations. Guided by this sound policy, Carthage, besides her African settlements, planted several colonies in Europe, three of which remain to the present day. Cadiz,

Carthægena, and Port Mahon; the ancient names of *Iu com-*
which were Gades, Carthago Nova, and Portus *merce, artis,*
Magonis: the latter deriving its appellation from its *&c.*
founder Mago. Their skill in maritime affairs kept pace with the extension of their commerce; and their fleets are said to have covered the Mediterranean, when Rome could not boast of a single vessel, and her citizens were even ignorant of the form of a galley. It is difficult to speak with certainty of the character and manners of the Carthaginians; for we are under the necessity of forming our judgment through the medium of Roman prejudice. These unsparring conquerors bore perpetual enmity to the African republic, and the spirit of the "*delenda est Carthago*" of the censor Cato, seems to have been infused into the pages of the Roman poets and historians. But these writers have brought forward little evidence to sustain their invectives, if they have not sedulously kept back that information which would have enabled us to judge of the truth or falsehood of their charges against the republic of Carthage; who had no historians of her own. Virgil calls them "*bilingues Tyrii*," "*the double-tongued Tyrians*." Livy, in speaking of Hannibal, after having exhausted his powers of description in degrading that illustrious general, attributes to him "*perfidia plusquam Punica*," "*perfidy even more than Punic*." See HALL'S *SÆL*. Cicero says, that the Carthaginians were noted for perfidy and cunning, "*calliditas*;" and a proverbial expression among the Romans, to denote a treacherous and dishonest person, was "*Punicum ingenium*," "*a Punic genius*." This is the testimony born to the character of that unfortunate people by those political rivals, who first destroyed their empire, then cruelly and unjustly burnt their city, reducing its inhabitants to slavery; a testimony which every honourable mind will regard with that caution naturally suggested by the very suspicious quarter whence it is derived.

§ IV. *Of the arts and sciences of the Carthaginians.*

The Carthaginians do not seem to have shone in the fine arts. No works of sculpture and painting have come down to us. Yet, here again, when it is recollected with what industry Rome laboured to destroy her monuments of greatness, few could be expected to remain; still, had Carthage possessed any scientific or literary men of eminence, something must have survived, at least in the memory of mankind, and genius would have triumphed over malice, accident, and time. But the bustle of commercial enterprise, and the feelings connected with the love of gain, probably checked the literature of Carthage in its first advances to perfection.

It will be necessary to give some sketch of the conquests of the Carthaginians, and to trace the means by which they gradually rose to such an unexampled pitch of prosperity, as successfully to contend with the Roman arms. At first possessing a very limited territory in Africa, they are said to have been under the necessity of paying an annual tribute to the neighbouring barbarians for the land which had been granted them for the site of their city. In process of time, however, according to Justin and Sallust, this ambitious people, having subdued most of the native powers, seized upon the whole of Northern Africa, and extended their boundaries to the pillars of Hercules. Still enlarging their empire by means of their naval superiority,

Carthage, they obtained possession of Sardinia; an acquisition particularly serviceable to them in supplying their forces with provisions. They also seized upon the Balearic islands, the Majorca and Minorca of modern times; in the latter of which the Portus Maionis was situated.

It is not certain at what period the Carthaginians first entered Spain, but the fact of their having acquired the dominion of that fertile country is as indisputable in itself as it was important to the conquerors, who were supplied from its gold and silver mines with the means of carrying on their foreign wars, and from its population with a martial and hardy race of men who composed their infantry. According to Polybius and Livy, the Carthaginian generals over-ran the greatest part of Spain in the space of twenty years; while the conquest of this country employed the Roman arms upwards of two centuries. This important acquisition by the republic of Carthage may be considered as the grand cause of her having been able to defy and keep in check the Roman power for so long a period. It is also uncertain when the Carthaginians first invaded Sicily; but it is clear that they had subdued it in part so early as B.C. 503, since this was the date, according to Polybius, of the first treaty entered into between the republic of Rome and Carthage, in which it was expressly stipulated that the Romans should not enter into the ports of Sicily, since these were considered as belonging to the latter power. About the year B.C. 484, the Carthaginians entered into an alliance with Xerxes, king of Persia; the terms of which bound them to attack the Greek colonies in Sicily and Italy, while he invaded the mother country. The army destined for the Sicilian invasion consisted of 300,000 men, and the fleet of 5,000 vessels. At the head of these forces Hamilcar landed at Panormus, or Palermo; he immediately laid siege to the neighbouring city of Himera, and shut up Theron, the commander, in complete blockade. This general finding means, however, to apprise Gelon, the tyrant of Syracuse, of his situation, that celebrated chieftain immediately marched to the assistance of the place, with 60,000 infantry and 5,000 horse, and intercepting the messenger to an application for cavalry which Hamilcar had sent to Selinuntum, he dexterously contrived to substitute his own forces at the appointed time, who, being admitted into the Carthaginian camp, killed Hamilcar, and set fire to his vessels. The Carthaginians were now attacked by the whole force of Gelon, who totally defeated them; 150,000 of their troops falling in this miserable enterprise.

This carnage was followed by a treaty of peace between the Carthaginians and the Sicilians; the Syracusans having, in gratitude to Gelon, presented him with the crown; and after this failure, the designs of Carthage upon Sicily were suspended until B.C. 412. About this time Hannibal, encouraged by the people of Segesta, made a descent upon the island, took successively Selinuntum and Himera, and returned in triumph to Carthage. Three years afterwards the Carthaginians fitted out another expedition against

Sicily, under the united command of Hannibal and Its com-
Milon: who were successful in taking Agrigentum source, &c.
and Gela, the former of which they entirely destroyed. The war was at length terminated by the cession, on the part of Dionysius, the tyrant of Syracuse, of Sicily to Carthage, with the exception of the domains of the Leontines, the Messinians, and the Syracusans. About the year B.C. 404, however, Dionysius, having made the necessary preparations, attacked Motya, the Carthaginian depot in Sicily, and took it, in defiance of the vigorous opposition of Milon.

But in the following year, this general returned with an immense army, retook Motya, and invaded Syracuse, whither the conqueror had returned, and was upon the point of making himself master of the city, when a contagious distemper carried off a considerable portion of his army. Dionysius attacked the rest of the troops, whom he put to the sword, with the exception of Milon and a few who escaped with him. The Carthaginians did not, however, resign their views upon Sicily; and the Syracusans, being afterwards defeated in a great battle by them, permitted them to retain all their previous conquests in Sicily, with some unperforated fortresses. After the death of Dionysius the elder, B.C. 348, they fitted out another fleet against this island; but the Syracusans being assisted by Timoleon, the celebrated Corinthian general, compelled Mago, the Carthaginian admiral, to raise the blockade of their city, and to retire to Africa. Undismayed by this discomfiture, as it appears from Plutarch, they planned another grand armament against Syracuse. But Timoleon, at the head of 6,000 troops, gave battle to their army, consisting of 70,000 men, and utterly routed them, with the loss of 10,000, who were slain.

The Carthaginians now sued for peace, and accepted the hard terms of only retaining the country lying beyond the river Halycus. About B.C. 319, however, Hamilcar, the Carthaginian general, attacked Agathocles, the tyrant of Syracuse, and besieged him in that city. Syracuse was again upon the point of surrendering, when Agathocles formed the design of carrying the war into Africa, and thereby creating a diversion in favour of the Sicilians. But in this plan, after repeated vicissitudes of fortune, he utterly failed, and soon afterwards died of poison, while Carthage resumed her former ascendancy in Sicily. About B.C. 277, the Carthaginians entered into an alliance with the Romans, against Pyrrhus, king of Epirus; which they seem to have done that Sicily might not fall into the hands of the Grecian monarch. Notwithstanding this league, Pyrrhus succeeded in taking all the possessions of Carthage in Sicily, with the exception of Lilybæum; but Hiero being appointed king of Syracuse, after the departure of Pyrrhus, made common cause with Carthage against the alarming encroachments of Rome. This event gave occasion to the first Punic war; and from this period the history of Carthage is incorporated with that of Rome, until the time when she was finally crased from the list of nations.

HISTORY.

CHAPTER IX.

OF ROME.

Rome.

§ I. Topographical description of ancient Rome.

ROME was built, according to Archbishop Usher, in the year a. c. 748. It derived its name from its founder, Romulus. Italy, of which it became the capital, was called, in more ancient times, *Ænotria*, *Ausonia*, *Hesperia*, and *Saturnia*. All these names are mentioned by Virgil, in various parts of his poems. He thus addresses his native country in his *Georgics*:

*Salve, magna parens frugum Saturnia tellus,
Magna virum.*

Hail! Saturnian land, thou mighty mother of fruits and of men.
Book. II. l. 175.

Again, in the eighth book of the *Æneid*, v. 329,

*Scepia et nomen possit Saturnia tellus.
The country Saturnia has very often changed its name.*

In the seventh book, v. 85, he calls it

— *Omnique Ænotria tellus;*

and in the first book of the *Æneid*, v. 532, he mentions the inhabitants as *Ænotrii*.

In the same book, v. 539, he tells us the name by which it was anciently known to the Greeks:

*Est locus, Hesperiam Græci cognomine dicunt.
There is a land, which the Greeks call by name Hesperia.*

It is supposed that the name *Italia* is deduced from *Italus*, one of the ancient kings of the country, or from the old Greek word *Ἰταλός*, which signifies *an ox*, the land abounding with this animal. That *Italia* was the more modern appellation of the country, is evident from the further testimony of Virgil:

— *Nunc Enea, Minores
Italiam dixisse, duci de nomine, gentem.* Book I. v. 592.

Now there is a report, that their posterity have called the nation *Italia*, from the name of its chief.

The country and climate.

Ancient Italy was bounded on the north by the Alps, on the south by the straits of Messina, on the east by the Adriatic, and on the west by the Tyrrhene sea. According to Cluverius, its extent, from Aosta, at the foot of the Alps, down to cape Lencopetra, which was situated at the extremity of Calabria, was nine hundred miles. Its breadth was, in some parts, five hundred and sixty miles; in others, one hundred and thirty; and in a few places only twenty-five miles. Italy, in the most extensive meaning of the word, was always divided into several small states; and has been split

into petty republics, or provinces, through every period of its history. The chief rivers of this country were the Po, the Mincio, the Arno, and the Tiber. The principal mountains were the Alps and the Apennines. The first formed its northern boundary, and extended about eight hundred miles; the latter ran through Italy, from the Maritime Alps to the straits of Messina. Italy lies between the thirty-eighth and forty-sixth degrees of north latitude, the climate is uncommonly salubrious, the sky unclouded, and the soil fertile. It was called the "garden of the world;" and Pliny, speaking of this country, says, *Hæc est Italia Diis sacra, hæc gentes ejus, hæc oppida populorum.* "This is Italy, sacred to the gods; these are her nations; these the cities of her people." Virgil addresses her as the "*magna mater*." She was famous for her oliveyards, her vineyards, and her harvests.

§ II. Religion and manners.

It is no easy matter to point out the true sources whence the ancient Romans derived their religion. It is, however, certain, that the idolatrous superstitions of Egypt and of Greece were believed in Rome; and this circumstance may induce the conclusion that the ancient inhabitants of Italy borrowed alike their deities and their religious creed from the Greeks. When it is recollected that most of the states of Italy were originally Grecian colonies, it is not extraordinary that the colonists should have carried with them their religion into the country which they had chosen as a place of settlement. *Æneas* is said, by Livy, to have introduced into Latium the gods of Troy; and to have instituted the worship of Jupiter, Venus, Mars, and Vesta, together with many other idols revered in Greece and Phrygia. The Trojan hero also introduced into Latium the Palladium, which had been the protector of the capital of Priam, and was afterwards considered as the tutelary deity of the Roman empire. Romulus, who was of Latine extraction, accordingly brought the gods of Alba Longa and Lavinium to Rome, and established their worship amongst his new subjects. That Jupiter was the supreme deity of the Romans, as well as of other nations, is clearly proved by the fact of Romulus dedicating, after a successful battle, the *opima spolia* to Jupiter Feretrius; and likewise from the temple which was consecrated to that god, under the ap-

Rome. **pellation of Jupiter Capitolinus.** Though the Romans probably borrowed most of their mythology from the Greeks, they derived their religious ceremonies and sacrifices more immediately from their neighbours, the Tyrrhenians. This people were, in fact, of Lydian, or Grecian origin, and inhabited that part of Italy which was called Etruria. They were exceedingly superstitious; and so celebrated for their superior skill and knowledge in religious rites and sacrifices, that they were called Tusc, or Tusci, by the Greeks, from *Θω*, to sacrifice. The Romans, however, considerably augmented the number of the deities whom they had borrowed, and added ceremonies peculiar to themselves, which were altogether unknown to Greece. It is very probable that the Delphic priestess of Apollo, the Pythia of the Greeks, was the prototype of the celebrated Roman sybil of Cumæ. According to the mythology of the Latines, she gave Æneas, on his arrival in Italy, instructions how to find his father in the infernal regions, and even conducted him to the entrance of hell. It has been contended, however, that the fable of this descent of Æneas is a parabolic illustration, on the part of Virgil, of the various external evils, and moral maladies, to which the soul is exposed, in consequence of its union with the body, and the imprisonment of its spirituality in a material nature. Yet, granting this Platonic idea to have been entertained by the bard, we must still believe that he intended to convey some notion of the state of the disembodied spirit in a future world. The first sentiment seems undoubtedly to have pervaded the Eleusinian and Bacchic mysteries; and to have formed the substance of the sacro-dotal and symbolical mythology of the ancients. It is to be traced, although in language obscure to us, from our having, in a great measure, lost the key to these mysteries, in Plotinus (Plotin. in *Æn.* i. lib. viii. p. 80.), in Plato (Plato, *Cratylus*, et *Respub.* lib. vii.), in Proclus (Commentary on Plato's *Politics*, p. 372.), in Pindar (Clement of Alexandria, in Stromata. lib. iii. quoting Pindar), in Philolaus (preserved by Clem. Alex. ut supra, p. 413.), in Pythagoras, in Synesius (hymn i.), in Pseudo (on Oracles), and in a variety of other ancient writers. A mass of evidence relative to this point is accumulated in a Dissertation on the Eleusinian and Bacchic Mysteries, published anonymously, and without date, at Amsterdam, during the last century. The sybil is said to have written her prophecies upon leaves, which she placed at the entrance of the cave; and it required great care in those who consulted her, to take up the leaves before they were scattered by the wind.

Folius basium ne carmina scanda;

Nu turbato valent repulsi hœdria ventis.

Only do not consult the verses to leaves, lest they should be carried to and fro at the mercy of the winds.

The sacrifices offered, and the rites performed, by the Romans, in honour of the Bona Dea, were undoubtedly borrowed from the Eleusinian mysteries of the Greeks. The same solemnity, the same veil of secrecy were thrown over both these festivals; and the discrepancies between the two religious ceremonies, which may be perceived, do not affect the general resemblance. The festivals of the Romans were almost innumerable; but the Capitoline Ludi, and the sacrifices in honour of Jupiter, were held the most sacred.

The worship of the goddess *Vesta* was celebrated with

particular solemnity. Livy says, that Æneas first introduced her mysteries into Italy; and that Numa built a temple to her honour, in which was deposited the celebrated Palladium of Troy; and the sacred fire, the mystic emblem of the divinity, was kept within the sanctuary, continually burning, by the vestal virgins. The extinction of this hallowed flame, in any case, was considered most inauspicious to the interests of the republic, and ominous of some calamity to the state. Six virgins of unblemished purity were accordingly appointed to watch it; if by accident or negligence it went out, it was rekindled at the beams of the sun, and the vestal through whose neglect the accident was occasioned, was liable to severe punishment. This virtual worship of fire by the Romans bears so striking a resemblance to the rites of Zoroaster, the Persian monarch, who considered fire as the purest emblem of the Supreme Being, and the only proper visible object of devotion, that its oriental origin may be easily discovered. The vestal virgins, who were the priestesses of the goddess from whom they took their name, were endowed with peculiar privileges; in return for which they bound themselves to her service by a solemn vow of chastity for thirty years. If this oath were broken, the criminal was either impaled or buried alive; a punishment, strongly marking the ferocious sternness of the Roman character. To the honour of female chastity and virtue, although under the influence of a principle not more noble than superstition, it is recorded, that in the space of one thousand years, from Numa to Theodosius, during which time the order continued only eighteen instances of the breach of this vow occurred.

The Romans were not very select in regard to their gods, since they generally admitted into the number of their deities the idols of the respective nations whom they conquered; a fact demonstrated in the erection of that splendid temple called the Pantheon, which was dedicated, as its name imports, to all the gods in the universe. Amidst this laxity of principle and the follies of polytheism, the Romans, in common with other nations, had some vague conceptions of a state of future happiness, and punishment. This great and general sentiment is not expressed merely by the poets, in their charming descriptions of the Elysian fields, or the isles of the blessed, but is anxiously contended for in the elaborate disquisitions of their most celebrated philosophers. "If," said the eloquent Cicero, "I err in believing the soul of man immortal, I err willingly; for I will never suffer this belief to be torn from me." The poets placed their hell, or seat of torment, at Avernus, a lake of Campania, to which Virgil, conveying no unimportant sentiment, alludes—

Facilis descensus Avernæ.

The descent of Avernus is easy.

Æn. vi. 126.

That the Etrurians, or Tuscans, first initiated the Romans into the mysteries and ceremonies of religion, is very clear, from the following passage of Livy, who is speaking of Cære, a town in Etruria: "*Sacerarium populi Romani, divinatorium sacerdotum, ac receptaculum sacrorum.*" From this circumstance of religious rites being particularly paid by the inhabitants of Cære to the gods, the word "*ceremonie*," appears to have been derived.

The Etruscans seem to have been amongst the first inhabitants of Italy, and accordingly communicated the use of letters, together with their religious rites and

Rome.

civil institutions, to the rest of the Italian nations. The ancient Romans were no less indebted to them for their literature, arts, and sciences, than for their religion.

Language.

Whether the *avvayōvov*, or Aborigines of Italy, possessed any written language is uncertain; but it appears to have been justly presumed, that the use of the Greek letters was first introduced into Latium by Evander, an Arcadian. It can hardly indeed be doubted, that the Latins borrowed their language from the Greeks. Dionysius Halicarnassus says, that the Arcadians first emigrated into Latium, where they introduced the original Pelagic language and characters. Hence the similarity of the Latin language to the rustic and simple Doric and *Æolic* dialects. The distance from Greece, and the separate government of Latium, together with a mixture of the ancient Etruscan, may well account for that corruption of language which finally formed a separate tongue, while the analogy of its original *Æolic* form was never forsaken. Indeed the resemblance between the languages of Greece and of Rome is sufficiently obvious to strike even the most superficial observer. Dionysius Halicarnassus further states, that in the days of Augustus there was still existing a treaty between Tarquin and the Galai, which was written in Greek characters, but in Latin words. The alphabet which the Etruscans brought into Italy was apparently of oriental origin; for, the Academy Della Crusca have shown that independent of the circumstances of the Etruscans themselves being natives of the east, most of the ancient Tuscan words were of Asiatic extraction. This language particularly spread amongst the Umbrians, the Sabines, and the Latins. The use of the Latin letters before the time of Romulus may be further inferred from the inscription of some Etruscan coins mentioned by Father Gori, as quoted by the authors of the Universal History, and which are generally concluded to have been struck long prior to his birth. On the face of these coins appears the double head of the god Janus, and on the reverse, in Roman characters, VELLATI, an inscription evidently referring to the Etruscan city of Velitæ.

The Romans were acquainted with some of the more familiar arts and sciences in the time of Romulus; and had made some progress even in astronomy. Their skill in architecture was, however, but rude, for, before the burning of Rome by the Gauls, it was little better than a mean though large village, consisting of wooden huts, thatched with straw, and divided into long, crooked streets. And although the ancient Romans appear to have divided their year into ten months, much laxity and inaccuracy pervaded their general arrangement of time.

§ III. Different forms of government.

Government.

The original form of the Roman government was monarchical, limited by the authority of the senate; it was, also, at one time elective, and at another hereditary. This form of polity, it is probable, was borrowed also from the Etruscans, whose chief magistrates were kings. The Romans, from the foundation of their city to the expulsion of Tarquin the Proud, cannot be regarded as a refined or polished people. What Aristotle, in his Politics, objects to the state of Sparta, may be justly applied to Rome in her infant condition; she was a city of soldiers rather than of citizens.

Government and character.

The government of Rome, after the institution of the consulate, does not appear to have been very happily chosen. The power of the consuls, the senate, and the patricians on the one hand, might tend to an odious oligarchy, and, on the other, the turbulent innovations of the plebeians to a wild democracy. Hence the quarrels between the patricians and plebeians afford but a low idea of the stability of the consular government, and plainly demonstrate that the balance of power, which constitutes the foundation of real liberty, and the preservation of all civil institutions, was utterly unknown to them. Their republican form of polity had another fatal objection attached to it. As there was no person in Rome who was at the head of affairs, in cases of extreme emergency, the senate was under the necessity of investing some eminent individual with the supreme authority. It is very evident, that this absolute magistrate, whose title was dictator, might, either by stratagem or force, take away the liberties of his country; and, in point of fact, among the earliest officers of this description were men of virtue and probity, it finally happened, that the persons invested with these authorities trampled upon the rights of the people, and changed the commonwealth into an empire. A further evil attended this republican form of government; the vices of the people, who were the representatives of the plebeian interest, by their factious eloquence and intrigues, very nearly introduced a pure democracy; and by their behaviour towards the illustrious men of the state, showed that they only wanted opportunity to act the parts of Athenian demagogues. In later times, indeed, no such evil was to be apprehended from a Roman tribune, but it was to be dreaded from another quarter, for the senate had, in the days of Sylla, Lucullus, Pompey, and Caesar, engrossed the whole of the executive power in its own hands.

§ IV. Martial and sanguinary character.

In forming an estimate of this extraordinary people, we must not suffer their victories or martial prowess alone to engage our attention. In many respects their internal polity was singularly revolting. The brutality with which they treated their slaves and women; their ingratitude to their illustrious heroes; their ferocious restlessness, both at home and abroad; and their wanton and insulting cruelty to captive kings and princes, prove that they were little better than half-civilized barbarians. To what can be attributed their utter disregard of all those social ties which bind man to man, and smooth the rugged path of life, but to the entire want of moral cultivation? And in what other light can the condemnation of the sons of Brutus by their father; the murder of his sister by Horatius; the sentence of death passed on his own child by Torquatus; and the assassination of Virginia by her parent, be regarded by any well-ordered mind? Yet some of these facts are brought forward as splendid instances of the *amor patriæ*, and of the sacrifice of private feeling to the public good. It is not meant to be insinuated that, among the Romans, there were not many bright examples of self-devotion for the interests of their country, and that too unmixt with baser motives. The conduct of Regulus, the disinterested valour of Curtius and the Decii, will be held up as a model of generous patriotism to the latest posterity; but no

character of the Romans.

Rome. people are more carefully to be proposed to the admiration of the young.

It is astonishing with what difficulty, and at how very late a period of time, the literature of the Greeks was received by the Romans. In the days of the first Cato, this stern cynic proscribed the very teaching of the Grecian language, and expelled their philosophers and orators from the city. Little disposed to the cultivation of letters, the laurel chaplet of the victor was long thought to confer more substantial honours at Rome than the bays of the poet, or the toga of the orator. True it is, that in the annals of the empire, and especially in the Augustan age, we do not meet with those barbarous and disgusting scenes of parental or fraternal insensibility, which disgraced their earlier history; the dispositions of the people had been somewhat ameliorated by the humanizing influence of letters; but their very sports mingled the sanguinary character of their ancestors with their hereditary bravery, while their fellow-creatures were torn in pieces by wild beasts, or fell mutually destroyed in the bloody combat;—amusements which were alike frequent in republican and imperial Rome. In the decline of the empire, these inextinguishable characters of fierceness remained when the honourable pride of the republic was no more; and the senators and patricians of Rome, not content with being spectators of the death-pangs of the combatants, would themselves descend into the arena, and take part in these savage contests. Domitian, perceiving that the scenic imitation of a criminal dying on the cross was a favourite entertainment amongst the spectators, had a real criminal actually crucified on the stage, and in that state torn to pieces by wild beasts.

It cannot excite surprise that suicide should be prevalent among such a people: the Romans regarded the commission of this crime as an act of undaunted valour. We find in the Roman heroic character a strange mixture of patriotism and consciousness of superior worth, with excessive pride and unrelenting cruelty. The laws, with some exceptions, were favourable to public virtue; but the civil institutions, especially those which regarded children and slaves, breathed the very spirit of domestic tyranny and oppression. The harsh and inflexible doctrines of the stoics, which were early introduced into Italy, must have strengthened, in no inconsiderable degree, the native Roman austerity; as the character of the two Catos may serve to demonstrate.

At Rome, as well as at Athens, women were considered as mere domestic slaves, created for the gratification of sensual appetite; but they do not appear to have been subjected to that entire seclusion from society which the Grecian females were compelled to endure. Like the rest of the ancient world, the Romans had no conception of that mysterious union of sentiment, passion, and sympathy, which constitutes love, founded on esteem and approved by reason, and which Christianity has done so much to cherish and mature. The Oppian law restricted the women from riding openly in carriages and wearing certain articles of dress: the authority of the husband, by the laws of Romulus and Numa, was as absolute over the wife as over a child, excepting that he could never sell her as a slave, and that she had nominally the rights of a Roman citizen. If he had no children, too, she was his heir, otherwise

she was considered as his sister, and shared his property with the children. They were treated, on the whole, with great capriciousness; sometimes extravagantly honoured, at other times abandoned, or chastised by the principal slaves of their despot, on the slightest pretext; and the husband could even put his wife to death, according to Dionysius Halicarnassus, not only for infidelity and the usual capital crimes, but for excess in wine. The necessary consequence of these usages was the absence of all self-respect in a large portion of the Roman females: the virtues in which women are felt more than they are seen were unknown; and intrigue, perfidy, and assassination frequently disgraced their characters.

§ V. Literature of the Romans.

The Romans confessedly borrowed their learning from the Greeks, but it is not very probable that the elegancies of Grecian lore were transplanted to Rome before the time of Cæsar, a famous orator and philosopher, a. c. 155. (Cicero de Orat.) At this period commenced the era of her literature. The Roman youth, with an unprecedented ardour, applied themselves to the study of the Greek tongue, and drank deeply into the spirit of the deathless poets, historians, and orators whom it celebrated. Cicero tells us that the knowledge of this language became so necessary at Rome in his day, that no person was considered either as a gentleman or a scholar without being deeply conversant with its best writers. Horace acknowledges that most of the elegances, and even words of the Latin language flowed from this source—

— si
Græco fonte cadunt, purce detorta.

If the words should fall from the Greek fountain a little altered, and exhorts the Romans to a diligent perusal of the works of Greece—

— vos exemplaria Græcæ
Nocturnæ vernate manu, vernate diebus.

Do you, both by night and by day, turn over the Grecian models. Again,

Græcis ingentibus, Graiis dedit ore rotundo
Musa loqui.

The muse gave grins and sonorous diction to the Greeks.

Rome now produced many celebrated writers; Ennius, Accius, and Pacuvius, flourished as tragic poets; but, from the few fragments which have been preserved to us, we have not much to regret in the loss of their works; their style was rugged and inharmonious, and we in vain look for the bold sublimity of Æschylus, the magnificence of Sophocles, or the moral pathos of Euripides. Lucilius may be considered as the founder of satirical poetry amongst the Romans. His writings, with the exception of a few detached pieces, have also been lost; and Horace gives us no very favourable opinion of their excellence. Accurately speaking, the Romans possessed no comedy. We shall not indulge any criticism concerning the elegance of Terence, or the broad, coarse humour of Plautus, but merely observe, that most, if not all, of the Roman comedies were taken from Menander and Philemon. In fact, their plots and characters were but a mere transcript of Attic comedy, and the Romans were content to behold Greek manners, customs, and sentiments represented on their stage in Roman masquerade. Hence Julius Cæsar calls Terence “dimidiatus Menander.” The style of Plautus

Literature,
&c.

Rome.

was so obscure and rude, that he became obsolete, even in the days of Horace: he had little conception of what was elegant, and no powers of sensibility for what was affecting. Lucræti, however, amidst much philosophical error displayed in a rugged style, discloses a rich imagination; and such bursts of poetry, of fancy, and of feeling occasionally appear, amidst much dry and abstruse discussion, in his "De Natura rerum," as abundantly prove the author to have been no mean rival of the Mæstant hard. In justice to Lucræti, too, as a writer, it should be remarked, that the genius of the Latin tongue was remarkably unfavourable to conveying philosophical truth in verse. The literature of the Romans was at a low ebb, and in a most unpolished state until the Augustan era. They had been long in possession of the matchless models of Greek genius; they enjoyed a free government; and yet they did not produce a single name, before the reign of Augustus, which can at all compare with any one of the immortal writers of Greece. The Romans were by no means a commercial people, and were deficient in painters and sculptors. Architects, indeed, they had, whose mighty genius is sufficiently demonstrated by such structures as the Capitol, Pantheon, the Coliseum, and the triumphal Arch of Trajan. These buildings, however, were erected rather in the decline than in the zenith of their power, and when they must have improved themselves upon models of Greece within their reach, even while they affected to despise them. Virgil was so conscious of the defects of his countrymen in the fine arts, that, in pure envy of the Greeks, he even congratulates them upon their ignorance, and says that arms, not arts, were their peculiar province. Cato the censor, upon the dismissal of the Grecian ambassadors, made use of the same reasoning and argument:

*Excedit aliis spirantia mollius aëre,
Credo equidem: vivos docent de marmore vultus;
Crassius cæcis actus; et cæque moras
Describit radiis, et surgentia sidera discunt,
Tu regere imperio populos, Romane memento;
Hæc tibi erunt artes, pacisque imponere morem,
Parcere subjectis, et debellare superbis.*
Æsop. l. vi. v. 847—853.

Let others better mould the mingling mass
Of metals, and inform the breathing brass;
And soften into flesh a marble face.
Plead better at the bar, describe the skies,
And when the stars descend, and when they rise,
But Rome! 'tis thine alone, with awful sway,
To rule mankind, and make the world obey;
Disposing peace and war thy own majestic way;
To tame the proud, the froward slave to free:—
These are imperial arts, and worthy thee.

Quintilian was more candid, and, in weighing the respective literary merits of the two claimants, frankly awards the palm to Greece. The great body of the Roman people were by no means imbued, nor even tinctured with a love of letters; for it would appear that the knowledge of Grecian literature was entirely confined to the higher classes of society and the privileged orders. Colloquial Greek words, indeed, were as common as French phrases are with ourselves; and Juvenal alludes to this custom, Sat. vi. 19. *Quæ ex Græco;* but the Roman character was too stern to allow many of her citizens to imbibe the elegances of literature; and totally deficient in that enthusiasm, that poetical temperament, that vivid perception of beauty, which were the characteristics of the Athenian people. The manners of the two people materially

affected their poetry. In Homer we have boldness and sublimity; in Virgil elegance and majesty. But where the Latins shall we find the sublimities of Pindar, or the light sallies and playful elegance of the bard of Teos?

§ VI. Miscellaneous history.

The line of the ancient kings of Italy, before the building of Rome, partakes of the confusion of all the early periods of profane history. According to some writers, the Latin monarchy existed about 600 years a.e. and was established by Janus; but we know nothing of the Etrurians and Latins, except generally as considerable nations in Italy. The names which remain to us of the kings of Latium, before the arrival of *Æneas*, are *King*. *Picus*, *Faunus*, and *Latinus*; then *follow* *Æneas*, *Ascanius*, *Sylvius*, and a long list of monarchs, some of whom are probably fabulous. The only fact upon which we can fix, during a considerable number of years, is the foundation of Rome. Concerning the precise time, however, when this event took place, there is a great discrepancy of opinion amongst historians and chronologists. *Romulus* chose Mount Palatine for the situation of his infant city. For an account of the actions of that prince, we refer our readers to the separate article *ROMULUS*, already given. It is certain that he was slain a.e. 711, and was worshipped as a god after his death, under the name of *Quirinus*; hence the Roman citizens in later days were called *Quirites*. Upon the decease of *Romulus* an interregnum took place, occasioned by disputes between the Romans and Sabines, who not being able to come to an agreement in the choice of a king, the senate took the government into their own hands. It was at last settled that the Romans should choose the king, but that he must be a Sabine. They elected, a.e. 708, *Numa Pompilius*, who was a famous Sabine philosopher, and whose reign was distinguished not for military exploits, but for the cultivation of peace and the arts of life. This prince paid great attention to religious matters, and divided the ministers of religion into eight classes. He dedicated a temple to *Janus*, which was to be closed in peace and open in war. He improved their laws, encouraged agriculture, distributed the citizens into separate bodies, according to their trades or professions, and reformed the Roman calendar. See *NUMA*. Plutarch relates that *Romulus* divided the year into ten months only, but that *Numa* added the two months which were wanting, and also the intercalary days. He reigned forty-three years, and was succeeded by *Tullus Hostilius*.

Hostilius, who was elected both by the people and the senate, a.e. 665; but scarcely was he seated upon the throne when a quarrel arose between the Alban and the Romans. Both parties took the field; and as neither seemed inclined to come to an engagement, *Tullus Hostilius* and *Succatius*, the Alban general, agreed to terminate the dispute by a personal combat of three warriors, chosen from each side. According to *Dionysius of Halicarnassus* there were three brothers in each camp remarkable for their strength and valour. Their names were the *Horatii* and *Curiatii*: the former were Romans, the latter Alban. These champions voluntarily offered to decide the difference between their respective nations; which being assented to on both sides, the Roman and Alban heroes advanced against each other. Before they engaged, they quitted

their weapons, and embraced in tears; they then flew to arms, and each impetuously charged his adversary. The combat was long doubtful, but at last one of the Horatii fell, mortally wounded; and the second soon afterwards expired upon the bleeding body of his brother. The remaining Horatius was still unhurt, and, as the Alban champions were all wounded, he pretended to fly. By this stratagem, the Romans, separating them, slew each of the Curiatii singly, as they pursued him at unequal distances, before either could come up to assist the other, and seizing their armour, returned in triumph to Rome. On entering the city, he was met by his sister, who perceiving amongst the trophies of his victory a robe which she had wrought for one of the Curiatii who was her lover, covered with his blood, she burst into tears and loud complaints. This so enraged the triumphant barbarian that he slew her on the spot; while his father, equally unnatural, applauded the deed, and, considering his daughter as a disgrace to the family, would not allow her to be buried in the Horatia sepulchre; a circumstance which has repeatedly furnished materials for the song of the poet and the pencil of the painter. Horatius was condemned to die for this atrocious outrage, but was pardoned on an appeal to the people. Soon afterwards Tullus made war upon the Fidenates and Veientes; and being joined by the Alban troops under Sulfetius, he determined to attack the enemy. Before the battle began, however, to the astonishment of Tullus, the Albans wheeled round, and retreated to a rising ground. Undaunted at this, the Roman general charged the opposite armies, and having utterly overthrown the Fidenates and Veientes, prepared to punish the perfidy of Sulfetius. He invested Alba Longa, put the Alban general, and his chief advisers to death, and having destroyed the town, removed its inhabitants to Rome. Tullus next turned his triumphant arms against the hostile tribes of the Sabines, and, having gained a great victory over them, he dictated his own terms of peace. Some years after, these Sabines invaded the Roman territory in return, but were defeated by him in a pitched battle. Tullus died soon afterwards, having reigned thirty-three years. Ancus Martius was chosen by the senate and people to succeed him a. c. 634. The new king made war upon the Latins for their infractions upon former treaties, ravaged their country, and defeated them in a general engagement. He successively triumphed over the Fidenates, the Veientes, the Volsci, and the Sabines. The senate decreed him a triumph for his two decisive victories over the people of Veii. Under the reign of this enterprising prince Rome was much enlarged and improved. He rebuilt the temple of Jupiter Feretrius, founded the harbour and city of Ostia upon the Tiber, and died, after a prosperous reign of twenty-four years; leaving two sons, under the guardianship of Tarquinius Priscus, an illustrious senator and patrician. Upon this event the ambitious Tarquin determined upon seizing the vacant throne: the eldest son of Ancus Martius being only fourteen years of age, and the other a mere infant, he judged it would not be difficult to supplant them, and accordingly, by an artful baraque, prevailed on the people to invest him with the regal power. At the commencement of his reign he made a hundred new senators, in order to increase his interest in that illus-

Ancus
Martius.

Tarquinius
Priscus.

trious body. His first war was waged against the Latins, in which he was successful, and the honours of a triumph were decreed him at Rome. The people of Etruria next engaged his attention. This nation, after ravaging the Roman territories, besieged and took Fidenæ, which was the key of the Roman strength. Tarquin, however, entering the field with a large army, entirely defeated them, and recovered the place. The Etrurians now gladly sued for peace, and obtained it, on condition of acknowledging the king of Rome as their sovereign. They accordingly sent Tarquin the badges of royalty, consisting of a crown of gold, an ivory sceptre, and a purple robe, and, decorated with these regalia, he entered Rome in triumph. After this success he directed his attention towards beautifying the city, built its walls with stone, and, according to Livy and Pliny, constructed its aqueducts. He next turned his arms against the Sabines. In the first campaign he was not so successful as on former occasions; but in the spring of the following year he took the field with better fortune. He rapidly crossed the Tiber, attacked the Sabine camp, and put them to the sword. The arms of the Sabines floating down the stream of the Tiber, announced the victory at Rome before the couriers could arrive with their dispatches. After this battle Tarquin, according to Livy, entered the territories of the Sabines, who were again defeated by the Romans in another great battle, and their camp was taken. In the next year the Sabines appeared in the field early, but would not venture beyond their entrenchments. Tarquin blockaded their camp; but, in spite of his vigilance, the Sabine general contrived to make his escape. The year succeeding, the two powers, having opened the campaign, determined to put the whole to the issue of a battle. Tarquin's good fortune again attended him; the enemy were defeated on all sides; and the Romans returned laden with spoils. He now granted peace to the Sabines on condition of being put in possession of their fortresses; and entered Rome in triumph. In commemoration of this war, the conqueror laid the foundation of a temple to Jupiter on the Tarpeian rock; and this building afterwards became the far-famed capitol. Soon after this event he was assassinated in his palace, by some conspirators, instigated to the crime by the sons of Ancus Martius. Servius Tullius, Tarquin's son-in-law, with the consent of the senate, according to Livy, ascended the throne, a. c. 573. He was originally a slave (whence his surname, Servius), and had successively become a Roman citizen, patrician, and senator. The commencement of his reign was disturbed by the intrigues of the sons of Martius, and the senate; which seems scarcely to accord with the testimony of Livy, that this important body consented to his elevation. Servius, however, succeeded in gaining the affections of the people, who he promised to protect against the encroachments both of the senate and the patricians. Averse to war, he was still under the necessity of chastising the rebellion of the Veientes and Etrurians; and, after a long and arduous contest, was successful. About this time Tanaquil, the wife of Tarquin, died. Before her death, Servius was elected king by the assembly of the people, the senate, according to some writers, still withholding its consent. After his Etrurian expedition, he enlarged Rome by taking in two other hills, added a fourth tribe to the three appointed by Romulus, and

Death of
Servius.

Tarquinius
Superbus.

married his two daughters to the grandsons of Tarquin, Lucius Tarquinius and Arunx. The Etrurians revolted during the celebration of these marriages, but were again defeated. He instituted the census at Rome; a law which compelled all the Roman citizens to give an account of their names, family, and effects; by means of which the taxes were laid according to the ability of the person upon whom they were imposed. He divided the citizens into six classes, and the classes into centuries. He ordered that the freedmen, or "liberti," should be admitted to the rank of Roman citizens; and convinced the senate of the policy of this law, to which they assented. He afterwards entered into an alliance with the Sabines and Latins. This excellent monarch was at last murdered by the orders of his son-in-law, Tarquin, who was prompted to this crime by Tullia, the daughter of Servius. Tarquin seized upon the throne B. C. 529, and early acquired the surname of the "Proud." The man who had waded to the throne through the blood of his father-in-law, could not reasonably be expected to act towards his people as a mild and benevolent monarch; but atrocious as was the conduct of Tarquin, that of Tullia must be considered as still more revolting. She not only prompted him to murder her own father and seize upon his crown, but, upon her return from the forum, she drove a chariot over the yet panting body of her parent, left by his assassins in the public road, and dyed its wheels with that blood which was the fountain of her own. Both Tarquin and Tullia, previous to this murder, had dissolved their respective conjugal relations, and now formed an incestuous marriage with each other.

The disposition of the new king was soon felt by a proscription of all virtue and public spirit. With him virtue and ability were unpardonable crimes, and villany was alone acceptable. He put Marcus Junius and one of his sons to death, on account of their popularity and affluence; Brutus, the other son, only escaped by counterfeiting madness. Apprehensive of a revolt at Rome, on account of his tyranny, he procured himself, by intrigue, to be made generalissimo of the Latin forces. He then turned his arms against the Volsci and the Sabines, and, according to Livy, being victorious, gave the plunder to his soldiers, excepting one-tenth of the spoils, which he reserved to finish the temple of Jupiter Capitolinus. Soon afterwards the Gabini made war upon him, with various success, during seven years; until Sextus Tarquinius, his eldest son, ingratiated himself into their favour by pretending to flee from his father as a tyrant, and, being received by them without suspicion, obtained almost the entire government of their chief city, Gabii. He now sent a messenger to his father, to request his commands respecting the disposal of the place; and Tarquin is represented by Livy as giving no other answer to the embassy than what was indicated by perpetually striking off the heads of the tallest poppies in his garden, as he gave the messengers an interview. Sextus, interpreting this to point out to him the necessity of removing all the principal persons at Gabii, immediately commenced a course of arbitrary prosecution against the chiefs of the place, devoting many of them

to death upon the slightest pretences, and dividing their effects amongst the people. Having thus reduced their capital to perfect resistanceless, he handed it over to the possession of his father, B. C. 506. Rome was now in a state of profound peace, and Tarquin employed the people in finishing the capitol. This temple, which stood upon the top of the hill Tarpeius, occupied eight acres of ground, was two hundred feet broad, and two hundred and fifteen feet long. The dome of the building was gilt both within and without. It contained three chapels, one dedicated to Jupiter, another to Juno, and a third to Minerva. Soon afterwards, a war breaking out between the Rutuli and the Romans, Tarquin laid siege to Arden; when an incident occurred which determined the fate of the monarchy. Sextus Tarquinius and Collatinus conversing together, with other officers, concerning the excellence of their wives, a dispute arose, and they determined to settle it by ascertaining which was the lady who was best employed at home. They accordingly hastened to Rome, where the princesses were revelling; but Lucretia, the wife of Collatinus, was spinning amongst her maidens; and to her, of course, the meed of merit was conceded. Sextus, struck with her beauty, was inflamed with unhalloved desires. A short time afterwards he returned to the house, entered Lucretia's bed chamber at midnight, and, in spite of her resistance, by menaces and force, accomplished his iniquitous purpose. Lucretia, next day, summoned her husband to meet her father Lucretius, Publius Valerius, afterwards called Puplicola, and Lucius Junius, surnamed Brutus, on account of his passing for an idiot at Tarquin's court, after the murder of his father. She acquainted the assembly with her injuries, and the author of them, and declaring herself unable to survive the disaster, plunged a dagger into her bosom, and fell dead at their feet. Upon this Junius Brutus drew near, and seizing the poisoned yet warm with her blood, solemnly swore upon it, that he would avenge her wrongs upon the head of Tarquin, or perish in the attempt; an oath which was immediately taken by the whole assembly. Brutus instantly convened the senate, who unhesitatingly voted the expulsion of the Tarquins, and the abolition of the monarchy for ever. He next exposed the bleeding body of Lucretia in the assembly of the people, and called upon them to revenge her injuries as their own. The multitude with one consent supported the vote of the senate for the expulsion of the Tarquins; the name of kingdom was to be exchanged for that of commonwealth, and the office of king for that of consul; and from this period to the fall of Rome, even after the restoration of monarchical government, no ruler dared to assume the royal title. They then assembled in the Campus Martius, and solemnly elected Junius Brutus and Tarquinius Collatinus consuls for the year. Tarquin being detected by his army, according to Livy, fled to Cere, in Etruria; and thus ended the regal government of Rome, having lasted about two hundred and forty-two years, yielding to the consular administration, B. The tragic poetry of Greece, as we find it in the surviving plays of Æschylus, Sophocles, and Euripides, forms a class of imaginative works, entirely distinct from every other which we can distinguish in the treasures which have descended to us from ancient times. If, indeed, we reject the claim of the French tragedians to be its faithful disciples, it will stand entirely alone. In conjunction, therefore, with our biographical detail of the lives of its great masters, we shall endeavour to trace this mighty phenomenon in the world of genius in its origin, its progress, and its perfection.

The elements of the dramatic art seem to be almost as universal as the human mind. In the lowest stages of civilization, we discover rude and barbarous attempts to arrive at the pleasure which it is calculated to impart. In China, and even in the islands of the South sea, the inhabitants, secluded from the influence of European examples, participate in amusements resembling, in species, those of the theatre. We observe children, in their earliest pastimes, becoming the imitators of their elders and superiors; not only indulging in the mimicry of objects immediately before them, but framing out for themselves fancied similitudes of things, of which they can only have very partial knowledge; "a wedding, or a festival; a mourning, or a funeral;" and thus, eagerly going out of themselves towards objects which have acquired a hold on the imagination and the heart, they exhibit man as, in the theatrical sense, an acting, before he arrives at the dignity of a *thinking*, being. It can be no just occasion of surprise then, that in Greece, where poetry had, in Homer, found almost its utmost maturity in its earliest youth, the drama should have obtained a speedy triumph, and have flourished under very favourable auspices.

Origin of the Greek Tragedy.

Although it is usual to trace the Greek tragedy to ceremonies in honour of Bacchus, its first hints and beginnings may probably be referred to a more poetical source. The rhapsodists, the original poets, historians, philosophers, and religious instructors of Greece, were also, in reality, its earliest actors. They accompanied their recitations, doubtless, with such gestures, and delivered them with such intonations, as they thought would most powerfully assist in bringing the scenes which they were describing before the minds of their hearers. There is, indeed, in the texture of the epic poem, an essential difference from that of the tragedy; because, in the former, events are related by a person, who, whether they are joyous or pathetic, professes no immediate interest in them, but contem-

plates them as irrevocable and past, and therefore regards them with a degree of composure; while, in the latter, we have the actual contest, as a thing present; the struggle of human powers and passions, or their vain resistance against a destiny above them. But this real distinction, which now so completely separates the two species of composition, must almost have disappeared in the impassioned declamation of a rhapsodist, who would seem actually to see the themes of his muse in solemn vision; and, in reciting his own poetry, renew the inspiration by which it was originally prompted. At least, nothing could more readily suggest the idea of a drama, not as a rude game, but a high poetical work, than those noble effusions. Homer, no doubt, in his journeyings as a sacred bard, performed the functions of a great actor; and it is curious that the two greatest poets whom human nature has ever produced, the author of the *Iliad* and Shakespeare, together with Æschylus and Sophocles, should have exercised an art which is now so frequently stigmatised as degrading.

Still it must be admitted, that the peculiar ceremonies practised in honour of Bacchus were the immediate means of developing the materials of the tragic art, and giving to it a distinctiveness which it did not before possess—"a local habitation, and a name." We are told that it was customary at the feasts of Bacchus, to sacrifice a he-goat, as that animal was supposed to be peculiarly obnoxious to the god, in consequence of the injuries the vine sustained from his bite. On those occasions, religious hymns were chanted in honour of the festive deity, and rustic poets and reciters contended for the prize of victory. At first, the compositions produced on these occasions were merely lyrical. Soon, however, to relieve the singer, and vary the gratification of the audience, interlocutors were introduced, who filled up the pauses of the song with short narratives of some heroic event; originally, perhaps, having some relation to the god of wine, or his votaries, but soon assuming a more general and diversified character. Thespia and Phrynicus added a little to this idea, by making one entire story occupy, in continuation, all the pauses of the song. In consequence of this improvement, the odes became, in some degree, subordinate to the narration, and seemed to interrupt it at the intervals. Still, if we are to believe the majority of antiquarian critics, *dialogue* was unknown; on which supposition, we must give to Æschylus the praise of having absolutely invented tragedy. It seems, however, most probable, that some rude beginnings of the

Ceremonies in honour of Bacchus.

Biography. dramas, preceded these mighty exertions, by which he rendered it almost perfect. Certain it is, that before his time, Greece had no regular theatre. The faces of the performers were merely stained with the lees of wine, and they exhibited themselves in the curt of Theopis as on a mountebank-stage. To Æschylus, therefore, belongs the unquestionable praise, not only of having breathed into the dramatic art its life, spirit, and undying energy, but of having invested it with all its external pomp, decoration, and grandeur. Its springing up, like a scene of splendid enchantment, at the magic touch of his genius. Before, however, we particularly examine this matchless creation, it will be proper to state the facts which have descended to us, respecting the personal history of its author.

Æschylus. The birth of Æschylus took place, according to the old scholiast, in the sixty-ninth Olympiad; but it seems to be the better opinion that this event occurred in the sixty-third, i. e. about a. c. 528. He was a native of the village of Eleusis, and descended from an ancient family there, who professed to trace their origin to the first inhabitants of the region. His father's name was Euphorion, who seems to have been peculiarly happy in his children. All his three sons distinguished themselves most honourably in the great battles between the Greeks and Persians for the liberties of their country, and one, in addition to his military exploits, has contributed works to the glory of his age, and the delight of the world, which no lapse of time can destroy.

It is fabled of Æschylus, that, when asleep in a vineyard, in his early youth, Bacchus appeared to him in a dream, and commanded him to write tragedies. Unfortunately, we have no authentic record, or even probable conjecture, of the circumstances which directed his mind to its great office. His first representations, we are told, were exhibited before his countrymen when he had scarcely attained his twenty-fifth year. He seems to have at once conceived and executed the plan of a theatre, to have given to the dialogue its bounds, and to the chorus its office; to have invented the mask and the buskin, and to have planned the mechanism of the stage, and embellished it with the most splendid and magnificent scenery. By what gradations, and with what aids, all this was effected, we are unfortunately ignorant. We shall have occasion to examine particularly the work itself in its aëthral proportions hereafter.

Mighty as the exertions of Æschylus were to render the theatre worthy of Athens, he did not rest contented with adorning and delighting Greece. He showed himself possessed of the highest spirit and courage to defend it when in danger. When Datis and Antaphornes, the generals of Darius, invaded it, he hastened, with his two brothers, Cynegirus and Amyntas, to join the sacred band of heroes who fought and conquered at Marathon. The most honourable mention was made of them all for their eminent and peculiar prowess. So highly, indeed, did our poet signalize himself on that great occasion, that in the picture representing the battle, where Miltiades, for his sole reward, was represented animating and leading the troops, the portrait of Æschylus was drawn. Shortly after, his brother Cynegirus was appointed one of four naval commanders against a Persian armament, and assisted in dispersing the fleet, manned with thirty

thousand men, with only a thousand Greeks; but he fell in the heat of the action.

We find the two surviving brothers once more distinguishing themselves against the common foe, in the great naval engagement at Salamis. Amyntas was the first to attack a Persian ship, which he shattered in pieces, and killed the commander, for which exploit extraordinary honours were decreed him. In the course of the action, this gallant soldier, having too eagerly seized one of the hostile vessels, had his arm severed by a sabre, and was in imminent danger of his life, when Æschylus preserved him from further harm. In the following year, the poet added another wreath to his laurels as a hero on the field of Platæa, where Mardonius was defeated and slain, and Greece finally delivered from all risk of Persian mastery.

In the mean time, the intrepid and fiery Æschylus has pursued with indefatigable vigour his high poetical career. He wrote sixty-six dramas, in thirteen of which he obtained the victory over all his rivals. He is said also to have been the author of several satiric pieces, no vestige of which has reached us. Notwithstanding his varied and eminent deserts, he did not spend the evening of his days tranquilly among his countrymen, whom he had saved by his valour and exalted by his genius. Ingratitude was the vice of Athens: to be distinguished there was to be undone. It seemed as though the minds of its polished citizens were so entirely republican that they could not endure the presence even of superior talent or virtue. The cause, however, of the banishment or secession of Æschylus is variously related. It has been attributed, probably, with great injustice, to his own envy or disappointed ambition. By some, he is said to have taken offence at the prize having been adjudged to Sophocles, when very young, in opposition to his elder claims; by others, to have been disgusted at the preference shown to Simonides, in an elegy written on the battle of Marathon. But, in opposition to the first allegation, it must be observed, that Sophocles could never have been very young when Æschylus was in the decline of his age; besides, the last public exhibition of the latter was that of his great trilogy, which so fortunately remains to us, consisting of Agamemnon, the Choephore, and the Furies, which obtained the prize. And the second hypothesis is, on every ground, improbable; since we never find, on any other occasion, that our bard attempted the elegiac, nor is it likely that a contest to celebrate a particular battle should take place thirty years after the event. Suidas attributes his departure from his country to an accident which took place during the representation of one of his tragedies, when the seats and part of the theatre fell down, to the great terror and injury of the spectators. Others, again, allege that the appearance of the Furies, fifty in number, in his tragedy of that name, was so terrific as to frighten many women who were pregnant, and cause them to miscarry. This last story is also, in all probability, fabulous. It is not likely that the same piece should receive the prize, and occasion the banishment of its author; and, from all we can gather of the customs of ancient Greece, it was by no means usual for families to attend the representations of the theatre. Certain, however, it is, that on some ground, probably the boldness with which the operations of Olympus were unveiled in his works, Æschylus was

Biography. publicly accused of blasphemy. On this charge, upon which the greatest and best of men have suffered, the poet was condemned to die; when Amyntas, his brother, who pleaded his cause, exhibited the arm which had been deprived of its band at Salamis, and thus procured a remission of the sentence. Struck, however, with the insult offered to his dignity, and shocked by the ingratitude of his countrymen, the veteran poet left Athens, and found, at the court of Hiero, king of Syracuse, a worthy asylum. That prince, the great patron of philosophy and of genius at that period, honourably received and cherished him. As his protector was then engaged in laying the foundation of a city called Ætna, he celebrated the event in a tragedy of that name, in which he foretold its future greatness. He lived for several years at Gela, in Sicily, in a dignified repose. The manner of his death, as commonly related, is singular. It is said that an eagle, mistaking his bald head for a stone, let fall a tortoise upon it, which killed him. As, however, it is added that this event occurred in fulfilment of an oracle, which had pronounced that he should die by a weapon from heaven, the whole story wears the air of fable. His death occurred, according to Stanley, in the sixty-ninth year of his age. The Sicilians bestowed a magnificent funeral on his remains, which were interred on the banks of the Gela, near his residence. Tragedies are said to have accompanied the funeral solemnities, and poets to have contended for the prize at his tomb; in adaptation of the idea by which games of a more athletic cast were celebrated over the ashes of ancient heroes.

Æschylus
first gave
tragedy its
true char-
acter.

Æschylus at once produced and perfected, or at least gave its complete stamp to the Grecian tragedy. No sooner did he exhibit this high species of composition to the Athenians, than they hailed it with enthusiastic delight, and became, as in an instant, a dramatic people. This will appear surprising only to those who regard the tragic art as the mere power of exciting tears. They may well wonder "that all the world should be in love with" grief. The great difficulty which many critics have found in the pleasure experienced by men from exhibitions of pain and sorrow, has arisen, in a great degree, from a low conception of the tragic art. The true poet of tragedy does not appeal to the mere sensibilities of men, or strive to agonize, to lacerate, and tear the bosom. Grief is the mere background of his magnificent pictures, and tends by its deep shadowings to heighten the effect of their fine proportions, and set off their native grandeur. We are not pleasantly affected, because our fellow-creatures are exhibited to our view in a state of suffering; but because, in that state, they display those noble powers of action, or of endurance, which raise nature in our own esteem, and that of heaven. We exult that we belong to a species capable of such greatness of soul, and free, for the season at least, a congenial emotion with the mighty beings before us. It is in the exhibition of mental energies, of high passions, and high actions, that the triumph of the poet consists. The state of affliction is only incidental; it is only necessary to the tragic, because in that condition alone can the matchless resources of the heart be developed in all their fulness. It is in the struggle between the spiritual and material part of our nature that we take an interest so deep;—this, however remote the scene,

comes home to ourselves. We too must suffer and die; and with these inevitable ills perpetually before us, it is delightful to see others nobly suffering, and triumphantly dying—expressing, in their feelings and their deeds, that there is a principle within us over which agony and death have no power, and which shall live, in its full perfection, after these its earthly foes shall have vanished away. By the struggle and conflict alone are we delighted: it is the cause of humanity, and therefore our own; and it is not only the cause of humanity, but that cause as struggled for by the highest members of our race—not always indeed the most virtuous, but those who are richest in energy, passion, feeling, intellect—who are far removed from common life even in their aberrations—and who show, in their errors and crimes, that man is a mighty being, and the soul a thing of high capabilities and a glorious destiny. When the pathos would become oppressive, from the course of the incident, the true poet softens it by some images of gentleness and love, or sprinkles over the whole rich and beautiful fancies which give a tenderness to sorrow. Tragedy ends at the very point where some bare appeared to imagine that it began—the time when its heroes sink overwhelmed by their distresses, and have nothing left them but ignominiously to suffer. The tragic poetry of the Greeks was in direct opposition to this, at least, in the works of Æschylus and Sophocles. Its persons were rendered as high and dignified as possible in their external circumstances and relations. Sometimes they were the deities themselves, or their immediate descendants. Almost all of them were united by various ties of birth to the gods. They were kings, priests, and heroes, and sometimes united in themselves the qualities and the functions of them all. They belonged to those illustrious lines of the mighty, which the Greeks were accustomed to revere as connecting their race with the skies; their sufferings rarely proceed from instruments merely mortal; the web in which they are entangled is not woven of earth, nor of an earthly die; all the horrors shroud around them have a sacred and awe-breathing character; they wear "charmed lives." Some ancient crime, or terrible curse, pursues them, perhaps, for several generations, and every attempt to extricate them from it only serves to show the feebleness of man in comparison with the dark horrors of fate and destiny. They seem at a vast distance from ordinary mortals; and we view them through a kind of super-human medium, which gives to all their darings and sufferings an air of unearthly grandeur. Thus our sympathy with them is never rendered oppressive; it is broken by the semblance of long antiquity, and by feelings of mysterious reverence; and if the force of imagination alone excites these emotions in us, in this age of scepticism and reason, what ideas of august and super-human greatness must have been railed up in the minds of the spectators of these high representations, who brought with them the emotions of a religious faith which was closely interwoven with all the pulses of existence!

We have already seen, in estimating the poetry of Homer, how the religion of the Greeks introduced into their efforts of imagination a close analogy with the plastic arts, which became complete in the works of their tragedians. Fortunately for them, it was in the drama that this peculiar style arrived at its utmost

Biography. distinctiveness and perfection: for it was singularly adapted for the theatre—far more so than the contemplative or picturesque style of the moderns. An excellent living writer^{*} has indisputably proved, that Shakespeare cannot be acted;—that is to say, those excellencies for which his genuine idolaters admire and love him, cannot be bodied forth to the eye in palpable forms. His beauties lie so deep; they are too delicate, internal, or aerial; they refer too much to the most inward movements of the soul; or branch out into glorious pictures of natural freshness and joy, for any human grace of form, speech, or action, to express them in a theatre. They are to be mused and dreamed over, not declaimed. On the stage he is admired partly from national pride, and partly for excellencies which are possessed by far inferior dramatists. But it was otherwise with the ancient masters. Their triumphs over the mind bore an immediate resemblance to those of the statuary and the sculptor. They excelled, for the most part, in conveying an idea of the most perfect grace, harmony, and proportion of form. The external world, in all its loveliness and glory, was the material on which they chiefly delighted to employ their transcendent skill. Their beauties, therefore, were, in a great degree, capable of being bodied forth to the eye. Their representations, like exquisite statues, required no perspective; and, therefore, they were not incapable of exhibition on the stage. A Hamlet, or a Lear, cannot be shewn to the audience as Shakespeare conceived them; but by a happy combination of nature and art, there is no impossibility in the exhibition of a Helen or an Apollo. Spectators cannot look into the mind of Othello, and survey it in the depth of its sorrows or its joys, its excesses of hate or relapses into love; but they could be made to gaze on Prometheus chained to the rock, with the contest of earthly elements about him. Thus the poetic beauties of the Grecian dramatists, which were most peculiar to themselves, were capable, by the combination of the sister arts, of representation to a public audience.

As the tragedies of the Greeks were thus adapted to scenic exhibition, their authors enjoyed every assistance in thus displaying them, which the most liberal expence and the finest exertions of talent could procure. Their works were represented on stages capable of exhibiting temples and palaces almost in their real magnitude and gigantic proportions. The decorations did not consist of tinsel ornaments, which could only glitter by artificial light, but of the genuine productions of the finest arts. The great events they celebrated took place not under a contracted roof, but beneath the cope of an unclouded sky, with which the scene was formed to harmonize. Neither expence nor labour was spared to make the representation perfect in its minutest circumstances and attendant ceremonies. The mask and the buskin, though totally unsuited to our dramatic style, were the elegant appendages of that which delighted Athens. As the chief object to be attained was an ideal beauty and grandeur, this could be accomplished only by the aid of painting and of sculpture. The Greeks never desired to lose the beautiful in the passionate, nor consented to sacrifice loveliness to expression; and, therefore, they

admitted only such a degree of agitation as consisted with the preservation of dignity and grace. Their tragedies displayed a series of pictures, or rather groups, exemplifying beauty in action or repose; and thus was a certain sweetness diffused over the whole, softening down and mellowing the more violent emotions which the catastrophe might otherwise excite. All was in perfect harmony and keeping; the "still sad music of humanity, not harsh nor grating," breathed from the picture. Of the dance, and solemn music which accompanied the choral songs, we are now unable to form any conception; but there can be no doubt that they partook of the general feeling, and served to render the whole more harmonious. When we remember these circumstances—when we consider that the poets whose tragedies were exhibited, strove in various ways to render the exhibition perfect, in order to obtain the prize from their competitors—when we call to mind the theatrical spirit of the Athenians, which was not daily gratified, but only received the object of its desire at long intervals and on high occasions—and when we reflect on the character of the audience themselves, uniting the keenest sense of pleasure from excellence with the nicest perception of defect—we may form some estimate of the intense expectation which preceded, and the complete harmony which attended, a representation of the works of the great tragedians at Athens.

These representations, unquestionably, assisted in finishing the character of those by whom they were witnessed. The lowest of the Athenian populace found at the theatre a substitute for those formal lessons of wisdom delivered in the schools of the philosophers, which they were precluded from attending. Hence that nice sense and discrimination of the purity of their language, for which they were celebrated. To this class of men, indeed, it is, that a well-regulated stage is of the highest importance. It is to them in the place of literature, as by no other means could their deficiency in the finer parts of knowledge be so well supplied. The great moral advantage of history, painting, sculpture, and poetry, is, that they give men an interest in things out of and beyond themselves, which pertain not to everyday life, nor to "the ignorant present time." They excite in us a sense of ideal beauty, and delightfully lead us from the gross pursuit of individual interest, to a high communion with that general humanity of which we are too ready to forget that we are partakers. They break that web which the spirit of commerce, and, in some degree, the necessities of our condition teach us to weave around ourselves, to the exclusion of the rest of our species, and in which we should otherwise be imprisoned ourselves, like the silk worm, to toil and to die. They connect us with the past ages and generations of the world, and give us intimations of the destiny reserved for us in the richness of the future. Now, in some degree, the representations of tragedy confer similar benefits on the people. From these they obtain hints of a greatness above common nature—"glimpses which may make them less forlorn." Some perception of the beautiful and the grand steals imperceptibly over them; they are filled with ideas of high passions and heroic deeds, and catch a spark of generous enthusiasm from the bright and noble characters personified in their view. Thus are they elevated and polished into men. This

spirit.

* See Mr. Lamb's Essay on the Tragedies of Shakespeare, as adapted to representation at the Theatre. Works of Charles Lamb, vol. II. p. 1.

Biography. was the case, in a peculiar degree, at Athens. As this was the only Grecian city which excelled in the exhibitions of the theatre, its lowest citizens exceeded the chiefs of the states around it in the great arts of honourably living and virtuously enjoying. They united the Spartan zeal for freedom and the glory of their country with a humanity, elegance, and sense of refined pleasure, which the barbarous citizens of Lacedæmon thought incompatible with the sterner and more heroic virtues.

Among the most remarkable differences between the Greek tragedies and those of modern times must be classed the *chorus*. The original cause of the introduction of this peculiar feature has already been shown, in the sketch of the mode by which the tragic act was developed in its earliest beginnings. It constituted originally the whole performance, but gradually decreased in importance as the drama proceeded. We may even observe, that this decline in its functions did not stop with the efforts of the first of those great tragedians whose works have reached us. In Æschylus, the lyrical pieces occupy a far greater proportion of space, compared with the dialogue, than in Sophocles; and, in Euripides, they are often altogether detached from the plot, or linked to it only by very slender ties, so that they seem rather like distinct pieces chaunted between the acts to give rest to the performers, than necessary parts of the tragedy. This last gradation, however, was in the decline of the art. But it must be confessed, that the chorus was always regarded by the ancient critics as an essential portion of the Grecian plays. To us it seems, in many instances, to render the action improbable, or to retard its progress. But we must remember, that a dramatic representation was regarded in a very different light by the Athenians, from that in which it is viewed at the present time. With them it was a religious solemnity; with us it is a mere amusement. At Athens it occurred but rarely while we have constant opportunities of witnessing it. We require, therefore, to heighten our pleasure, or even to prevent our uneasiness, more pungent stimuli. To make a representation popular with us, it must contain much of action, and little of repose. But it was natural that, in this respect, the tastes of an Athenian audience should be more simple and pure. They looked to the lyrical intermixtures for moral and poetical satisfaction; and would have thought their absence but ill atoned for by more of variety, intrigue, bustle, situation, or incident. They required a strict conformity, not to ordinary probabilities, but to the ideal in beauty and grandeur. They would tolerate no defect in the internal harmony of the ode; but if this was unbroken, they did not think it necessary to their pleasure, that the question should be solved, whether it was likely that the persons should thus openly express their emotions. Notwithstanding the exertions of critics, ancient and modern, the precise offices of the chorus seem still unsettled. Horace's rule that they compose differences, moderate the passions of the turbulent, and support the cause of virtue and truth, at least admits of many striking exceptions. So far from acting a mediatorial or reconciling part, the choral band are sometimes the main subjects of the tragedy. This is the case in the *Supplicants* of Æschylus, the piece of the same name in Euripides, and in the *Furies* of the former tragedian. In many other

instances, also, they take a decided part in the action; *Tragic Poets of Greece.* as in the *Choephore*, where they excite and goad on Orestes to the murder of his mother; a piece of revenge which is always represented in the tragedies founded on it, at least of a doubtful character. Perhaps the best solution of all the difficulties is, that this part of tragedy, being considered as requisite in order to its completion, the poet was frequently compelled, by his subject, to place the chorus in characters and situations which appear absurd to us, but which the Athenians wisely chose to tolerate, rather than be deprived of the noble poetry to which it gave the occasion.

The Greek tragedians have often been censured for a strict observance of the unities of action, time, and place, and the moderns have been censured for not having studiously followed their example. From this charge the latter have been most able, and we think successfully vindicated, by W. A. Schlegel, in his *Lectures on Dramatic Literature*. Properly understood, indeed, the first, unity, is admitted to be of high importance. It seems essential that there should be a continuity of feeling or interest—a pervading emotion, an object, and a design—which, on its development, should leave on the mind a sense of completeness. This appears to be all which can even be explained with intelligibility respecting the unity of action. Those of time and place, in the sense in which they are recommended by their French advocates, were never scrupulously observed by the Greek tragic poets. In the *Agamemnon* of Æschylus, the watchman appointed by Clytemnestra sees the signals which announce, by a long series of lights, the fall of Troy; and shortly after the hero enters, having, since the commencement of the play, performed the voyage from the Troad to Argos. In the *Supplicants* of Euripides, an entire expedition is arranged, leaves Athens for Thebes, and obtains a victory after a hardly-contested battle, during a short choral ode, at the close of which a messenger arrives with a circumstantial account of the events of the field, which occupies in his relation three times the space allotted to the whole series of occurrences. In the *Trachinians* of Sophocles, the voyage from Thebes to Euboea is three times performed during the action. That the events of the play do not often occupy a longer time, is probably owing to the stage having never been left empty by a division into acts, but being constantly occupied, during the pauses of the business, by the chorus. Nor is it true that no change of scene ever took place during the representations of the theatre at Athens. In the *Ajax* of Sophocles, a removal of the place of action necessarily occurs; and in the *Eumenides* of Æschylus, it is actually transferred from Delphi to Athens. That this variety also did not more frequently occur, may be traced rather to necessity than system. The decorations of the Athenian stage were exceedingly massive and costly, and could not be removed, during the course of a play, without great delay and confusion. But, for purposes of convenience and effect, the back scene was frequently so constructed that it could be opened, and the interior of the palace, or temple, which it represented, could be rendered visible to the spectators. Hence it may be inferred, that other varieties would have been admitted, had they been regarded as possible. It cannot be matter of surprise, that those critics who have so highly extolled the Greek tragedians for these tribes, which they really did not

tions.

observe, should have overlooked those high and peculiar beauties which have rendered them immortal.

Æschylus, though admitted by all to have been almost, if not entirely, the inventor of tragedy, has been commonly regarded by the critics as a rude and uncultivated genius, who left Sophocles, and even Euripides, to bring his work to perfection. He has been accused of harshness, obscurity, and bombast; of the utter want of plan in the contrivance of his plots, and of consistency in the support of his characters. The genuine lover of poetry, however, will probably find, on perusing him with a kindred spirit and feeling, that the greatest part of these accusations is false, and the rest easily forgiven. His mind seems, indeed, to have had a portion of the sun's meridian glow diffused over it. It was dark only "with excessive bright." Mighty imaginations crowded so fast on him, that in the heat of his inspiration, he did not stop accurately to define, or clearly to develop them. When, however, he grasps the vastest subjects, he handles them with the ease of a master. If he is encumbered in his stupendous course, it is by the narrowness of the material sphere in which he is compelled to move. Of the internal mechanism of a play he knew but little; but, in the very fragments of his compositions a power almost above this world—a spirit, a freeness, and a native grace—are every where conspicuous. He dared the highest things, and almost always succeeded. Like his own Prometheus, he seems to have stolen fire from heaven to inspire and vivify his characters. "Thoughts that breathe, and words that burn," are peculiarly his own. The fiery zeal of a Greek, which he had displayed so nobly in the field, never seems, in all his compositions, to forsake him. However defective he may have been in the form, he had the most perfect spirit of tragedy. He felt most strongly that it was a high, a serious, and noble thing. He would instantly have rejected the idea of searching among the vulgar sufferings of common life for its materials. He "raised his mortals to the skies," or drew down the gods themselves to the earth, to mingle in the scene. He delights to throw his action back into the remotest obscurities of distance, among the order of the immortals. However mighty his theme, he always brings to it a kindred emotion. His language, from its elevation, its masculine boldness, and the sublimity of its metaphors, though often harsh and obscure, seems to be the language of the gods. But he never loses his stateliness in his passion; his terrors are in keeping, and always breathe of that unearthly grandeur and awe which is the true spirit of tragic poetry.

The Pro-
metheus
chained.

Of the sixty-six dramas which Æschylus is said to have composed, only seven have reached us. Of these none bears more strikingly the mark of his bold and fiery genius than the "*Prometheus chained*," which formed the middle link of a trilogy, in which it was preceded by a tragedy on the subject of the transmission of the sacred fire to mortals by the offending power, and followed by another on his liberation from his bondage by the efforts of Hercules. The idea, the scenery, the persons, are all alike majestic in this mighty relic of our author. The hero is a god of the oldest race, one who had assisted in subduing the Titans, and in placing Jupiter on his throne; and who, for beneficently communicating all the arts and embellishments of life to man, is condemned by the ungrateful monarch of

Olympus, to a dreadful, and, perhaps, endless suffering. It is a grand epitome of the oppression of right by might; of the subjection of the material frame of the wise and virtuous, in all times, to the iron rule of power; and of the proud, resolute, and unshaken resistance of the free-born spirit in the midst of the severest pangs. It exhibits the stern law of necessity, or of outward strength, bending down the body, and the inward triumph of the soul, calm, self-determined, and unawed. Nothing can be grander than the scenery in which the poet has made his hero suffer. We are to imagine a stupendous and desolate rock at the extremity of earth's remotest wilds, frowning over the ocean; and Vulcan, with Strength and Force, the two gigantic fiends in whose figures brute power seems personified, and Despotism is displayed in its native relentlessness and fury, fixing the sublime form of Prometheus by massive chains to the promontory. In vain do his conductors taunt, and Vulcan pity him: neither abuse nor compassion tempt him to utter a word. It is only when left alone that he condescends to give vent to his sorrows. The gentle nymphs of the ocean relieve the gloom with their tender compassionings, and draw from the immortal sufferer the tale of his beneficence and his wrongs. Oceanus, from the inmost caverns of the sea, rises to admonish him to submit to his oppressor, and is dismissed with a noble disdain. Then the unhappy and persecuted Prometheus, whose fate in the distance of time, are closely interwoven with those of Prometheus, who reveals to her, in part, her future destiny. At last Mercury descends, and commands him to disclose the secret by which Jupiter may escape the danger which threatens his throne; he sternly and triumphantly refuses; the tempest rages, the lightnings flash upon the rock: the sands are torn up by whirlwinds; the seas are dashed against the sky, and all the artillery of heaven is levelled against his bosom; while he proudly defies the vengeance of his tyrant, and sinks into the earth to the lower regions, calling on all the powers of justice to witness his wrongs. It has been objected, that in all this there is no action; but the piece must be viewed as part of a whole, forming, in effect, one tragedy. It is but a fragment of a mighty design, but how grand and complete in itself is the picture!

In the "*Seven Chiefs against Thebes*," the warlike spirit of Æschylus blazes with amazing fury and brightness. He seems to have composed this tragedy with a peculiar gust. The glorious fields of danger and confusion in which he had borne so conspicuous a part, seem actually present before him; and yet how delightfully is the whole softened and relieved by the tender lamentations of the Theban virgins, who, while they are elapsing the images of the gods, exhibit to us a scene of high plastic beauty! Great part of the play is occupied in the descriptions given by a soldier to Ptoecles, of the seven chieftains who are destined to attack the gates, and of his replies, specifying the commanders whom he will depute to oppose them. Nothing can exceed the vividness and life of these descriptions. By a few daring and masterly strokes, the heroes, with their appropriate armour, are completely exhibited to our view, and distinctly and individually seen, admirably contrasted with the cooler and more temperate champions who are destined to oppose them. Nothing can

The Per-
sonal.

exceed the noble burst of passion, when the messenger, having enumerated the six warriors, names Polynices, the brother of Eteocles, as the seventh, and the prince, who has ordered all till now with the utmost calmness and judgment, passionately calls for his armour without delay, and rushes out, with ungovernable impulse, to the unnatural and fatal combat. So admirable is the conduct of the piece, that we can forest with certainty the event of the battle. We see that the city will be saved by the cool prowess of its defenders; and that the brothers, alike driven on by a father's curses, are hastening to destruction. Nothing is left to chance. The battle is not a mere arbitrary means of bringing about the catastrophe, but a necessary link in the chain of destiny, prepared and fitted for the fulfilment of the design of fate. The heroic resolution of Antigone to inter Polynices, which forms the subject of Sophocles' exquisite tragedy, closes this portion of the disastrous history of the house of Ædipus.

The "*Persians*," considered as a drama, is exceedingly defective. The subject was essentially unfit for the stage, especially when the Athenians of the poet's days were to form the audience. Abstractedly considered, the overthrow of a great army, which only affects the prince in his public character, is not a fit subject of tragedy. No individual interest can be elicited from it. It belongs not to poetry, but to history; and, at all events, can be made the subject only of the epic or the ode. But of all public events, those which are recent are peculiarly improper for theatrical exhibition. The imagination can find no suitable resting-place in the thorny maze of contemporary politics. The poet cannot venture to interweave such fictions with the truth as may ennoble and adorn it; he can exhibit events only in their actual course, and, therefore, can excite no curiosity in his audience. Besides, it was impossible that the Athenians could feel sympathy in the distresses of Xerxes. His sorrows were to be made the theme of their triumph; and this selfish feeling is precisely the reverse of that which genuine tragedy will excite. Still the piece possesses high poetical merit, as a song of national rejoicing. It must have been singularly gratifying to the pride of the Grecians to hear their praises sounded forth from the mouths of their vanquished foes. And surely no one could so justly be selected to celebrate the triumphs of his country as the poet who had assisted so gloriously to obtain them.

The Suppl-
ments.

The "*Suppliants*" is one of the least interesting pieces of Æschylus. It consists, in fact, of nothing but the arrival of Danaüs and his daughters in Argos, at their flight from the sons of Ægyptus, who sought them in marriage; the protection afforded them by Pelasgus, the monarch of that city; and his refusal to resign them to their persecutors, on the insolent demands of their messenger. Schlegel conjectures that it formed a connecting link between two other plays, in the first of which the flight of the heroines was celebrated, and, in the last, their forced union with their uncles, their bitter revenge on them, and their final doom. As it now stands, it affords a pleasing portrait of the hospitality and regard to justice which prevailed in Greece, even in its rudest times.

The greatest work left to us of Æschylus is the complete trilogy, consisting of the three tragedies of the Agamemnon, the Choephore, and the Eumenides, and

forming one grand and connected development of a striking portion in the history of the devoted house of Atreus. It was beyond doubt one of his latest works, as its exhibition for the prize immediately preceded his departure from Athens. It is wonderful that the fire of his youth appears here utterly undiminished and unsubdued. In greatness of conception and energy in the execution, this work is almost without a parallel. The "*Agamemnon*" opens before the palace of the hero whose name it bears, where the watchman whom Clytemnestra has appointed is waiting with anxious and lingering hope for the blazing of the signal-fires which shall announce the fall of Troy. He sees the long-expected light which gives token of the joyful event. Thus the back-ground of the scene, which we seem to view afar in imaginary perspective, is exceedingly grand. There the final triumph of the Grecian arms, the sad catastrophe of the noblest of all heroic tales, is dimly seen; and when Agamemnon appears about to meet his own destiny, he comes irradiated, as it were, for the sacrifice, with the glories of the mightiest of ancient wars. The songs of the chorus, on receiving the glad tidings, are noble pieces of lyrical poetry; in the midst of exultation they breathe a religious awe, and serve to prepare us for the tragical events just on the verge of completion. After the herald has confirmed the tidings announced by the watchman, and expressed his fears for the safety of the Grecian princes, Agamemnon arrives with his spoils, accompanied by Cassandra, the prophetic and ill-fated daughter of Priam, who is seated on a triumphal car, to add to the state of the victor. Clytemnestra advances to meet her husband, and addresses him in a long congratulatory harangue, which shows how little affection she actually cherished for him. She entreats him to enter the palace, over the long train of costly tapestry which she has prepared to grace his entry. This, at first, he gracefully refuses, as an honour fit only for the gods; but at last consents, after having ordered that his war-like buskins should be taken off, lest he should insult the deities by his pride. The chorus express a dark presentiment that some evil is at hand. Clytemnestra again appears, and invites Cassandra to enter the house, but she remains silent and motionless, nor seems to understand the entreaties with which she is addressed. The queen once more retires to the palace, and the captive princess, agitated with the fury of prophetic inspiration, bursts out into expressions of distraction and horror. At first she hints obscurely at the dreadful catastrophe preparing; but soon the vision becomes clearer: she sees, in shapes of fire, and expresses in terrible words, the horrible banquet whence the woes of the house of Atreus arose, and the impending fate of Agamemnon and herself;—she feels her own death every instant approaching—and, conscious of the power of destiny, rejects all idea of flight or resistance as vain. At the close, she looks distractedly on the sun for the last time, and, frenzied on by ungovernable impulse, rushes into the house to die. The cries of Agamemnon, in the agonies and struggles of death, are now heard. Clytemnestra appears, reeking from her husband's slaughter, and triumphs in her deed. She is not, however, very consistent in her reasonings; at one time she removes the guilt from herself to the Furies, in vengeance for the repast of Thyestes; and at another, declares the act a just retri-

The Age-
mentary.

Biography. lation for the sacrifice of Iphigenia at Aulis. She seems to revel in blood—to be drunken with savage joy—and exultingly pictures to herself her devoted daughter meeting her murdered husband in the shades. *Ægisthus* unites with her in justifying and rejoicing in the deed; while the chorus nobly unmask the royal criminals to their face, and defy their guilty power. With this feeling of free-born defiance to tyrannic crime, the piece concludes; leaving on the mind a generous sentiment to repose on, after the awful events unfolded. There is nothing grander in the ancient tragedy than the scene in this play in which *Cassandra* speaks. The dignity of her own person, as representing the greatness of Troy, now in ashes; her sad condition; the divine inspiration within her; all conspire to render her an object of the highest tragic feeling. Her silence is inexpressibly noble; and when she speaks, breathing out her soul in prophetic frenzy, blending together in one terrific vision the past guilt and woe of the house of Atreus, its impending horrors and her own fate, and closing the whole by rushing involuntarily into the house to die with her conqueror—the soul is elevated to a dizzy pitch, and tragedy seems to have attained its highest possible tone. *Clytemnestra* does not appear a low or mean criminal. The true motive of her crime is kept carefully from the view as though a mere selfish and human aim would have debased the whole. Yet, after all, how inferior is she to the mighty murderess of Shakespeare! She does not stalk on to a glorious aim, reckless merely of means, like *Lady Macbeth*, who sees glittering visions before her, and only forgets or overlooks the horrors of assassination in her grasping eagerness for the crown—"the golden round that fate and metaphysical aid do seem to have her crowned withal." It is impossible, after all, to avoid feeling that the Grecian fiend's revenge is a mere pretext to cover a more ignoble end; but that the avowed aim of Shakespeare's heroine is real as well as grand and heroic, and removes her far from disgust or scorn. The former is an object, not of contempt indeed, but of hatred; the latter belongs not to the feeling but the imagination, and overpowers all other sensations by those of wonder and of awe.

In the "*Chœphoræ*," the deed which forms the subject of the former play is visited with a just, though unmitigated, vengeance. This piece derives its name from the circumstance of the chorus bringing offerings to present at Agamemnon's grave. The scene is laid before the palace, and exhibits the tomb of the murdered chief. Parts of the opening of the tragedy are lost, but enough remains to preserve the connection entire. *Orestes* first appears with *Pylades*, invokes *Mercury* and the shade of his father, and places a lock of his hair on the sepulchre. Observing *Electra* and the chorus approaching, the friends step aside to observe their proceedings. The choral ode explains the object of the mournful procession; that *Clytemnestra*, alarmed in the night by a terrible vision, had sent gifts to appease the shade of her murdered lord, mourns the death of Agamemnon, and laments the necessity of serving the guilty perpetrators of the deed. *Electra*, by the advice of the attendants, invokes *Mercury*, the leader of departed spirits, and the ghost of her father, to pity *Orestes* and herself, and send her brother to her aid. While she sheds the libations on the grave, the chorus begin to sing a soothing strain to appease the

dead, but break off into a rapturous exclamation, on beholding, in prophetic vision, the youthful hero rushing on to vengeance. *Electra* now discerns the hair, and surveys it with mingled wonder, fear, and hope. While her perplexity increases, *Orestes* appears, displays the embroidered tunic of her own work, and a joyful recognition takes place between the brother and the sister. The former relates that he has received the express commands of *Apollo* to put both the murderers to death; the chorus and *Electra* join in animating him to the deed; the peculiar enormities attendant on the death of his father are recounted; the attendants see fate hovering over the heads of the guilty; *Orestes* and *Electra* join in invoking the shade of Agamemnon over his tomb; and the former discloses his purpose of obtaining admittance by guile to the palace, and withdraws to consult with his friend on the immediate measures to be chosen. The chorus, in a strain of savage grandeur, sing of the ferocious passions of man, and of the dark exploits of women, alluding to terrible catastrophes of the older time, and declare that at last the righteous decrees of Almighty vengeance will be accomplished. *Orestes* and *Pylades* then appear, and desire to see *Clytemnestra*, pretend they come with the news of the death of her son, and are conducted into the palace. The chorus persuade the nurse, who laments over the death of *Orestes*, whom she had tended in childhood, to bring *Ægyptus* to hear the tidings alone, and she retires to find him. The chorus utter solemn prayers to the gods for the success of the enterprise. *Ægisthus* enters, expresses his doubts of the truth of the glad intelligence, and hastens into the palace to question the strangers. The awful moment, so long delayed, now approaches. The chorus, in agitating suspense, have scarcely addressed a short prayer to heaven, when the cries of *Ægisthus* are heard; a servant announces his death; meets *Clytemnestra*, and darkly conveys the news, which she understands, and demands an axe for her defence. *Orestes*, reeking from the slaughter of her paramour, rushes upon her; in vain does she cry for mercy; in vain does she point to the bosom which had nurtured him, and makes the most pathetic appeal to his compassion, for while nature roused within him makes him waver, *Pylades*, who now, and now only, breaks silence, solemnly warns him of the oracle, and adjures him to fulfil the purpose of the gods; and he pursues his mother into the house to sacrifice her with her partner in crime. The chorus sing an ode of triumph at the retribution. The palace now opens, and displays the dead bodies, near which *Orestes* stands and justifies the deed. Soon, however, his presence of mind forsores him. He feels the terrors of madness coming over him—sees his mother's Furies approaching him—declares, in the midst of horror, that he will hasten to the oracle of *Apollo* for purification and succour, and rushes from the stage. The chorus conclude the piece with a mournful reflection on the series of crimes and sorrows which have desolated the house of Atreus. Though this play is very ineffectually conducted, an austere and awful spirit pervades it. Destiny is represented in a manner the most terribly grand; she "sits on the dark battlements and frowns."

In the "*Eschylæ*" the consequences of this doubtful revenge are magnificently developed, and the whole series conducted to a placid repose. The scene opens

The Chœphoræ.

Biography. before the temple of Apollo at Delphi, where the Pythia appears, and pays her accustomed reverence to the celestials, previous to her taking the prophetic seat. She enters the temple, but instantly returns in great consternation; declaring that she has seen within a man, yet bloody, with a drawn sword in one hand, and a branch of olive in the other, in a suppliant posture, and around, on the consecrated seats, a great number of hideous figures, resembling women, stretched in slumber. The great gates then burst open—Orestes is seen, protected by Apollo, and surrounded by the Furies still asleep; the bright deity promises never to forsake his votary, but warns him to fly to Athens, and there entreat the protection of Minerva, its tutelary goddess. Orestes retires to obey, and Apollo disappears. The ghost of Clytemnestra rises, calls on the Furies to awake, points to her bleeding wounds, and demands vengeance. In broken words, as amidst dreams, the ministers of retribution call out to seize the object of their pursuit; and thro' awake in wild confusion, and express their rage that their foe has escaped them. Apollo drives them from his temple, and in vain tries to dissuade them from still pursuing Orestes;—they rush off to follow him. The scene now changes to the temple of Minerva, at Athens. Orestes enters, embraces the statue of the goddess, and entreats her interference in his cause. Scarcely has he spoken than the chorus of Furies appear, and, in a savage speech, demand his blood for that of his mother. He replies, that he has been purified at Delphi, and implores the protection of Minerva. The Furies now chant a solemn strain, by which they devote Orestes as their victim, and celebrate their high and ancient offices among mortals. Minerva appears; attends to both parties, and agrees to select judges before whom the great cause shall be decided. The chorus sing the hollowness of modern laws, and the secret powers of conscience which they govern. The trial then opens before the Areopagi;—Apollo pleads the cause of the suppliant; the judges throw their balls into an urn; for a moment an awful suspense prevails; but Minerva declares the number of votes equal, and, consequently, that the accused is acquitted. Orestes joyfully blesses Athens, and the Furies burst into exclamations of disappointed rage. At length, by her calm and mild wisdom, Minerva soothes their resentments, and charms away their hostilities, gives them a sanctuary in Attica, confers on them high honours, and receives their thanks and blessings. She then calls on the Athenian train to attend the goddesses, with torches and purple vestments, to their sacred abodes, and with this magnificent procession, the piece closes. Here, though the ground-work of the plot is among mortals, the trial is elevated into a contention among the gods. On the one hand, the guilty powers of unbridled ferocity, who sting the ether to madness, in the savage state, contend; and, on the other, the younger and brighter divinities of civilized life, of wisdom, poetry, and music, advance their claims; and the whole terminates in the most philosophical compromise; the feelings of indignant nature are conciliated by wisdom, and turned to benevolent purposes for the advantage of man. And all this is attended with the most delicate compliment to Athens, as the seat of mercy, justice, knowledge, and right, to which the gods themselves would repair in order to compose their divisions. This is the piece

for which the Athenians are said to have banished the poet as impious, and for which the French critics have delighted to load him with abuse, as the violator of their favourite unities!

SOPHOCLES was born at Athens, about the fourth year of the seventieth Olympiad, that is, in the year a. c. 497; so that he was about thirty years younger than Æschylus. His father, named Sophilus, is said to have been a mechanic; who also, however, enjoyed the esteem of Pericles, and had the discrimination and generosity to bestow an excellent education on his son. At a very early period of his life his great powers began to unfold themselves and to attract the notice of the first citizens of Athens. He was also exceedingly favoured by nature in the beauty of his person and a native elegance and grace; he made that great proficiency in music which might be expected in one whose whole soul was tuned to the harmonious; and in the bodily exercises held honourable in the Athenian youth, he was pre-eminent for grace and skill. When the Greeks returned victors from the great battle of Salamis, and the trophy was erected in honour of that event, the poet, then only sixteen years of age, led the chorus of noble youths who sung the *Psalm* around it, dancing before them, and accompanying their song on his lyre. The high success of Æschylus, then at the summit of his reputation, stimulated him, before he had attained his twenty-fifth year, to the composition and representation of tragedies; and an opportunity was soon afforded him of carrying away the prize from his mighty master.

Cimon, having understood that the oracle had commanded the Athenians to bring to their city the ashes of Theseus, and to pay honours to him, undertook to search for the relics of the hero. For this purpose he went to Scyros, where, according to tradition, Theseus had been slain by Lycomedes, and with great difficulty discovered the sepulchre. Hence he procured the bones of the warrior, and brought them in his galley, with great splendour and solemnity, to Athens. Among the rejoicings on this occasion, an exhibition of tragedies was appointed, at which both Æschylus and Sophocles contended for the victory. The applause of the theatre was divided; some of the spectators zealously supported the youthful candidate, and others as zealously maintained the supremacy of the veteran. This state of suspense continuing, Apollonius, the archon, instead of casting lots to determine who should be elected judges, appointed Cimon, and his nine associates in command; and having performed the usual solemnities in honour of the deity who presided over the festival, caused them to swear honourably and impartially to give their decision. By these, after a warm contention, the prize was awarded to Sophocles, then in the first ripeness of manhood. It is affirmed by some, that it was in consequence of this event that Æschylus left Athens; but this opinion we have already stated our reasons for rejecting.

The subsequent career of Sophocles was worthy of this splendid beginning. Like his predecessor, he did not confine his genius to the arts of peace; he was associated in command with Pericles and Thucydides, and assisted in reducing the isle of Samos to obedience. In his maturer age, he exercised the functions of a priest. His long life seemed a golden round of arts,

Sophocles.

Biography. triumphs, virtues, and joys. He is said to have composed a hundred and twenty tragedies, to have gained the first prize four and twenty times, and also, on all other occasions, to have been ranked second in the list of poets. So excellent was his conduct, so majestic his wisdom, so exquisite his poetical capacities, so rare his skill in the finest arts, and so uninterrupted his prosperity, that the Greeks regarded him as the peculiar favourite of heaven. Hence the ancients have related several marvellous incidents concerning him. Plutarch, in his Life of Numa, informs us that it was a common tradition that Æsculapius sojourned with Sophocles during his lifetime, and that, after his death, some other deity performed for him the sacred rites of burial.

His accomplishments.

forms us, that the last time he obtained the prize, his delight and surprise were so great, that he died in a transport of joy. All accounts agree that his end, like his life, was gentle, and without lingering disorder. A little before, when Euripides, who had long been his rival, and, in some part of his life, at least, his foe, expired, he hastened to do him honour, ordered a tragedy to be acted, went himself to the theatre in mourning, and compelled the actors to appear without their coronets or garlands. It was fitting, therefore, that he should himself obtain the highest honours in his funeral. We are informed that, at the period of his decease, Athens was closely besieged by the Spartan army under Lysander; but that general, in consequence, according to fable, of a vision from Bacchus, had probably from a high reverence for genius, suspended the attack on the city, that the Athenians might, without interruption, indulge the melancholy joy of paying the last and tributes of homage to the most truly illustrious of their citizens.

The great and distinguishing excellence of Sophocles will be found in his exquisite sense of the beautiful and the perfect harmony of all his powers. His conceptions are not on so gigantic a scale as those of Æschylus, but in the circle which he prescribes to himself to fill, not a space is left undressed; not a niche without its appropriate figure; not the smallest ornament which is incomplete in the minutest graces. His judgment seemed absolutely perfect, for he never fails; he is always fully master both of himself and his subject; he knows the precise measure of his own capacities; and while he never attempts a flight beyond his reach, he never debases himself, or his art, by any thing beneath him. He keeps on, undisturbed in his majestic course, in calm and beautiful progression; he never, like Æschylus, soars to a height in which, if the sight, the sympathies of his audience cannot pursue him, nor does he, like Euripides, condescend to appeal to mere sensibilities for applause. It is wonderful that, as he added so much to the plot and machinery of the drama, he should, above all other tragedians, be exempt from inconsistency or confusion. His persons are more numerous, his plots more involved, his incidents more thickly strewn than those of his great predecessor, and yet every thing is perfect in itself; all is lucid and clear; and in the variety and complexity of the parts, the harmony and proportion of the whole is never forgotten. All his images are finished off with a greater nicety of polish than those of Æschylus, though they are less colossal in their size, and scarcely insinuated with so Promethean a spirit. As the more ancient had resembled the sculptor who forms single statues, or groups of but two or three figures, his successor imitated him who presents more numerous figures in each group, though each individual form is equally perfect. In reading Sophocles, we seem always to breathe the fresh air of Attica, and expatiate on a sky without a cloud. From his figures a sweet music seems to breathe, such as comes over the soul with delight, from the contemplation of the Apollo Beheldere, or the Venus de Medicis. His philosophy is "musical as is Apollo's lute": his wisdom is made visible in the form of beauty. His choral songs, which are the soft expressions of the feeling which the tragedy should inspire, are full of the noblest passages to which this praise is pre-eminently due. He was un-

Character
of his
poetry.

His death. The accounts of the death of Sophocles vary. According to Lucian, he was choked, like Anacreon, with the stone of a grape; but Valerius Maximus in-

Biography. doubtably the first philosophical poet of the ancient world. With his pure taste for the graceful, he perceived, amidst the sensible forms around him, one universal spirit of love gently pervading all things. Virtue and justice, to his mind, did not appear the mere creatures of convenience, or the means of gratifying the refined selfishness of man; he saw them, having deep root in eternity, unchanging and imperishable as their divine author. In a single stanza he has expressed this sentiment, with a plenitude of inspiration before which the philosophy of expediences must vanish away. The passage has neither parallel nor equal in its kind, that we recollect, in the whole compass of heathen poetry:

Ὁ μὲν ἔστιν ὁμοῖος
 Μῦθος ἀνθρώποισιν ἀνθρώπων
 ἔργων ἡ φύσις, ὃς ἡμῶν ὁμοῖος
 ἡ φύσις, ὅτις ἡμῶν ὁμοῖος
 ἡ φύσις, ὅτις ἡμῶν ὁμοῖος
 ἡ φύσις, ὅτις ἡμῶν ὁμοῖος
 ἡ φύσις, ὅτις ἡμῶν ὁμοῖος
 ἡ φύσις, ὅτις ἡμῶν ὁμοῖος
 ἡ φύσις, ὅτις ἡμῶν ὁμοῖος
 ἡ φύσις, ὅτις ἡμῶν ὁμοῖος

Edip. Tyrus, v. 688.

Which may thus be rendered :

O for a spotless purity of action and of speech, according to those sublime laws of right, which had the celestial heavens for their birth-place, and God alone for their author—which the decays of mortal nature cannot vary, nor time cover with oblivion; for the divinity is mighty within them, and waxes not old!

No translation, however, can give the spirit of this passage. The English poetical versions completely fritter away its deep sense in miserable embellishment, and destroy at once its purity and truth.* It is one of those noble pieces of antiquity, which Milton imitates with kindred spirit, when he disposes exquisite Grecisms amidst his picturesque and romantic poetry—like Ionic temples amidst a pastoral landscape.

Of the numerous tragedies of Sophocles, we have only seven remaining; among these, however, are some which we find were most celebrated in ancient times. The "*Antigone*," in particular, received the most enthusiastic welcome from the Athenian audience; and amply, indeed, does it deserve the honours which all ages have showered upon it. The subject, as usual with the Greeks, is exceedingly simple. After the two sons of Œdipus have fallen by each other's hand, as described in the noble tragedy of *Æschylus*, Creon, on whom the government devolves, refuses to Polynices, as the invader of his country, the sacred rites of burial, which the ancients regarded as of such high and solemn importance, and decrees that instant death shall be the punishment of any who should venture to perform them. Antigone, with pious and sisterly love, remonstrates with the tyrant, and, on his refusal to allow her to perform the last sad duties at the tomb of her brother, resolves to devote her life to effect the holy design. In this heroic resolution she has no earthly support. Her sister *Ismene* refuses to assist her, and the chorus are utterly daunted by the threats and the power of Creon. Affianced and linked by affection to the son of the monarch, love never, for a moment, eases her to waver. She stands undaunted

and alone. When, indeed, she is led forth to die, she TragicPoets affectingly bewails the life she is about to lay down, of which she has scarcely begun to taste the joys. This lingering farewell to hope and existence, is so far from detracting from her dignity, that, while it deepens the pathos of the scene, it elevates her character. To make the sacrifice of life really heroic, the person resigning it must have learned something of its value. As few comparatively feel existence in its true worth, the courage commonly admired is not the subjugation of the fear of death, but only of the apprehensions of dying. It was otherwise with the immortal heroine of Sophocles; she had counted the cost of her virtue. With the full tide of life rushing healthfully through her veins, with a deep consciousness of her existence and its value, with pleasing hopes just unfolding, in the very bloom of her youth, she deliberately resigns her earthly being to accomplish the interment of her brother. It is not for a lover she dies; then might human passion have some part in her constancy, and she might only be seeking in the grave a reunion with one for whom alone life was dear. All is pure, spotless, unearthly. She exhibits the most glorious perfection of the female character. Her dauntless heroism springs not from ambition, or a masculine spirit, but has its root in the purest affection, the most disinterested of loves. Sophocles, in this play, has shown that, in an age when women were scarcely regarded as reasonable beings, he estimated the true nobleness of the female heart. Excepting *Alceste*, there is no female portrait in all the works of antiquity which, in the slightest degree, approaches this. Women are constantly represented by the Greeks as weak or wicked. If we pass by the Clytemnestras, and Medæas, as anomalous, we shall find little to praise in the Electras, the Andromaches, the Hecubas, and the Iphigenias. As the heroism of Antigone is without rival, so the vengeance exacted for her death is almost without example. The whole family of the tyrant fell; even his wife, as Schlegel has observed, who was never heard of before, is introduced, that she may perish.

In "*Electra*," Sophocles has ventured to take the The Electra, ground which *Æschylus*, in the *Choephore*, had been the first to occupy. He has completely succeeded in working up a part of the materials in his own inimitable fashion, though there are others used by his precursor which, with his usual judgment, he left sacred. His piece is infinitely better conducted than that of his master. At the opening of the scene, *Orestes*, with *Pylades*, and the old servant by whom he had been snatched from sharing the fate of his father, enters, and gives to his companions an account of the warnings he has received from Apollo, expressing his intention to proceed in fulfilling them. Hearing the voice of *Electra*, venting her distress within the palace, he is eager instantly to discover himself, but his attendant prevails on him first to retire, and offer oblations at his father's grave. A pathetic scene ensues between the chorus of Argive maidens and *Electra*, in which the latter gives way to her sorrows and hopeless desire of revenge, and the former vainly strive to give her comfort. *Chrysothemis*, her younger sister, appears with an offering, sent by Clytemnestra to Agamemnon's grave, in consequence of a dream in which she had seen her husband returned to life, and planting his

* Franklin translates the latter part thus:

"Which not in dark oblivion lies,
 Nor pine away, decay, and die;
 But bloom immortal, like their native heaven!"

Biography. sceptre on the gate of the palace, which started into a tree whose foliage covered the land. The sisters debate the property of their respective firmness and submission; and Electra is informed, that on the return of Ægisthus, who is on a journey, greater severities will be put in practice towards her. Undaunted, however, by this intelligence, she prevails on Chrysothemis, instead of accomplishing the wishes of her mother, to pray at the grave for the return of Orestes and for vengeance, and to place a lock of hair with the other offerings. The chorus begins to feel that the awful retribution is at hand. Clytemnestra then appears, and after a scene, in which she reproves Electra, and is charged by her with Agamemnon's death, she proceeds to the altar of Apollo, and offers up openly prayers for other blessings, and secretly for the death of Orestes. The plot, which Orestes and his friends have completely matured in the interval, now begins to open. The old servant arrives, in the character of a messenger from Phocis, and gives a long account of the pretended death of Orestes at the Pythian games, which are described with great beauty. Clytemnestra, after a slight visit of nature, indulges her joy, and invites the messenger to the palace. Electra, believing the news, resigns herself to the bitterest sorrow, and rejects the consolations of the choral train. At this instant Chrysothemis returns, rejoicing in having found at the tomb the offerings of Orestes; but her sister rejects all hope, and in despair proposes that they alone should attempt to slay Ægisthus, which is refused by Chrysothemis, who, after vehement reproaches from Electra, retires. After a lamentation of the chorus, Orestes and Pylades enter with an urn, which they pretend contains the ashes of the former. Over this supposed relic of her brother, Electra mourns in so pathetic a strain that Orestes can no longer suppress his feelings, and, producing Agamemnon's seal, discloses himself, to his sister's inexpressible joy. While they are uniting in grateful pleasure, the old servant calls Orestes to action; and he enters the palace, with his friend, to seek his mother. The chorus now declares that the moment of justice is come. The loud and brief supplications of Clytemnestra are heard, and her cries for succour, while Electra calls to her brother to incite him to the completion of the revenge. Ægisthus approaches, and is induced to believe, from the language of Electra, that the body of Orestes is within the palace. Instantly the doors are thrown open at his eager command, and a pall is seen covering over a corpse, with Orestes standing beside it. The prince desires Ægisthus to remove the veil; he finds the body of his consort; and seems to suplicate in despair for his life. Electra refuses to hear him, and Orestes forces him to enter the threshold, that he may complete the work of justice by sacrificing him on the very spot on which his father fell.

From this meagre statement, it is evident that nothing can be better contrived than the arrangement of the incidents. That space in the action, which seems so long without proceeding in the Choeophore, is here filled up with the most beautiful and affecting situations. The exquisite narration of the supposed death of Orestes in the chœir-race—the deep and real grief of Electra, whom it deceives—her resolution gathered from despair—the contrast of her heroism with the feminine timidity of her sister—the elegant introduction of

the urn, and the tender lamentation over it—are all the inventions of Sophocles, and admirably serve to diversify the scene. The recognition, too, being hastened by the sorrow of Electra, and preceded by a deeper grief, is more joyfully affecting than Æchylus. On the other hand, there is nothing so awful or sublime as the scene of Cassandra's wailings, prophecies, and desperate rushing out to die. The development of the plot is much better conceived by Sophocles than by his precursor. The idea of veiling the body of Clytemnestra, and leaving Ægisthus to discover it, when he expects to find that of his foe, is both poetical in itself, and theatrically effective; and the determination to kill the adulterous murderer on the scene of his crime denotes a solemnity of purpose, and a sense of justice, which makes that a sacrifice which otherwise might seem a murder. These are excellencies which all may perceive. The nicer beauty of the piece has been so happily developed by Schlegel, that we shall give his words to the reader:

"That which more particularly characterizes this tragedy is the celestial purity, the fresh breath of life and youth which is diffused over so dreadful a subject. The bright divinity, Apollo, who commanded the deed, appears to have shed his influence over it: even the break of day at the commencement is significant. The grave and the world of shadows are kept in the distance. What in Æchylus is effected by the spirit of the murdered monarch, proceeds here from the mind of the still-existing Electra, which is endowed with an equal capacity for inextinguishable hate and ardent love. The disposition to avoid every thing dark and ominous is remarkable even in the very first speech of Orestes, when he says it does not grieve him to be reputed dead, when he finds himself alive in the fulness of health and strength: he is neither beset with doubts nor stings of conscience, either before or after the deed; so that here the purpose is more determined than in Æchylus; and the appalling scene with Ægisthus, and the reserving him for an ignominious execution, at the conclusion, is conceived with more austerity than in the other drama. The nocturnal vision of Clytemnestra affords the most striking image of the relation which the two poets bear to each other; both are equally suitable, significant, and ominous: that of Æchylus is grander, but appalling to the senses; that of Sophocles majestically beautiful even in terror." Lectures on Drama, Lect. v.

In the "Trachinæ" alone has Sophocles appeared to sink below the usual standard of his excellence. Corina, a mortal suffering, however dreadful, is no fit subject for tragedy; yet here there is a sacredness shed over it, from its supernatural and marvellous cause, which takes it out of the usual course of mere mortal afflictions. Hercules, caught in the dreadful toils, suffers like a god: and the death of Dejanira excites the tenderest compassion for her, notwithstanding the catastrophe of which she has been the innocent occasion.

"Ajax," although at first sight the incident on which Ajax turns, partakes somewhat of the ludicrous, is a most noble heroic picture. His insanity is, in itself, painful and debasing, but precisely suited to his former rough and ungovernable character. To have given his madness an imaginative or intellectual cast, besides that it would have destroyed the play, would have been to have changed and transformed his mind, and not merely to

have thrown it in confusion. Nothing can be more affecting than his return to sense, when he finds himself among the cattle he has slaughtered, a mark for scorn "to point its slow unmoving finger at," and feels, in all its weight, the terror of despair. His honour blasted, and his long course of heroic deeds obliterated at a stroke, he has nothing left him but to die. Still, in this awful moment, he bids a noble farewell to the sun, the grand power of nature, which could not mock him. The conclusion of the drama, in which, after it has been proposed to disgrace the hero by refusing him burial, interment is granted to his remains, appears to us tame; but, among the Greeks, the want of sepulture was so believed to afflict the disembodied spirit, that the interest might well be extended after death, as long as this matter was in suspense, and the mind left to a consolatory repose, when the last honours are paid at the tomb.

Philoctetes.

"*Philoctetes*" is the most simple, and one of the most beautiful of all the works of Sophocles. Nothing can be more affecting than his situation when the piece opens. Left alone for ten years in the wild scenery of a desert island, and exposed to constant attack of raging pain, he seeks a scanty subsistence by his bow. And of this treachery now seeks to deprive him! He is not, however, represented as meanly sinking beneath his sufferings. In proportion as his fellow-creatures have injured and forsaken him, he cleaves with fervent love to the material forms of nature, which could neither insult nor deceive him—his dreary cave, the crisp fountain, the white cliffs, and the circling ocean, have become his dear companions, whom he laments to forsake. The struggles of a generous nature forced to attempt guile in Neoptolemus are exceedingly beautiful. The imagery of this play accords with its subject; it is most chaste, pure, and simple;—the whole seems to breathe of the sea, the caverns, and the rocky shore, which shut out the world, and are to the soul "a passion," a "feeling, and a love." It is the model which the great philosophical poet of our own country may almost be supposed to have profited by studying.

Œdipus Ty-
rannus.

"*Œdipus Tyrannus*" has possessed the singular good fortune of having excited the almost uniform admiration of the critics of every age. Some have not hesitated to pronounce it the first production of the human mind. This admiration, however, when examined, will be found to be grounded, in many instances, on an excellence which is far indeed from the highest of which the imagination is capable. The praise amounts to little more than this, that *Œdipus* is the finest, because it is the most artfully constructed of all ancient plays. Now we conceive that no mechanical skill in inventing, or in involving incident—no art in the conduct of a fable—no talent in weaving a complicated intrigue—is to be compared in value to a high sense of the beautiful and the grand, and a perfect ease in embodying the loveliest conceptions. The praise, though not the highest due to this noble piece, of exactness in the mechanism, is certainly true as far as it respects the action actually presented to the spectator. Every circumstance tends directly to produce the development; every imprecation of *Œdipus* against the guilty is so worded as to apply peculiarly to himself, even from the first scene; every effort he makes to disentangle himself from the toils of fate, only wraps them closer

about him. The ground-work of the piece is, however, Tragic Poets improbable. It is utterly incredible that no inquiry should have been made into the death of Laius, who is represented as a pious king, after the danger of the sphinx was over; and still more so that *Œdipus*, married to the queen, should never have heard the circumstances of his predecessor's fate. This is, however, of little importance, except to those who would make the art of constructing a story the basis of an immortal fame. Up to the period when the discovery is complete, the whole is moulded, though from revolting materials, into perfect beauty. How grand is the opening scene—the palace in the back-ground amidst the temples—on one side the river, and on the other the altar—the sages solemnly imploring, with suppliant bows, for the delivery of the city—and the varied crowd at a distance, of tottering infancy, tender womanhood, and feeble age, casting up prayers in silence to heaven! The kingly gentleness of *Œdipus*, the wanton levity of Jocasta, and the prophetic nobleness of Teiresias, are admirably portrayed in the foreground, while the dim shadows of fate are seen in awful distance solemnly beckoning the devoted prince to destruction. Nothing can exceed the philosophical dignity and lyrical perfection of the choral songs. Of these we have already given a specimen, and the whole will be found of a corresponding tone. The subject, however, is, to modern feelings, utterly revolting. Though the sufferer is in intention innocent, so dreadful a misfortune ought rather to be covered with a veil, than exhibited as a spectacle. The mind turns from it, as the sun refused to shine on the horrible banquet of Thyestes. In ancient times, the idea of an innately destiny confounded misfortunes and crimes; and the more tremendous the event, the more signal was the display of supernatural powers. The *Œdipus* could not be endured now were it to be written—though the modern imitation of it, "The Mysterious Mother," is infinitely more revolting.

"*Œdipus in Colonus*," one of the last, the sweetest, and *Œdipus* is the most sacred works of Sophocles, excites no feelings but of tenderness, reverence, and compassion. There is little action in it; but it is a perfect specimen of beauty in repose. The pathos is here of the most gentle kind. The storm of fate which struck down the unhappy victim has left him placidly to die; filial affection supports him to the last; the Athenian territory, which the poets delighted to honour, receives him in peace; and in the consecrated grove of the furies, which the genius of Sophocles represents as fresh, green, and lovely, the immediate hand of heaven relieves him of existence and its sorrows. The powers "which have been cruel, are yet merciful;" they appear to aid him in his death, and snatch him from the remembrance of woes too heavy for endurance. Throughout this piece, we seem to be treading on sacred ground; a consecrating gleam is every where shed over it—"a light that never was by sea or land!" Its moral, or rather its feeling, seems to be, that the great Spirit of good will not wholly forsake the most wretched and the most polluted of living things. It makes us look on death as a genial repose—the soft pillow where every suffering shall have its rest. It breathes the genial emotion of age, calm and still joyous, and awaiting, without impatience or terror, its final change. Doubtless, it speaks the sentiment of

Euripides.

The setting sun, with music at the close,
Like the last taste of sweets, is sweetest last;
Wells in remembrance more than things long past.

Richard II. act i.

EURIPIDES, the latest in birth of the Greek tragedians, though out-lived by Sophocles, was born in the first year of the seventy-fifth Olympiad, i. e. n. c. 480, in the island of Salamis. To this place his father, Mnesarchus, and mother, Clito, had retired from Athens, according to some writers, on account of their poverty, and to others, in order to avoid the impending invasion of Xerxes. It has been the general opinion that their circumstances were far from affluent. It has, indeed, been alleged that Mnesarchus had suffered the ignominy attached to parties insolvent, and that Clito obtained her subsistence by selling herbs. Aristophanes frequently alludes to the meanness of the poet's origin. Bayle, and others, have, however, endeavoured to maintain that he was of a nobler descent, and refer, in confirmation of this opinion, to the story of his greatness having been foretold by the oracle of Delphi, which it was unlikely that persons in a very low condition of life should think of consulting. Certain it is, that however reduced in fortune the parents of Euripides may have been, they enjoyed the privileges of free Athenian citizens.

The day of the poet's birth was singularly auspicious, as it was signalized by a great victory gained by the Grecian fleet over the armament of the Persians. To this event he has been supposed to allude in *Ilin*, when he represents the tapestry covering the tent erected for the feast of Xuthus, as displaying, among other imagery, the barbaric fleet opposed to that of Greece. The conjecture, though unsupported by evidence, is very plausible, nor is the anachronism at all against it. Such violations of chronology perpetually occur in his plays; and the Athenian audience were little anxious to enter into painful calculations when objects, beautiful in themselves, or calculated to revive the remembrance of their national glory, were presented before them.

Education.

As the oracle of Apollo had intimated that the son of Mnesarchus should obtain the prize of victory, his parents concluded that he would obtain that honour by bodily exercises at the Olympic games. He was, therefore, carefully instructed in the gymnastic arts, and is said, when very young, to have actually obtained a crown at the festival of Ceres. He also made some proficiency in painting, but applied himself with peculiar diligence to the study of philosophy, then so popular at Athens. Some have alleged that he studied under Socrates; but this is scarcely possible, since that philosopher was his junior by thirteen years. He seems, however, very early to have become a pupil of Anaxagoras, and to have made considerable advances in ancient lore. In consequence of the fate of his master, who was banished on a charge of blasphemy, he changed the immediate direction of his studies, to the dramatic art, and, at a very early age, began to compose tragedies. He found, in the theatre, a more safe and ready mode of diffusing his maxims, than in
